Comrade Mao Zedong pointed out in his "talks at the Yanan forum on literature and art" that our literature and art are for the masses of the people, and in the first place for the workers, peasants and soldiers. Serving the people and socialism--this is the orientation we must adhere to. Before his death, Lu Xun highly appraised Gorkiy saying that all of Gorkiy's lofty ideals came true and that the most important reason for this was that "he was one of the people and shared their grief, anger and joy." Lu Xun was also a person who mixed himself with the masses and shared the masses' feelings. Throughout his life, he always had the sincerest, warmest and deepest love for the masses of the people. He cried out for them and fought for them. As a great writer, Lu Xun fought with his pen, coordinating his writing with the Chinese people's struggle for liberation under the leadership of the CCP. He used his pen as a dagger and a spear mercilessly exposing the darkness and crimes committed in China by imperialism, feudalism and domestic and foreign reactionaries. Through his personal struggle, Lu Xun contributed a tremendous force to ushering in the Chinese people's liberation. He was a most outstanding figure among our country's great revolutionary forerunners. His voice represented the aspirations of the Chinese people for revolution and liberation in the semicolonial and semifeudal society. His voice aroused strong sympathy among the masses of the people precisely because he was truly representing the Chinese people. Here lies Lu Xun's enduring strength. Comrade Mao Zedong called on all Communist Party members to emulate Lu Xun--"fierce-browed, I cooly defy a thousand pointing fingers and head-bowed, like a willing ox, I serve the children"--and become oxen for the masses of the people, devoting their entire lives to the service of the people. He asked us to emulate the very essence of Lu Xun's great character--his ardent love for and dedication to the people.

At first Lu Xun did not clearly see the role and place of the masses of the people in the entire course of history. After he accepted Marxism, he more consciously found that the material strength to reform China was with the masses of the people and that China's literature and art should pay chief attention to the masses of the people who constituted the vast majority of the nation. In 1930, in view of the prejudices of some bourgeois writers in our country, he emphatically pointed out: "The majority's strength is great and important. If those who aspire for reforms fail to deeply understand the masses' feelings and to try to guide and improve them, then whatever brilliant writings and great ideas they may produce, romantic or classic, will have nothing to do with the masses, but only for a few persons to express admirations for one another and derive some self-satisfaction in their studies." A major sign of Lu Xun's ideological maturity in his later years is that he saw that the great material strength to reform China, the strength to determine victory or defeat, lay in the masses of the people.

To make the masses of the people the masters of culture, Lu Xun and his comrades made great efforts to popularize literature and art. He resolutely opposed the aristocratic and scholar-bureaucrat tendencies in writing and literature, opposed the intentional choice of difficult words and affected elegance and opposed turning writing and literature into "something for the privileged" and "tools of the privileged class." With great enthusiasm he advocated the reform of the written Chinese language and promoted the picture-story books, modern woodcuts and folk theatrical arts. At that time, popular works of literature and art loved by the people, such as picture-story books, were not taken seriously by many people. Lu Xun stepped forward, however, to defend them most touchingly. Lu Xun was a highly accomplished intellectual in China, but he was also a fervant advocate for the popularization of science and literature and art. He set a good example in combining popularization and the raising of standards.

Lu Xun also resolutely opposed artistic tailism characterized by unprincipled catering and yielding to the masses. He had a revolutionary writer's high sense of mission and social responsibility toward the masses of the people. As a revolutionary intellectual, a revolutionary writer and artist, his lofty duty was "to give beneficial guidance" and not "to cater" to the masses. Lu Xun said: "Some people maintain that everything must meet the masses' approval. Some even say that it is necessary to 'cater to the masses,' and deliberately use coarser words to please the masses. Those individuals certainly make a painstaking effort, but by acting in such a way they are becoming literary hacks for the masses." In making such a conclusion, Lu Xun was by no means deliberately exaggerating so as to create a sensation. In our era, if literature and art do not focus on the overall and long-range interests of the masses of the people, if they do not observe and understand life from the standpoint of the progressive elements of the masses, but lower the ideological level, substitute something vulgar for what is popular in the name of the masses and use some stimulating things to cater to the appetite of the backward among the masses and pollute the masses' minds, will it not turn writers and artists into new literary hacks?

Lu Xun had a high sense of responsibility to the people. He placed the people's interests above everything else and always considered the objective social effects of literary works when published. It is particularly admirable that he made a conscious effort to remold himself and seriously analyzed himself. Today, our socialist revolutionary writers should learn from Lu Xun's keen sense of responsibility. It is wrong to regard this sense of responsibility as a kind of shackle to individual freedom. All revolutionary writers and artists with high aspirations should make this sense of responsibility an important part of their own artistic life and should not waver at any time. Only with this sense of responsibility can the orientation of our literature to serve the people and socialism become firm and capable of withstanding the test of history.

Lu Xun warned young writers and artists not to use literature as a stepping-stone to success, not to forego hard work after publishing one or two volumes of poems or novels and making a few small achievements and not to think that publishing a few essays or magazines for a year or so was a "great, unprecedented feat." At the same time, Lu Xun also hoped that literary critics would pay attention to protecting and inspiring the enthusiasm of young people to make long-lasting efforts, and not to "assassinate" them either by flattery or by abuse. This sincere and earnest teaching merits attention by all of us.

The development of China's new culture that was opened up by revolutionary Chinese writers and artists represented by Lu Xun is incomparably broad. As long as we adhere to the line of the 3d plenary session of the party's 11th Central Committee and the four fundamental principles directed by the Party Central Committee, conscientiously study the "resolution on certain questions in the history of our party since the founding of the PRC" adopted by the 6th plenary session of the 11th Party Central Committee, insist on literature and art serving the people and socialism, unswervingly implement the policy of letting a hundred flowers blossom and a hundred schools of thought contend and arm our ranks with Marxism-Leninism-Mao Zedong Thought, our literature and art assuredly will win still more brilliant victories. In the past century, our country has in the great struggles against feudalism and imperialism produced such cultural giants as Lu Xun, Guo Moruo and Mao Dun. Today, our country has entered a new historical period, and it is all the more necessary for a group of socialist cultural giants to come forward. Today, we solemnly commemorate the centennial of Lu Xun's birth to express our high respect for Lu Xun and also to place an earnest hope on the generation of new people of our country. In this age of ours there have already appeared many writers and artists who are taking the road of the new culture opened up by Lu Xun and other forebearers. We hope that from now on more vanguards and trailblazers will appear to break through brambles and thorns and charge forward to build up our country's socialist spiritual civilization.

Although the road we have followed is by no means smooth, our country has come a long way after all and the Chinese nation is now full of vigor and vitality. In the past few years, in the field of literature and art, we have revived and carried forward the fine tradition of revolutionary realism since the "4 May" and also radiated the new brilliance of revolutionary romanticism. Either in reflecting social life in depth and in breadth or in artistic forms, a number of outstanding writers and their works are pushing socialist literature and art to new levels and states. However, there are also quite a few shortcomings and mistakes in our work. Some writers and artists lean toward bourgeois liberalization and other erroneous tendencies and have not been promptly criticized and struggled against--which they deserve--by the leadership. The weak and lax state of leadership over literature and art urgently needs to be overcome. Under the leadership of the Party Central Committee, we must correctly use the weapons of criticism and self-criticism, develop our achievements and overcome shortcomings so that our ranks of writers and artists will become more united, stronger and more militant and so that our literature and art will develop more healthily. We firmly believe that in this great country of ours in the east with its long-standing culture and historical tradition, a brand-new great socialist renaissance of an eastern type will certainly arrive. Let us usher in its arrival by increasing our efforts a hundredfold and a thousandfold.

SHANGHAI UNIVERSITY SELECTS YOUNG CADRES AS LEADERS

Beijing GUANGMING RIBAO in Chinese 25 Jul 81 p 1

[Article: "Courageously Selecting and Training Young Cadres, Shanghai Jiaotong University Strengthens Leadership Group"]

[Text] In recent years, Shanghai Jiaotong University's party committee has courageously selected and trained talented and capable young cadres to strengthen the university's leadership group.

In 1977, the average age of five persons serving as secretaries and presidents and vice presidents was 63.6, and the president and vice president, Zhu Wuhua [2612 3670 5478] and Zhou Zhihong [0711 1807 1347], were already 70 and 80 years old. In 1978 the university chose four young cadres to fill the leadership group, and from outside the university chose two vice presidents, thus lowering the average age of the leadership group to 57.7. The young cadres made up 45 percent of the group. In 1980, the party committee agreed to the reassignment of two presidents who were over 70 to positions as second-level consultants and at the same time adopted the method of combining wide-ranging middle-level cadre recommendations and leadership agency examinations. With the approval of higher authorities, a 66-year-old first-level professor was made president, and two young and vigorous cadres were made first vice president and vice president. Through this readjustment the party and government separated, each doing its own job. In February of this year the party committee held an election and elected a young cadre to be deputy secretary of the party committee. Now the university leadership's average age is 54.5 years old, and young cadres make up 63.7 percent of the leadership group. Graduates of the university also make up 63.7 percent of the group.

The university now has 62 persons who are ministerial- and departmental-level cadres; of this number, 25 were selected after the smashing of the "gang of four," 40 percent are about 45 years old, and most have a college education. In addition, departments are electing chairmen and deputy chairmen in order to strengthen young cadre forces. The party committee has conscientiously studied and observed and sought out reserve forces as the foundation for strengthening leadership in the future.

Shanghai Jiaotong University has also dealt appropriately with the question of arrangements for old cadres and specialists who have been transferred to second-level positions, such as formulating "Several Views on Developing the School Consultant Role," establishing consultant groups, and further developing their role as guides, supervisors, and consultants. The university has designated persons to take care of the study and lives of old cadres who have left or retired.

STATISTICS ON NATIONAL COLLEGE ENTRANCE EXAM APPLICANTS

Beijing GUANGMING RIBAO in Chinese 4 Aug 81 p 1

[Article: "Changes in Students Participating in This Year's National College Entrance Examinations; Increase in Proportion of National Minority Applicants, and Increase in Proportion of Applicants for Science, Engineering, Agriculture, and Medicine Over Last Year"]

[Text] According to materials supplied by relevant sections, this year 2,589,000 persons applied for national college entrance examinations. The proportion of students registering for examinations in science, engineering, agriculture, and medicine and the proportion of students who will graduate from urban middle schools this year is higher than last year. The proportion of domestic national minorities and students of overseas Chinese, Hong Kong-Macao, and Taiwan Province registry has increased over last year.

This year there will be screening in Sichuan, Shaanxi, Gansu, Xinjiang, Shanxi, Hunan, Hubei, Heilongjiang, Jilin, Shandong, Jiangsu, Guangxi, and Henan, with an estimated 3.6 million students participating in the preselection. After the screening, the number who will take the examinations will be 1.25 million.

Applicants by sex: more than 1.7 million males, or 66.3 percent (last year, 65.1 percent), females: 870,000, or 33.7 percent (last year, 34.9 percent.)

Examination category: letters: 680,000 applicants, or 26.4 percent (last year, 33.2 percent); science, engineering, agriculture, and medicine: 1.83 million applicants, or 70.9 percent (last year, 66.8 percent); arts and physical education: 66,00 applicants, or 2.6 percent.

Applicant category: this year's graduates of urban middle schools: 640,000, or 24.9 percent (last year, 20.3 percent); this year's graduates of rural middle schools: 1.14 million, or 44.4 percent (last year, 50.1 percent); intellectual youths who have returned from the countryside, or intellectual youths who have gone to the mountains and villages: 460,000, or 17.8 percent (last year, 17.2 percent); workers, cadres, and soldiers who have transferred to other occupations: over 60,000, or 2.4 percent (last year, 3.4 percent); others: 270,000, or 10.5 percent (last year, 8.7 percent).

Of students participating in the national college entrance examinations, applicants from national minorities number 139,000, or 5.38 percent (last year, 5.2 percent), which is higher than last year's ratio. Young people of overseas Chinese, Hong

Kong-Macao, and Taiwan Province registry number more than 1,700, or .07 percent (last year, .05 percent). In addition, there are over 540 who applied directly to Jinan University and the Overseas Chinese University and who have not participated in the national college entrance examinations. Over 270 of them have already been accepted by these universities. With the addition of these students, over 2,000 young people who are overseas Chinese, or are from Hong Kong-Macao and or Taiwan Province, are participating in the entrance examinations. (Editor's note: The figures given in our report on 2 August were incorrect and are hereby corrected.)

SICHUAN INTELLECTUALS PLAY ROLE IN FOUR MODERNIZATIONS

Chengdu SICHUAN RIBAO in Chinese 11 Jul 81 p 1

[Article: "Role of Intellectuals in Four Modernizations Fully Manifested; 23 Sichuan Professors and Associate Professors Selected for Leadership in Institutions of Higher Learning"]

[Text] Since the Third Plenary Session of the 11th Central Committee of the CCP, 23 professors and associate professors from Sichuan have been chosen as heads or deputy heads of institutes and schools in 15 institutions of higher learning, including Southwest Agricultural College, Chengdu College of Telecommunications Engineering, Chengdu Geological College, and the Sichuan College of Finance.

The 23 professors and associate professors who have been chosen to join the leadership ranks of institutions of higher learning include party members and nonparty members. One-quarter of them are below the age of 55. They have been teaching in institutions of higher learning for a long time and have made important contributions to teaching and research. Professor Liu Mingzhao [0491 2494 6856], who has been made dean of Southwest Agricultural College, has been teaching for nearly 40 years. He has broad knowledge and profound attainments in genetics, biophysics, and biological statistics. He and other faculty and students bred eight superior strains of cotton, making a contribution to the development of cotton production in Sichuan. The "heyu [0678 3768] No 1" corn variety, developed under his guidance, has already spread to a large area in Sichuan. His books "Cultivation" and "Evolution of World Cotton Cultivation" have a very high academic level. After Professor Lo Zhetan [5012 5832 3384] of the Chengdu Geological College graduated in 1942, he then went abroad for further study in the United States in 1948 and earned an M.S. In 1950 he returned to China and has held the positions of deputy chairman and chairman of the Department of Geology at Chong Qing University, of the Department of Drilling at Beijing Petroleum College, and of the Department of Petroleum at Chengdu Geological College. In his scientific research he has not feared difficulty and has dared to explore and be creative, constantly introducing new theories, new techniques, and new methods, and has aspired to surpass advanced world levels. He is one of the first specialists in China to research raising the recovery ratio of oil strata, and he has accumulated a great deal of experience in forcing out oil with foam, CO_2 water flooding, and by heating the oil stratum. He has published many treatises and writings." "On the Sedimentary Features and Reserve Strata of Triassic Oolitic Carbonatite in Ancient Faults of South China Basin" which he helped write, was an exchange contribution to the 25th International Geological Association Conference and was well received by the international journal ECONOMIC GEOGRAPHY. For the past 31 years, Professor Lo Zhetan has made important contributions in training petroleum and geological technical specialists and in developing China's petroleum. Late last year he was made vice dean of Chengdu Geological College.

After these 23 professors and associate professors assumed positions as heads and deputy heads of schools and institutes of higher learning, they worked hard as leaders in teaching and in scientific research as well as organizers of teaching and scientific research, and they played an important role in the teaching, scientific research, and executive management of their schools. After comrades Gao Zhiren [7559 0037 0088] and Yang Feng [2799 7685], professors at Sichuan Agricultural College, were made vice deans, they were really willing to work hard. Under the leadership of the college party committee, they humbly listened to the opinions of the faculty, organized the improvement of the teaching and research work of the entire faculty of the college, and received good marks from the masses. After Professor Gu Deren [7357 1795 0088], who is a specialist in pulse theory, color television, and radio technology, was made vice dean of Chengdu College of Telecommunications Engineering in February of this year, he went to the departments and laboratories to understand the situation and, together with the faculty, he studied and resolved problems in instruction and scientific research. He also made many proposals for building laboratories and readjusting the college's instructional system.

LIMITS TO LITERARY LICENSE LIMNED

Lenin on Literature

Fuzhou FUJIAN RIBAO in Chinese 12 Aug 81 p 4

/Article by Zhang Yuzhong /1728 3768 6945/ entitled: "Dialectics of 'Creative Freedom'"/

/Text/ Of the many articles which have recently been written on the democracy of art and creative freedom, nearly all have cited the following saying by Lenin: "It is beyond dispute that literature is a matter which least lends itself to a mechanical norm, standardization and the dictum of the minority acceding to the majority. It is beyond dispute that this is a matter in which an individual's creative talent and interests must be given free rein."

Thus, Lenin, in making clear in an incisive manner the special laws innate to literature, demands that due respect be accorded the creative nature of art and the esthetic interests of a particular writer in the process of literary creation. It is for this reason that he termed the "literature of the party," which is "a part of the total concern of the proletarian class," as truly "free literature." As is well-known, literature is a reflection of the objective life in society rather than a mechanical copy of it. It is the re-creation of art by making use of the form as a model. This involves the instillation and fusion of such elements as the subjective microcosm of the individual's thinking, his esthetic interests and his emotional style. For this reason, it is only by according him the fullest creative freedom that proletarian literature can be made to flourish. Having been through the 10-year period of Fascist dictatorship imposed by the "gang of four," we should allow writers to exercise their artistic and creative talent to the full in their literary creation.

Truth, however, has its limits. The overstepping of such limits is bound to result in error. What was also said by Lenin in the same piece of writing has seldom been touched upon in recent years. Lenin said, "Not only must we establish a free press, but we are also certain that it will be established. This freedom not only implies shaking off the oppression of the police, but also capitalism and entrenched privileges, and even the individualism of anarchism of the bourgeoise." He pointed out sharply that "to live in society and to live freely and apart from society is an impossibility." The fact is that literature, being the "cogwheel and the screw" of the machinery of the entire proletarian revolution, "simply cannot be an individualistic enterprise divorced from the entire enterprise of the proletarian class." For this reason, it cannot have "absolute freedom" and be free from any restraint. People are fond of mouthing the saying "emancipate the mind and break through forbidden ground." What do these words actually mean? In my opinion, it means emancipation from the ultra-leftist line, from idealism and metaphysics and breaking through the forbidden ground of cultural dictatorship imposed by the "gang of four." We should speak fearlessly and in a forthright manner against such anachronisms. However, we must not break through what is proper and correct the way we break through "forbidden grounds." For instance, we must not only refrain from breaking through the four basic principles which served as the foundation for the establishment of the republic, but must resolutely strive for their implementation. Again, while there is nothing wrong to write about love, any indulgence in writings of a sexual nature will certainly be censured. At the present time, it cannot be denied that there are some comrades in the literary circles who take freedom and democracy to mean freedom from any restraint whatsoever and who consider it permissible to run amok at will. There are those who write articles openly advocating that writers should have the courage to take an "opposite stand" against the party. Articles have been written in favor of egotism, subjectivism and the subconscious and urging writers to refrain from writing about meritorious achievements which are beyond "their own feelings." Some writings are passive in style and pessimistic in tone. They tend to exaggerate particular instances and certain bright and dark sides of society as being representative of the bright and dark sides of the entire prevailing society. Some writings strive to play up what is startling, agonizing and blood-curdling and are partial to the undesirable trend of indulging in plots of a bizarre nature. Furthermore, poems and songs have been written such as "The General and the Soldier" whose aim it is to distort the relationship between the officers and men in the people's army. How can people derive strength and hope from works of this nature? How can such works serve to activate the positive socialist attitude of the people to expedite the implementation of the four modernizations?

If that is meant by "creative freedom," it will, without a doubt, create havoc to the entire cause of the proletarian revolution. It can also be said that a small number of writers, given the absolute freedom they seek, are certain to deprive the masses of their freedom. For this reason, we must at all times and under all circumstances act in accordance with dialectical materialism and avoid going to extremes. While "we should permit the free competition of all types and varieties of literary works," we must call on writers to take a profound view of life and to look at people as they are and produce what is true to the times. It is only thus that we can be sure that proletarian works of literature will bring into full play what was said by Lenin about "serving thousands and tens of thousands of the laboring masses, their country's best interests, their country's power, and their country's future."

Liberal Trend Attacked

Jinan DAZHONG RIBAO in Chinese 31 Aug 81 p 1

[Text] The Literary and Art Union of the province recently met to study and to discuss the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" and Comrade Hu Yaobang's speech at the meeting celebrating the 60th anniversary of the founding of the Chinese Communist Party, to review Chairman Mao's comments on the works of literature and art, to study and discuss the instructions handed down by comrades in leadership positions in the Central Committee of the CCP on literature and art, to discuss ways and means to strengthen and improve upon the party leadership in literature and art, to launch a campaign to criticize works of literature and art in a correct manner and to rectify the liberal trend in literature and art since the Third Plenary Session of the 11th Central Committee of the CCP.

In the course of the discussion, it was unanimously agreed that since the smashing of the "gang of four" and especially since the Third Plenary Session of the 11th Central Committee of the CCP, the situation as regards the battleline of literature and art in our province has been favorable and that there has emerged a new phase of unprecedented activity. However, under the influence of the liberalization tendency of the capitalist class, there has also emerged works which follow the wrong trend and certain mistaken viewpoints which run counter to the four basic principles. Particularly worthy of note is the fact that those engaged in literature and art, by failing to speak out against this erroneous trend and erroneous works in time and in a fearless and forthright manner, have displayed an attitude of laxity and weakness. It was agreed that unless these problems are corrected in time, our literature and art will be in danger of being sidetracked from being dedicated to the service of the people and of socialism.

Those present at the meeting engaged in an animated discussion on ways and means to strengthen and improve upon the party's leadership in literature and art. It was pointed out by some comrades that, under the long-term leadership of the party in literature and art, those engaged in such pursuits have willingly accepted the party leadership, that the works of literature and art have become the "cogwheel and the screw" of the entire revolution, that Leninism and the thought of Mao Zedong have always been the guiding thought in the work of revolutionary literature and art, that all the achievements in literature and art have resulted from strong and effective party leadership and that there can be no socialist literature and art in the absence of party leadership. Note was also taken that since the smashing of the "gang of four" and especially since the Third Plenary Session of the 11th Central Committee of the CCP, the flourishing state of literature and art was made possible by the leadership in hewing to the correct political line of the party. At the present time, there has appeared a liberalization tendency among those engaged in literature and art who seek to weaken and to shake off party leadership. This cannot be tolerated. In the past, due to the damage done by the "gang of four" and certain policy errors committed by the party in exercising its leadership, some damage was done to the entire field of literature and art. That, however, cannot be used as justification for shaking off the correct leadership of the party. Since the Third Plenary Session of the 11th Central Committee of the CCP, the Central Committee of the CCP has pursued a correct political line. In the works of literature and art, the party has clearly pointed to the direction of "dual endeavors," resolutely implemented the "two hundred" policy and the "three don'ts" principle, directed much attention and given due respect to the works of writers and artists, provided leadership to literature and art according to the regulatory laws pertaining to literary and artistic works, liberated to the largest possible extent the productive potential of literature and art, given full impetus to and brought into full play the positive attitude of those engaged in literature and art and lent great support to large numbers of those engaged in literary and artistic work. It is incumbent upon those engaged in literature and art to submit willingly to party leadership and the guidance of the party's political line, adhere strictly to the four basic principles, direct their efforts toward the production of a larger volume of literary and artistic works that are in tune with the spirit of the times, and heighten the enthusiasm of the people for socialist development.

In the course of the discussion, it was pointed out that there exists among the literary and art circles an undesirable practice, namely, the resentment of criticism and the dismissal of all criticism as an "attack." As a result, all literary and artistic reviews dwell on what is good and remain silent on what is bad and indulge in flattery without regard for principles. If this abnormal situation is not corrected, it will not only hamper the adoption of the correct view of the world on the part of writers and artists, but will also be prejudicial to the development and blossoming of literature and art as well. We must use criticism of literature and art as a weapon to set a method for criticism and we must give consideration to the effects of such criticism. We must not, under any circumstance, repeat the "leftist" mistakes of the past. The method of criticism characterized by the practice of giving people derogatory names indiscriminately, of launching an assault at will, of inflating minor matters into serious offenses to incriminate a person, of launching an attack without reason just for a moment's gratification, and of waging merciless struggles and cruel attacks can only do harm to our comrades without helping to resolve ideological problems. It was agreed that in criticizing literature and art, we must be mindful of certain demarcation lines, namely, the demarcation between academic and political problems, the demarcation between the influence exerted by a momentary lapse in correct thinking and the influence exerted by reactionary thought, the demarcation between the contradictions among the people themselves and the contradictions between the enemy and ourselves, and the demarcation between a temporary lapse of understanding and the stubborn persistence in holding on to one's errors. All problems relating to ideology and to contradictions among the people themselves should, for the sake of unity, be resolved in a new spirit of unity and on a new basis following a period of criticism and struggle.

During the discussion, the participants also engaged in a spirited exchange of views on how to prevent and to overcome the laxity and weaknesses of leadership in literature and art, and how to develop young and middle-aged writers.

Writers Must Serve Masses

Beijing RENMIN RIBAO in Chinese 16 Sep 81 p 5

[Article by Ma Weian [7456 3956 1344] entitled "Writers Must Listen to the Opinions of the Masses"]

[Text] From its first draft to its formal adoption, the "Resolution on Certain Questions in the History of Our Party Since the Founding of the Republic of China" took a year and three months to come into being. As many as 7 drafts were submitted at different times to various bodies for their joint discussion. This "Resolution" is realistic, scientific and based on what is true. The entire process of its drafting was characterized by adherence to the truth. This process made clear that the truth can be arrived at by hewing to the line and by culling the collective wisdom of the masses.

This has served to pose a question: If it is fitting to submit this important party resolution repeatedly to those inside and outside the party for their opinion, should not writers also pay more heed to the opinions of the masses?

Our literature is dedicated to the service of the people and the socialist cause. A literary work is a reflection of the writer's views on life in society. Whether or not this reflection is correct and profound is something on which the masses who constitute society have every right to express their opinions. Being the parties for whom literary and artistic works are created, the masses naturally have the full right to pass judgment on their merits and on whether or not they are appreciated in the light of their standard of acceptance. It was Comrade Zhou Enlai who said that "A work of art is subject to the approval of the people, and it has value only insofar as it is appreciated by the people."

Perhaps some comrades fear that since a literary creation is not the same as a political resolution, to listen to too many points of view would tend to cramp a writer's personal style. Although this fear is not entirely without justification, it is necessary to look at it analytically.

A literary creation must, of course, bear the stamp of a writer's style. Whether it is distinctive and multi-faceted is an important gauge as to whether or not the literature of a certain period is flourishing and mature. The absence of a variety of styles in the works of authors is an indication of a literary decline. However, an author should not take the heeding of the opinions of the masses to mean the hampering of his literary style. Listening to the opinions of the masses does not mean giving it to the masses. After having heard the opinions of the masses, an author should analyze what is correct, what should be taken into account, and what should be kept for reference purposes. After having accepted and absorbed the opinions of the masses, a writer has still to decide what changes he should make. On the basis of his personality and style, a writer has still to cull from and to assimilate the best opinions of the masses and to decide how they may be reflected in his work. He must keep faith with the artistic structure of his entire work rather than to make a change here and a change there in deference to a particular opinion as a matter of form. Listening to and digesting and assimilating the opinions of the masses will not cause a writer to lose his personal style, just as people eating the same food will not have the same weight, the same type of face, and especially the same personalities.

There are other comrades who contend that writers and artists should retain their "courage" and self-respect. Others even go so far as to make the statement in public that "the secret of my success lies in my being true to my own feelings. I am what I am. I do not listen to the advice of my friends and I do not allow myself to be swayed."

In actual human society, there is no place for a loner who refuses "to be swayed by others." Those who claim that they are not "swayed by others" have, in fact, already been "swayed" by others. Not only writers, but also all revolutionaries, should be true to their own feelings and refrain from insincere utterances. The question is whether one's feelings are healthy and correct and whether utterances made in sincerity have any validity. How do we draw the boundary line between isolating oneself from the masses, the comrades and friends on the one side and individualism and subjectivism on the other? While it is true that writers and artists should have their own pursuits and their own personalities, they should not set themselves up in opposition to the masses and without regard for their needs. Self-respect also entails respect for the masses. To show no respect for the masses is to be guilty of egotism. In his artistic pursuit, a writer should proceed in the general direction that responds to and meets the needs of the masses. To pursue a goal that is irrelevant to the needs of the masses is to run into a blind alley. Respect for the opinions of the masses is a discipline which should be cultivated by all revolutionaries. What is more, the masses are not all committed to the denial of a writer's individual pursuits. Is it not an asset to artistic creation when one's pursuit receives the welcome and support of the masses? The central idea embodied in Mao Zedong's literary works represents the merging of literature with the people and the masses of the time. It is absolutely necessary that those engaged in literary work should find a clearcut solution to the problem of the relationship between themselves and the masses. It was Gorki who said that "It is when a writer is deeply aware of the flesh and blood kinship between himself and the people that he comes to acquire beauty and strength. He must seek what has yet to be found, and look for new words and phrases, new rhythms, new forms and new designs. A poet is an echo of the world, and not merely of his own soul."

Those who indulge in writings which expose the dark side of life within the party and society should in particular go into the masses and listen to their opinions. The purpose of exposing the dark side is to correct what needs to be corrected, and not merely to lay them bare just to satisfy one's whim of the moment. By listening to the opinions of the masses, a writer can make his work more precise and profound and avoid being one-sided. The achievement of the above is all to the good. Writers should imbue themselves with the spirit of a high degree of responsibility toward the party and the people and avoid being over-confident. Over-confidence is a form of superstition. Our suggestion is that writers should have confidence in the masses while retaining their own self-respect. Undesirable as it is to be lacking in self-confidence, self-confidence to the exclusion of everything else will lead to serious errors. Writers should listen not only to the critical remarks of the masses, but also those from a variety of sources rather than the opinions of one particular segment and one particular group of people. They should avoid being arrogant. Criticism and self-criticism provide the motive force that enables us to develop our endeavors. We should use criticism and self-criticism as a weapon to overcome various kinds of erroneous tendencies. At the present time, we must in particular direct our criticism in a stern and forthright manner and wage an effective struggle against the prevailing tendency in society to sidetrack socialism, to shake off party leadership and to advocate for capitalistic liberalization. Literary criticism serves to restore order and to establish the correct attitude toward criticism and to develop literary criticism according to the Marxist mold.

It was pointed out in the "Resolution" that "following the basic completion of the inception of socialism, the major contradiction that remains to be resolved is the contradiction between the increasing demands made by the people in a materialistic civilization and the productive capacity of a backward society." We must achieve a heightened understanding of the need to relate the problem of getting writers to listen to the opinions of the masses to the major contradictions in our socialist society. The purpose of material production is to improve the economic life of the people, while spiritual production merely serves to satisfy their cultural and artistic needs. By paying more attention to the opinions of the masses regarding their work, writers cannot but help to resolve this major contradiction. It is our sincere hope that writers and artists will address themselves to this problem and help to find a gradual solution through their efforts.

COUNTRYSIDE AS SUBJECT FOR CREATIVE WRITING DISCUSSED

Beijing RENMIN RIBAO in Chinese 16 Sep 81 p 5

[Article by Zhou Weizhi [0719 1550 1492]: "A Great Future for Writing on Rural Themes"]

[Text] Summary: In the past 2 years, some well-received creative works with rural themes have been produced. We must recognize the importance of these creative works in view of the important role played by peasants in our long revolutionary struggle and in the four modernizations. We must carefully sum up their experiences, discover their special features, including their national and mass styles and their methods of expression, and produce more good works for the entertainment of 800 million peasants. We must conscientiously implement the "200" policy and continue to improve the quality of the works so that literature and art can serve the people and socialism more effectively.

In the first 2 years following the downfall of the "gang of four," some writers who were familiar with rural life produced artistic works portraying rural scenes with certain success. However, because of the limitation of the realities of life in the countryside and some other factors, not many of these works were of a high level and really able to generate the expected appeal. With the implementation of rural economic policies after the Third Plenary Session of the 11th party Central Committee, the situation in the countryside has greatly improved and many writers and artists have turned their attention to rural areas. Those writers who had long been there were further inspired, and in the past 2 years some creative works with rural themes have been warmly welcomed by the broad masses of peasants and city dwellers. In such circumstances and with the gradually enlarged scope of literary and artistic creation, the question of using rural themes in writing has further aroused the attention of the broad masses as well as people in literary and art circles. Here are my personal observations on this question:

1. We must appreciate the importance of creative works with rural themes in view of the significant role played by the peasants in our long revolutionary struggle and in the four modernizations.

In China, it has long been an established fact that 80-90 percent of the population are peasants. During the democratic revolution, our party learned the truth of the saying that "the basic problem of the Chinese revolution is the problem of the peasants" only after many reverses and failures. It was on the basis of such knowledge that our party, under the leadership of Comrade Mao Zdeong, could lead the Chinese revolution, establishing rural revolutionary bases, using the countryside to surround the cities, and finally seizing political power throughout the country.

China has undergone great developments and many changes during the 30 years since the founding of the people's republic. However, there are still 800 million peasants among our 1 billion population, and the rural economy still has a strong bearing on the entire social life and the progress of the four modernizations. Practice has proved that in undertaking any part of our four modernizations program, we must consider the present situation of the peasants and the rural economy. We must also fully assess the needs of the peasants and consider the methods to satisfy these needs before we can achieve any spectacular success; otherwise, we will commit errors and even fail to accomplish anything. Cultural advancement, as a component of the four modernizations, should likewise proceed from the hard fact that there are 800 million peasants among our 1 billion population, and we must satisfy the daily growing needs of these peasants' cultural life before we can accomplish anything. It is unthinkable for us to talk glibly about thriving literature and art without giving any thought to rural themes.

Our stress on the importance of rural themes does not mean that we are advocates of the "theory that subject matter decides everything." The evaluation of literary works can be decided only on their ideological and artistic quality instead of on the subject matter chosen. But there is a difference between important and unimportant subjects, after all. In choosing the subject matter, the writer should certainly think of the interests of the revolution, because the relative importance and urgency of different aspects should be compared before the final choice is made.

2. We must strive to portray the lifestyle and destiny of the peasants and present their different images. This is our fine literary and artistic tradition which must be cherished, continued and developed.

The development of our revolution and construction began with the solution of the peasants' problems; our new literary and art movement should likewise begin with the portrayal of rural life. Many writers from Lu Xun and Mao Dun on down to the fine scholars of the present age have carried forward the fine tradition with great success, and this tradition has been based on the important place occupied by the peasants in our country's social life as well as the close relationship between our party and the peasantry. For a certain period beginning in the late 1950's, leftist mistakes produced very unpleasant effects on agricultural production and the peasants' livelihood. In the early 1960's, the unjust repudiation of the "the theory of middle characters" and "the theory of the deepening of realism" was a setback for some writers devoted to the portrayal of various typical images in rural life according to the requirements of realism. The perverse action of Lin Biao and Jiang Qing during the 10 years of upheaval in particular further disrupted the close relationship formed over a long period of revolution and construction between the party and the peasants, with the result that many writers, proficient in depicting rural life, became victims of persecution and attacks. They lost their right to creative writing, and the growth of the traditional revolutionary literature and art, which was good at depicting rural life, was checked or even strangled.

The implementation of the two documents concerning rural economy in the new period, the redress of grievances on the agricultural question and the successful handling of the problem of China's countryside with 800 million peasants have given a new life to creative writing on rural themes. We should have confidence and mettle not only in the use of rural themes in presenting in-depth descriptions of how our peasants in different historical stages have experienced various difficulties and setbacks and have finally embarked on the road of successful development, but also in the production of more good works in various forms to add new chapters to our glorious history. We believe that as long as we firmly adhere to the four basic principles, the "dual purpose" orientation and the "200" principle of the party in literature and art; resolutely emanicipate our minds, and continue to go deep into the realities of life to observe, experience, analyze and study all people and all vivid forms of life as well as the different forms of struggle in the countryside, we can certainly continue to create more and better works with rural themes.

3. We should fully affirm and carefully cherish the fine start as well as the achievements already gained in creative writing on rural themes. All this will serve as the starting point for us to continue our march and our ascent.

It is a gratifying sight now that a number of budding talents adept at depicting rural life have emerged. The large varieties of themes, the novelty of their contents, the in-depth expression of ideas and the new methods of presentation have combined to produce a magnetic power. The movies "A Family Full of Joy" and "Laughter at Moonlight Bay"; the documentary films "They Are Doing Well" and "Ducks Turned Treasure"; the dramas "Luofengtai [Wind Terrace]," "Zhao, Qian, Sun and Li," "Decorated with Lanterns and Streamers"; the operas "Niu Duoxi in a Sedan Chair" and "Hard to See a Full Moon"--all of which have won awards from the Department of Culture--are representative works.

I would like to talk about some experiences which deserve to be summed up in the light of the success of the above movies, dramas and other creative works. My views are as follows:

First, proceeding from the continued development of agricultural production and the fast changing appearance of the countryside, including the change in rural life since the Third Plenary Session of the 11th Party Central Committee, these works have shown how the hundreds of millions of peasants, under the party's leadership, have once again become masters of their own destiny in a historical change, and how the countryside will continue to flourish for a long time to come through the description of the present rural life. This is the first salient feature of creative works with rural themes in recent years.

The situation in the countryside has changed mainly because of the strong vitality demonstrated by the party's rural policies. Besides emancipating the peasants from the spiritual fetters of the leftist policies of the past, these rural policies also called on the peasants to act as masters of their own destiny, to devote their talents and energy to productive labor, and to show a strong determination in building a new world. This is the impression we got from the drama "Luofengtai." Here the contradictions are focused on the election of a production team leader, but the value of the drama is that instead of confining himself to the election, the writer also depicts the "old obstacles" as the aftermath of the leftist policies over many years against a background of fresh vitality brought forth by the Third Plenary Session, and he then proceeds to show the difference between the two destinies of all the peasants in Luofengtai. "Xu Mao and His Daughters" is a bold portrayal of people's destiny, and through the change of destiny shows the reform of social life. This new development in creative writing has prompted the revival of revolutionary realism. This novel has already been made into a movie and a drama to be shown on the screen and the stage. We believe that some other good novels, such as "Chen Huansheng Goes to Town," "At the Country Fair" and so forth will also attract the attention of movie drama producers and will someday find their way to the screen and the stage.

Second, rural themes used in movies and theatrical works, as in literary creation, stress the artistic portrayal of people as the central task and in a typical way. These works depict the changes in the countryside and in the people's spiritual outlook after the implementation of the party Central Committee's policies. However, instead of the stereotyped method of "illustration with diagrams," real life, stirring episodes and vivid dialogues are used to portray the characters and their personal traits; and their images, thus portrayed, show the special features of the age as well as the new relationships among the people. Such are the merits of the movies "A House Full of Joy," "Laughter at Moonlight Bay" and other prize-winning works. There are also some works with unique themes and new methods of portraying characters.

Third, some of these movies and theatrical works are written in the form of comedy. This is a big improvement and a departure from the old methods of portraying tragic scenes. Just as the playwrights themselves said, the use of the new method is possible only because of the tremendous change in the peasants' life and in their spiritual outlook, which has impressed and educated the writers. From this, we can see that if we continue to go deep into the realities of life and thus draw our inspiration and strength from the people's life experiences, it will help us not only remold our world outlook but also improve our artistic creation.

Here, we have touched on the question of exploration and innovation of methods and forms of expression in creative works with rural themes. In order that movies and other theatrical works may be more suitable for depicting new life experiences and for the peasant audiences of different cultural levels and different tastes, we must be sure that our artistic works meet the requirements of today's audiences, particularly the young audiences, and continue to develop their good taste by producing fine works and bringing up new talents.

All artistic forms and methods of expression should constantly change along with the devlopments of the age, the evolution of lifestyle, the progress of science and technology, and the change in people's tastes. Rural life, the peasants' way of thinking and lifestyle, and the relationships among people have all undergone great changes nowadays. For all artistic forms, including national forms (such as traditional opera) and imported forms (such as movie and drama), there is the question of how to cater to the taste of the rural audience more effectively. Therefore, on the basis of inheriting the national tradition, our writers and artists should look further for the forms and methods of expression according to the national and mass styles before they can keep up with the progress of the age. For example, traditional opera is originally a national heritage welcomed by the broad masses of peasants. However, it has to be constantly upgraded instead of remaining at the same old level. In movie and drama, great progress has been made in adapting to the national style after more than half a century's efforts, and by now, they have become part of our national culture. However, further progress is still necessary in achieving national and mass styles for the movies and dramas intended for the rural audiences, in order that they can be completely understood and thoroughly enjoyed by the 800 million peasants. If the peasants do not understand the movies or dramas and refuse to see them, these movies or dramas will not be of any educational value, and the goal of satisfying the peasants' cultural needs cannot be attained.

4. We should firmly uphold the principle of "letting a hundred flowers blossom," provide correct guidance on the use of rural themes in creative works, and actively help solve the many problems relating to the enrichment of creative works. Proceeding from the realities of life, we should also adhere to the principle of revolutionary realism. The key to further improving and developing creative works with rural themes is to constantly improve the quality of such works without reducing their output.

First, we should improve and strengthen our leadership over creative works. A good start has already been made in the production of movies and dramas depicting the realities of rural life in the new historical period. Now is the time to follow up by further enriching creative work and improving its quality. This calls for planning and organization. There should be more works of really high quality before there can be a general improvement; and the production of more high-quality works requires time, support and favorable conditions.

As to the guiding ideology in creative works, there should be a general agreement on the way to portray positive characters and new socialist people. In his "congratulatory message" to the Fourth Congress of Chinese Writers and Artists, Comrade Deng Xiaoping said: "In literature and art, we should make greater efforts and achieve greater success in portraying and training new socialist people. We should create pioneers of the four modernizations and show that they have revolutionary ideals and scientific approach; lofty sentiments and creative ability; a broad vision and a brand new mental outlook of seeking truth from facts. Through the images of these new people, we should arouse the socialist enthusiasm of the broad masses and encourage them in their historical task of pioneering for the four modernizations."

To accomplish the task of creating new socialist people, we should first have a better understanding of these people in the countryside. They should be from a new generation of peasants with advanced ideas, high integrity and good workstyle. They can also be those typical persons who have been backward and are now advanced; or those who formerly took the wrong path but, after a process of education and remolding, have turned over a new leaf and joined the ranks of the new generation in the countryside. The march of time is endless; the new life offers unlimited opportunities; and people's thinking changes constantly. Therefore, our understanding of the "new people" cannot be always based on the same standard, and it would be an even more serious mistake for us to idolize the new socialist people or portray them as saints born perfect. In portraying peasants, it is certainly wrong to ignore the main aspect by omitting the good points reflecting the new ideology which they embody. At the same time, however, it would be unrealistic to ignore the defects which have been left over from the old society and picked up by many, and then portray these people as being "all perfect." By creating typical characters of flesh and blood, we can either use the ideology and sentiments of advanced characters to influence people so as to keep the wheels of history turning in its advance, or sum up certain experiences and draw lessons from some of these typical characters so that people in general will become more intelligent and more capable of carrying out innovation. We must not create characters who tend to become formalized and generalized and are so pale and weak that people become tired of seeing them. Such characters may even spoil people's appetite for creative works with rural themes.

Second, in enriching creative works with rural themes, we should also bear in mind two other considerations: On the one hand, some people do not care to write on rural themes because there is not much to write about, because they are afraid that the rural policies may change again and therefore they dare not write, or because movies and theatrical works with rural themes may not be able to attract a large audience in the cities, and therefore they do not want to write. These views should be clarified, because they are certainly one-sided. On the other hand, we must uphold the principle of letting a hundred flowers blossom and strive for more varieties of themes, forms and styles, so that the works may not become monotonous. We should also guard against the tendency toward mass production at the expense of quality.

Lenin said: "Great political reforms in history have always gone a long way before they could be digested." The same applies to politics and literary and artistic creation. At present, our countryside is undergoing a great reform, and there is a process of digestion, understanding and learning for our writers, directors and actors. Therefore, we cannot urge the writers and artists to produce a great deal of high-quality works quickly. However, people must first eat before they can have anything to digest. Similarly, we must be thoroughly familiar with the realities of life and with people and then go through the process of thinking, refining and generalizing before we can proceed with creative works. Our writers must not at any time or under any circumstance forget to firmly uphold the principle of proceeding from the realities of life and the principle of realism in creative work.

Material and spiritual lives in our country are now improving rapidly along with the socialist modernization, and the 800 million peasants are earnestly hoping for a rich cultural life with more entertainment from high-quality creative works. We must discard the former narrow concept of cultural work in the countryside, emancipate our minds, and gradually expand the scope of our cultural service to the countryside in different forms and styles. We should think of the peasants whenever we are engaged in any type of cultural work. Through the efforts of the writers and artists who have gone deep into the realities of life and artistic practice, not only creative works with rural themes, but also our task of serving the countryside as a whole will take a gigantic step forward!

"This article is composed from the speeches at a symposium held by the Department of Culture on creative work with rural themes.)

SOCIOLOGICAL, EDUCATION AND CULTURE

COMMEMORATION OF PEOPLE'S EDUCATION UNDER SOCIALISM

Beijing JIAOYU YANJIU [RESEARCH IN EDUCATION] in Chinese No 7, Jul 81, pp 2-7

[Article by Zhang Jian [1728 0256]: "The Establishment of the People's Education: A Great Cause Under the Leadership of the Party--In Commemoration of the 60th Anniversary of the Founding of the Party"]

[Text] The great, accurate and glorious CCP was born 60 years ago. Our party led the Chinese people in their great revolutionary struggle and arduous undertakings. On the foundation of the victorious conclusion of the New People's Democartic revolution, we are now advancing on the new long march of the socialist revolution and four modernizations, striving to build a modern, highly democratic, highly cultured, powerful socialist state. Our party integrated the basic principles of Marxism-Leninism with the realities of the Chinese revolution and in the space of 60 years--a very short period in the long process of human history--not only created a socialist economy that works for the welfare of the people, based on the public ownership of the means of production and the elimination of all exploitation, established a people's democratic dictatorship in which the people are masters of their own house and a socialist political regime in which all oppression has been abolished. We also established the great undertaking of educating the people, abolishing ignorance, stimulating the people's intelligence and nurturing men of talent and skills, thus laying the initial foundation for building up a socialist material civilization and a spiritual culture.

From the May 4 Movement to the first revolutionary civil war, our party's proletarian revolutionaries of the older generation fully realized that the people's educational undertakings are a powerful and effective means to transform the old China and build a new society, and that schools are the important front for the education of the people and the nurturing of cadres. The great leader of the party and cofounder of the party, Mao Zedong, was not only a great proletarian revolutionary, strategist, philosopher and poet, but also a great educator of the people. Prior to the May 4 Movement, when he was studying at the Hunan First Normal College, he pioneered night schools for workers in Changsha, organized workers to acquire elementary education and propagated revolutionary ideas for the salvation of the country and the people. He later established the Hunan Self-Study University and organized young students to study revolutionary theories. At the time of the first revolutionary civil war, he instituted peasant study groups at Guangzhou, Wuhan and at the seat of the central authority to train a core contingent of cadres for the revolutionary movement of the peasantry. Comrade Li Dazhao [2621 1129 6856], one of the founders of our party, propagated Marxism at Beijing University, guiding young students toward the revolution. Comrade Zhou Enlai [0719 1869 0171] once hald the position of head of the Political Department of the Huangpu Military Academy, nurturing several eminent military men. Comrade Liu Shaoqui [0491 1421 1142] established workers' clubs and night schools at the Anyuan coal mines, arousing the workers to rise in revolt. Comrade Qu Qiubai [4234 4428 4101] was one of the men who established Shanghai University, nurturing revolutionary cadres, etc., etc. These are activities of some of the revolutionaries of the older generation on the educational front as they were engaged in nurturing revolutionary cadres.

In the second revolutionary civil war, the war of resistance against Japan and the war of liberation, further favorable conditions were created for the education of the people due to the fact that the party led the people in arming the revolution and in establishing revolutionary base areas.

In order to develop the education of children, youths and the masses, Lenin elementary schools, various night schools and literacy classes were instituted all over the central soviet districts, and the soldiers of the Red Army were also organized for the study of politics, military science and general education. At that time the rate of children of school age in schools exceeded that rate in areas under the rule of the Kuomintang. Exhilerating results were achieved in wiping out illiteracy among youths and adults. The war of resistance against Japan and the war of liberation, with their continuous expansion and development of base areas, saw not only the establishment of anti-Japanese elementary schools, popular night schools and literacy classes, but also of ordinary middle schools and normal colleges. In his article, "The United Front in Cultural Work," Comrade Mao Zedong pointed out at that time: "In our educational work we must not only have concentrated regular elementary and middle schools, but also dispersed irregular village schools, newspaper reading groups and literacy classes. We must not only have modern schools, but also make use of the old private schools in the villages, which we should reform." This provided the way for a comparatively speedy development of the education of the people.

Whether it was education of cadres, education of children and youths or education of the masses of workers and peasants, all education was carried out under the unified leadership of the party committees at various levels and by a mobilization of forces of various quarters. During the war of resistance against Japan, education in the base areas behind the enemy lines was carried out while at the same time we were engaged in fighting and in production. Particularly in Yenan, it was a way of grasping production in one hand and grasping education in the other hand, making education of the people and nurturing of cadres a strategic task in the fight for nationwide revolutionary victory. The Central Committee of the party instituted and operated the world-famous Anti-Japanese Military and Political College, North Shaanxi Public School, Central Party Academy, the Institute for Marxism-Leninism, Women's University, Yenan University, the Luxun Academy of Literature and Art, the Youth Cadre School, the Bethune Academy of Medicine, the Academy of Natural Sciences, the Academy of Public Administration and various cadre schools. The largest among all the cadre schools was the Anti-Japanese Military and Political College, which in addition to its main campus had 12 branches and in the course of time trained over 100,000 military and political cadres. Many men who had gone through the cadre schools of Yenan or the anti-Japanese base areas later advanced to core positions of leadership on various fronts.

In looking back at the great undertaking of popular education instituted by our party in the Yenan period, the major problems that we solved and the basic experiences that we gained are the following:

1. Determination of a new-democratic educational policy that suited China's specific conditions. This policy conformed exactly to Comrade Mao Zedong's statement in his "On New Democracy," in that it was of a nationalist character, opposed imperialist oppression and stood for the honor and independence of the Chinese nation. At the same time as it took account of the special characteristics of our nation, it also made use of the advanced educational systems of other countries as models. It was scientific and opposed to all feudal and superstitious ideologies. It advocated seeking truth from facts and stood for objective truths and for the unity of theory and practice. It was of a mass character, serving, in the first line, the toiling masses of workers and peasants that constituted over 90 percent of our nation. It made a distinction in degrees between the knowledge of the revolutionary educational cadres and the knowledge of the revolutionary educational masses and again linked these two up with one another. It made a distinction between raising the educational level and popularizing education, and again linked these two up with one another. Because there was at the time an urgent demand for a large contingent of cadres due to the revolutionary war and the establishment of base areas, the party leadership made cadre education the focal point in its undertaking of popular education. In the education of cadres at their posts or education in cadre schools, it became established policy to study as a central task the actual problems of the Chinese revolution and to take the basic principles of Marxism-Leninism as guidelines, doing away with a static and isolated method of studying Marxism-Leninism. The educational policy that Comrade Mao Zedong formulated for the Anti-Japanese Military and Political College was: "Firmly established a correct political orientation, a work style of hard work and plain living and a flexible strategy and flexible tactics." The school spirit was to be: "Be united, alert, earnest and lively." In the light of the war situation and the ideological condition of the students, the Military Affairs Committee of the Central Committee in its "Directive on Rectification of Problems at the Anti-Japanese Military and Political College," pointed out: "All work in the college is directed toward the transformation of the students' mentality; political instruction is the key link." It put forward the following demands directed toward the students: "(1) They shall be taught to grasp Marxism-Leninism and to overcome bourgeois and petty bourgeois mentalities. (2) They shall be taught a sense of discipline and organization and to oppose organizational anarchy and liberalism. (3) They shall be taught to go down to the grassroots in their work and be opposed to underestimating actual work experiences. (4) They shall be taught to draw close to the workers and peasants, be determined to serve the workers and peasants and be opposed to scorning ideas and knowledge of workers and peasants." Practice has proved that all these precepts were in full accord with the objective realities and played an important part in guiding the operation of the cadre schools and the training of revolutionary cadres.

2. Stating the unequivocal aim to train men who are both Red and expert. All cadre schools demanded that their students are themselves mentally with Marxism-Leninism, that the students foster a lofty communist ideal and firm confidence in the certain victory of the revolution, that they acquire an outlook on life of wholeheartedly serving the people, above all the masses of workers and peasants, and acquire the noble character of willingly sacrificing everything for the revolution. The schools

also demanded that all personal study and work must consciously follow the organizational plan. Concrete demands in vocational respects were also made on the students of different cadre schools in view of the special needs of the revolutionary war and of the development of the base areas. For instance, the Anti-Japanese Military and Political College organized its students every term, with different objectives as targets, to study the military ideas of Mao Zedong, to practice fighting at close quarters, night fighting, target shooting, bayonet fighting, grenade throwing, etc., and to master flexible strategies and tactics. The Luxun Academy of Literature and Art proceeded from the cultural needs of the base areas and the interests of the students in organizing the students to study literature, music, fine arts and drama. The Institute for Marxism-Leninism nurtured party cadres with theoretical specialization and organized the students to study systematically the basic principles of Marxism-Leninism. The institute later also established research institutes for history, party history, philosophy, politico-economics, questions of the Chinese revolution and dissemination of education in order to have some of the cadres who prepared for theoretical work to have one field of particular emphasis. The students at the Bethune Academy of Medicine trained for high proficiency in internal medicine and surgery as particularly applicable under the conditions of the revolutionary war.

3. Flexible and diversified educational system and a limited but concise curriculum. Due to the urgent needs of the revolutionary war, the duration of studies at the various cadre schools was rather short, the minimum being several months and the maximum 1 or 2 years. The courses within each school also varied in length depending on the varying conditions of the students and training objectives. Worker and peasant cadres with low levels of general education had to be brought up first of all to at least junior middle school level by supplemental coaching in elementary education before they were admitted to studies of revolutionary theory and to special vocational or professional courses. Some students who originally had been university students were made to engage mainly in self-study and attend classes only as a supplementary way of studying. Orginary students with middle school education, or having reached middle school level through self-study, were mainly to combine classroom studies with self-studies. To take the third class of the Institute for Marxism-Leninism as example, this class consisted mainly of six courses: philosophy (main lecturer Ai Qisi [5336 1142 1835]), political economy (main lecturer Wang Xuewen [3769 1331 2429]), Western revolutionary history (main lecturer Chen Changhao [7115 2490 3185]), Chinese revolutionary history (main lecturer Yang Song [2799 2646]), elements of Marxism-Leninism (main lecturer Wu Liangpint [0702 0081 1627]), foundation of the party (main lecturer Chen Yun [7115 0061]). In addition, comrades in responsible positions in the Central Committee of the party gave reports on specific subjects. For instance, Comrade Mao Zedong's "On New Democracy" was first a report given at the Institute for Marxism-Leninism and only later published in the CHUNGGUO WENHUA [CHINESE CULTURE] of Yenan. Comrade Liu Shaoqi's "How To Be a Good Communist" was also first a report at the Institute for Marxism-Leninism and only later published in JIEFANG [LIBERATION], a Yenan magazine. The lectures by the main lecturers and special lecturers were of a high standard and the content was in general characterized by: (1) Integration of the universal principles of Marxism-Leninism with the realities of the Chinese revolution, explaining the profound in simple terms and with vivid eloquence, blending ancient foreign knowledge with the rich experiences of our revolution. (2) Limited quantity of material but presented in concise form, concentrating on the basic essence of Chinese and foreign knowledge and data, ancient

and modern, and leaving out everything nonessential, making the past serve the present and foreign things serve China. (3) Compilation of the gist of all teaching materials and outlines by the main lecturers personally. In general, the teachers first lectured and then distributed the teaching materials. The courses and the teaching materials were all very much welcomed by the students.

4. Implementation of an instructional principle of linking theory with practice. The teachers were not only to make use of the very rich actual material as the substance of their instructions, but also to raise questions for discussion by the students, aiming such questions at the ideological realities of the students. In his lectures on the establishment of the party, Comrade Chen Yun held one class on "How To Be a Member of the Communist Party" (listed as one of the documents to be studied during the Yenan rectification movement). This course raised such questions as: What are the qualifications of someone joining the Communist Party, will he truly support the party program, observe the party statutes and party discipline, how will he handle conflicts between personal interests and the interests of the revolution, will he be honest and faithful to the party, etc. The students, in integrating these questions and linking them with their own knowledge, were to express their own views. Some party members who were unable to express clearly certain important personal circumstances at the time of joining the party, also took advantage of this opportunity to give supplemental explanations. This "shooting the arrow straight at the target" method of teaching that linked theory and practice, was very effective.

5. To carry out simultaneously study as well as productive work, teachers and students set to work together and studies were carried out diligently and economically. To break the blockade of the Shaanxi-Gansu-Ningxia border region by the Kuomintang, to overcome the economic difficulties and respond to Comrade Mao Zedong's appeal "Everyone to set to work and there will be ample food and clothing," the anti-Japanese base areas launched a great production drive. In these special circumstances the cadre schools all carried out a combination of education and productive work, engaging in studies and productive work simultaneously. Some schools also decided to be self-sufficient in grain for half a year and for most of their vegetable and pork requirements. The students also took part in reclaiming wasteland, cutting firewood and cooking, raising pigs and sheep, spinning and weaving cloth, and other productive work. The students of the Anti-Japanese Military and Political College also undertook the digging of caves and building of school buildings. Comrade Mao Zedong therefore pointed out in his "Direction of the Youth Movement" that the reason for the young students of Yenan becoming models for the youths of the whole nation was that they studied the theories of revolution, researched the principles and methods of fighting in resistance against the Japanese and of achieving the salvation of our country, that they carried out a production movement and reclaimed thousands of acres of wasteland; even Confucius never did anything like this.

6. Respect for teachers and solicitude for students. Educated youths and worker-peasant cadres united as friends. Most of the teachers at the cadre schools of that time were revolutionary cadres in leading positions, some were revolutionary scholars specialized in certain fields and some experts. All these taachers enjoyed the respect and support of the students. The teachers on their part showed solicitude and care for their students, some times like parents for their children. The students at that time were mostly of two kinds: one section were educated youths

from all parts of the country and from abroad who had come to study in pursuit of the revolutionary truth to save their country and their people, and one section were worker-peasant cadres who had participated in the revolutionary struggle or in constructive work in the base areas. The former had a high level of education, but lacked practical experiences; the latter had a high level of education, but lacked practical experiences; the latter had practical experiences, but a low level of education. However, Comrade Mao Zedong taught the educated youths: "Final distinction between revolutionary, nonrevolutionary and counterrevolutionary intellectuals depends on whether they are willing to and actually drawing close together with the masses of workers and peasants." He also taught the worker-peasant cadres that they must exert themselves to acquire an education and study the revolutionary theories, that they should respect and unite with the intellectuals--to rise in revolution. As a consequence there was mutual respect, mutual learning from each other and a friendly unity between the educated youths and the worker-peasant cadres.

2. In the early period after the liberation of the whole country, the Central Committee of the party stated: The educational undertaking of new China is based on the educational system of the old liberated areas, and takes the advanced experiences of Soviet Russian education as a model and adopts certain beneficial ideas from traditional Chinese education. At that time we appropriately took over the operation of the old schools, recovered our educational sovereignty from the hands of the imperialists and, based on the needs of national reconstruction, took in hand the readjustment of departments and faculties of higher education and the reform of teaching. We instituted the study of Marxism-Leninism and Mao Zedong Thought for all teaching personnel, thereby inducing them to undergo a voluntary ideological remolding so as to foster a revolutionary mentality of service to the people.

In reorganizing departments and faculties of higher education, we gave consideration to the needs of national economic construction and first of all vigorously developed education in engineering, science and technology. We not only transformed such famous universities as Qinghua University, Zhejiang University and Shanghai Jiaotong University into multidepartmental engineering and science universities, but established for the first time in China specialized engineering institutes for geology, iron and steel, aviation, petroleum, chemistry, automobile, tractor and civil engineering, and engineering colleges for atomic energy, military armament and other branches of engineering and science for defense needs. Moreover, to meet the needs of scientific research, we also expanded or replenished a series of universities, such as Beijing University, Fudan University, Nanjing University, Nankai University, Jilin University and Hankou University, to become comprehensive liberal arts and science universities. Furthermore, to develop secondary education and to train qualified teachers for our middle schools, we newly established or replenished a series of teacher training colleges, such as Beijing Teachers Training College, Huadong [east China] Teachers Training College and Dongbei [northeast] Teachers Training College. The practical experience during the 30 years since the establishment of our government proved that the readjustment of departments and faculties, based on the requirements of the national construction with its emphasis on strengthening engineering, physical sciences and teachers training was basically correct under the historical conditions of that time and achieved important results. However, it also entailed shortcomings ahd negligence, for instance in separating the science and engineering departments, the science departments of some old institutions were relatively weakened, as were also some departments in the humanities, such as finance, economics, political science and law. This was harmful to the nurturing of highly qualified engineering and technological experts and also harmful to strengthening industry and agriculture as well as the scientific administration of the economy. The large cities with a concentration of high schools should retain a small number of comprehensive universities where such subjects as industry, agriculture, medicine, teacher training, literature and physical science are taught. This would be beneficial for the nurturing of qualified teachers and experts for all kinds of institutes. However, in imitating closely the Soviet model, the comprehensive universities were not retained, which was rather inappropriate, but viewing the overall situation, these shortcomings and negligences are of secondary importance.

In our reform of higher education, we instituted reforms in three directions: (1) In view of the needs of national construction, we established 300 to 400 specialized vocational colleges and turned from the old Chinese way of educating so-called all-round talents to educating specialists. (2) In imitation of the conditions of specialization in Soviet institutions of higher education, we set up our instructional plan, determined the various links in the instructional process (attending classes, responding to questions, class discussions, experiments, fieldwork, examinations and assessment of proficiency, graduation projects, etc., translated Soviet teaching materials and strengthened the links between theory and practice. (3) We established the basic organization for instruction and scientific research--teaching and research organizations (offices) and organized old, middle-aged and young teachers for joint instructional activities and scientific research. As we see it today, it was indeed necessary in view of the actual needs of the socialist planned economic construction, to consider training as training for particular vocations. The defect of this system was that some special training as devised was too narrow, so that after graduation, students were not fully fit for the work for which they were trained. The Soviet plan of instruction, their educational system and instructional materials were in the main good and feasible, judging from the fact that it was adapted to the needs of the 156 engineering projects of that time. The defect of it was that it emphasized unity of all activities and lacked the necessary flexibility. Some of the specialized education was built on too narrow a base of knowledge, it was especially deficient in integrating the Chinese reality.

At the same time as reforming higher education, we submitted ordinary middle and elementary school education to reform and achieved great results, but not without certain shortcomings and faults.

To oversome these shortcomings, we began in 1958 to evolve our own Chinese system. We then emphasized increased instruction in political ideology at the schools so as to nurture men who would be both Red and expert, and had them carry out a combination of education and production work. Engineering colleges would carry out graduation projects that were real projects. At that time Qinghua University was charged with planning the Miyun reservoir near Beijing; 3 universities, Qinghua, Nanjing Engineering University and Tongji, participated in 10 major engineering projects, 1 being the Great Hall of the People in Beijing, and in all these projects great results were achieved. However, under the influence of the leftist ideology, there were too many political activities and pressure of production work at that time. The "Red-expert debate" and the "hauling up the white flag" movements criticized most disturbingly the broad masses of teachers and did great harm to the enthusiasm of the intellectuals. Furthermore, due to the excessive amount of political movements and pressure of production work, the health and the quality of instruction again deteriorated. Between 1961 and 1962, the Ministry of Education, under the guidance of the Central Committee and the State Council and based on the positive and negative experiences of the past, formulated the "Sixty Articles on Higher Education," "Fifty Articles on Middle School Education," and "Forty Articles on Elementary Education." This started our country's education on its own characteristic path. It restored normalcy in educational procedures and as a consequence the health of teachers and students in higher, middle school and elementary education improved and the quality of instruction was raised to a higher level.

From 1966 to 1976, the two counterrevolutionary cliques of Lin Biao and Jiang Qing usurped the party and seized state power; they also did great damage to our educational undertaking. They concocted the reactionary "two appraisals," negated wholesale the eminent achievements in education during the 17 years since the founding of the PRC and brought down on our country's education an unprecedented calamity. Not only were there 1 million university students less and 2 million middle school and vocational school students less than should have been trained, but great harm was done to the broad masses of teachers and students and one whole generation was wasted.

Since 1976 when the "gang of four" was smashed, especially after Comrade Deng Xiaoping assumed charge of scientific and educational work in 1978, the Central Committee and the State Council restored order out of chaos on the educational front, expended great efforts and achieved outstanding results. Especially since the 30 Plenary Session of the 11th CCP Central Committee, our country's educational undertaking, based on a correct distinction of right and wrong on the question of line, effected readjustments, developed and improved the quality of instruction and was extensively suc-essful. All the successful experiences that have been beneficial for preserving party leadership, for letting socialism determine the direction of our school work, for raising the quality of our education and the level of our scientific skills, are now being gradually affirmed and further developed. All mistaken methods that were harmful to maintaining party leadership and to using socialism as the determining factor in running our schools, that obstructed the improvement in the quality of our education and prevented the level of our scientific skills from being improved, will be subjected to our criticism and correction. Mistakes are frequently the forerunners of the correct way, "past experiences, if not forgotten, are guides to the future." Regardless of whether it was a successful experience or a lesson from defeat, all constitute spiritual wealth that we should use fully.

In the course of guiding and establishing the great popular education in the past 60 years, especially in the 31 years since the founding of the PRC, the party has recorded great achievements and has accumulated a great wealth of experiences.

First, the party set up a huge network of popular education. There are now over 1 million full-time universities, middle schools and elementary schools all over the 9.6 million square km of our fatherland, and we have gradually set up a network of popular education where every commune has its complete elementary school, every county a complete middle school and every province an engineering, agricultural, medical university and a teachers training college. The number of students enrolled in full-time schools rose from 25 million before liberation to 210 million, that is more than 7 times. In addition we set up, in the thousands and tens of thousands, night schools, radio schools, television schools, correspondence schools and other after-hours schools for the masses of our workers and peasants. In connection with our economic readjustment, more than 100 million employees and workers are all undergoing further training, and the broad masses of the peasantry are also unfolding a mass campaign for elementary education and for the study of technical skills. The establishment of a huge network of popular education is an important strategic measure by which our country is developing the intellectual of sources and to raising work productivity.

Second, we have initially raised the level of education of the people. Our country has not only wiped out the illiteracy of hundreds of millions of youths and adults, but also has graduated 300 million children and youths from elementary and higher schools, among these 140 million had junior middle school education and over 40 million senior middle school or higher education. All localities are at present vigorously pushing campaigns for the elimination of illiteracy and for after-hours schools for workers and peasants. The educational level of the people is indeed being gradually raised.

Third, our educational undertaking is in a planned way training qualified personnel for the national economy and social development. In the 31 years since the founding of the PRC, the various institutions of higher education in our country have trained and graduated over 3 million, and the polytechnic schools over 5 million, adding the skilled personnel trained in after-hours schools of various degrees, our country has already a contingent of Red and expert intellectuals of the working class of upward of 10 million. Comrade Chen Yun pointed out: "The present contingent of technical personnel form the foundation of our intellectual strength. The technological level of the seventies and eighties must be derived from the technological level of the backbone personnel of the fifties and sixties." The upward of 10 million Red and expert specialists that we have trained within the last 31 years are certainly an important achievement of our country's popular educational undertaking.

Fourth, we have drawn up an educational policy of nurturing socialist new men who are Red, expert and of good health. It means that those who have received education shall have developed in all respects, morally, intellectually and physically, and have socialist consciousness and be well educated workers (including physical and mental workers). It also means that our youths shall resolve to become men with ideals, with a sense of morality, with knowledge and physical strength who can make a contribution to their people, their fatherland and mankind. The proletarian revolutionaries of the older generation such as Mao Zedong and Zhou Enlai and the leading comrades in the Central Committee who are now in charge of our country's education, Deng Xiaoping, Hu Yaobang [5170 5069 6721] and others, all demand that we nurture the successors to the revolutionary proletarian cause, the new socialist men and new force to work for the four modernizations. They all demand that our men must have socialist consciousness (be Red) as well as proficient in mastering modern science and culture (be experts). They must be able to perform physical as well as mental work. They must be qualified specialists and workers in industry and agriculture who are healthy in body and spirit as well as clever, capable and experienced. In this way we shall proceed from the actual conditions of China and enrich and transform into reality the educational doctrines that are fully developed in Marxism.

Fifth, we have drawn up a correct policy toward the intellectuals and we shall rely on the teachers for the effective operation of the schools. In drafting the Central Committee's resolution for "Attracting and Accepting a Large Number of Intellectuals," Comrade Mao Zedong pointed out as far back as in the early period of the anti-Japanese war: "Victory in the revolution is not possible without the participation of intellectuals." In the early period after liberation of the whole country, our policy toward teachers, staff and workers in the old schools formerly under Kuomintang rule was one of retaining everybody in their original positions and at their original salaries and wages (excepting only individual counterrevolutionary elements). We strove to unite with them and educate them to serve in the cause of popular education of new China. Apart from the former president of Beijing University, Hu Shi [5170 6684], and some other individual reactionaries who fled to Taiwan, over 90 percent of the teaching staff joined the contingent of teachers, employees and workers of new China. Later, Comrades Zhou Enlai, Deng Xiaoping and Peng Zhen [1756 4176] personally spoke to the teachers of the schools in Beijing and Tianjin, encouraging them to study revolutionary theories and voluntarily remold their thinking. In 1957 in the overextension of the antirightist movement, our party committed leftist mistakes in its policies toward intellectuals and many teachers suffered criticism, and were labeled bourgeois intellectuals. In our decade of calamity, the two counterrevolutionary cliques of Lin Biao and Jiang Qing again indiscriminately persecuted many teachers, considering them hostile to the dictatorship of the proletariat. After smashing the "gang of four," and particularly after the 30 Plenary Session of the 11th CCP Central Committee, the party's Central Committee summed up the positive and negative experiences of the 31 years since the founding of the PRC and clarified a step further that the intellectuals and school teachers are a part of the working class. The party not only politically effected rehabilitation in the cases of miscarriage of justice, but socially promoted the customs of respect for teachers and solicitude for students and furthermore gradually improved their material livelihood. At present there are 10 percent of the total number of 100 million staff and workers in the whole country (this includes those in the public owned system and the collective owned system). They are now working hard in nurturing socialist new men for our fatherland.

Sixth, we carried out a policy of "walking on two legs," with schools run by the state and by the masses, schools run by the departments of education and by departments of enterprises, schools run by the central government and by the local authorities, with simultaneously full-time systems, half-work (including agricultural work) half-study systems and after-hours education, to arouse fully the enthusiasm of all quarters in operating schools. Due to the fact that we are a gib country of 1 billion people including 800 million peasants, we are also a poor country, economically and culturally very backward. In those days in the old liberated areas, we had schools operated simultaneously by the state and by the masses. After liberation of the whole country, we still advocated that the state and the masses should run schools simultaneously, as we were developing the ordinary middle school and elementary school education. During our decade of calamity, due to the sabotage by the two counterrevolutionary cliques of Lin Biao and Jiang Qing, the majority of middle schools and elementary schools in the countryside were depleted of students, the students were sent to do manual agricultural labor and the schools were left to be run by local people. This was harmful to the development and consolidation of the cause of education. According to the provisions of the 60 articles concerning agricultural communes passed by the 30 Plenary Session of the 11th CCP

Central Committee, the middle schools in the villages are to be operated completely by the state and the elementary schools primarily by the state. Operation of schools by the masses means mainly that they are to help build school buildings, replenish equipment, such as desks and chairs, but not that all questions are to be solved by the masses. Especially the salaries and welfare benefits for teachers in middle schools and elementary schools which will in the future, depending on the development of production, gradually become a responsibility of the state, to the full amount of to a large part of it. In developing higher education, especially the secondary vocational and technical schools, we also intend to bring into full play the initiative of the central authorities and business departments, factories, mines and enterprises of the provinces and municipalities, and, based on the needs of the national economy and social development, effectively reform in a planned way the higher and medium grade of the educational structure, and gradually increase the proportion of secondary vocational and technical education so that education can be more effectively adapted to the needs of the four modernizations.

Seventh, in view of the imbalance between the economic and cultural conditions of various localities, the quantitative and qualitative development of education at whatever level and of whatever kind will pose different demands according to local systems having to fit local conditions; we must not apply "one knife to cut everything the same way." In general, we can distinguish: (1) In large, medium and small cities and in a small number of economically and culturally developed suburbs of large cities, not only is elementary education widely extant, but junior middle school education is almost universally extant and senior middle school education is rapidly developing. (2) In the villages in general and in the small cities and townships, elementary school education is not yet completely available, very few have junior middle schools and even fewer have senior middle schools. (3) In the mountainous regions, border areas and the districts inhabited by national minorities, very few go to elementary schools and these areas are culturally very backward. In the development of education in these three kinds of areas, one has to fit the speed of development and the operational pattern of schooling to the local conditions and must not impose uniformity.

Eighth, the leadership of the party in the educational undertaking demands of all schools at all levels primarily that they implement and carry out the correct line laid down by the party, that they uphold the four basic principles, carry on vigorously the work of political ideological education and furthermore that they mobilize all social forces to take an interest in and support the education of our youths. We are determined constantly to raise the socialist awareness of the broad masses of teachers to have them educate our children and youths in patriotism, love of the people, love of work, love of science and love and care for all public property. We intend to launch movements to learn from Lei Feng [7191 6913] and foster new customs. Let us integrate tge movements of the "three good things" (good study, good work, good body), "five considerations" (consider culture, good conduct, hygiene, orderliness and ethics) and the "four beautiful things" (beauty of the mind, of language, of behavior and environment) in order to nurture children and youths with communist morals and character and a revolutionary outlook of life.

In the past 60 years, our party led and established the great popular educational undertaking, achieved great successes and gained rich experiences. Under the new historical conditions of building a powerful modern socialist state, our party, based on the historical experiences of the past, will carry forward the excellent traditions of seeking truth from facts, of the mass line and of independence and self-reliance and, looking to the future with full confidence, will advance our popular educational undertaking to a new stage along the correct line of the 30 Plenary Session of the 11th CCP Central Committee.

SOCIOLOGICAL, EDUCATION AND CULTURE

BRIEFS

OROQEN MINORITY AUTONOMY ANNIVERSARY--Hohhot, 2 Oct (XINHUA)--A bonfire evening of feast and entertainment was held last night in the deep forest in the Dahinggan Mountains by nearly 1,000 people of Oroqen nationality to mark the 30th anniversary of the establishment of the autonomous banner of Oroqen nationality in the inner Mongolia autonomous region. The Oroqens dressed in their holiday best, sang and danced around the bonfire. Wild animals hunted were cooked over the bonfire to mark the occasion. Oroqen nationality, with a population of more than 3,100, is one of China's smallest minority nationalities. The Oroqen people live by hunting in the Dahinggan and Xiaohinggan mountains. Before 1949, they led a wandering life, ate animal meat, wore animal hides and lived in bark shacks. The population of the autonomous banner of Oroqen nationality has increased from 700 in 1951 to 1,300 at present. There are now 135 cadres of the Oroqen nationality in the banner. The Oroqen people all have settled down and moved into brick and tile houses. They enjoy free medical care and their school-age children all go to school with expenses covered by the government. MEETING WITH FOREIGN JOURNALISTS--Beijing, 29 Sep (XINHUA)--The All China Journalists Association arranged a meeting between Chinese journalists and foreign correspondents in Beijing this afternoon on the occasion of the 32nd anniversary of the founding of the People's Republic of China. Hu Jiwei, member of the Presidium of the association and editor-in-chief of the PEOPLE'S DAILY, attended and expressed warm welcome to those present on behalf of the association. Wang Yi, first secretary of the association's secretariat, and leading members of various Chinese press institutions in Beijing were present. ASPECTS OF ANTILIBERALIZATION MOVEMENT DISCUSSED

Hong Kong CHENG MING [CONTENDING] in Chinese No 47, 1 Sep 81 pp 10-11

[Article by Luo Bing: "The 'Antiliberalization' Movement and the Renewed Criticism of Bai Hua"]

[Excerpts] At a time when the weather was very hot, the political climate became chilly, and the cold wind which began last winter now seems to have become even colder.

Let me start by reporting an "episode."

The "Reactionary Hong Kong Publications"

In the middle of July a notice from the central propaganda department to the effect that four magazines in Hong Kong (generally acknowledged in Hong Kong to be patriotic publications) were "reactionary magazines" was suddenly circulated among the propaganda departments in Beijing.

This was a verbally circulated notice, not a written document. The notice consisted of a single sentence without any further content; it did not say why these four magazines were designated as "reactionary magazines."

This communication caused considerable panic. A whole series of problems emerged: Why is exposing various hidden aspects of life in China or putting forth views and suggestions "reactionary"? If these publications, which had put forth some opinions in a well-intentioned way were considered to be reactionary magazines, were not various legally importable materials which directly reviled the Communist Party and attacked socialism and Marxism-Leninism reactionary? Just where was the line between patriotism and reaction?

Although we call this an "interlude," it gives a good indication of the problem.

If clear distinctions are not made even for foreign publications, but they are designated "reactionary" at will, it goes without saying that writings and views inside the country which displease the powers that be are subject to the same treatment.

The Gathering Storm

In fact, the propaganda work conference held in the first third of August laid out the tasks involved in the criticism movement. Next, in the middle of August, the "spirit" of the conference was circulated among all units in Beijing. A major Central Committee figure said, "Currently the situation on the ideological and cultural front is one of weakness, dissipation of strength and a lack of criticism and self-criticism." What was to be criticized? "Bad writings, and articles and erroneous views which are harmful to the 'four principles.'" At this point the Central Committee had not yet described "erroneous views" as rightist or "right-leaning," but instead called them "liberalization trends." Some specific examples of such views were these:

--"Some people say that there should be absolute freedom of public opinion and that publications and performances should be subject to no limitations."

--"Some people make 'order without intervention' the universal principle and consider party leadership to be 'fetters.' Others say that letting 'a hundred flowers bloom, and a hundred schools of thought contend' cannot be subject to any guiding ideology."

--"Some writers will listen only to praise and not to criticism. As soon as they are criticized, they make indiscriminate claims that people are 'crudely interfering' and are 'assaulting' them."

High-ranking party officials say that all of this constitutes "working for liberalization," and that the key aspect of liberalization is throwing off party leadership and departing from the "four principles"; naturally this is unacceptable, and accordingly it is necessary to criticize these various "erroneous views."

Since "bad writings" and "writings with erroneous ideological leanings" are among the targets of criticism, in literary and theoretical circles alike everyone is feeling a lowering of atmospheric pressure and a sinking of spirits.

Before the sixth plenary session, high levels in the party had already selected three articles as being typical of "liberalization" literature and requested opinion-making and theoretical circles to criticize them. The three articles were "More on Breaking out of Restraints" by Gu Er [7357 3643], "Some Theoretical Problems of the Later Period of the Socialist Transformation in This Country" by Ying Xueli [2019 1331 3680] and Sun Hui [1327 6540], and "The People's Sun Must Rise" by Li Yihong [2621 0110 3163].

Making Public Opinion

It is true that the various manifestations of liberalization described above are connected with theoretical circles, but they have an even greater association with literary circles. Some belong in one category and some in the other, but we refer in particular to Wang Ruowang [3769 5387 2598], among others. Starting on 14 August, GUANGMING RIBAO carried a series of front-page articles dealing with criticism of art and opinions with and self-criticism; their purpose was to launch the criticism movement and create opinion; of course, these were signals of the gathering storm.

Compared with GUANGMING RIBAO, RENMIN RIBAO clearly was less enthusiastic. By 18 August RENMIN RIBAO had merely published an article entitled, "Grasp Good Weapons of Literary Criticism" under the name of "Staff Commentator." The article did indeed transmit the intent of the higher-ups, but it also made a self-criticism of its "state of weakness" in the past when dealing with "some writings with erroneous ideological tendencies" and "a few harmful writings." The article said, "The shortcomings of weakness and diffuseness which the higher authorities mentioned also exist in this newspaper's literary criticism," and "we frequently have failed to forthrightly and convincingly criticize writings with incorrect tendencies and expressions of erroneous views." It can be seen from RENMIN RIBAO's self-criticism that the imminent tide of criticism would not spare such writers as Bai Hua, Wang Ruowang and Sha Yexin [3097 5509 2450].

Arrows Aimed at Bai Hua

Friends in the Beijing literary world have told me that Bai Hua and "Bitter Love" were inevitably marked out for criticism; when Deng Xiaoping and Hu Yaobang said that "Bitter Love" was "bad" and "harmful," how could they escape criticism? It is said that previous criticism was poorly done and had a poor effect; was this because Bai Hua was right or because the critics were incompetent? (In reality the problem is not so simple, because previous criticism of Bai Hua concealed a hidden intent against Hu.) What they now want to do is "normal criticism and self-criticism." My friends tell me that the article "More on Criticism and Assault," which appeared in GUANGMING RIBAO on 15 August, was obliquely launching some hasty shafts at Bai Hua: "To refuse to allow criticism and to lack self-knowledge, to be clearly wrong and think that one is entirely correct, are dangerous things and easily lead to corrosion by erroneous ideological tendencies in society, to complacent acceptance of certain misdirected 'evil winds,' and to wrong-headedly posing as 'heroes,' so that those involved sink ever further in the quicksands of error." My friends explain that the "misdirected evil wind" was the support for Bai Hua and opposition to the military newspaper which were prevalent in public opinion before the sixth plenary session. Some high party officials would give lip service to the "mass line," but if the masses' opinion on some topic did not agree with theirs, they would think that public opinion was merely "wrong tendencies" and "evil winds." But were the masses the "real heroes" or the "real dunces"?

Let us consider Bai Hua's situation during the previous criticism directed at him.

The criticism of Bai Hua in the late spring and early summer of this year was not a sudden attack, but an incipient process of fermentation. After Bai Hua's "The Stars Are Bright Tonight" became a movie, some people criticized him with the assertion that "The stars are not bright tonight." Bai Hua works in the Wuhan Military District, and before the "Bitter Love" incident occurred, some people on the Wuhan municipal party committee wanted to criticize him. In Shanghai, in Beijing, and particularly in the higher levels of the military and in the central party schools, some people expressed displeasure at "Bitter Love" while others favored it. Wei Guoqing and Huang Kecheng both agreed to criticize "Bitter Love" by name in the newspapers. It was at this time that Bai Hua, who had just finished the film script for "Bridge of Dreams," visited East Lake in Wuhan, ate fish at Wuchang, did some cooking in the kitchen, and showed himself to be "unconcerned about wind and waves and as confident as though he were walking securely in a locked courtyard." On 20 April, JIEFANG JUNBAO published an article by "Special Correspondent" criticizing Bai Hua. Bai Hua seemed to take no notice of this. From that day on, he immersed himself in writing. What did he write? Not a revision of "Bitter Love," as was intimated, but primarily the historical play "The King of Wu's Battle Axes, the King of Yue's Swords." The first draft was finished on 1 May.

In that period, although Bai Hua was subjected to political pressure, he still enjoyed a full measure of social favor. The Beijing People's Artistic Theater sent its representative Lan Tianye [5663 1131 6851] to visit him and find out how he was progressing on the play he was writing for the theater; his comrade-in-arms from youth Peng Jingfeng [1756 5427 7364] made a trip from Kunming specifically to see him in Wuhan; many university students paid calls on him and stood beside him; and nearly a thousand letters and telegrams of support poured in.

After Bai Hua's poem "The Spring Tides Before Me" received an award this May, he fully believed that he would be able to go to Beijing and meet artistic and literary figures; but, possibly because some people gave the matter some sort of "special consideration," he was not allowed to go. In July he recalled, "At first I thought I could take the opportunity of going to Beijing for my prize to give my play to the theater, but I unexpectedly was unable to go; the poets who had received awards sent me a long collective letter full of warm feeling." "I am constantly receiving letters from readers, but never as many as now: every evening young Wang the postman laughingly gives me a great pile of them, and when I have carefully read these unknown people's letters and telegrams I try to imagine their jobs, characters and appearance, and I answer the most important of them. They move me so that I am often choked with tears and forget the passage of time."

Love of Spring

In mid-June he received a notice from the Chanhchun motion picture plant's cinematography group to come and see the revised print of his film. Of this northern journey, he wrote in an article entitled "How I Love Spring," which appeared in XIN GUANCHA No 14 of this year, "Was I pursuing spring, or did spring particularly favor me? When I arrived in Changchun on the 17th, I was assailed by the fragrance of the lilacs, and startled by the peas, like green jade, in the bowl: this was not like March in the south! Bai Hua, a small plant in a forest, had just stretched his hoots out of the moist soil. When I saw the revised print of the film, I revised the play "Bridge of Dreams" again. On the 26th I stole some time for a hurried, lightning visit to Harbin, which I have long admired, and the wind on the Songhua River made me put on a woolen vest. I am obscurely content in spite of myself that this year I have been able to spend so many days with spring; and although there have been storms, they are the wind and rain of spring. Fresh green is everywhere, and 'the fragrant grasses are everywhere from horizon to horizon.' Multitude of tender plants, it is you that are the emblem of spring."

PARTY AND STATE

BEIJING CONVERSATIONS ON CURRENT POLITICAL SITUATION REPORTED

Hong Kong CHENG MING [CONTENDING] in Chinese No 47, 1 Sep 81 pp 7-9

[Article by Luo Bing [5012 0393]: "What is Deng Xiaoping Planning?"]

[Excerpts] Wang Dongxing's Building and Xi Zhongxun

One day in mid-August, an old Beijing resident and I left Beihai Park and crossed the bridge next to Zhongnanhai, talking as we went. Through the row of high, closely-spaced iron bars I could see a corner of Zhongnanhai, cloaked in green trees. Suddenly I thought of the building built by Wang Dongxing and opened my eyes wide, looking intently for its outline in the park, which was beginning to look like a spattered-ink drawing in the gathering dusk. My friend astutely guessed my thoughts, and said with a smile:

"Wang Dongxing's house? You can't see it from here."

I was a bit disappointed, but my curiosity immediately moved on: "Wang Dongxing must have moved, hasn't he?"

"Not at all."

"Does he use the whole building for business?"

"No, people live there too. One of them is a 'new guest,' Xi, his secretary."

"Do you mean Xi Zhongxun [5045 0112 8113]?"

"Yes. He must have moved in," my friend said, and explained, "It makes it easier for him to get to work. I understand he's very busy--he's the permanent duty secretary."

Why Did Deng Xiaoping Go to Xingjiang?

The talk turned from Xi Zhongxun to Hu Yaobang and Deng Xiaoping. After we had passed by the armyman guarding the bridge, my friend told me a piece of "inside news" in a low voice: In order to gain first-hand information on the minority unrest in Xinjiang and to successfully bring about ethnic unity there, Deng Xiaoping had gone to Xinjiang with Wang Zhen.

"Didn't Wang Zhen visit Xinjiang twice less than a year ago?" I asked.

"Yes, but the problems weren't solved. There are two main problems. One is that the Uighurs are displeased with the ethnic Chinese cadres; their slogan is 'We want to be autonomous, not ruled.' In the last year the Uighurs have intensified their pressure on ethnic Chinese and there have been a number of incidents. The second problem is that ethnic Chinese cadres in the parts, government and administrative departments are uneasy; they are thinking of home and are afraid that the Uighurs might provoke incidents. The mood is quite bad. All of society in Xinjiang is in turmoil."

"I have heard that some people in Xinjiang were preparing to start a rebellion to force the ethnic Chinese out, but it did not come off. Is this true?"

My friend's face became graver. "I have heard that too; fortunately it didn't materialize."

"Then Wang Zhen's two previous trips to Xinjiang were not total failures."

"That's right. Recently the situation is Xinjiang has been calmer. But the nationality questions have not really been solved. I hope that this trip of Deng's can help solve them."

What Is His Strategy for Running the Country?

"When will he be back in Beijing?"

"He can't stay there too long. There are many matters all over the country that he must deal with. He works 8 hours a day and often says, 'I haven't got enough energy; I'm 77 this year, and if I do more I'll get worn out.'"

"It's no easy matter for a man of 77 to work 8 hours a day. But I believe he is concentrating on the most important matters, isn't he?"

My friend didn't answer immediately, so I continued, "What is his strategy for running the party and the country?"

My friend smiled at me and did not answer.

[The friend and two others] were discussing study of the resolution of the sixth plenary session by the various organizations. In general, there is not much enthusiasm for studying it, and some lectures have turned into newspaper-reading meetings. But these two friends said much that was new during the conversation.

One thing that greatly interested me was the speeches at the small group meetings at the sixth plenary session. The friends had seen summaries of these speeches and they believed that the summaries were authentic. Some of the speeches were quite bold and unexpected:

--"Why can't 'one divide into two' in the case of the Cultural Revolution?" (i.e. he believed that one part could be affirmed.)

--"The Cultural Revolution was counterrevolutionary!"

Different Views on the Cultural Revolution and Mao

--"I would only be at ease if the resolution had confirmed that Comrade Mao Zedong's contribution was of primary importance. In the past, people wouldn't even put up Chairman Mao's picture for fear others would say that they belonged to the 'all' [fanshi] faction."

--"The resolution said only that Comrade Mao Zedong made the error of left tendencies, whereas in reality his error was one of line."

--"During the Cultural Revolution the party organization had completely ceased to exist and the "Cultural Revolution Group" issued orders in place of the government, so that in reality it had usurped the power of the party Central Committee and the local party committees: accordingly the party should not bear all or part of the blame for the errors of the Cultural Revolution."

--"In the future it will be sufficient to cite Marxism-Leninism; Mao Zedong Thought should no longer be cited."

Protecting Hua and Criticizing Hua

--"Comrade Hua Guofeng should be correctly treated. He really did make a contribution, and he is honest, kind and unassuming."

--"It is not true that he is unassuming. Once Comrade Chen Yun telephoned Hua Guofeng, and after 10 minutes Hua claimed he was busy reading documents and would not continue the conversation."

--"Comrade Hua Guofeng continued and developed all of Comrade Mao Zedong's errors; he supposedly is an 'enlightened leader,' but they came out with a standard picture of him and put it side by side with Mao Zedong's. He was indifferent to old cadres or rejected them, and even believed that his becoming party chairman was because the time was ripe for him."

--"When Comrade Liu Lantao [0491 3482 3447] criticized Hua Guofeng in the Plenary Session, he cited 13 of Hua's errors, and they were all factual."

--"Comrade Deng Liqun's [6772 0500 5028] speech criticizing Hua Guofeng was also very good."

--"Hua Guofeng made serious errors and should not be selected Vice Chairman."

Is Deng a Marxist-Leninist or a Revisionist?

--"Comrade Deng Xiaoping's actions in recent years have been in accord with Marxism-Leninism."

--Everything that Comrade Deng Xiaoping is now doing is incomprehensible. Some people say it is revisionism."

--"The resolution is basically acceptable."

--"The resolution does not do enough to affirm the older revolutionaries and to make a realistic evaluation of them."

--"It is questionable whether the resolution can unify thinking and action. What the higher-ups have said is good, but sufficient thought should be given to whether the people lower down really can carry it out."

These speeches reflect the fact that at the sixth plenary session, thought was energetic and people were outspoken, that opposing views could be stated and rivalries maintained. At the same time, they also indicate that thought within the party (even at the highest levels) is in a complex state, and that there are various differing viewpoints.

An Objective Attained

During the discussion everyone agreed that divergence of opinions and difference of views within the party was normal and could be resolved by seeking common ground while allowing differences to continue to exist. But the party's guiding ideology should be unified, otherwise everyone would follow his own beliefs and work would be thrown into chaos. My friend told me that Deng Xiaoping's main request to the sixth plenary session was that it unify the guiding ideology. They said that with regard to the guiding ideology this session had gotten rid of the chaos caused by Lin Biao and the "gang of four" and by Mao Zedong's erroneous utterances and actions, had officially ended the rule of leftist ideology in the party and had eliminated the effect of the "two 'all's'" over the core of the party, had affirmed the line and techniques used since the third plenary session, and had used personnel transfers to assure organizationally that the guiding ideology would be implemented, so that Deng Xiaoping's aim could be said to have been essentially accomplished.

The "Twelve Criticisms of Deng" Are of Dubious Authenticity

There was a slight ripple of laughter, and my friends revealed something that Deng Liqun (head of the Office of Policy Studies of the Central Committee Secretariat, Deputy Secretary of the State Council, and Deputy Director of the Institute of Social Sciences) had said recently in an internal conversation: During Comrade Mao Zedong's late years, he was sometimes lucid and sometimes confused, and ultimately the situation reached the point that they had to depend on interpretation of Comrade Mao Zedong's speech by Mao Yuanxin and a few others. Accordingly, the "Twelve Criticisms of Deng" put together by Mao Yuanxin are suspect.

Then my friends revealed that some people at high levels in the Communist Party considered that Mao's private life was bad and that his errors were strongly connected with his individual qualities. Deng Xiaoping did not agree with this view. He said, "Comrade Mao Zedong's errors cannot be referred to his individual qualities." Recently Deng Liqun stressed this point, saying that "Some people are now tracing Comrade Mao Zedong's errors to problems of his individual character, but in reality his errors cannot be explained in those terms. People of good character too can make mistakes."

"Keeping Mao" Is "Keeping the Party"

As the conversation continued, everyone concluded that Deng Xiaoping's "keeping Mao" was "statesmanlike" and resulted from political necessities. "Keeping Mao" was done in order to "preserve the party." To quote Deng Xiaoping himself, "Rashly overstressing his (i.e., Mao Zedong's) errors could only damage our party's and country's image and the prestige of the party and the socialist system, and would only dissolve the unity of the entire party, the entire army and all nationalities of the country."

It was now very clear that the question which my friend had not answered a few hours before at Zhongnanhai had found its answer. The main thing that Deng Xiaoping is working on at this moment is how to recover the party's prestige and how to unify the entire party.

Deng Xiaoping's Revenge and Aspirations

For this purpose, Deng Xiaoping had repeatedly stressed the "four principles," while emphasizing that the core of these principles is adherence to party leadership.

When I was returning from my old friend's house to the Overseas Chinese Building, I kept thinking about the main problems on Deng Xiaoping's mind. His revenge had been great. He had said several times at the party's high-level conferences that they should "do what Mao Zedong had suggested but had not done, set right what he had erroneously opposed, and do well what he had not done well." But what were the things that Mao Zedong had not done well? Primarily these three: opposing hegemonism, unity, and economic construction. I believe that during the time remaining to him, Deng Xiaoping wants to do these things well (particularly economic construction). For this purpose, he ardently desires to restore and increase the party's prestige, to strengthen and consolidate intraparty unity, and to eliminate all words and deeds which harm party prestige and unity.

But for the present, at least, this is a difficult problem.

The summaries of the small-group meetings at the sixth plenary session suggest that the ideological contradictions are far from simple, and could not be resolved at a single session. Even if divergence of views could be virtually eliminated at the top levels of the party, what about the many levels below that? Illness prevented Ye Jianying from attending the sixth plenary session, and it seems that this old leader will not be able to "struggle until the end of his life for communism" in his current position; but will there be discord among army officers at the division and regimental levels?

Intraparty Contradictions and Unhealthy Tendencies

There is also the question of unhealthy tendencies in the party. The Chinese Communist Party publicly admits that thus far there has not been a change for the better in tendencies within the party. Because of the unhealthy tendencies in the party, the social atmosphere and social order have not improved, and people bitterly hate noxious influences and instances of privilage in the party. Can the party's image be made more lofty in such a situation? At present almost all activitist elements involved with unauthorized publications throughout the country have been taken into custody; can this type of behavior succeed in protecting party prestige? The "criticism of liberalization" has already been set in motion, and the party is planning to use this "movement" (the party avoid using the term) to ban exposé literature and "different political opinions." But will such activities really protect the party's image, or will it do precisely the opposite?

DEVELOPMENT OF CRITICISM MOVEMENT DESCRIBED

Hong Kong CHENG MING [CONTENDING] in Chinese No 47, 1 Sept 81 pp 12-13

[Article by Xiao Cheng [5618 1004]: "Some Signs of Intensification of the Restrictive Policy"]

[Excerpt] After the sixth plenary session concluded, an extremely unusual phenomenon emerged on the political stage: the more "relaxation" there was in economic matters, the more "restriction" there was in politics.

The economic relaxation is obvious and we will say no more about it beyond noting that the policies of allowing private individuals to hire labor and of contracting with individuals to manage state-run enterprises may cause some people with ossified thinking to rasie the hue and cry about "restoration of capitalism."

At the same time that there is relaxation in economic matters, restrictions are clearly being intensified in political matters. On the eve of the sixth plenary session, "Bitter Love" was rehabilitated and people were relaxing a bit in the belief that the restrictive tendency that had been prevailing since the beginning of the year was ending. But after the end of the Sixth Plenary session, the tendency toward restrictions began to become stronger.

The First Signals of Restrictiveness

The literary world was the first area where the storm warnings of a policy change went up.

On 28 July, RENMIN RIBAO carried on page 4 an article which attracted little attention at the time, but which was the first signal of stepped-up restrictiveness.

The article was written by Li Bozhao, [2621 0130 6856] Vice-Chairman of the Chinese Playwrights' Association and wife of Yang Shangkun [2799 1424 2492]. She emphasized the need to "strengthen the party's leadership over art," and criticized artistic circles as "harboring some unhealthy features." She said, "I feel that some current writings are simply seeking 'box office value,' and catering to the admiration of certain vulgar tastes in society; some other people claim that we should not engage in singing the praises of the people of virtue and accomplishment, and there is even a small minority that is planning to weaken or cast off the party's leadership. This would have harmful social results, how would it then be possible to undertake the lofty task of creating an advanced socialist spiritual culture? In their ideological essence, these unhealthy features are completely at odds with socialist spiritual culture. We cannot view them with equanimity: we must take suitable measures to restrain them."

The day after Li Bojian's article was published, RENMIN RIBAO also published an article by Liu Baiyu [0491 4101 5038] and others. Liu criticized the JIEFANG JUNBAO Special Commentator's criticism of "Bitter Love," and his article emphatically stressed. "We artistic writers must reflect life under the guidance of the "four basic principles" so as to promote the advance of history."

On the same day that it carried Liu Baiyu's article, RENMIN RIBAO also published an article by army cultural cadre Wei Chuantong [7614 0278 4827]. Wei Chuantong hinted that a criticism campaign would be developing in the artistic world when he said, "To progress we must have criticism and self-criticism. We should imitate 'the petrel that soars above towering waves' and 'the roc that stirs up the water for 3,000 li around' and not imitate birds that 'take fright at the sound of the bow.' We must not have a conditioned reflex every time we hear criticism; we must of course stress the form and results of criticism, but we cannot 'forswear food for fear of choking.'"

HONGQI Beats the War Drums

And indeed, half a month later, the Communist Party's most authoritative magazine, HONGQI, published a commentary which adopted a stronger tone and whose import was clearer. This article clearly indicated that a campaign of criticism must be carried out against certain intellectuals and stated that it was necessary to "solve the problems of departing from the 'four basic principles,' leaving the path of socialism throwing off the party's leadership, and engaging in bourgeois liberalization; there are some who in speeches, creative work, articles or in other forms are distoring the image of the party, ridiculing the socialist system, and slandering Mao Zedong thought; how can we do otherwise than criticize them? If we do not, where will they lead us?" The article also called on party organizations at all levels to wage an active struggle: "The seriousness of the problem does not stem from the fact that these phenomena exist but from the fact that the party's leadership on the ideological front has been diffuse and weak. Some party organizations and party leadership comrades have failed when confronted with various erroneous tendencies and erroneous ideology and actions, to take the initiative in ideological work and have not dared to criticize them. This is a very bad state of affairs."

Even the people who had not heeded the signals of half a month before could not fail, on reading this article, to admit that the gale warnings had been upgraded.

The Talisman of Ideological-Political Work

This restraining tendency obviously was not aimed only at the literary world.

It can be seen from the 5 years following the fall of the "gang of four" that the contingent making the greatest challenge to the ruling party is artistic writers and the young generation. Young intellectuals in particular, especially under the influence of the Xidan Wall, the unauthorized publications movement and last year's free elections, are very active. Accordingly, an additional target of this policy of restriction is China's student population.

There are currently 200 million students in China; the number should not be underestimated, nor should the students be underestimated as a force.

Between 1 and 11 August, the Ministry of Education held a national work conference on ideological-political education in schools and made its preparations to carry out "ideological-political work" among these 200 million students.

Ministry of Education Jiang Nanxiang said at the meeting that this year a number of serious problems with regard to the students require attention. He declared that ideological-political education of the students should be intensified in four ways.

First, he said, it was necessary to strengthen education in the "four basic principles." He stressed particularly that "it is necessary to make the students understand that patriotism is a great spirtual force for the construction of socialism; in today's China, if one does not love the party and socialism, one cannot be a true patriot."

Second, it was necessary to intensify the teaching of Marxist-Leninist theory in the schools. He said, "Courses in Marxism-Leninism are compulsory in socialist schools. They cannot be weakened, much less eliminated; and conscientious study must be made of ways of improving and strengthening them."

Third, it was necessary to strengthen education in communist morality. He said, "We must educate the students to learn from the older generation of proletarian revolutionaries and heroic examplars and to continue the revolutionary tradition, to set up revolutionary ideals, and to bring a revolutionary spirit of arduous struggle into play."

Fourth, it was necessary to intensify labor education. He said, "It was incorrect in the past to have the students do too much labor, but the current practice of not having them labor at all or having them participate in labor only to a small extent is also not beneficial to their overall development, and henceforth we must develop a set of methods, suited to the characteristics of schools at various levels and at various kinds, for carrying out labor education.

The Central Committee attached great importance to this meeting. Li Xiannian, Wan Li and others received more than 150 participants at Huairentang in Zhongnanhai. They stressed repeatedly the importance of ideological-political work. Li Xiannian said, "Our party is founded on ideological-political work, and in the future we will still need to intensify ideological-political work." Wan Li said, "The key to intensifying ideological-political work in the schools is strengthening and improving party leadership."

Making Another "Fifties Generation"

This set of ideological-political work methods which the Communist Party is currently stressing obviously takes the 1950's and early 1960's as a model. It appears that the party is eager to train a new "1950's generation." But it will be difficult to do this.

The current younger generation, which has experienced the Cultural Revolution, has the ability for independent thought and the habit of boldly opposing prevailing ideas, and it will be very difficult for ideological-political work to move them. If they are made to study Marxist-Leninist theory, they may be able to use certain Marxist-Leninist viewpoints to criticize shortcomings of the current situation or to us practice to confront outmoded viewpoints; both of these things have happened in university political classes. If they are made to concern themselves with politics, they may engage in unauthorized publication or free elections, because this is one form of involving oneself in politics. They can no longer be forced to become "men of the 1950's."

It would appear that the CCP's only recourse is to repose its hopes in those who did not pass through the period of the Cultural Revolution and "brainwashing." But can this generation reenact the history of 20 or 30 years ago? At present we can only say that this is a riddle.

FOREIGN PAPERS HAIL YE JIANYING STATEMENT ON REUNIFICATION PROPOSAL

Philippine Paper Hails Proposal

OW041214 Beijing XINHUA in English 1203 GMT 4 Oct 81

[Text] Manila, 4 Oct (XINHUA)--The Philippine SHIJIE RIBAO (THE WORLD NEWS) carried today on its front page a signed article saying that it is very appropriate to have talks on China's peaceful reunification with Chairman Ye Jianying's statement as the basis.

The article, entitled "On China's Peaceful Reunification," said "the statement issued on such an important occasion by Ye Jianying shows how much importance the Chinese Government attaches to this question. The problem of peaceful reunification of China is obviously given the highest priority."

It pointed out that Ye Jianying's statement "is the most comprehensive, most concrete and most moderate proposal ever made in the past 30 years" and that "it seems very appropriate to hold talks with this statement as the basis."

"The Chinese nation is a nation with very high wisdom. In the past several thousand years, it has developed unceasingly and made important contributions to the world culture. Today's state of partial separation is only a temporary episode in the long, glorious history of the Chinese nation," the article said.

It added that since the publication of the message of the NCP Standing Committee on New Year's day of 1979, "the atmosphere in the Taiwan straits has been greatly alleviated in the past 2 to 3 years. To maintain such atmosphere will be helpful not only to China's peaceful reunification but also to peace and stability in the Asian and Pacific region."

It expressed the hope that the Communist Party and Kuomintang "will continue to seek ways of peaceful reunification so that the Taiwan straits will never be an area where the superpowers could bluff and bluster."

Asian Papers Laud Statement

OW041604 Beijing XINHUA in English 1547 GMT 4 Oct 81

[Text] Beijing, 4 Oct (XINHUA)--A Singapore and a Philippine newspaper have acclaimed the nine-point proposal contained in Chairman Ye Jianying's statement concerning the return of Taiwan to the motherland for the realization of China's peaceful reunification.

THE STRAITS TIMES of Singapore said in an editorial on 2 October that Ye Jianying's statement is consistent with the previous Chinese statements on the matter. "This time, however, it is better packaged in a nine-point plan, and made more attractive to the Taiwanese." "Some of the concessions are significant, signalling perhaps that China is really serious this time about making up with Taiwan," it added.

"The idea of unification probably appeals to both peoples. On the international front, the new offer appears to demonstrate China's sincerity in wanting to come to terms with a thorny issue," the editorial said, adding "since it was kicked out of the United Nations in 1971, Taiwan has found itself increasingly friendless--at least politically. But in dealing with the mainland, there is no point for the old guard Kuomintangs to insist that Beijing abandons its communist system before negotiations take place. In so doing, Taipeh is not only succeeding in showing its intransigence to the world at large, but is also being unrealistic." "A rigid attitude taken by Taipeh will not enhance its own credibility nor make it politically easier to deal with."

In a signed article entitled "On China's Peaceful Reunification," the Philippine daily THE WORLD said today that it would be quite appropriate to take Ye Jianying's statement as the basis for holding talks on China's peaceful reunification.

It pointed out that Ye Jianying's statement "is the most comprehensive, most concrete and most moderate formula on the Taiwan issue procliamed in the past 30 years or so."

"The fact that the statement is issued by Ye Jianying at such an important juncture shows the importance the Chinese authorities attach to the matter."

The article said: "The Chinese nation is a very intelligent one. Over thousands of years this nation has been developing steadily and has made important contributions to world culture. The present partial split is only a transient episode in the long and brilliant history of the Chinese nation."

It noted that since the Standing Committee of the National People's Congress issued a message to the comaptriots in Taiwan on New Year's day in 1979, "a relaxed atmosphere has set in across the Taiwan straits in the past 2 or 3 years. The maintenance of this relaxed atmpsphere will help promote the realization of China's peaceful reunification, and contribute to peace and stability in the Asian and Pacific region."

'XINHUA' INTERVIEWS JAPAN OFFICIALS ON YE PROPOSAL

OW021638 Beijing XINHUA in English 1614 GMT 2 Oct 81

[Text] Tokyo, 2 Oct (XINHUA)--Some noted Japanese political figures described as positive, moderate and sincere the recent statement made by Ye Jianying, chairman of the Standing Committee of the Chinese National People's Congress, in which the policy concerning the return of Taiwan to the motherland and the reunification of the country was explained.

In an interview with XINHUA, Masatoshi Tokunaga, president of the Japanese House of Councillors, said: Chairman Ye Jianying's proposal concerning China's peaceful reunification is one put forth by Chinese leaders after careful considerations. It is a timely move. The one and the same nation should be unified."

Chozo Akiyama, vice-president of the House of Councillors, said: "Chairman Ye Jianying's statement is a positive proposal. The presenting of the question itself is a step forward."

Yoshikatsu Takeiri, chairman of the Komei Party, said: "Chairman Ye Jianying's statement is a timely move. It is a prompt step taken by the Chinese leaders after careful considerations, demonstrating their firm faith."

Shoichi Shimodaira, vice-chairman of the Japan Socialist Party, said: "Chairman Ye Jianying's statement demonstrates a sincere desire for the peaceful reunification of the country, and should be given a high appraisal. Proceeding from a reciprocal stand, China recognizes Taiwan's status quo. Nothing could be more sincere than this. Now, the authorities in Taiwan have turned down Chairman Ye Jianying's proposal. But it will surely produce far-reaching influence in Taiwan which cannot reject the proposal for ever."

WORLD ACCLAIMS YE JIANYING PROPOSAL ON TAIWAN

OW061441 Beijing Domestic Service in Mandarin 1100 GMT 6 Oct 81

["International Current Events" commentary: "A Major Move of Historical Significance"]

[Text] After Chairman Ye Jianying gave his interview, the Korean paper NODONG SINMUN, in a 5 October commentary, expressed resolute support for the Chinese people's efforts for the return of Taiwan to the motherland and the realization of China's peaceful reunification. The commentary said: The nine-point proposal put forward by Chairman Ye Jianying once again shows that the CCP and the Chinese Government hope to bring an end to the country's division and realize the Chinese people's long-cherished desire for the reunification of their motherland at an early date. It also clearly shows that reunification of the country by peaceful means is not a matter of expediency but the firm and unshakable policy of the Chinese party and government.

The commentary pointed out: The Taiwan authorities should accept the proposal for China's peaceful reunification put forward by the CCP and the Chinese Government. Otherwise, they will go against the trend of the times and the wishes of the Chinese people. China's peaceful reunification is in the vital interests of the Chinese people and accords completely with the world people's desire for peace in Asia and the world.

In conclusion, the NODONG SINMUN commentary said: The Korean Workers Party and the Korean Government and people will, as always, actively support the CCP and the Chinese Government and people in their just struggle for the return of Taiwan to the motherland and the reunification of all China.

On the same day Chairman Ye Jianying gave the interview, Japanese Prime Minister Zenko Suzuki, in answering reporters' questions, said: It will be a good thing if China can be reunified through negotiations.

The Japanese Ministry of Foreign Affairs welcomed Ye Jianying's statement saying that it is a desirable one.

Speaker Masatoshi Tokunaga and Vice Speaker Chozo Akiyama of the Japanese House of Councillors, Chairman Yoshikatsu Takeiri of the Komeito and Vice Chairman Shoichi Kodaira of the Japan Socialist Party made statements to XINHUA correspondents, unanimously praising Chairman Ye Jianying's statement as positive, moderate and sincere. They said that the statement shows his good faith in China's peaceful reunification.

Major newspapers in Tokyo, such as MAINICHI SHIMBUN, Tokyo SHIMBUN and ASAHI SHIMBUN, and the NHK Television Station carried editorials and reports saying that the nine-point proposal is appropriate and of great, far-reaching significance.

Some Thai newspapers published editorials and articles praising Chairman Ye Jianying's statement. (XIN ZHONGYUAN BAO) [NEW CHINA DAILY] said in its editorial: Ye Jianying's statement, which is made in an earnest tone and is full of sincere feelings, has deeply moved the Chinese people of all nationalities on both sides of the Taiwan Straits who earnestly hope for the reunification of the country. Friendly neighboring countries also welcome his statement.

The (MINZU PINGLUN BAO) [NATION'S COMMENTARY] carried an editorial saying that it is difficult to reject the Beijing proposal. The editorial expressed the hope that the KMT and the CCP in China will sit together to seriously discuss the question of reunification.

The Singapore paper STRAITS TIMES said in its editorial: The nine-point proposal has an even stronger appeal to the people on Taiwan.

The Philippine paper (DAILY WORLD) published a signed article saying that it is very appropriate to use Ye Jianying's statement as the basis for the talks on China's peaceful reunification.

Newspapers published in Malaysia, Turkey and other Asian countries have also given prominence to reports on Chairman Ye Jianying's statement.

On the same day that Chairman Ye Jianying gave the interview, (Long-bo-ge), spokesman of the U.S. State Department, said at a press conference that the U.S. Government has taken note of China's statement. He considered Ye Jianying's statement consistent with the spirit of China's past relevant statements. He said: The relationship between the PRC and Taiwan is a matter that should be settled by the Chinese people themselves. As for the Taiwan question, what we are concerned about is only the peaceful solution of this question.

The WALL STREET JOURNAL carried an article quoting a Western diplomat as saying that China has made the most magnanimous proposal it has ever made on reunification with Taiwan. The article pointed out: China's proposal is not just propaganda.

An official of the FRG Information Bureau said: China's proposal concerning reunification of the country will win the German people's sympathy. The German people will welcome China's reunification. A personage from West Germany's economic circles said: West Germany's economic circles hope for China's reunification.

In Britain, THE TIMES carried an editorial saying: China has made a new and more generous proposal; the appeal emphasizes patriotism and China's progress. THE GUARDIAN said: Chairman Ye Jianying's statement is one of wisdom; it is also one of utmost benevolence and righteousness.

In Italy, LA REPUBLICA said: The statement is the most generous proposal made by the People's Republic of China since its founding in 1949.

In the United States, many Americans of Chinese extraction warmly praised Chairman Ye Jianying's statement. They said that the nine-point proposal for peaceful reunification made by Chairman Ye is a historically momentous action and that it inevitably will have wide repercussions. Professor (Jen Chih-kung) of Johns Hopkins University said: The focus of Chairman Ye's statement is the reunification of China as a whole. All Chinese people support it. He said: The principle laid down by the Chinese leaders is fair and reasonable and indicates the Chinese leaders' earnestness and sincerity. They propose national reconciliation and cooperation between the two parties. If anyone doubts their sincerity, he should recall the "Xian incident." At that time, it was only after the Chinese Communist Party, putting unity and resistance against Japanese imperialism above all else, dispatched Zhou Enlai to Xian to guarantee Chiang Kai-shek's safety and freedom that the cooperation between the Kuomintang and the Communist Party materialized for the second time. If this is not sincerity, then what is it? Recalling the past and considering the present nine-point proposal, how can one say that the proposal is a "united-front plot"?

(Chou Yang-ming), a researcher of the Institute of the Dupont Chemical Company in the United States, said: The nine-point proposal for peace talks enumerated in the statement are very fair and reasonable. They are practical and realistic. They prove that China's leaders have taken into account not only the future of the nation and the well-being of the Taiwan compatriots but also the interests of the Taiwan authorities. He voiced his determination to make further contributions to the motherland's unification and democracy and to its construction.

Dr (Huang Tien-hsin), chairman of the Board of the Orient International Company, said: In his statement, Ye Jianying from the very beginning put the interests of the Chinese nation and the country above everything else and above the party's interests. This shows the fundamental idea of respecting the people and a broad vision. To make the Chinese nation strong and powerful is a matter of prime importance. If both the Kuomintang and the Chinese Communist Party put the national interests above everything else, then it is possible for them to unite and cooperate and our country will have a bright future.

U.S, BRITISH CHINESE HAIL REUNIFICATION PROPOSAL

OW050128 Beijing XINHUA in English 0102 GMT 5 Sep 81

[Text] Beijing, 4 Oct (XINHUA)--Leaders of Chinese organizations in the United States and Britain in their recent interviews with XINHUA warmly welcomed the talk of Ye Jianying, chairman of the Standing Committee of the Chinese National People's Congress, elaborating on the policy concerning the return of Taiwan to the motherland for the realization of China's peaceful reunification.

Kenneth T. C. Mei, president of New York Society for the Advancement of Chinese Americans, said that the new proposal for China's reunification proclaimed by Ye Jianying has expressed the common aspiration of the 1,000 million Chinese people including the Taiwan compatriots and the earnest desire of overseas Chinese. He pointed out that the reunification and national solidarity of China constitute the primary conditions for speeding up the process of the four modernizations. He said it is his ardent hope that the Taiwan authorities would adopt a realistic approach and give serious consideration to the proposed peace negotiations so as to contribute to the great cause of reunification of the motherland.

James Ying, chairman of Sino-American Chamber of Commerce (U.S.A.), said, "I hope for an early reunification of the motherland, which is realizable because both the Chinese Communist Party and the Kuomintang adhere to the position of 'one China' and want to see China reunified, both want to see the motherland prosper, the people on both sides are blood brothers and sisters, and the cooperation between the two parties for two times before has laid a good foundation for a possible third time cooperation." He held peaceful negotiations will surely succeed if only both sides act out of a desire for genuine solidarity and in the spirit of seeking common ground on major issues while reserving differences on minor ones. The peace negotiations will surely be successful. He pointed out that application by all Chinese at home and abroad for national reunification represents the mainstream which is irresistible.

Chik Lung Yum, president of the Fu Kien Association, said that national reunification is the desire of the compatriots on both sides of the straits, although they have been separated for over 30 years. It is also the desire of overseas Chinese who are convinced both national unification and the great goal of building China into a prosperous and powerful country will be achieved some day with the joint efforts by all Chinese.

Chairman Ye Jianying's statement has aroused warm discussions and great repercussions among Chinese residents in Britain and Chinese Britons.

A 70-year-old leading member of the overseas Chinese community said: "The Kuomintang and the Communist Party of China had cooperated for two times before. Now, there exist conditions and possibilities for them to cooperate for the third time for the security and interests of the Chinese nation as a whole. Only a unified country can better resist foreign aggression. Even neighbouring countries need to be inter-dependent like lips and teeth, let alone brothers of one and the same nation."

He added, "Only by striving for national unity and unification can a political party have a place in history. Otherwise, it can only be a criminal against the nation."

Some middle-aged and young overseas Chinese indicated that Ye Jianying's statement is the most comprehensive and concrete proposal up to now, demonstrating the breadth of vision of the Chinese Communist Party which does not bear the old grudge.

A young Chinese Briton of the Guanghua bookshop said, in spite of the opposition by a small number of people, "the movement for the unification of the motherland is irresistible." He expressed the hope that the Taiwan authorities, placing the national interests above everything and valuing this good opportunity, will enter into dialogue with the Chinese Communist Party as soon as possible.

A number of Chinese Britons said, although they have been naturalized, China is always their mother. They earnestly hoped that the Kuomintang and the Communist Party on the both sides of the Taiwan strait will cooperate at an early date. Only in this way can China become a genuinely prosperous and powerful country. They hoped that such a day would come soon.

THAI PAPERS SUPPORT YE JIANYING PROPOSAL

OW021514 Beijing XINHUA in English 1501 GMT 2 Oct 81

[Text] Bangkok, 2 Oct (XINHUA)--Thailand newspapers appraised a statement made 30 September by Ye Jainying, chairman of the Standing Committee of the Chinese National People's Congress, on a peaceful reunification of Taiwan with the motherland.

In today's editorial, the NEW CHINESE DAILY NEWS said that Ye Jianying's nine-point proposal is "more detailed and specific than those declared in the past." The statement was issued "in an earnest tone and with sincere sentiment which gave a deep impression to people of various nationalities on both sides of the strait."

The editorial urged Taiwan authorities to take the initial step by sending delegations to visit the mainland and hold talks there.

The editorial said that if the authorities in Taiwan continue to refuse contact, they will be ignoring the desire from both sides of the strait for peaceful reunification.

In another newspaper, an article said today that "the forbearance of the Chinese Communist Party with the Taiwan authorities" is obvious from Ye Jianying's statement.

Ye Jiangying's statement was made with "the utmost tolerance and patience and was aimed at nothing but an early unification of the motherland," the article said. The call for unification sets the state and national interests above everything, so that the whole country can make a wholehearted and united effort for accelerating the four modernizations."

The article said "our motherland is rich in natural resources and has 1 billion valiant, industrious and intelligent people. They can surely build the country into a powerful state with high democracy and civilization."

The article asked how Taiwan can consider itself an outsider in this great cause. "The old scores between the Kuomintang and the Communist Party can be written off with one stroke, and they should look forward to the future together," the article said.

The article concluded by expressing hope that Taiwan authorities would "show great foresight, give up their prejudice and take action to promote the unification of the country and nation" in the spirit of Sun Yat-sen.

A commentary in the TONG HUA YID PAO newspaper said yesterday that Chinese in China mainland and Taiwan as well as overseas Chinese want to reunify the motherland peacefully.

"Without doubt," the commentary added, "the peaceful reunification of China is a general trend and represents the aspiration of the people. Therefore, it is a reasonable belief that the movement for the peaceful reunification will develop continually. Though there are difficulties at the present stage, the movement is bound to finally attain its goal."

The NATION REVIEW, an English-language newspaper, said yesterday in an editorial that Beijing's statement "is attractive and hard to reject." The editorial expressed hope that the Communist Party of China and the Kuomintang of China will discuss the reunification problem in earnest.

CHIANG CHING-KUO URGED TO COOPERATE WITH CCP

OW051639 Beijing XINHUA in English 1512 GMT 5 Oct 81

[Text] Beijing, 5 Oct (XINHUA)--Chen Zhijian, sworn sister of Mr Chiang Ching-kuo's mother Mao Fumei, told XINHUA yesterday: "I hope Ching-kuo will contribute to the third period of cooperation between the Chinese Communist Party and the Kuomintang for the sake of the country and the people and for his late mother."

Chen Zhijian, now 88 years old, is a member of the Zhejiang Provincial People's Political Consultative Conference and vice-chairman of Fenghua County's Revolutionary Committee of the Kuomintang. She said: "This year is the 100th anniversary of the birth of my sister Fumei. Her tomb has been renovated. We are waiting for Ching-kuo to pay his respects at his mother's tomb."

According to the PEOPLE'S DAILY, Percy Chen, son of Chen Youren, former secretary to Dr Sun Yat-sen and foreign minister of the National Government in Wuhan, praised Chairman Ye's nine-point proposal as "a flexible policy which is full of wisdom." He said: "These are really the words of a Chinese who is broadminded and has cast away prejudices."

Percy Chen, a well-known Hong Kong lawyer, has long promoted association and understanding between the people of China and foreign countries as well as the unity of the Chinese people. He said, "The Taiwan authorities should seriously consider Chairman Ye's proposal for talks for it is not only in the interest of the Chinese people but also in the interest of world peace."

Yuan Xiaoyuan, former member of the Kuomintang National Assembly and a U.S. citizen of Chinese origin, in a letter to his colleagues on Taiwan, said: "The reunification of the country and the unity of the nation is the common aspiration of the Chinese people. When you promote the reunification of the motherland, you fulfill your obligation as members of the Kuomintang National Assembly."

CHEN WEN-CHENG'S WIDOW TESTIFIES IN U.S. CONGRESS

OW071240 Beijing XINHUA in English 1218 GMT 7 Oct 81

[Text] Washington, 6 Oct (XINHUA)--Chen Su-jen, wife of Chen Wen-cheng, the American professor who died in Taiwan last July after prolonged interrogation and torture by KMT agents, personally gave witness today proving spy activities by agents of Taiwan's Kuomintang authorities in the United States had led to the murder of her husband.

In her testimony today before the Subcommittee on Asian and Pacific Affairs of the House Foreign Affairs Committee, Chen Su-jen recalled events surrounding the murder of her husband made public at a press conference at the Carnegie-Mellon University in Pittsburgh on 11 September 1981. "My husband's death was not a suicide or an accident. It was murder," she said.

Chen Su-jen produced 39 photographs of her husband's body taken during the first autopsy in the week of 5 July 1981 to prove that her husband had been badly tortured before he died. There were too many external wounds which could not be explained by a fall, she stressed. She said she had consulted several medical doctors. According to the doctors' opinions, several wounds on the right shoulder and the neck were sustained several hours before his death. These were obviously from tortures. A cluster of punctures on his right elbow were most likely caused by repetitive piercings with sharp objects. The three parallel, deep bruises on the back were highly suggestive of whipping. All these wounds from torture could be seen from the photos.

Three weeks ago, she said, her husband's former colleague, Professor Degroot, and a forensic pathologist, Dr Wecht, went to Taiwan and reexamined the case of her husband's death. At the press conference upon their return on 24 September they reaffirmed her original judgement and conviction that her husband was murdered.

Chen Su-jen spoke of her heartfelt apprehension in agreeing to testify here today. "My main concern was whether I might be harrassed by KMT agents in this country because of my testimony here, whether my parents and relatives in Taiwan might be intimidated by KMT agents, and whether my safety might be endangered in future visits to my parents in Taiwan."

She said the garrison command in Taiwan maintained that the interrogiations of her husband were prompted by intelligence reports collected through KMT's "rainbow intelligence project."

The garrison command also claimed that they had in their possession tape recordings of her husband's impromptu comments on the Kaohsiung incident of December 1979. his personal letters to his friends and five checks in the amount of U.S.$5,000 in total that were enclosed in the letters.

Chen Su-jen said that KMT spy activities are ever-present in the United States. Many Taiwanese people have been harrassed by KMT agents on campuses and elsewhere as had been testified before. People were afraid to report because of repraisals from KMT agents against themselves and relatives in Taiwan.

"The United States should immediately put restriction on the number of the personnel of the Coordination Council for North American Affairs. I feel it is equally important to make arms sales to Taiwan contingent on a certification that the Taiwan authority has ceased their spy activities in the United States," Chen Su-jen said.

Steve Solarz, Don Bonker and other congressmen at the subcommittee meeting expressed their grave concern over the extension of Taiwan's repressive activities inside the borders of the United States. Representative Jim Leach reiterated his request to the U.S. administration for a thorough investigation of KMT spy activities in this country which threaten the life and liberty of Chinese from Taiwan. Chairman of the House Asian and Pacific Affairs Subcommittee Solarz reiterated his stand that further arms sales by the administration to Taiwan be suspended.

Many Chinese, mostly students from Taiwan, were present during the hearing. Some students told XINHUA that they were shocked by the murder of Chen Wen-cheng and strongly condemned the Kuomintang agents in the United States.

'HSIN WAN PAO' ON TAIPEI'S ANNIVERSARY COINS

HK241504 Hong Kong HSIN WAN PAO in Chinese 24 Sep 81 p 2

["New Talk" column: "Taipei Has Shifted, But Not Enough"]

[Text] Taipei has shown changes in its actions in the past couple of days. Although the changes have not been sound and seemed perfunctory, they are still worth commending. These changes indicate a good trend. It is also necessary to point out: It will be very good if serious changes are made.

Taiwan is issuing gold and silver coins in commemoration of the "70th anniversary of the founding of the country." As a matter of fact, it is to commemorate the 70th anniversary of the 1911 revolution. The original design of the coins aroused widespread discontent because it was intended that they bear only the image of Chiang Kai-shek and not that of Sun Yat-sen. The day before yesterday, CHUNG YANG JIH PAO published the news that this was to change and the coins would now also bear the image of Dr Sun Yat-sen. (We regret having neglected this point yesterday.) This illustrates the saying, "It takes courage to realize shame." After all, it is promising for the Taiwan authorities concerned to feel shame and correct the mistakes, and we should praise their deeds.

However, we must point out that these changes are not sufficient and are in fact far from being sufficient. Among the four kinds of coins, three gold and one silver, only one of them bears the image of Dr Sun Yat-sen and the others still bear the image of Chiang Kai-shek. Even though the biggest gold coin will bear the image of Sun Yat-sen, the change is not entirely appropriate.

It was Dr Sun Yat-sen who led the revolution of 1911 and Chiang Kai-shek could not be found anywhere at that time. Thus, he is not qualified to appear on the coins. Perhaps Taipei might say the coins are to commemorate the "70th anniversary of the founding of the country," and that for over 40 years Chiang Kai-shek has played a certain role. Even if this is so, and we do not mention his merits or faults, we are now commemorating the anniversary of the founding of the country and Chiang Kai-shek did not contribute at all to this. Thus, how can the Taiwan authorities let him claim credit for other people's achievements? The worst thing is that three-quarters of the coins will bear his image, reluctantly leaving the image of the criticized Sun Yat-sen on the remaining quarter. Does the change seem adequate or serious?

The Taiwan authorities earlier denounced Beijing for "making use" of Sun Yat-sen in preparing for the grand ceremony to commemorate the 70th anniversary of the 1911 revolution. But on the other hand, in starting to issue coins, even they did not have the intention, until now, of "making use" of Sun Yat-sen. Thus were they on strong ground to denounce others? We are afraid that pretense is not found in Beijing but in Taiwan.

We should like to advise them once again: Pay genuine respect to Dr Sun Yat-sen and really implement the three people's principles.

BRIEFS

APPEAL TO DEFENSE MINISTER--According to our reporter (Li Guisheng) stationed in Zhaozhuang, Gao Qiyuan, younger brother of Kao Kuei-yuan, the Juomintang's defense minister in Taiwan, enthusiastically supports Chairman Ye Jianying's talk and hopes his brother will place the righteous national cause above everything else and take the bright road of patriotism and unification. Gao Qiyuan is a member of the Zhaozhuang Municipal CPPCC Committee. When he heard the talk delivered by Chairman Ye on Taiwan's return to the motherland and the realization of the great cause of unification over the radio, he said to this reporter: An early reunification of the motherland is a wish cherished by people throughout the country over the past 30 years. An early reunion of family members is yearned for by all the separated families on both sides of the strait. I earnestly hope my brother will place the righteous national cause above everything else, go with the tide of history and contribute to the return of Taiwan and the reunification of the motherland. My brother Kao Quei-yuan has been separated from us for over 30 years. All my family members are eager for a family reunion. I am 59 years old. My eldest son is a worker; my second oldest son is an apprentice at the Zhaozhuang Mining Bureau. We are doing very well. My brother Kuei-yuan is 74. As the old saying goes: Few people have ever lived beyond 70. I hope my brother will return to his old home on the mainland to reunite with us and renew our brotherly affection. FAO OFFICIAL, SPADOLINI, BRANDT ON WORLD POVERTY

OW170914 Beijing XINHUA in English 0740 GMT 17 Oct 81

[Text] Rome, October 16 (XINHUA)--Some 800 million people in the world are living in absolute poverty but the international community is not doing enough to end hunger, said Edouard Saouma, director-general of the Food and Agriculture Organization of the United Nations (FAO), here today.

In his speech today, designated by the FAO as the First World Food Day to draw public attention to the extent of world hunger, Saouma said most of the poorest people are found in the least developed countries and there are some nine million refugees driven from their homes by a rising tide of natural and man-made disasters.

He therefore called for a rededication to agriculture. Last year, Saouma said, production in over 60 developing countries failed to keep pace with the population growth. Fifteen countries were producing less food than they did a decade ago.

Without doubt, he added, "the situation among developing countries, particularly the poorest of them, is more serious now than at any time since the world food crises of the early seventies. Their position has been weakened even further by the recession in the industrialized world which has reduced both the volume and the value of their exports. As a result, the developing countries are falling prey to the forces of the market place, selling less for less. At the same time, the poor countries must pay more for imported goods and essential energy supplies."

Prime Minister of Italy Giovanni Spadolini in his speech stressed the need to map out a line of an "organic and incisive strategy," of a programme of action, to cope with the problem of hunger and malnutrition in the world. In this common effort, he said, Italy will do its part.

Speaking of North-South dialogue, the Italian premier said that "in our opinion this dialogue should more and more take the form of a global negotiation, intended to build up a more just economic order, capable of giving a valid reply to the legitimate hopes of the less privileged countries."

Former West German Chancellor and chairman of the Independent Commission on International Development Issues Willy Brandt stressed "the need to recognize the necessity of a programme of immediate action in critical sectors. The top priority for us is a global food programme."

He said that "any thought given to the components of a North-South priority programme, must include among its top priorities action for safeguarding the world food supply." This action should be taken in the following three sectors: First, increasing food production, with emphasis on low-income food-deficit countries. Second, world food security. The aim would consist in ensuring that the developing countries in general, and the most vulnerable ones in particular, are able to get the food supplies they need in times of difficulties. Third, international trade. The essential thing here is to raise commodity prices to levels which offer producers a fair reward. And tariff and non-tariff barriers in developed countries should be reduced or removed.

This afternoon, Italian President Pertini received at the Quirinale Palace the delegates to the FAO ceremony.

POLISH GOVERNMENT DISCUSSES ECONOMIC CRISIS

OW120722 Beijing XINHUA in English 0704 GMT 12 Oct 81

[Text] Warsaw, October 11 (XINHUA)--The Polish Government Presidium has authorized the Council of Ministers' Trade Union Committee to call for the establishment of a permanent mixed commission with the trade unions without delay to deal with supplies, price increases and rationing.

At a meeting yesterday the Presidium discussed a draft resolution on ways and means of preventing the worsening of the crisis and improving the administration of the country. It also discussed measures to do away with negative phenomena which undermine stability.

The government spokesman said here last night that the Presidium believes that the normalization of political situation is vital in bringing into full play our country's economic potentialities, carrying out reforms and satisfying the people's needs, especially as the winter set in. But, he said, "the course and resolutions of the Solidarity Union Congress have made the situation even more disquieting."

The proposed permanent mixed commission will consist of representatives of the government, the Solidarity union, the pro-government unions and the unaffiliated autonomous unions, and will deal with matters related to market deliveries, the rationing of necessities and price changes.

The decision is seen as a government move toward a permanent working relationship with the Solidarity union in view of the actual need for still more price hikes and agonizing food and fuel shortages in the winter.

The Polish State Television said last night that Poles would have to cut the use of their cars by one-third because only about 70 per cent of fuel needs would be met this month.

A Polish radio commentator said that Poles probably would have to suffer from the freezing cold this winter because output of the coal mines is falling.

CSO: 4000/4

POLISH GOVERNMENT DISCUSSES DOMESTIC SITUATION

OW141216 Beijing XINHUA in English 1203 GMT 14 Oct 81

[Text] Warsaw, October 13 (XINHUA)--The Polish Council of Ministers held a meeting here yesterday to discuss present domestic political and economic situation and study the result of the second-stage Solidarity congress, a Polish Government spokesman announced today.

The spokesman said that the progress of the congress and the substantial parts of its programme and resolution have exceeded the agreement reached in August 1980, thus seriously contradicting the principle of the country's system. Furthermore, no "favourable response" has been given to the proposal for constructive cooperation put forward by the government in a letter to the congress. The draft laws governing state-run enterprises and self-management of workers which were approved by the National Assembly were violated unprecedentedly, he said.

The Solidarity union has shown no interest in and understanding of the programme and actions taken by the government to overcome economic crisis. Such an attitude has brought tension and conflict in overcoming economic difficulties, he said.

The spokesman announced that the Polish Government was ready to discuss any constructive proposal. Thus, the Council of Ministers reaffirmed the proposal for establishment of a mixed commission composed of representatives of the government and various trade union centres to study problems such as market supplies, improvement of purchase, commodity prices and subsidies, he added.

He said, the meeting also studied the market situation, the improvement of coal production and the coupon system and economization of energy.

He said that the Council of Ministers asked all the peasants, Central Union of Agricultural Groups, "Solidarity" Peasant Union and other agricultural organizations to sell to the state agricultural produce, particularly livestock.

The Council of Ministers called for hastening the drafting of laws concerning economic reformation, readjusting the organizational and economic situation of enterprises and strengthening order and discipline, the spokesman added.

POLAND'S SOLIDARITY ENDS FIRST CONGRESS

OW081314 Beijing XINHUA in English 1255 GMT 8 Oct 81

[Text] Warsaw, October 7 (XINHUA)--Poland's Solidarity union wound up its first national congress in Gdansk today with an eight-chapter, highly political program after 12 days of searing debate.

The program, adopted by a majority vote at the second phase of the congress, calls for separation of political and economic power, breaking of the state monopoly of mass media, free and open elections at both local and national level, an independent judiciary, de-politicising of the police, workers' self-management and a boost to private enterprise.

The Solidarity demands a public trial of those responsible for what it termed "Poland's downfall," by the end of this year, with the threat that if the authorities fail to open the necessary inquiry for such a trial, it would undertake itself to organize a "people's tribunal" for the purpose.

The program branches out to cover foreign policy, saying: "Sense of responsibility forces us to recognize the balance of European powers established since World War Two. It is our desire to pursue our vast movement of change without challenging existing international relationships."

TRYBUNA LUDU, the party organ, today criticised the program for the fact that the term "socialism" was not even once mentioned in the program.

POLAND'S KANIA CALLS FOR BAN ON STRIKES

OW170306 Beijing XINHUA in English 0255 GMT 17 Oct 91

[Text] Beijing, October 17 (XINHUA)--Stanislaw Kania, first secretary of the Polish United Workers' Party, yesterday opened the fourth plenum of the party Central Committee after the ninth party congress in July by calling for a ban on strikes and ordered seasoned soldiers to prolong their military service, according to reports received here.

Kania, who has been reportedly taking a soft line towards the Solidarity free trade union, accused the movement of paralysing the country and ruining the economy with repeated demands and strikes.

He proposed at the party plenum that strikes should be banned during autumn and winter.

The party leader also suggested that Poles give up their free Saturdays in the coming months.

Kania said, "What is the worth of appeals and promises which we hear from the Solidarity leaders from time to time."

"The practice of their actions is determined by the blocking of all anti-crisis undertakings of the government. Let's put it openly, the line of (prolonging) economic crisis is aimed at taking political power," he pointed out.

Referring to Solidarity's rejection of pay incentives for Saturday work for miners, he said, "Nothing can justify blocking coal production in the face of the coming winter... Those who do so want our country to live in darkness and cold, our factories to be halted because of lack of energy."

In view of "the complex internal situation and drastic economic difficulties," the Polish Council of Ministers decided to extend military service for conscripts who had completed their normal two-year term, said a PAP report.

According to other reports the government-Solidarity talks on urgent economic problems, the first of such talks since August 7, came to an agreement Thursday on a temporary freeze on food prices. Chief negotiator of the Solidarity union, Grzegortz Palka, told newsmen after the talks that there are still differences between the two sides on the prices of petrol and wines. They would continue talks on cost of living compensation as well as public control over the country's economy, urgent and long range measures for freeing the country from crisis.

A PAP report said that owing to food shortages, especially the worsening of meat and meat products supply, strikes and other forms of protests have occurred in central and other parts of Poland.

FRENCH FOREIGN MINISTER CHEYSSON VISITS POLAND

OW090738 Beijing XINHUA in English 0715 GMT 9 Oct 81

[Text] Warsaw, October 8 (XINHUA)--French Foreign Minister Claude Cheysson arrived here today for an official visit.

His visit was described by the press here as "of special significance."

Henryk Jablonski, president of the Council of State, and General Wojciech Jaruzelski, chairman of the Council of Ministers, received him respectively.

PAP reported that the Polish premier and French foreign minister had talked about the "main problem in smoothly developing cooperation between Poland and France" and "Poland's demand for short-term and long-term cooperation between the two countries."

The French foreign minister also held talks with its Polish partner Jozef Czyrek on the "international affairs they were interested in" and the "possibility of developing relations between the two countries in various fields."

In an interview published in the newspaper ZYCIE WARSZAWY, the French minister said one aim of his visit was to study better Poland's economic situation so as to more effectively help Poland and also to tell France's partners about the problems in Poland.

He said, apart from providing food relief and raw materials, France was unable to solve certain problems by relying on her own efforts, and she should consult with other countries.

Poland and France have had traditional friendly relations and close economic ties. The turnover in trade between the two countries totalled 1,200 million U.S. dollars in 1980. France, next to West Germany, Britain and the United States, is the fourth biggest trading partner of Poland.

WEINBERGER CITES COMMON U.S., FRENCH DEFENSE VIEW

OW161630 Beijing XINHUA in English 1505 GMT 16 Oct 81

[Text] Paris, October 15 (XINHUA)--The United States and France "agree completely" on the need to boost common defence efforts, combat neutralism in Europe and follow the developments in the Middle East and Africa closely, said U.S. Defence Secretary Casper Weinberger here today.

Weinberger was speaking at a news conference after his talks with French Defence Minister Charles Hernu and Foreign Relations Minister Claude Cheysson. He arrived here last night at the head of a 15-member delegation for a 24-hour visit to France.

It is imperative to maintain the balance of force between the East and the West, particularly in Europe where the Soviet Union is continuing its deployment of the SS-20 missiles every week, he said.

France under President Francois Mitterrand is making an impressive contribution to the security of the Atlantic alliance, he said. He disclosed that the two sides had exchanged views on the threat posed by the Soviet strategy and on means to counter the threat. Both expressed their readiness to cooperate in armament.

Both the United States and France hold that the present neutralism in Europe is dangerous and that the call by some groups in Europe for unilateral disarmament is most unrealistic, he declared.

Weinberger pointed to the signs of instability in the Middle East, the Horn of Africa and Africa. The United States will do its utmost to help these countries, Egypt and Sudan in particular, he said.

The United States will give Sudan military aid as early as possible and to the amount of 100 million dollars, to be increased later.

Weinberger also expressed his appreciation of France's effort in the Indian Ocean.

At the end of the news conference, Charles Hernu said that he has accepted an invitation to visit the United States at a date to be discussed later.

In the talks, Weinberger detailed to the French ministers President Reagan's strategic plan to boost U.S. nuclear forces. The talks also covered bilateral military and armament matters and international issues of common interest.

U.S. CONGRESS DISCUSSES RECENT INDOCHINA POLICY

OW180116 Beijing XINHUA in English 0100 GMT 18 Oct 81

[Text] Washington, October 17 (XINHUA)--The Asian and Pacific Affairs Subcommittee of the House Foreign Affairs Committee started a discussion on U.S. policy on the Indochina region since Viet Nam's invasion and occupation of Kampuchea. At its first hearing last Thursday, some American experts and Vietnamese who managed to have escaped from the Hanoi brutal rule were present to give their witnesses.

Truong Nhu Tang, former justice minister of the Vietnam Provisional Revolutionary Government, told the subcommittee that the Hanoi regime is "an integral part of the Soviet hegemonists" and the invasion of Laos and Kampuchea were "to carry out the regional hegemonist policy of the Soviet Union's global strategy." As an insider, he disclosed the fanatic ambition of the Hanoi regime for expansion, quoting its present leader Le Duan as declaring "we will build up our country ten times bigger" while the Central School of Nationalities in North Vietnam was discussing a union of Southeast Asia to be set up by the end of this century. Years after Le Duan's declaration, Vietnam occupied Laos, invaded Kampuchea and attacked Thailand while the Soviet Union invaded Afghanistan, pointed out Truong Nhu Tang.

Analyzing the ties between Moscow and Hanoi, he said it has grown into an organic and integral body-like axis. The 1978 Vietnam-Soviet treaty was accompanied by five secret agreements including the provision for the use of military bases in Vietnam by the Soviet Union. To approve and support the Vietnamese invasion of Kampuchea, the Soviet Union gave Hanoi from three to five million dollars of military aid a day. He stressed that the conception of giving aid to Vietnam to save it from the Soviet orbit is similar to that of giving money to award a murderer. "I can tell you that the Hanoi regime is the most inhumane in the history of Vietnam and the Soviet hegemonists are the most dangerous imperialists in the world," he said.

He concluded his testimony by calling for joint efforts by the Asian countries, Japan, China and the U.S. to defeat Soviet hegemonism.

His statement was supported by follow-up witness Douglas Pike, a U.S. expert on the region. Ridiculing the idea of providing aid to win over the Hanoi regime, he quoted a poster in an American zoo: "Please don't feed the bears because the bears are going to bite you."

He said in geo-political terms the Vietnam-Soviet linkage "has developed over the last seven years into what is a military alliance in all but name." Vietnam is dependent on the Soviet Union for some 20 per cent of the food it consumes without which there would be rice riots. It is dependent on the Soviet Union for all its military hardware and supplies used in Kampuchea and against China. Soviet ships and submarines call regularly at Cam Ranh Bay, its reconnaissance planes fly regular missions out of Danang over the South China Sea. Estimates on the cost of all this to the Soviet Union range from two to four billion U.S. dollars annually.

He pointed out the difficulties Vietnam is facing. With continuing economic and socio-political malaise at home, Vietnam's invasion of Kampuchea has not gone well and it is extremely isolated with only two countries appearing to be truly friendly--the USSR and Cuba.

He also called for united efforts by the Asian countries, China and the United States to check Vietnam's act of expansion.

EGYPTIAN PRESIDENT STRESSES NATIONAL UNITY

OW181608 Beijing XINHUA in English 1506 GMT 18 Oct 81

[Text] Cairo, October 18 (XINHUA)--Egyptian President Husni Mubarak has emphasized that national unity is one of the most important priorities of the coming stage, the local newspapers reported today.

Mubarak presided over a series of meetings yesterday attended by top aides and provincial governors to discuss the security situation and economic and foreign policies.

He defined the priorities of domestic national action for the coming stage as the realisation of stable security for the masses and paying more attention to the bringing up of the new generation and to the minimisation of bureaucratic practices and red tape.

Mubarak also urged provincial governors to fight all forms of deviation, negligence and indiscipline and confront all problems in their governorates.

The government will strongly face up to any deviation, he said. "Every citizen, be he Muslim or Christian, is duty-bound to shoulder responsibility. We all are Egyptians and we all are equal."

Mubarak said the government will pay considerable attention to the appropriate channelling of the creative energies of youth while confronting all extremist doctrines and fanatic tendencies of any colour.

JAPAN OFFICIAL URGES U.S. FLEXIBILITY ON MIDEAST

OW160728 Beijing XINHUA in English 0712 GMT 16 Oct 81

[Text] Tokyo, October 16 (XINHUA)--Toshio Kimura, chairman of the Dietmen League for Japan-Palestine Friendship, has said that Japan should take the opportunity of the North-South summit to inform the United States and Israel of the Palestine Liberation Organization's perceptions of Middle East peace and to urge them to adopt a flexible attitude.

In a talk carried in today's YOMIURI SHIMBUN, this former Japanese foreign minister pointed out that "it is of great significance for the PLO leader to pay, for the first time, a visit to Japan, a developed country with influence on the United States."

He said: "The Palestine issue is the core of Middle East peace. As a clue to the solution of this issue, it is significant for Japan to take the opportunity of Chairman 'Arafat's visit to clarify Japan's Middle East policy."

"During his talks with Japanese Prime Minister Zenko Suzuki, Chairman 'Arafat made an affirmative appraisal of the eight-point proposal put forth by Crown Prince of Saudi Arabia Fahd and accepted it as the basis of Middle East package peace," he said, adding, "By confirming this reaction, Japan will be able to contribute to Middle East peace and play its special role."

TOKYO SHIMBUN noted in a commentary today: "Japan has opened the way for dialogues with the Palestine Liberation Organization. This is of great importance. However, if Japan really wants to help achieve Middle East peace, it should urge the United States to adopt a flexible policy."

CARTER, FORD SUGGEST DIALOGUE WITH PLO

OW121226 Beijing XINHUA in English 1215 GMT 12 Oct 81

[Text] Beijing, October 12 (XINHUA)--Two former American presidents, Jimmy Carter and Gerald Ford, favored U.S. recognition of the Palestine Liberation Organization, according to a report from Washington.

They favored a U.S. dialogue with the PLO in a joint press interview aboard the presidential jet on their way back to Washington from the funeral of Egyptian President Anwar as-Sadat.

Asked if the United States should talk directly to the PLO, Ford said, "At some point that has to happen. I would not want to pick the date today, but in a realistic way that dialogue has to take place..."

Carter said, "I don't see any possibility of the Palestinian world, and the Arab world, of acknowledging any other leadership for the Palestinians other than the PLO."

He added, "We can't speak for Israel but I think a simultaneous acknowledgement of the PLO and that Israel has a right to exist, and our dealing with the PLO would be certainly something that I favor."

Explaining the lack of progress in the Middle East peace negotiations, Carter said this was "primarily because of the settlement policy on the part of Israel and the difficulty with East Jerusalem."

Zbigniew Brzezinski, who was national security advisor to former President Jimmy Carter, also came out for a dialogue with the Palestinian Liberation Organization while addressing a Foreign Affairs Club luncheon in Washington. He said that "whether we like it or not, they probably speak for a large segment of the Palestinian population" and that "it does not serve the American interests not to have some sort of a dialogue with them."

MUBARAK SWORN IN AS EGYPTIAN PRESIDENT

OW150212 Beijing XINHUA in English 0104 GMT 15 Oct 81

[Text] Cairo, October 14 (XINHUA)--Muhammad Husni Mubarak took his oath at the People's Assembly at noon today to become Egypt's third president after Gamal Nasser and Anwar as-Sadat.

At the beginning of the assembly meeting, Speaker Sofi Abu Talib announced the results of the referendum held yesterday by which Mubarak was overwhelmingly approved as the president of the republic.

Mubarak was then sworn in and pledged to look after the interests of the people and maintain the independence of the nation and the integrity of its land.

In a congratulatory address to the assembly, Sudanese President Ja'far Numayri said the approval of Mubarak's nomination for the presidency was an affirmation of the people's determination to continue the march.

Then Mubarak delivered a long speech, eulogizing the late President Anwar as-Sadat. At his request, the House observed two minutes' silence in memory of the late president.

On domestic and foreign policies, the new president said: "Prosperity, raising the national income and the standard of living, providing equal opportunities for all and realizing justice are foremost among our national aims." He pledged to continue the economic open-door policy.

He declared that Egypt would respect all treaties and international agreements and honour all commitments. He also asked "the others to honour their commitments in full." He said the Egyptian Government would continue to take the course of durable and overall peace in the Middle East based on the Camp David accords and would spare no efforts for the success of the autonomy talks. But he said: "We do not speak in the name of the Palestinians," as the Palestinian people have the last word to say about their final solution.

Mubarak also said that Egypt's position would not change till Israel completes its withdrawal from Sinai in April next year. He told the assembly that he had received Israel's firm assurances that its final withdrawal would take place as scheduled.

To conclude his speech, he said that the Egyptian people "are today more determined to pursue the course of peace and are more adamant to protect all fruits of peace."

MUBARAK PLEDGES CONTINUED MIDEAST PEACE PROCESS

OW120252 Beijing XINHUA in English 0236 GMT 12 Oct 81

[Text] Cairo, October 11 (XINHUA)--Egyptian Vice-President and presidential candidate Husni Mubarak today assured that the peace process will continue as scheduled and that Egypt is fully supported by the United States which will continue as full partner in the peace process in the Middle East, MENA reported tonight.

Mubarak made this statement after his talks earlier today with U.S. Secretary of State Alexander Haig. The talks, according to Mubarak, were a continuation of his Washington talks a week ago. Mubarak termed today's talks as "fruitful."

Haig also expressed confidence that President as-Sadat's line will be maintained. He conveyed to the Egyptian leadership that Washington would not allow any external interference in the area.

In the meantime, official Egyptian-U.S. talks started here today under Egyptian Deputy Premier and Foreign Minister Kamal Hasan 'Ali and U.S. Secretary of State Haig.

'Ali told journalists that the talks dealt with the urgent and speedy need for stability in the Middle East.

In the talks Egypt emphasized that she will follow the same policy and will respect all agreements and conventions, 'Ali said. It will also respect the accords on a timetable for the coming sessions of talks between Egypt and Israel, especially those to finalize Israeli withdrawal from Sinai scheduled for October 25 in Tel Aviv.

Haig said he completely agreed with what 'Ali said.

In an interview with NEWSWEEK magazine, Mubarak has reiterated that he is going to continue the peace process in the Middle East and considered Camp David as the basis.

Mubarak disclosed that moments before as-Sadat was shot, the president was discussing with him how to celebrate the complete return of Sinai from the hands of Israel on April 25 next year and telling him things that needed to be done.

He said he had received condolences from some Arab leaders who did not want to publicize them. He added that he was sad that some other Arab leaders did not send condolences. But he said: "I am not going to start with animosity at all." He said: "We did not do anything with the Arab world. They froze their relations with us." As for a rapprochement, he added, "The initiative should come from their side."

'ARAFAT COMMENDS SAUDI MIDEAST PEACE PROPOSAL

OW141228 Beijing XINHUA in English 1209 GMT 14 Oct 81

[Text] Tokyo, October 14 (XINHUA)--Yasir 'Arafat, chairman of the Executive Committee of the Palestine Liberation Organization (PLO), commended Saudi Arabia's Middle East peace proposal and clarified his stance on the question of recognition of Israel.

'Arafat expressed this commendation several times in his talks with leaders of the Dietmen's League for Japan-Palestine Friendship and other parties here yesterday, reported TOKYO SHIMBUN.

Asked why the Palestine Liberation Organization did not recognize Israel, 'Arafat said: It is exactly the opposite. It is Israel which does not recognize us and rejects our proposal. Whether to recognize Israel or not is our last trump card which we won't play until our descendants are back to their motherland."

In his talks with Liberal Democratic Party Secretary Yoshio Sakurauchi and others, the PLO leader said Saudi Arabia's peace proposal "deserves commendation and will be an important agenda item for discussion at the next Arab summit."

'Arafat said "no" in answer to a question put by Zentaro Kosaka of the Foreign Affairs Research Council of the Liberal Democratic Party as to "whether there is any clause in the Palestinian charter which stipulates the elimination of Israel?"

"There is nothing of that sort in the charter. But it is stipulated in the charter that Moslems, Christians and Jews should have land to live together," he said.

The PLO leader also pleaded with Japan for support when he talked with Japan Socialist Party Chairman Ichio Asukata.

"We have no intention to harm anybody. Like others, we, too, have the right to live. We hope Japan can get rid of the pressure from all sides and give us support," he said.

In his separate talks with Komei Party Chairman Yoshikatsu Takeiri, Representative Yohei Kono of the New Liberal Club and the United Social Democratic Party Chairman Hideo Den, 'Arafat reiterated his position on the Saudi Arab's proposal and said it is their intrinsic right to establish a state of the Palestinian people.

JAPANESE PREMIER, 'ARAFAT DISCUSS MIDEAST PEACE

OW141908 Beijing XINHUA in English 1906 GMT 14 Oct 81

[Text] Tokyo, October 14 (XINHUA)--Japanese Prime Minister Zenko Suzuki met Palestine Liberation Organization Chairman Yasir 'Arafat here today to discuss peace in the Middle East.

Suzuki has been the first head of government among allies with the United States to talk with 'Arafat about the Middle East.

"The nucleus of peace in the Middle East is the problem of Palestine," Suzuki said, "and the Palestine Liberation Organization is an effective organization among the Palestinians."

'Arafat told Suzuki that the PLO has agreed with the eight-point proposal on peace in the Middle East submitted in August by Saudi Arabian Crown Prince Fahd. And his organization had made some efforts for the materialization of peace in the Middle East.

However, he said Israel had not yet recognized Palestine and it continues to reject United Nations resolutions.

'Arafat stressed that "the rights to national self-determination refer to establishing an independent country" and the rights of Palestine to self-determination should be recognized.

He reiterated his objection to the Camp David accord reached between Israel and Egypt in 1978.

Suzuki told 'Arafat that "a just, permanent peace package should be introduced" in the Middle East and Japan "is willing to cooperate for the materialization of the U.N. resolutions."

He said that "the rights of the Palestinians to self-determination should be recognized and at the same time the rights of Israel to existence also should be recognized."

Suzuki said that Japan would contribute to peace in the Middle East.

After the discussion, 'Arafat told news reporters at the Tokyo Journalists Club that his visit to Japan had been "important and successful." He will leave tomorrow for Viet Nam.

INTERNATIONAL AFFAIRS

'XINHUA' NOTES 'ARAFAT WELCOMES U.S.-PLO DIALOGUE

OW131220 Beijing XINHUA in English 1200 GMT 13 Oct 81

[Text] Tokyo, October 13 (XINHUA)--Yasir 'Arafat, chairman of the Executive Committee of the Palestine Liberation Organization, declared here last night that his organization welcomed the proposal that the United States should have direct dialogue with the PLO.

During a television interview with the Japan Broadcasting Corporation (NHK), 'Arafat, commenting on the proposal to this effect made by former U.S. Presidents Gerald Ford and Jimmy Carter said: "The PLO welcomes the statement and appreciates the suggestion that the peace package put forth by Saudi Arabia be taken as a basis for future peace talks." He also expressed the hope that U.S. President Reagan should recognize the practicability of the statement.

He said: "The U.S. must recognize the fact that the Palestinian people are the victims of Israeli aggression, must recognize the right of self-determination of the Palestinian nation and accept the U.N. resolution. This is a prerequisite."

At a welcome cocktail party given by the Japanese hosts last evening, 'Arafat said: "Peace in the Middle East cannot be realized unless the international resolutions are observed and the Palestinian people's right to self-determination and to build their own state are ensured." He condemned Israel and stressed: "We hope that the problems should be settled in accordance with international laws and the Middle East issues be solved in accordance with the U.N. resolutions."

'Arafat arrived in Tokyo from Pyongyang by special plane yesterday afternoon for a three-day visit to Japan at the invitation of the Dietmen's League for Japan-Palestine Friendship. Prime Minister Zenko Suzuki and Foreign Minister Sunao Sonoda will hold talks with him. Foreign news agencies hold that the arrangement of these talks has important significance.

JAPAN'S SUZUKI SAYS PALESTINE KEY TO MIDEAST

OW131900 Beijing XINHUA in English 1641 GMT 13 Oct 81

[Text] Tokyo, October 13 (XINHUA)--Japanese Prime Minister Zenko Suzuki today said the Palestinian issue is "the core of the Middle East problem."

Suzuki, holding talks with United Arab Emirates Minister of Petroleum and Resources Mani' ibn Sa'id al-'Utaybah, also said Japan intends to do whatever it can to help solve the Palestinian issue.

On his forthcoming talks with 'Arafat, chairman of the PLO Executive Committee, Suzuki said he is looking forward to a frank exchange of views with 'Arafat who is now visiting Japan.

Al-'Utaybah stressed to Suzuki that peace in the Middle East will never be reached until the Palestinian issue is solved. He also expressed his country's hope that the United States will "change its stance" in Middle East peace negotiations and "strive for a comprehensive peace."

The leaders also discussed the assassination of Egyptian President Anwar as-Sadat on October 6 and its implications on peace in the Middle East.

On relations between Japan and United Arab Emirates Suzuki pledged to promote a cultural and technical interchange between the countries, while al-'Utaybah called for an interchange of sports teams.

Al-'Utaybah arrived in Tokyo Monday for a seven-day visit to Japan.

EEC TO CONTINUE MIDEAST PEACE EFFORTS

OW140328 Beijing XINHUA in English 0229 GMT 14 Oct 81

[Text] London, October 13 (XINHUA)--Foreign ministers of the European Economic Community today pledged to continue their Middle East peace efforts following the assassination of Egyptian President Anwar as-Sadat and to do what they could to assist stability in that region.

After a meeting of the EEC foreign ministers here which discussed the impact of President as-Sadat's assassination, British Foreign Secretary Lord Carrington, who chaired the meeting in his capacity as the current president of the Community's ministerial council, told a press conference that the EEC's search for a mediating role in the Arab-Israeli conflict would go on. "We feel the stability of Egypt is extremely important at this time," he said. "We expressed our determination to remain active in the spirit of our past declarations, in particular the Venice declaration."

Lord Carrington announced plans to fly to Saudi Arabia in the next few weeks as the emissary of the European Community in a fresh attempt to bring peace to the Middle East.

Apart from the Middle East, today's meeting also discussed other matters in the context of strengthening political cooperation among the ten EEC member states. The foreign ministers underlined the importance of consultation among the ten on all important questions of foreign policy, which they believe lies at the heart of European political cooperation. They also agreed to establish a crisis procedure under which EEC foreign ministers could meet within 48 hours at the request of any three member states. "That ought to prevent any repetitions of what happened over the disarray we had over the invasion of Afghanistan," Lord Carrington stressed. The object is to enable the Community "to speak with one voice in international affairs."

Besides, the EEC foreign ministers moved a step further today by agreeing for the first time to place security matters on the political cooperation agenda. "The political but not the defence aspects" of security were discussed, Lord Carrington explained.

ALEXANDER HAIG ASSURES U.S. SUPPORT TO EGYPT

OW101826 Beijing XINHUA in English 1515 GMT 10 Oct 81

[Text] Cairo, October 10 (XINHUA)--The United States is committed to support Egypt against hostile actions from foreign powers and will speed up arms shipments, U.S. Secretary of State Alexander Haig declared Friday.

The large U.S. delegation which arrived in Cairo Friday included former Presidents Richard Nixon, Gerald Ford and Jimmy Carter, Secretary of Defence Casper Weinberger and former Secretary of State Henry Kissinger.

During a meeting with Egyptian President-designate Husni Mubarak, Haig, head of the U.S. delegation to Anwar as-Sadat's funeral, delivered three messages from President Ronald Reagan to Interim President Sufi Abu Talib, Vice President Mubarak and as-Sadat's widow.

The messages reportedly confirmed the vital importance of promoting U.S.-Egyptian relations and the continuation of the United States as a full partner in comprehensive peace negotiations in the Middle East. Haig also conveyed Reagan's invitation to Mubarak to visit the United States.

Mubarak accepted the invitation and is expected to visit Washington in January or February.

IRAN PARLIAMENTARY DISSENT REPORTED

OW091335 Beijing XINHUA in English 1232 GMT 9 Oct 81

[Text] Tehran, October 8 (XINHUA)--For the first time since the ouster of former President Bani-Sadr last June, Iran's Majlis, dominated by the Islamic Republican Party, heard the strong voice of dissent at its session yesterday.

Bazargan, formerly prime minister of the provisional government after the Islamic Revolution and a deputy for Tehran, took the floor and declared that the country is in the flames of a terrible fire which endangers the state, the government and the religion.

He said: "Each side accuses the other of being hypocrites, reactionaries and anti-Islamic and imperialist agents. The noble clerics did not come from the United States, nor are those young people who defy death born and brought up in American families. It is not justified to call them hirelings of the United States. Why then do people deem it legitimate and necessary to slaughter each other? And the most disastrous of it all is that this turmoil and brutalities have been fueling the discontent and acts of revenge. More and more people are disassociating themselves with revolution and the religion. The honor and prestige of Islam are besmirched as a result."

An uproar erupted in the hall as Bazargan delivered his speech. Some deputies shouted: "While Koran prescribes that hypocrites must be executed, Mr. Bazargan says no. You are opposing the rules of Koran." "You (Bazargan) are a hypocrite and a renegade." Some dashed to the platform to voice their protests and others walked out.

The session resumed after a recess of about half an hour.

'XINHUA' REPORTS ARAB REACTIONS TO AL-SADAT DEATH

OW081803 Beijing XINHUA in English 1646 GMT 8 Oct 81

[Text] Beijing, October 8 (XINHUA)--Reactions to Egyptian President Anwar as-Sadat's death in Arab countries varied the past two days.

Sudanese President Ja'far Numayri described the assassination of as-Sadat on October 6 as "a conspiracy against the Egyptian people." He also announced an official 40-day mourning period and cancelled official ceremonies for one week.

Meanwhile, the Sudanese first vice president expressed the determination on October 6 that Sudan will continue to support the Egyptian people and develop fraternal ties between the two nations.

Moroccan King Hassan II in a message of condolence yesterday expressed sympathy for the Egyptian people and leaders and as-Sadat's family.

Moroccan Prime Minister Maati Bouabid will lead a delegation to attend as-Sadat's funeral in Cairo.

Chairman of the Executive Committee of the Palestine Liberation Organization Yasir 'Arafat said at a Damascus rally on October 6 that the assassination of as-Sadat proved "the Palestinian cause was alive in the conscience of the great people of Egypt which never forgave its president for abusing Jerusalem, selling off the Palestinian cause and signing the treasonous Camp David accord."

The Iraqi Revolutionary Command Council called on as-Sadat's successors to "abandon as-Sadat's policy of treachery and return to the ranks of the Arab nation."

Lebanese Prime Minister Shafiq al-Wazzan said on October 6: "The assassination of as-Sadat was a historical lesson. The Camp David accord has brought a series of splits and disputes to the Arab world and set the arrogant Israel free to commit invasion and infiltration into Lebanon. The Camp David accord killed as-Sadat."

Jordanian Information Minister 'Adnan Abu 'Awdah said on October 6 that any Middle East solution which ignores the Palestinian question could never succeed.

Libyan leader Mu'ammar al-Qadhdhafi in an October 6 radio speech said: "As-Sadat's death has buried forever the hatred between Egypt and Libya."

He announced that Libya's borders with Egypt will be opened as of Wednesday and border patrols withdrawn. In addition, Libya will not intervene in Egypt's internal affairs, and Libya will improve relations with Egypt, he added.

Al-Qadhdhafi urged Egyptian troops to "take over the powers from which as-Sadat deprived you."

FRG PRESIDENT'S VISIT TO NATO NOTED

OW081951 Beijing XINHUA in English 1534 GMT 8 Oct 81

[Text] Brussels, October 8 (XINHUA)--"Europe's sorrowful history is clear evidence that the mere will for peace does not suffice to safeguard peace," President Karl Carstens of the Federal Republic of Germany told the NATO Council here today.

Paying a visit to the NATO headquarters here this morning, President Carstens stressed, "There can be no doubt that the North Atlantic alliance is an indispensable prerequisite for maintaining our security and freedom and preserving peace. We do not believe in unilateral disarmament as a practicable approach to preserving peace."

He said, "One of the conditions for the preservation of peace is equilibrium of military forces between the East and the West. All parties to the alliance must make a united effort to maintain that equilibrium." He said further, "Our constant efforts to achieve arms control and disarmament are also an indispensable part of our policy for peace."

Greeting the West German president, NATO Secretary-General J. Luns said there is in Germany, as in other alliance countries, "a younger generation which increasingly questions the necessity for defence and fails to understand the peace-promoting nature of an approximate balance of forces. In this field as well, our common task is to create the necessary means of political education by providing frank and honest information. NATO depends on the common will of its member countries and their citizens to stand up for peace and freedom."

While visiting the EEC headquarters yesterday, President Carstens affirmed that "for the fact that the process of European unification can occur in conditions of external security, we are indebted to the North Atlantic alliance."

The president of the commission, Mr. Thorn, said in a speech of welcome, "We are grateful to your country for having recently taken initiatives in different [words indistinct] order to boost European integration."

DPRK'S CHONG CHUN-KI ON KOREA'S REUNIFICATION

OW101830 Beijing XINHUA in English 1616 GMT 10 Oct 81

[Text] Pyongyang, October 10 (XINHUA)--President Kim Il-song's proposition for the reunification of Korea last year was the most reasonable way for Korea to unite, Chong Chun-ki, alternate member of the Political Bureau of the Central Committee of the Workers' Party of Korea, said Friday.

Chong, also vice premier of the Administration Council and vice chairman of the Committee for the Peaceful Reunification of Korea, made the remark at a news conference on the first anniversary of the proposition's publication.

Chong emphasized that Koreans should achieve great national unity, irrespective of the differences in ideology and systems, party affiliations and political views, and help found a Democratic Confederal Republic of Koryo.

For national unity and peaceful reunification, personages of all circles in the North and the South and overseas should have contact and hold dialogue, he said. He also pointed out the urgent necessity of convening soon a conference for the promotion of national reunification.

When the conference is convened, all the problems concerning reunification including the proposal for founding the Democratic Confederal Republic of Koryo will be discussed and settled there, he said.

"Our sincere efforts have not yet borne a proper fruit," Chong said. "This is because of the malicious hindrances of the South Korean rulers who are encouraged by outside forces who want to perpetuate national division." "If the Chon Tu-hwan group withdraws from 'power' and if democratic figures and genuine representatives of all strata, who are truly desirous of democracy and peaceful reunification of the country come to power, we will sit at one table with them any time and discuss and solve the question of the country's reunification," Chong said.

Chong also urged the United States to end its "two Koreas" policy and its arms shipments to South Korea.

DPRK'S KIM IL ON SOLUTIONS FOR REUNIFICATION

OW101938 Beijing XINHUA in English 1849 GMT 10 Oct 81

[Text] Pyongyang, October 10 (XINHUA)--Kim Il, vice president of the Democratic People's Republic of Korea, proposed some solutions to problems in unifying Korea.

President Kim Il-song has advanced the proposal for unification of Korea by the founding of the Democratic Confederal Republic of Koryo (DCRK).

The vice president proposed his solutions during a talk yesterday with Choe Hong-hui, publisher of PAEDAL SINBO and president of the International Federation of Taegwndo who is visiting Pyongyang.

Vice President Kim Il, who is also a Presidium member of the Political Bureau of the Korean Workers' Party Central Committee and chairman of the Committee for the Peaceful Reunification of the Fatherland, proposed the following:

1) To establish a confederal state, the Chon Tu-hwan fascist rule should be destroyed and society be democratized in South Korea;

2) Tensions should be eased and the danger of war be removed in our country;

3) The "two Koreas" policy of the United States and its interference in the internal affairs of South Korea should be stopped;

4) The so-called "proposal for mutual visits" of traitor Chon Tu-hwan should be sternly denounced and rejected;

5) Personages of all circles in the North and the South and abroad should have contacts and hold dialogues with each other to wage a nationwide patriotic movement of supporting and realizing the proposal for founding the DCRK;

6) A conference for the promotion of national reunification attended by representatives of political parties and organisations and personages of all circles in the North and the South and abroad desirous of reunification should be convened, at which all problems concerning national reunification including the formation of the preparatory committee for the founding of the DCRK and all other problems arising between the North and the South should be discussed and settled;

7) All the Koreans at home and abroad should achieve great national unity under the banner of national reunification, irrespective of differences in ideology, idea, system and political view.

THAILAND TO RECTIFY IMBALANCE IN ECONOMY

OW130812 Beijing XINHUA in English 0718 GMT 13 Oct 81

[Text] Bangkok, October 12 (XINHUA)--Thailand is going to rectify its structural imbalance in the country's economy which is expected to grow at a relatively high rate of 6-7 per cent in real terms in the next few years.

The concept is envisaged in the fifth five-year national economic and social development plan which takes effect this month, according to official sources.

Thailand recorded high growth rates in the development of its national economy in the last few years. The National Economic and Social Development Board (NESDB) announced recently that Thailand had an economic growth rate of 6.3 per cent during 1980 as its gross domestic product (GDP) totalled 294,376 million baht (23 bahts for one U.S. dollar).

However, a senior official of the NESDB, the government prime economic think tank, disclosed that the high growth rates in the past had caused structural weaknesses as the gap of uneven distribution of wealth had widened and development had benefited city dwellers rather than the rural majority.

In the light of these weaknesses, the main concern in the coming years is, not so much the growth of GDP, but the rectifying of structural imbalance within the country's economy and society.

Therefore, the fifth plan puts prime emphasis on bridging the rich-poor income gap, curbing imports and reducing the level of foreign borrowings.

To achieve these objectives, the policies to be pursued point to a sharp swing inwards with stress on greater self-reliance. These policies include: to improve national economic efficiency and productivity by restructuring the pattern of growth in different sectors, to correct the growing urban-rural imbalances, to improve and balance domestic and external financial positions, and to further slow down the rate of population growth. However, in order to contain the external threat to the country, national defence expenditure will have to go up during the current five-year plan period.

'RENMIN RIBAO' DELEGATE ON VISIT TO PANMUNJOM

HK150705 Beijing RENMIN RIBAO in Chinese 9 Oct 81 p 7

[Article by Pei Da [5952 6671] of RENMIN RIBAO delegation to DPRK: "A Trip to Panmunjom"]

[Text] We drove from Pyongyang southward. All the way we saw picturesque scenery. There were dense forests. The paddy in the fields was ripe. A bumper autumn harvest was in sight. What a gratifying scene this was! Coming to Kaesong city, we saw clean and tidy roads and streets. Everywhere in this "city of youth" was a scene of prosperity. We went southeastward for more than 10 li along a winding mountain road before we came to Panmunjom.

Panmunjom was a place of world renown. Here, 28 years ago, the United States bowed its head for the first time and signed a truce agreement. In his book entitled "From the Danube to the Yalu River," American General Mark Clark wrote: "Carrying out the government's instructions, I earned an unenviable reputation: I was the first American commander who signed a truce agreement without winning the war." This self-ridicule is still taken as a laughing stock today.

Panmunjom still attracts the world's attention today. There, U.S. imperialism and the South Korean puppet are still in the defendant's seat. Refusing to learn the lesson of their defeat, they have been intentionally violating the truce agreement. Up to August this year, they have violated the agreement 324,000 times.

We went up the watch tower and looked far into the distance. The scene reminded me of a poem by Guo Moruo:

Everything in Panmunjom remains the same. The parallel divides the place into two different parts. On the south is a shambles while on the north is a scene of everlasting prosperity. Bright and limpid eyes are looking from every direction. Two foreign soldiers are patrolling the place. Despite its serious wound, the paper tiger still tries to show its strength. Pitifully, it is approaching a pit of fire.

Guo Moruo, leader of the Chinese people's delegation, read this poem at the party of poets held in the evening of 22 October 1958 during the "Korean-Chinese Friendship Month," angrily denouncing U.S. imperialists' crime of splitting Korea, and expressing the Chinese people's wish that Korea would be reunified very soon. Twenty-three years have passed, but Korea's national tragedy has not yet ended. The endless wire entanglement and countless pillboxes of the U.S. puppet army cut the Korean land into two halves. On the southern side of the military dividing line was a barren strip of land. A Korean comrade told us that the residents there had been driven away and the houses were unoccupied. The chrysanthemums growing in front of the houses were left uncared for. The whereabouts of the owners of the houses were unknown. In accordance with local customs, a woman working on a cooperative farm in the North went to the South to her mother's house to deliver her first child. But she could not go back to the North, so that the child never saw the father in the past 30 years. In Kaesong, 75 percent of the families have kinsmen in the South. Throughout Korea, millions of people are suffering the pains of being separated from their kinsmen. The Korean comrade telling us the story was filled with grief, and the visiting Chinese comrades-in-arms were excited and indignant. New hatred piled onto old. At an elevated spot near Panmunjom, we saw the new crime committed by the U.S. puppet clique. Violating the truce agreement, it built a reinforced concrete wall on the southern side of the 240-km dividing line. The wall was 5 to 6 meters high and 10 to 15 meters wide at the base and 2 to 3 meters at the top, with a large number of firing points, watch towers and permanent pillboxes installed here and there. Big iron doors were also installed at short intervals, providing exits for heavy tanks. A great deal of military equipment was placed behind the wall. The fighters of the Korean People's Army angrily pointed out that the enemy's brazenness was a challenge to all Korean people who longed for reunion with their kinsmen and an insult to the people all over the world who hoped for reunification of Korea.

Though the wall was thick, it could not hide the vicious intentions of the U.S. puppet clique, which frenziedly attempted to divide Korea forever by means of a reinforced concrete wall and to shackle the Korean people of the South forever. However, the U.S. puppet clique was only daydreaming! A commander of the local army unit told us that on 14 August this year, Captain Sok Chong-hyon, commander of a company of the First Division of the South Korean puppet army, came over to the North by taking the opportunity of inspecting posts at this part of the wall. We saw this company commander on the television screen when we were in Pyongyang. He was telling press reporters how and why he came over. He was a native of the South. After being conscripted into the army in 1974, he attended an infantry school. He was promoted to be captain and a company commander. He lived with his parents and younger brothers and sisters. He was married. He was not persecuted by the South Korea authorities, nor did he have to worry about his family's livelihood. However, he hated Chon Tu-hwan's dark rule and opposed the oppression of compatriots. He hoped for a peaceful reunification of the fatherland. He yearned for the North because there was light and hope in the North. His sense of justice and his love for the nation urged him to part from his kinsmen and to come over to the North at the risk of his life. Quite naturally, people link Sok Chong-hyon's deed with the wish of the people of the South. Those in the South who cannot earn a living are brutally persecuted. Day and night, they yearn for their kinsmen in the North. Do they not yearn for the North and hope for an early reunification of their fatherland more than Sok Chong-hyon did? This common wish of millions of people is brewing a daily growing militant force. The roar of thunder is the loudest where the silence is, and the sight of the reinforced concrete wall can only raise a laugh. No matter how thick the wall is, it cannot stop the advancing wheel of history. In the long run, like the meeting place at Panmunjom, it can only be a witness of the defeat of the U.S. puppet clique.

On our way back to Pyongyang, night fell and the beautiful landscape was getting dim. It was quiet in our car. What the Korean comrade-in-arms at Panmunjom said echoed in my ears: "Please tell the Chinese brothers and the people in other parts of the world that the struggle to unify the fatherland is arduous but, answering great leader Kim Il-sung's call, we are sure of victory and will step up construction and make all preparations for the reunification of the North and the South and for building the Koryo Democratic Federation." Yes, this resembled what we saw everywhere during our visit. In the Taean heavy machinery complex, the workers were carrying out a campaign to increase output and working hard to improve the quality of products, so as to furnish the newly built units with more and better equipment and to aid the South in its construction. The first 5-year plan of the Kiyang irrigation project was accomplished in 1 year and 8 months, greatly increasing grain output in the areas irrigated by this project. The responsible comrade of the management office told our delegation: We are building more reservoirs for irrigating the farmland in the South to further increase farm output in the South after the reunification of the fatherland. The Baehwa Higher Agricultural College was run with excellent results. It has trained 3,000 technicians, who have taken the posts of farm management committee chairmen, farm management group leaders and farm technicians and are playing a major role in bringing prosperity to the countryside. The president of this college said: We never for a moment forget the rural youths in the South. We hope to teach them our farming techniques as quickly as possible so that the peasants in the South can also lead a happy life. At the heroic height 351, the commander pointed at the enemy sentry post, angrily denouncing the enemy provocations. He said: Our officers and men have inherited the revolutionary spirit of the brave fighters who took only 15 minutes to capture this height years ago. They are constantly prepared to fight to accomplish the great cause of reunification. A wolf will never change its character. Once it shows itself, they will seize it and give it a good beating!

The fatherland needs reunification. This is a strong will of the 50 million Korean people. The kinsmen need reunion. This is the common wish of the Korean compatriots in both the North and the South. We were deeply moved by this strong aspiration. On the Korean National Day, which fell on 9 October, we watched a mammoth callisthenics exhibition in the Moran-bong Stadium in Pyongyang. The brilliant performances manifested the great achievements won on the industrial, agricultural, cultural and educational fronts. When a pattern showing the split between the North and the South was formed by the gymnasts on a viewers' stand, the other gymnasts on the playing field performed with uniform and vigorous movements, demonstrating their firm will to unify their fatherland. Suddenly, amid joyous music, the military dividing line disappeared from the pattern, which then showed a bright sun in the sky over the picturesque landscape of Korea and a train loaded with cargo speeding from the North to the South. Instantly, a thunderous applause burst from among thousands of viewers, and the stadium was permeated with a joyful atmosphere. How eagerly the Korean people are waiting for this day to come!

When our car entered the city proper of Pyongyang, we were greeted by a beautiful night scene. In the Children's Palace, children were studying. In the university library, the youths were absorbed in reading. In the well-lit newly built housing estates, all families rejoiced at having moved to a better place. The Mangyongdae Theater, where a large-scale song and dance performance was being staged, was permeated with a joyful atmosphere. After the day's work, the workers and staff members were enjoying a happy evening and were prepared to usher in another day of intensive work. In the beautiful capital city, the heroic people have made brilliant achievements and are leading a happy life. We sincerely hope that flowers of peace and happiness will blossom all over Korea very soon.

GDR'S INDUSTRIAL DEVELOPMENT REPORTED

HK160801 Beijing RENMIN RIBAO in Chinese 7 Oct 81 p 7

[Article by Chen Dexing [7115 1795 5281] and Du Keming [2629 0344 2494]: "What We Heard and Saw in the German Democratic Republic"]

[Text] Last July and August, we had an opportunity to stay in the GDR for 40 days. We visited a number of integrated enterprises, agricultural cooperatives and urban construction projects, called on some cooperative members' households and went sightseeing to places of historic interest and scenic beauty. This tour left a very deep impression on us.

The GDR has made great headway in its economy in the past three decades. As we all know, its laboring people had to rebuild their homes, in virtual ruins after the war. Through strenuous efforts, they have quickly changed the appearance of their country and achieved marked successes in the industrial and agricultural fields. Today, the per capita industrial output value of this country has reached the advanced world level. It has fairly well-developed machinery, chemical engineering, electronics, optical instruments, lignite and sylvite industries. It has also made considerable headway in agricultural development. It is now more than self-sufficient in meat, eggs and milk and has achieved a high degree of mechanization in agricultural production, with over 95 percent of its grain, potatoes and sugar beet being sown and harvested by machines. There have also been big increases in per unit area and total grain yield. During our visit to the (Wei lian pi ke) [1218 1670 4122 0344] agricultural producers' cooperative in the (Geia) [2706 5198] special district, the director told us that their per hectare yield of winter wheat this year was about 4,600 kilograms.

How to make the economic management system conform with the needs arising from the expansion of the productive forces is a very important question. In the early 1960's, the GDR was one of the first Eastern European countries to pursue a national economic plan and a new economic management system. After experimenting for more than a decade, they finally decided toward the end of the 1970's to establish and develop integrated enterprises in the industrial and building construction sectors first. The establishment of integrated enterprises is considered the biggest change in the GDR's industry in the past decade. Integrated enterprises are basic economic units in the industrial sector that link research and design with production and marketing. An integrated enterprise usually includes more than 20 enterprises and a work force of some 40,000 people. The Berlin Cable Integrated Enterprise has 13 enterprises scattered all over the country and the Zeiss Integrated Enterprise has 18. We were told that the main characteristics of these integrated enterprises are: They are conducive to speeding up scientific and technological advancement in production; quick in responding to domestic and overseas market demands; convenient for organizing centralization and specialization in production; and can help accelerate the renewal of equipment within the enterprises, economize raw materials, raise production efficiency and improve output quality. At present, the 33 integrated enterprises under central control are responsible for 99 percent of the country's industrial output value and account for 96 percent of total industrial productive capacity.

While developing the state sector of the economy, the GDR also attaches great importance to the development of individual handicraft trades and small businesses. Just after the founding of the GDR, the policy of putting capitalist industry and commerce under joint state-private operation was adopted. In the early 1970's, the productive state-private enterprises were converted into state-owned ones, but still a large number of individual handicraft trades and small businesses were given protection and allowed to develop. According to state regulations, these enterprises cannot employ more than 10 workers. However, there is no limit on the amount of funds they can earn. We were told that individual handicraft trades and small businesses like these are all over the country, with more than 4,100 in the Leipzig special district alone. They are an essential supplement of the state-owned economy because they can furnish many consumer goods for daily use. In the countryside, all member households of the cooperatives are entitled to half a hectare for private plots. The cooperative members can grow vegetables and fruits on these plots and sell them in free markets. They can also raise cattle, pigs, sheep, rabbits, bees and so on. Income derived from household sideline production varies, but some households can make as much as they earn from the cooperatives.

We were also deeply impressed with the progress made in the GDR in solving the housing problem. Since the 1970's, it has taken the building of new housing quarters and the renovation of old ones as the core of its social welfare policy. As we traveled from the capital Berlin to the (Gela) special district, we saw a large number of newly built modern buildings. The total floor space of housing projects started during the past 10 years is twice as much as what it was a decade ago. This has improved the living conditions of 4.2 million people, or a quarter of the country's population. The GDR is determined to basically solve the housing problem by 1980. We visited a newly developed area which was still under construction in Berlin. There, every residential area had its own stores, schools, nurseries, kindergartens, restaurants, hotels and other cultural and recreational facilities. In front of a row of houses arranged in the shape of a half moon, we saw a lawn dotted with trees, a nursery and a kindergarten. A school was built right in the neighborhood, so students of junior classes did not have to cross the main road and could eat in the little restaurants nearby during their lunchbreak. In addition, there was also a home for the aged in this residential area. This was where the retired live, study and meet.

INTERNATIONAL AFFAIRS

'RENMIN RIBAO' ON BRITISH SOCIAL DEMOCRATIC PARTY

HK160927 Beijing RENMIN RIBAO in Chinese 11 Oct 81 p 6

[Special report by Xu Qingmei [1776 1987 5019]: "British Social Democratic Party Holds First Annual General Meeting--Mass Media Believes the Party's 'Moderate' Policy Appeals to People in the Middle"]

[Text] London, 9 Oct--The British Social Democratic Party held its first annual general meeting, since its establishment on 26 March this year, from 4-9 October. The meeting called for "efforts to bring about a new beginning in Britain."

The headquarters of the Social Democratic Party declared that the chief aim of this annual general meeting was to study and discuss the draft of the party's program and its various policies. It would not resort to voting on decisions and another meeting would be held early next year for the purpose of approving the party program and electing a leader. The meeting was held in three successive locations: Perth in the north of England, Bradford in the midlands and London. The subjects of discussion at the meeting changed with the meeting's locations. It was stated that this was because the problems of the greatest concern to the people varied in different areas. This approach was reportedly aimed at attracting new party members. It was estimated that the total number of people attending the meeting exceeded 4,000 people, increasing the influence of the Social Democratic Party in various areas.

At the meeting, the leading members of the Social Democratic Party separately spelled out their policies. The call for an alliance between the Social Democratic Party and the Liberal Party received warm support at the meeting. On domestic policy, they stressed the need to consider as a priority the reform of the existing system of parliamentary elections and the change from "a simple majority" to "proportional representation." As far as economic problems were concerned, they believed that there was now no panacea that could quickly lift Britain out of its economic plight. They reaffirmed the policies already announced when the party was first founded. They called for the introduction of a mixed economy with both state economy and private economy existing concurrently and the formulation of flexible income policies and sustained economic strategies. They also stressed the establishment of "real" cooperation between government and industry. They urged support for the development of minor enterprises in the belief that this was an important way to stimulate the invention and creation of new techniques and a way to increase employment opportunities. They believed that international and national defense policies and domestic policies were inseparable, and that an active commitment to the obligations of the European Economic Community and NATO should be made the basis of foreign policy. Meanwhile, the realization of multilateral disarmament and arms control to maintain world peace should be the focus of international activities. They proposed that the pound sterling come under the "European Monetary System." They urged strengthening the relations between Britain and the EEC. They also emphatically criticized isolationism, trade protectionism, neutralism and the idea of unilateral disarmament. They believed that the view now being advanced in British society which urges withdrawal from the EEC and the weakening of NATO was a result of the influence of these erroneous ideas. British magazines and newspapers said it was for this reason, the Social Democratic Party called for the introduction of a "moderate" policy.

It was announced that in the half year since the founding of the Social Democratic Party, over 66,000 members had been signed up, far exceeding the projected target. Among the party members attending the annual meeting, many had switched to the Social Democratic Party because they were dissatisfied with the policies of the Labor Party and the Conservative Party. Also many had never before joined any political party. Their worries about the existing economic state of Britain prompted them to join the Social Democratic Party in a search for the right policy to revitalize the economy. During the period of the annual general meeting, another five parliamentary members announced their withdrawal from the Labor Party to join the Social Democratic Party. The Social Democratic Party so far holds 20 parliamentary seats. People believe that the "middle-of-the-road" stand taken by the Social Democratic Party and its approach, which stresses strategy, meet the needs of current political changes in Britain and appeal to those people assuming a "middle-of-the-road" political stance.

JAPAN REPORTED TO PLAY ROLE FOR MIDEAST PEACE

OW181043 Beijing XINHUA Domestic Service in Chinese 1302 GMT 15 Oct 81

[Report by XINHUA correspondent Wu Xuewen [0702 1331 2429]]

[Excerpts] Tokyo, 15 Oct (XINHUA)--The 3-day visit to Japan by Yasir 'Arafat, chairman of the PLO Executive Committee, provided a good opportunity for Japan to play a role in the Middle East issue.

During this visit to Japan, 'Arafat held talks with the Japanese prime minister and foreign minister, leaders of various political parties and prominent figures of economic circles and received the same hospitality as accorded to a state leader. Japan was the first Western country to receive a visit by 'Arafat and this matter in itself is of great significance. Obviously, the PLO not only enjoys warm support from the large Third World, but is receiving increasing attention from the Western world. This is reflected in Prime Minister Suzuki's statement at his talks with 'Arafat, when he stressed that the core of peace in the Middle East is the Palestinian issue.

In consideration of its relations with the United States, Japan supports the Camp David accord. But it holds that the United States, Egypt and Israel are not enough to bring peace to the Middle East. It attaches importance to and supports the Middle East peace proposal made last August by Saudi Arabian Crown Prince Fahd ibn 'Abd al-'Aziz Al Sa'ud. That is, in the words of Japanese officials, Israel should recognize the Palestinians' national right to self-determination, whereas Palestine should recognize Israel's right to survive. Through recognition of each other's rights, peace will be achieved in the Middle East. This was emphasized by both Prime Minister Suzuki and Foreign Minister Sonoda during their talks with 'Arafat.

Since the Soviet invasion of Afghanistan, Japan has shown increased concern with the situation in the Middle East. It is concerned with both the supply of oil and the peace in the world, and it realizes that without a stable Middle East situation there can be no stable supply of oil. For this reason, Japan's basic stance toward the Middle East is to bring peace to the area and to avert any war or Soviet control of the area. Recently, Japan has not necessarily felt at ease with the U.S. policy toward the Middle East. This can be proved by the statement that former Japanese Foreign Minister Toshio Kumura made to the press circles a few days ago. He said: "If the U.S. policy toward the Middle East proves to have been miscalculated the impact on the United States would surpass that resulting from its miscalculation on Iran. The Arab states would no longer trust the United States, while the Soviet Union could easily take advantage of the situation to benefit itself."

Japan wants to do its best on the Middle East issue and is mainly using the following method: On the one hand, maintain a balance between the United States and the PLO, which are antagonistic toward each other; on the other hand, combine the Camp David accord with the Fahd proposal to reach a peaceful solution of the Middle East issue and play the role of a bridge in this regard.

Whether Japan's efforts toward this goal can achieve any result hinges on the extent of its success in convincing the United States and using the United States to influence Israel.

Following the Suzuki-'Arafat talks how will Japan carry out its work toward the United States and what results will be achieved in this respect? These are questions to which people are paying close attention.

'RENMIN RIBAO' REPORT ON MUBARAK'S STAND

HK141246 Beijing RENMIN RIBAO in Chinese 12 Oct 81 p 6

[Report: "Egyptian President-designate Mubarak Says Egypt Will Continue To Oppose Soviet Expansionism and Promote the Peace Process in the Middle East"]

[Text] According to Western news agency reports, Egyptian President-designate Mubarak said Egypt will continue to oppose Soviet expansionism and greatly promote the peace process in the Middle East.

In an interview with BBC correspondent (Walters) [wo er te si 3087 1422 3676 2448] in Cairo on 9 October, Mubarak said: "We are determined to preserve this peace process. We will keep to this process so it can continue and will greatly promote this process."

Mubarak said that during the 6 and 1/2 years he worked with al-Sadat as his vice president, he had taken part in making every decision and he fully agreed with al-Sadat's policies. He said: "We will continue to carry out al-Sadat's policies. I believe in his policies. Therefore I must pursue these policies."

Mubarak told an AFP correspondent on 9 October that he supported the U.S. sale of AWACS to Saudi Arabia. He said he was shocked by Israel's response. He said: "We hope the United States will agree to sell these planes in order to cope with Soviet expansionism." He also said he was puzzled as to why the U.S. Congress was unwilling to authorize this deal.

This vice president warned: "Washington's refusal to supply Saudi Arabia, its closest ally in this region, with AWACS will make its other friends raise a lot of questions."

Mubarak, who was chosen by the assembly to succeed al-Sadat, emphasized that because Western Europe, the United States and Japan all had interests in the Gulf, it was of the utmost importance for the Americans to help Saudi Arabia deal with whatever dangers arose.

This vice president strongly opposed Soviet "expansionism" in this region. He said this (the opposition to Soviet expansionism) was one of President al-Sadat's principles and we intend to follow this principle.

WESTERN EUROPE STRENGTHENS TIES WITH GULF REGION

OW071145 Beijing XINHUA Domestic Service in Chinese 1231 GMT 5 Oct 81

[Report by XINHUA reporter Liang Guodong [2733 0948 2767]: "Western Europe Strengthens Ties With the Gulf Region"]

[Excerpts] Beijing, 5 Oct (XINHUA)--The West European countries are paying more attention to developing relations with the countries in the Gulf region because of the strategic importance of the oil-rich Gulf region and the increasingly prominent role of the Gulf countries in settling the Middle East crisis. Leaders of the Western countries have visited the Gulf region one after another since April this year. British Prime Minister Mrs Thatcher visited six Arab countries in the Gulf in April and September. West German Chancellor Schmidt and Austrian Chancellor Kreisky successively visited Saudi Arabia and other countries in April and May. French President Mitterrand made a special trip to Saudi Arabia in the latter part of September.

During their frequent visits, the leaders of the West European countries discussed more specifically with the leaders of the Gulf countries three issues of great concern: the strategy against hegemony in this region, a just solution to the Middle East question and further development of bilateral relations.

On her two visits to the Gulf, Mrs Thatcher spoke about the Soviet military presence in Yemen and the Horn of Africa and cautioned against the Soviet threat to the Gulf oilfields. She voiced support for the establishment of a U.S. rapid deployment force in the Gulf region. She said: "If the United States establishes such a force, we will certainly participate."

Seeking a just and peaceful solution to the Middle East question is another important question discussed by both sides. The EEC countries unanimously hold that 1981 should be a year of progress in solving the Middle East question. They are taking the lead in dealing with the Middle East question by European countries as noted in the Venice declaration last year.

People have noticed that the EEC and the United States are taking an obviously different attitude toward the dispute between Saudi Arabia and Israel and hope that the European leaders will be able to exert their influence on the United States toward settling the dispute between Saudi Arabia and Israel.

The question of bilateral relations is important in the talks between the leaders of the Western countries and the Gulf countries. With the exception of Britain, most of the Western countries' energy supply has depended primarily on importing large quantities of oil from the Gulf countries.

The successive visits to the Gulf region by the heads of West European countries have strengthened the relations between the Western countries and the countries in the Gulf region and have benefited the realization of peace in the Middle East.

PZPR EXPELS JOURNALIST, UNION OFFICIAL

OW190355 Beijing XINHUA Domestic Service in Chinese 1250 GMT 17 Oct 81

[Text] Warsaw, 16 Oct (XINHUA)--According to PAP, the Control Committee of the PZPR Central Committee and the Gdansk Control Committee have passed resolutions separately expelling S. Bulatkovski, chairman of the Association of Polish Journalists, and B. Lis, member of the National Committee of the "Solidarity" union and vice chairman of the Gdansk Committee of the "Solidarity" union, from the party.

Having recently "reviewed the stand and activities of Bulatkovski," the Control Committee of the PZPR Central Committee decided to expel him from the party on 16 October. The sanction panel of the Control Committee pointed out that the "social activities" pursued by Bulatkovski "had constantly run counter to the party's resolutions, party regulations and the party platform." These activities "hampered the whole party and journalist organizations in concretely implementing the line of the ninth special congress."

Bulatkovski had been called a prominent figure in the liberal faction of Polish journalistic circles. Over the years, he was a responsible editor of Life and Realities, a supplement of ZYCIE WARSZAWY, and a member of the "Experience and Future" group. Following the labor unrest in August last year, he was elected chairman of the Association of Polish Journalists. After the Bodgoszcz incident in March this year, he published an open letter to party members on the eve of the 9th Plenary Session of the 8th PZPR Central Committee and was considered engaging in "activities harmful to inner-party unity."

In its resolution about expelling Lis, the PZPR's Gdansk Control Committee pointed out on 15 October that Lis' act was incompatible with the party constitution and his viewpoint ran counter to the PZPR platform and principles and social consultative ideas.

It is reported that Lis was one of the organizers of the Gdansk workers' strike during industrial unrest in August last year and he represented the "Solidarity" union in negotiating with the government on commodity prices and other issues. He was looked upon as a "radical" in the "Solidarity" union for advocating that "Solidarity" should not only be a trade union organization but should also engage in social activities. He was barely elected to the National Committee after the sixth nomination at the first national congress of the "Solidarity" union.

Lis was a precision machine repairman in the Gdansk Shipyard. He is 29 years old. He joined the party in 1975 and took part with Walesa and others in support of the "free trade union" activities in 1978. After the founding of the "Solidarity" union, he led the trade union's foreign affairs committee and visited Sweden and other countries.

BRIEFS

SOUTH ASIAN HEALTH, POPULATION MEETING--Katmandu, October 4 (XINHUA)--The first health and population group meeting of South Asian countries identified 15 areas for regional cooperation, according to a press release issued here yesterday. Representatives from Nepal, Bangladesh, Bhutan, India, Maldives, Pakistan and Sri Lanka attended the two-day meeting from October 1 to 2. Nepalese Water Resources Minister Lal Bahadur Khadayat in his speech at the meeting expressed the confidence that the cooperative efforts would result in positive changes in the life of the rural people of the region. The areas for cooperation include appropriate technology for health and population activities, production and distribution of essential drugs and insecticides, basic medical, surgical and health equipment maintenance and repair, communicable diseases control, expanded program on immunization, water supply and sanitation and the development of health and management information system. [Text] [OW040824 Beijing XINHUA in English 0747 GMT 4 Oct 81]

UN DECLARATION ON S. AFRICAN APARTHEID--United Nations, October 12 (XINHUA)--The United Nations special committee against apartheid in a declaration here today appealed to all governments, organizations and individuals to denounce the group of repression in South Africa and to demand the immediate and unconditional release of all political prisoners there. The declaration, adopted at a special meeting in observance of the day of solidarity with South African political prisoners, pledged continued efforts of solidarity "until the apartheid regime is destroyed and replaced by a democratic state" in South Africa. Addressing the special meeting, Secretary-General of the United Nations Kurt Waldheim declared that the United Nations had no option but to persevere in demanding that South Africa abandon its inhuman racial policies. Ismat T. Kittani, president of the U.N. General Assembly, and chairmen of various U.N. committees also denounced the practice of racial discrimination in South Africa and reaffirmed their support for the political prisoners there. [Text] [OW130848 Beijing XINHUA in English 0738 GMT 13 Oct 81]

NATO RESOLUTIONS ON POLAND, DRA--Bonn, October 16 (XINHUA)--North Atlantic Treaty Organization Thursday passed resolutions on Poland and Afghanistan at the first full session of its 27th annual conference in Munich. The resolutions asked nations to keep a close watch on the developing situation in Poland, reminded the Soviet Union not to interfere in Poland and stated that NATO would maintain humanitarian and economic aid to Poland. The conference also called on NATO countries to continue their support for the independent rights of the Afghan people, accused the Soviet Union of intruding in Afghanistan and violating the sovereign rights of the Afghan nation and asked the Soviet Union to bring about a political settlement in Afghanistan that will protect the independence of Afghanistan. The conference also demanded the Soviet Union to withdraw its troops from Afghanistan in accordance with the United Nations resolution passed on January 14, 1980. The six-day conference, which ended today, was attended by 172 delegates from 15 NATO countries. [Text] [OW161722 Beijing XINHUA in English 1630 GMT 16 Oct 81]

PZPR EXPELS SOLIDARITY OFFICIAL--Warsaw, October 16 (XINHUA)--Bogdan Lis, the only party member elected to the Solidarity union's National Commission at Solidarity's recent national congress, was expelled from the Polish United Workers' Party yesterday. The Polish news agency PAP said that a decision to this effect was made by the Control Committee under the Gdansk committee of the United Workers' Party after a careful examination of Lis' behavior. Bogdan Lis, 29, was one of the organizers of strikes during the industrial unrest in August, 1980. He joined the United Workers' Party in 1975 and has been Lech Walesa's staunch supporter in the free trade union movement. He was considered a tough and uncompromising negotiator of the Solidarity union. [Text] [OW171024 Beijing XINHUA in English 0753 GMT 17 Oct 81]

LEADING PZPR CADRES QUIT SOLIDARITY--Warsaw, October 17 (XINHUA)--Eleven leading cadres of the central and local organizations of the Polish United Workers' Party (PZPR) announced their withdrawal of membership from the "Solidarity" trade union at the 4th plenary session of the Ninth PZPR Central Committee yesterday. Among the 11 leading cadres were Z. Grzyb, member of the Political Bureau, nine Central Committee members and one alternate Central Committee member. In their statement, the 11 party cadres pointed out: "The Solidarity union has shown clearly to the people that it is an organization which tries to damage our socialist system, relations of alliance and political principles ever since the union's first national congress." "Members of the Independent Poland Confederation and the Social Self-Defence Committee (two dissident organizations--ed.) have sneaked into the leading bodies of the union. We have nothing in common with them. So we decide to withdraw from it," said the statement. [Text] [OW181556 Beijing XINHUA in English 1539 GMT 18 Oct 81]

POLISH GOVERNMENT REJECTS SOLIDARITY PROPOSAL--Warsaw, October 17 (XINHUA)--Polish Minister of Trade Union Affairs Stanislaw Ciosek in a statement yesterday rejected the "Solidarity" union's proposal for establishing a national economic-social council, calling it an attempt to seize state power, according to a PAP report. The proposal of the Presidium of the National Commission of the Polish "Solidarity" union was put forward during the talks between the union's National Commission and the Ministry for Trade Union Affairs yesterday. The Presidium in a statement Friday said that the proposed national economic-social council should be appointed by the union, be independent of the government and have the "right" to supervise the government's and local authorities' economic measures. The ministry's statement said the proposal was unacceptable and pointed out that its aim is to usurp state power and overthrow the constitution. The statement reiterated the Polish Government's proposal for setting up a joint committee open to all unions including "Solidarity." [Text] [OW181247 Beijing XINHUA in English 1205 GMT 18 Oct 81]

PARTY AND STATE

FUJIAN PARTY COMMITTEE REVIEWS REDRESS OF INJUSTICES

Fuzhou FUJIAN RIBAO in Chinese 5 Sep 81 p 1

[FUJIAN RIBAO correspondent's report: "Provincial Party Committee Held Provincial Work Conference To Implement Policies with Provincial Party Committee Secretary Cheng Xu [4453 1645] Presiding and Li Zhengting [2621 2973 0080] Making Summary Speech; Resolutions Called for Basic Completion of Policy Implementation Task Within This Year"]

[Text] Strengthen the leadership and be determined to have the task of policy implementation completed within this year--this was the resolution passed at the work conference held by the provincial party committee for the implementation of policies throughout the province. The conference ended 2 days ago.

The conference began on 28 August and lasted 7 days. The meeting reviewed and redressed the cases of people being unjustly, falsely and wrongly charged and sentenced in past political movements, implemented the cadre policy, exchanged experiences, and discussed measures for the expeditious implementation of policies and problems in the implementation of the related specific policies.

The participants of the meeting were secretaries of various prefectures, municipalities and counties in charge of policy implementation; directors of organization departments and policy implementation staff offices; leaders of various departments and committees under the provincial party committee, and responsible persons of various committees, staff offices, bureaus and sections directly under the provincial government in charge of policy implementations.

The summing-up session was held on 3 September. Present at this session were party and government responsible comrades including Xiang Nan [7309 9589], Wu Hongxiang [0124 3163 4382], Li Zhengting, Guo Chao [6753 6389], Cheng Xu, Yuan Gai [5913 2395], He Ruoren [0149 5387 0086], Wen Xiushan [3306 4423 1392], Liu Yongsheng [0491 3057 3932], Guo Ruiren [6753 3843 0085], Lu Haoran [4151 3186 3544] and Ni Songmao [0242 2646 5399]. Cheng Xu, secretary of the provincial party committee, presided over the meeting, and Li Zhengting, another secretary of the provincial party committee, made a summary speech.

Since the Third Plenary Session of the 11th Party Central Committee, and particularly since the provincial party congress of this year, remarkable achievements have been won in speeding up the implementation of policies. The broad masses of cadres and people in the main are satisfied, but the work of reviewing and rectifying wrong verdicts has not been completed. The remaining work to be done in this connection, though not much, is nevertheless difficult. Therefore we can never relax our efforts and we must continue to pay great attention to this work in order to bring it to a successful conclusion.

The meeting [illegible] that since the holding of the Sixth Plenary Session of the 11th Party Central Committee and the publication of the "Resolution" have already decided the question of right and wrong in the guiding ideology of the past, we should now concentrate our energy on the task of developing our national economy and effectively promoting the socialist spiritual civilization. If we let our work of policy implementation drag on slowly, refuse to carry out this work, or delay it openly and resist it secretly, instead of adopting a positive approach and resolute measures for this work to be accomplished, we will certainly handicap the shift of focus of our work. Fujian Province has been designated to implement special policies and to adopt flexible measures and should settle all outstanding matters ahead of other provinces so that we can concentrate our energy on economic construction. Furthermore, some problems relating to comrades who were unjustly attacked in past movements have not been solved or entirely solved. This can also affect stability and unity as well as our work in various fields. Unless we can quickly solve these problems, we will be unable to mobilize all the positive factors. Party committees at all levels must realize the necessity and urgency of the work of policy implementation from the standpoint of a strategic shift in the focus of our work. Then with strengthened stability and unity and the mobilization of all positive factors to serve the four modernizations as the starting point, they should proceed in earnest with the job of policy implementation.

After serious discussions by the participating comrades, it was unanimously agreed that in view of the present favorable conditions, it is entirely possible for the work of policy implementation to be basically completed within this year. In the course of policy implementation, we should attach primary importance to speed. The Sixth Plenary Session of the 11th Party Central Committee and the "Resolution" are powerful weapons for speeding up policy implementation; therefore, we must further study the "Resolution," unify our thinking, enhance our understanding, and be energetic in overcoming various mental hurdles. At present, some people still do not fully understand the important significance of the work of policy implementation. Some are complacent and careless, afraid of the difficulty involved, or bored with ideology, have lingering fears of committing rightist errors; still others take only a passive attitude, lest the cases formerly handled by them come under attack. Finally, there are still those obsessed with factionalism or laboring under the pressure of factionalism. If we fail to encourage criticism and self-criticism to correct these erroneous ideas and simply leave them alone, they will become a serious hindrance to the work of policy implementation. Furthermore, there are still a tiny number of people who have misgivings about, or even antagonism toward, the line, principles and policies adopted after the Third Plenary Session of the 11th Party Central Committee. If you talk about quickening our pace, they openly procrastinate and secretly resist. They call the review of historical cases "a blast of wind," and even make things tough for the reviewers of the cases. In some localities or units, some important unjust, false or wrong cases still cannot be redressed, or thoroughly redressed. All localities should therefore make one more careful check to see if they have such problems.

The meeting stressed the need for active and patient ideological work in the course of policy implementation. The leaders, the personnel in charge of special cases, and the persons involved in these cases should help one another in the spirit of seeking truth from facts and mutual cooperation in order that the work can be a success. The kind of speed we are talking about does not mean "a blast of wind." The responsible comrades of party committees at all levels, particularly the prefectual, county and commune party committees, and all departments and commissions should work with great enthusiasm and a keen sense of responsibility, and take the initiative in calling on the comrades concerned for heart-to-heart talks in order that the ideological work can be effective in removing mental hurdles and clearing up misunderstanding. This was the method used by the party committee of the Yongan section under the Fuzhou Railway Branch Bureau. According to its experience, one personal contact and heart-to-heart talk was more effective than the writing of 100 reports. In economic work, stress should be laid on economic results; similarly, in implementing policies, stress should be laid on political effects. We have to look at the departments in charge of people's correspondence and visits and see if the number of letters and visits received and handled has been reduced. In the work of policy implementation, we should also stress the importance of unity and looking forward. Since the work of policy implementation began in our province, many areas and departments have done a great deal of work in clearing up misunderstanding and strengthening unity. The broad masses of cadres and people, including a very large number of comrades who were wrongly repudiated, attacked or mistreated, are now attaching great importance to the common cause and the overall situation, and are united and looking forward. However, some comrades do not treat the interests of the party and the people as their primary concern; instead, they are concerned about personal benefits or individual grievances. In this case, the damage to unity cannot be remedied, the problem of unity cannot be solved, and the final goal of policy implementation cannot be attained. Leading cadres at all levels should set good personal examples in strengthening unity. All comrades, including those who attacked others and the victims of attacks, should take the party spirit seriously and give good work performances. Out of a desire for unity, the leaders of party committees, the responsible comrades of the organization departments, and the comrades in charge of policy implementation should take the initiative in calling on those who have been wronged, show them great concern, and have heart-to-heart talks with them so as to remove their mental hurdles and to unite with them in work. Those comrades who have been victims of injustice should be persuaded to bear the overall situation in mind, to take an objective view of the historical background of the past and to let bygones be bygones. If our ideological work is effective, these comrades will respond with understanding.

At the meeting, the comrades also discussed some problems related to policies. The meeting pointed out the need to uphold the principle of seeking truth from facts and conducting concrete analyses on concrete problems, so that all mistakes will be duly corrected and no corrective action will be taken if no mistake has been made. Corruption, embezzlement, speculation and profiteering and other acts of violation of law and discipline, of course, cannot be tolerated at any time, and wrong verdicts must be reversed no matter who passed them and what organ approved them. If a review of the case shows nothing wrong with the verdict, however, we must firmly uphold the principle instead of bending with the wind. We must also act in the spirit of "being crude rather than subtle, and being lenient rather than strict," and pay attention to the main problems and the main facts in order to arrive at a correct conclusion. We should rehabilitate or redress whatever should be rehabilitated and redressed, completely and leaving no untidy ends; but we must not wrangle endlessly over minor issues. We must adhere to the principle of solving problems politically but making no economic restitution in general. The meeting also worked out concrete plans for the implementation of policies concerning the basic level of cadres in the countryside and in the cities and towns.

On behalf of their committee, the responsible provincial party committee members thanked and praised the comrades in charge of policy implementation throughout the province for their painstaking efforts in doing a thankless job, and expressed the hope that everyone will continue their good work in carrying the work of policy implementation through to the end.

'RENMIN RIBAO' CARRIES ZHOU YANG REPORT ON LU XUN

HK100907 Beijing RENMIN RIBAO in Chinese 28 Sep 81 pp 2, 3

[Report: "Persist in Lu Xun's Cultural Direction and Develop Lu Xun's Militant Tradition"]

[Text] Comrades and friends:

Today we are holding a grand meeting to mark the centenary of the birth of Mr Lu Xun--a great son of the Chinese people and a great founder of modern Chinese culture.

During the 100 years since Lu Xun was born, earthshaking changes have taken place in China as well as in the world. Now our great nation, led by the Chinese Communist Party and guided by Marxism-Leninism-Mao Zedong Thought, has surmounted every difficulty and danger after long, tortuous and complicated struggles and is advancing with new strength and confidence toward the goal of building a powerful and modern socialist country. Lu Xun was unable to see the birth of new China in the Orient, but during his lifetime of only several decades he made incalculable contributions to this great change, which is unprecedented in the thousands of years of Chinese history. Moreover, the influence of his works and thinking is worldwide. Today, the Chinese people are remembering Lu Xun with deepest respect and admiration. His brilliant example is spurring us forward.

The great thinking of an era is invariably the social product of that time. It is often rooted in profound and age-old traditions and culture. It arises in the period of change from the old to the new in which the intensified social contradictions struggle with one another and various ideological trends feel the impact of one another.

Lu Xun's thinking was born at a time when the Chinese people's antifeudal and anti-imperialist struggles had suffered setbacks and failures and was developing again with immense vigor. If we say that the 1911 revolution put an end to feudal monarchy which had lasted several thousand years, then the new cultural movement, characterized by the "May 4th" movement, marked the beginning of the new democratic revolution.

Lu Xun came into being as a great figure at the time of the drastic change; he was created by the revolutionary struggles. His talent and cultivation did not make him a mere writer and scholar; they turned him into a heroic fighter standing at the forefront of the times in fighting against imperialism and feudalism, an outstanding pioneer in the ideological emancipation movement and a great communist. Just as Comrade Mao Zedong said: "The chief commander of China's cultural revolution, Lu Xun was not only a great man of letters but a great thinker and revolutionary. Lu Xun was a man of unyielding integrity, free from all sycophancy or obsequiousness, and this quality is invaluable among colonial and semicolonial peoples. Representing the great majority of the nation's people, Lu Xun breached and stormed the enemy citadel. On the cultural front he was the bravest and most correct, the firmest, the most loyal and the most ardent national hero, a hero without a parallel in our history."

Lu Xun was born in Zhejiang, a province with a long-standing history, culture and tradition. In modern times, this province became one of the first places where the aggression of capitalism was prominent. As it had frequent contacts with foreign things, it was one of the places influenced by the reformists' ideas. There were complicated national contradictions and class struggles. At the time when the reform movement was leading the country to a dead end, Zhejiang was further developed into an important anti-Qing base. Zhejiang was also the hometown of Qiu Jin, Cai Yuanpei and Zhang Taiyuan. Lu Xun was once a student of Zhang Taiyuan and he had established a profound friendship with Cai Yuanpei. Lu Xun also participated in the activities of the Guangfu Hui [Society for the Restoration of China]. He highly respected and admired Sun Yat-sen. After the failure of the Opium War in 1840, China's existence was in peril. In order to seek a way for saving the nation and the people, the Chinese pioneers took infinite pains in studying the Western theory of natural and social sciences. This created a fervor in studying new theories. It was due to the situation of China and of the world and due to the changes in his family that from his childhood, Lu Xun departed from the "correct road" of the Chinese intellectuals who "studied hard in order to take examinations." Following the trend of the times, Lu Xun chose a "new road." On this new road, Lu Xun's thinking developed through a relatively long process of pain and intensive contradictions, from learning foreign affairs to supporting the reform movement to supporting the democratic revolution aimed at overthrowing the rule of the Qing dynasty. Lu Xun's thinking developed in step with the development of the times. He once accepted Darwin's theory on evolution and other knowledge of modern natural sciences, including the ideas of freedom and liberty advocated by Russeau and other thinkers of the enlightenment movement in the 18th century, and the rebellious spirit of the romantic poets including Shelley and Byron of the 19th century. He also assimilated the knowledge from the artistic and literary works of northeastern Europe and other oppressed countries. At the same time, he was influenced by the idealist philosophy of Schopenhauer and Nietzche. In the course of his explorations, he was always courageous, eager to make progress and very patriotic. Throughout his life, he showed boundless love for the motherland and the people. Because of this, he gave up his medical studies and engaged in literary work. After the failure of the 1911 revolution, he experienced a period of deep thinking and observation. When the October Revolution in Russia succeeded, the world entered a new socialist revolutionary period of the proletariat. In China, the old democratic revolution also changed into the new democratic revolution. The whole world was moving toward a new era. At this moment, Lu Xun heroically devoted himself to the new democratic revolution. As early as the "May 4th" movement period, he sided with the pioneers who took the journal NEW YOUTH as representative of their central thinking, including the earliest communist Li Dazhao. During this period, he waged uncompromising struggles against imperialism and feudal warlords. At the critical moment when the great revolution failed and when a large number of Communist Party members and revolutionaries were suppressed and slaughtered by the KMT reactionaries, he further accepted Marxism, fundamentally changed his world outlook, upheld the stand of the CCP and joined the Chinese League of the Liberation Movement, the leftwing Writers' League and the Alliance for the Protection of Civil Rights under the leadership of the party. Moreover, he directly took part in some international antifascist struggles to support the proletariat and progressive people of foreign countries. In the rigorous domestic and international political struggles and in the movement to oppose the KMT's counterrevolutionary cultural "encirclement and suppression," Lu Xun became a staunch standard-bearer for the proletarian revolutionary culture of China and acted as an unwavering proletarian revolutionary and a great communist fighter. Lu Xun's road was a typical reflection of the road taken by the outstanding Chinese intellectuals of the 20th century in continuing to pursue truth and advance--a road of continued advance from patriotism and democracy to socialism and communism. With Lu Xun as a great representative, a number of outstanding intellectuals, including Soong Ching-ling, Guo Moruo, Mao Dun, Zou Taofen, Wen Yiduo, followed this glorious road in the 20th century in China. As a great pioneer who buried the old era and opened the new one, Lu Xun had a profound and thorough understanding of the life style and thinking of the Chinese people of different social strata, namely the peasants, landlords, intellectuals, ordinary citizens, bureaucrats and gentry. He also had a profound and thorough understanding of these people's role and influence in history and culture. With democracy as his ideological weapon in the early years and with Marxism in the later years, he summed up and violently criticized the Chinese feudalistic culture and imperialistic colonial culture. Lu Xun and his criticism marked the end of the old period in which the Chinese feudalistic ideology and culture occupied a dominant position.

Lu Xun started to write his brilliant literary works. His "A Madman's Diary" opened the first page of new literature in China. He wrote in rapid succession the "Medicine," the "True Story of Ah Q," the "New Year Sacrifice," "Regret for the Past" and some other extremely successful short stories. Later, in the "Old Tales Retold" written in a unique style, he mercilessly criticized the pessimism and backwardness of the mental attitude of the Chinese people. Later, he wrote some miscellaneous essays which developed a school of his own and which became a wonder of world literature. These were also the Lu Xun-style essays which Qu Qiubai highly commended. At the same time, he wrote a history of Chinese fiction, the first of its kind by a Chinese author. He then translated and introduced a large quantity of foreign literary and artistic works, particularly Marxist theories on literature and art. Lu Xun created brilliant literary works. Not fearing the difficulty involved, he scaled the height of China's modern literature and art and became the greatest founder and trailblazer of our new culture. It was precisely because of his epoch-making contributions which were of historic significance that his works were popular all over the world. His position in the world's cultural history was generally recognized.

Lu Xun made contributions in many fields, but his most prominent historical merit was on the cultural front. He used his outstanding feats to point out a new direction for the Chinese culture. Comrade Mao Zedong pointed out correctly: "Lu Xun's direction is the direction of the new Chinese culture." Generally speaking, this is a national scientific and mass direction. According to the historical conditions at that time, the culture developed by Lu Xun is the people's anti-imperialist and antifeudal culture, the new democratic culture under the leadership of the proletariat. Now, our society has entered the new period of socialist modernization. We do not just want to build a socialist economy with a high degree of prosperity and socialist politics with a high degree of democracy but also a highly developed socialist culture. The objective of today's culture is to serve the people and serve socialism and the continuously developing socialist culture. The contents are rich and varied and far superior to the new democratic culture. However, we should not forget that our socialist culture has inherited the new democratic culture and has developed under new historical conditions. During the new democratic period, our culture was also under the guidance of communist ideology and was a part of the world's proletarian socialist culture. This was true in the past. This has become even more true at present. Our socialist culture should not only assimilate the essence of all cultures but should also enrich itself through absorbing knowledge, reflect the reality and struggle of socialism and educate and encourage people with the communist spirit so that communist ideals and ideology can be more extensively spread and our culture can assume the historical responsibility of training socialist new people and building socialist spiritual civilization. The cultural direction that Lu Xun stood for is not out of date because of the completion of the new democratic revolution. It will further develop with the advance of our program of socialist modernization. Lu Xun's direction is still the one that we should keep to and develop. His heritage remains to be the treasure for our promotion of the socialist spiritual civilization and an indisputable forerunning guide and beacon light for the advance of the Chinese culture.

Without exception, the great culture of a country has its striking national characteristics and its own originality. It belongs to both the nation and the world. In other words, we can say that because it is a nation's culture it is part of the world culture. The inscription "The soul of our nation," written by Lu Xun's old friend Shen Junru after Lu Xun's death precisely indicated the high value people attached to him. With his outstanding creativity and national style, Lu Xun portrayed the suffering and indignation of our nation. More importantly, he portrayed our nation's most valuable quality, its most honorable thinking and sentiments and its most persistent fighting spirit. From Lu Xun himself and from his works we can find the essence of our nation's rich thinking, the wisdom, warmheartedness and creativity of the Chinese people in the semicolonial and semifeudal society and the real soul of our nation.

Lu Xun lived during a period of drastic change from the old to the new. He keenly felt the pulse of the times and greatly worried about the future of the nation. He was extremely sorry for the lopsided development of the national spirit, caused by long-term suppression, exploitation, humiliation and harm, and for the weaknesses of the national character. However, Lu Xun was not discouraged by this. On the contrary, he fought for the revival of China with a patriotic feeling of "offering my blood to the yellow emperor."

In the early years when Lu Xun began to explore the way for the Chinese people, he suggested that we should "neither lag behind the world's ideological trend nor disregard our national tradition. We should take into consideration both the past and present experiences and find a new way for ourselves." That is to say, we should on the one hand, assimilate foreign ideological trends and, on the other, develop our own national culture. This reflects Lu Xun's plan to combine the world's ideological trends in the sphere of culture. However, by the "world's ideological trend," Lu Xun at this moment referred to the theory of evolution in the field of natural science and to the ideological trend of democracy and liberty in the theory of social revolution. After he personally witnessed the failure of the 1911 revolution, he keenly felt the heavy mental encumbrances of the Chinese nation. Due to these bitter lessons and experiences, he, together with some other forerunners, castigated the old culture with an unprecedented militant spirit in the "May 4th" new cultural movement. At that time, he thought that the most important thing was to ensure the survival, food and clothing needs and development of China and to change China from a taciturn nation to an outspoken one. He called for reforms and resolutely attacked those who guarded feudalism and stuck to old traditions and refused to make reforms under the pretext of "preserving the national and cultural uniqueness." He called on the young people to do away with all conventional ideas and approaches and to create new literary and artistic works rather than sing the old stereotyped songs. Using his pen as a sharp-edged and pointed weapon, he developed and enriched the "civilized and social criticisms" which had always been lacking in China. At this moment, Lu Xun profoundly understood how the feudal dross of our national culture stifled the vitality of our nation. He also understood that, in order to revive and strengthen our nation, it was necessary to resolutely do away with the mask of the old society and the feudal shackle which imposed restrictions on the people.

Thus, from the time of the "May 4th" movement, Lu Xun began to resolutely and vigorously advocate that we should accept foreign culture. In this way, he hoped our national culture would revive and develop. He suggested that we boldly use foreign things with the "breadth of spirit which prevailed in the Han and Tang dynasties." We should "capture foreign things" and use them freely and without any hesitation. In his artistic practice, Lu Xun developed this "breadth of spirit which prevailed in the Han and Tang dynasties." During the period of the "May 4th" movement, Lu Xun fiercely attacked the traditional Chinese culture, but he was never a national nihilist. He was good at distinguishing between the essence and dross of our traditional culture. In his "A Brief History of Chinese Fiction," "The Relationship Between the Manners and Literary Works of the Wei and Jin Dynasties on the One Hand and Medicine and Wine on the Other," "An Outsider's View on Literary Works" and some other outstanding literary works, Lu Xun scientifically evaluated the origins and fine traditions of Chinese literature and art. He also greatly enriched and developed these traditions in his own artistic works. He found that the national culture was passed from one generation to another and was changed in accordance with the times. The new culture accepted a part of the old culture and rejected the rest of it. It rejected the negative part and the dross of the old culture but preserved and developed its positive part and essence. With intensive and extensive concern and indignation, he had to attack the weak points of our nation in order to revive it. No one else in the history of Chinese ideology and culture had made such conscientious and profound analysis and criticism of our people's negative features. At the same time, however, Lu Xun never forgot that in our nation there were a lot of hardworking people who were willing to give their lives for the interests of the people and that these people were the backbone of our nation and constituted the force for the survival and advance of our nation. Even in the dark years, Lu Xun was full of confidence in our nation. He criticized the pessimistic view which held that all the Chinese people had lost their confidence. He sternly pointed out: "It is all right to say that some of the Chinese people have lost their confidence. However, it would be an insult to say that all the Chinese people have lost their confidence." In many of his works, Lu Xun described the prominent characteristics, that is, the great soul, of the Chinese nation. Shortly before his death, he stressed that our nation had experienced catastrophes and failure and pointed out: "Our history has been stained with blood. However, our survival bears witness to our greatness. We should reveal our weak points in order to revive our nation and to improve it." Lu Xun was a man who fully respected foreigners and was good at learning their strong points. However, he was also a man with a high sense of national pride and dignity and a great patriot as strong as iron and steel.

On the one hand, Lu Xun practiced the "takeover doctrine" in absorbing foreign culture to develop our own national culture. On the other hand, he introduced the achievements of our national culture to the world so as to spur on the development of world culture. He upheld the idea of blending the national with the international and integrating patriotism with internationalism. He opposed both complacence and the style of improperly belittling ourselves, worshipping foreign things and fawning on foreigners. He looked down upon the "waiter style," which lacks national pride and is servile to foreigners. He also despised the comprador writers who thought China was lagging behind others in everything. Just as in dealing with opium, he tried to sweep away the dispirited culture, either introduced from the West or created at home, which poisoned the young people. He was indeed a defender of the spiritual health of our people and young men. Lu Xun's experience tells us that a good national writer should at all times be loyal to most people of his nation and should be good at developing the nation's fine cultural tradition. At the same time, he should have the far-sightedness to break through the narrow national limitations, grasp the trend of the progress of world culture and be adept at assimilating foreign culture to enrich ourselves so the culture of our nation will continuously advance. Lu Xun was exactly such a man to boldly assimilate the strong points of foreign writers while having a profound knowledge of our own national culture. He knew very well the history and current condition of the Chinese nation. Because of this, it was not accidental that he became a great representative of Chinese culture, which occupies a significant position in the world.

To inherit Lu Xun's militant tradition in promoting the socialist spiritual civilization, we should carry forward his revolutionary spirit and scientific spirit in a way suited to today's actual situation. We should also do well in combining these two kinds of spirits. All social activities carried out by Lu Xun, including those in the literary and art fields, were based on his enthusiasm in cherishing the motherland and the people and in trying to make social reforms. While carrying out these activities, he always took a scientific approach. The independence and development of a nation should be commensurate with the laws of natural science and social science. Because China had long been under the rule of feudalistic superstition, it had a particular need for a scientific weapon. In his youth, Lu Xun was nurtured and trained on natural science. Throughout his life, Lu Xun seriously, conscientiously and penetratingly analyzed society; he respected reality and truth and firmly did away with all sorts of superstition and worship of idols. This was inseparable from his scientific accomplishments. Lu Xun's literary career reached its peak during the "May 4th" movement. At that time, he still had not mastered the scientific theory of historical materialism to analyze society. However, as he adopted a firm and scientific attitude while exploring the truth of life and society, his works reached a very high level in analyzing Chinese society.

After Lu Xun had decided to uphold the Marxist scientific world outlook, there was a further improvement of his scientific spirit, and his knowledge of Chinese society and the rule for the development of literature and art attained a still higher level. He called Marxism "the fundamental and practical social science," which he believed was conducive to the advance of literature and art. He said: "Academic circles are shifting their attention to social sciences. This shift is good and proper. It is not only beneficial to many different areas, but it also leads literature and art onto a correct and progressive road."

Exactly as he himself said, Lu Xun accepted Marxism after he had drawn "lessons from facts." Among the truth-seeking Chinese, Lu Xun was one of the earliest people to come in contact with Marxism, but he did not accept it at that time. It was not until he had seen the 1911 revolution and other numerous incidents that he came to realize that only the Marxist analysis of human society and the road charted by Marxism were correct and that Marxism was suited to China's condition and required for saving our country. Then he resolutely corrected his ideological "deviation" and accepted the science of Marxism. In the hard years of White terror when "every family was a portrait of distress" in the wake of the "12 April" incident of 1927, Lu Xun boldly stepped forward and openly stood under the banner of the Chinese Communist Party.

Since Lu Xun's faith in Marxism was based on his deep understanding of the Chinese social condition and the law governing the development of history, he did not display the least sign of dogmatism when using Marxism to guide his words, deeds and writing. He was able to understand people, comment on world affairs and analyze the complicated social contradictions more thoroughly and deeply than ever before. He had a more profound and practical understanding of the actual revolutionary struggle, the state of the revolutionary ranks and their strengths weaknesses. Over and over again he stressed that a revolutionary should "understand the reality of revolution." He pointed out: "Revolution is painful. It is bound to have dirt and blood and is by no means as interesting and perfect as some poets have thought. In particular, revolution is a practical thing, requiring a variety of humble and troublesome work. It is by no means as romantic as some poets have thought. In addition, revolution requires destruction, but construction is needed more. Destruction is a delightful job, but construction is a troublesome thing." For this reason, he was never intimidated by blood stains nor overcome by difficulties and setbacks. In the extremely difficult period of the revolution, he still believed that only the new rising proletariat had a future. In the march of the revolutionary ranks, some withdrew, some ran away, some became disappointed, and some rebelled, but his faith persisted in the revolutionary cause. He was deeply aware that all these were inevitable phenomena in the course of the revolution. With such a firm revolutionary faith, he fought to the last moment of his life, showing the most valuable revolutionary integrity and political quality of an intellectual believing in communism.

All his life Lu Xun applied his revolutionary spirit and scientific approach to his artistic practice and persisted in taking the road of revolutionary realism in his creative work. From the "May 4th" era on, he always followed order of the revolutionary forerunners and even referred to his own writings as "order-following literature." On the other hand, he was always faithful to artistic truthfulness, loudly calling on writers and artists to boldly open their eyes to observe society. He correctly pointed out: "Only true voices can touch the hearts of the people throughout China and the world." Under the pressure of old China's cultural dictatorship which was powerful yet brutal, Lu Xun demonstrated a writer's morality and the courage of realism. As Lu Xun adopted a clear-cut and realistic attitude, he repeatedly stressed that a revolutionary writer should first of all be a revolutionary and personally experience a revolutionary life, for this was the only way not to misrepresent the revolution. While stressing that revolutionary writers should look reality in the face, Lu Xun also pointed out that they should have lofty goals and ideals. Lu Xun's scientific attitude lay not only in his attention to reality but also in his emphasis on proceeding from reality and tirelessly pursuing lofty goals and ideals. He always castigated those pessimists who had given up their ideals and refused to begin to work hard. He said: "People who are weary of the present world are still alive. These people are the enemy of the present world. As long as they exist, there is no hope for the present world." Unlike these pessimists, Lu Xun was always full of confidence in life and in the future. One important reason for the high level of maturity of Lu Xun's works was the fact that his realism was a combination of reality and ideals, able to fire men with enthusiasm to reform society and increase their strength to struggle toward their great goal.

Lu Xun's scientific attitude was not only applied to his creative work but also prominently embodied in his social and literary criticism. Lu Xun's militant life was a life devoted to a thorough criticism of the feudalistic and bourgeois old society and old culture. Lu Xun's criticism was the most incisive and forceful because it was scientific and because it grasped the essence. Lu Xun also pointed out that literature could be used for fighting and that writers should "have a strong sense of justice and a strong sense of likes and dislikes." Meanness, cunning and liberalism are incompatible with the spirit of Lu Xun. He regarded his essays as a reflex action and a means of attack and defense, and he maintained that "a writer's task is to make a prompt answer to stand against harmful things." When various kinds of feudalistic and bourgeois remnants ran amuck, Lu Xun always dealt them head-on blows. He fought against the "advocates of the doctrine of national and cultural uniqueness," the "modern criticizers," the so-called "liberal men," "people of the third category," the so-called "national writers" and the "advocates of the analects of Confucius" who trumped (?comfort), intelligence and egotism. Some of these people were his old friends, colleagues and bosses. However, he never made any concessions or showed them any mercy. He never "smiled or apologized obsequiously." He adopted a serious, militant and scientific attitude toward debate. He stressed that hurling insults and threats was no way to fight. "Our militant writers must pay attention to 'debate.' As for a poet, it may be all right if he gets angry and satirizes, because he cannot control his feelings. However, he should never go farther than mocking or making fierce verbal attacks. Besides, regardless of whether we laugh out of pleasure or scorn others out of anger, we must do so in the form of literary works. In this way, the enemy will be hurt or fatally struck. Yet, we have not played any mean tricks. Even the observers will not think that we have played dirty tricks. This is the skill of a militant writer." Lu Xun adopted the most clear-cut and steadfast attitude toward the enemy and toward the struggle against antagonistic ideology. Not long before his death, Lu Xun wrote a letter out of his sense of justice in reply to the malicious dissension sown by the Trotskyists. This was the best example of his attitude.

Lu Xun often pointed out that we needed strong critics who knew social science and we needed scientific criticism. This kind of criticism first of all should be out of "warm good intentions," that is, pure motives and the goal of unity. This kind of criticism is criticism seeking truth from facts and is aimed at helping those criticized. Lu Xun never avoided mentioning his own viewpoints. Just as he was strict with himself, he often had disputes with his comrades-in-arms. He never easily let go of his comrades' shortcomings and mistakes but sharply criticized them. He often warned them to pay attention to overcoming "leftist" ideas and sentiments. On the other hand he was always sincere toward them and correctly affirmed their strong points and achievements. Lu Xun did not have any personal enemies. In the struggle for the common goal, he never harbored "personal resentment" against those comrades who once disagreed with him or who misunderstood him.

Summing up the painful historical lesson, all of us who experienced the 10 years of internal disorder must never give up the weapon of criticism. We must never give up criticism and self-criticism. We must learn to use the weapon of criticism and self-criticism and correctly handle and solve contradictions among the people themselves. In order to make our criticisms suit the socialist spiritual civilization, it is necessary to raise the level of our literary criticism and criticism in various other fields (including self-criticism), making such criticism more effective and scientific.

Comrade Mao Zedong pointed out in his "Talks at the Yanan Forum on Literature and Art" that our literature and art are for the masses of the people and in the first place for the workers, peasants and soldiers. Serving the people and socialism--this is the orientation we must adhere to. In 1930, the leftwing Writers' League was established in China. This marked a great beginning in the history of Chinese literature. Lu Xusi was one of the main founders of this league. He was a true teacher and leader of China's leftwing literary movement. Comrade Mao Zedong highly and scientifically assessed the great contributions made by this movement. However, he also noted its weak points. Before his death, Lu Xun highly appraised Gorkiy, saying that all of Gorkiy's lofty ideals came true and that the most important reason for this was that "he was one of the people and shared their grief, anger and joy." Lu Xun was also a person who mixed with the masses and shared the masses' feelings. Throughout his life, he always had the sincerest, warmest and deepest love for the masses of the people. He cried out for them and fought for them. As a great writer, Lu Xun fought with his pen, coordinating his writing with the Chinese people's struggle for liberation under the leadership of the CCP. He used his pen as a dagger and a spear mercilessly exposing the darkness and crimes committed in China by imperialism, feudalism and domestic and foreign reactionaries. Through his personal struggle, Lu Xun contributed a tremendous force to ushering in the Chinese people's liberation. He was a most outstanding figure among our country's great revolutionary forerunners. His voice represented the aspirations of the Chinese people for revolution and liberation in the semicolonial and semifeudal society. His voice aroused strong sympathy among the masses of the people precisely because he was truly representing the Chinese people. Here lies Lu Xun's enduring strength. Comrade Mao Zedong called on all Communist Party members to emulate Lu Xun--"fierce-browed, I cooly defy a thousand pointing fingers, and head bowed, like a willing ox, I serve the children"--and become oxen for the masses of the people, devoting their entire lives to the service of the people. He asked us to emulate the very essence of Lu Xun's great character--his ardent love for and dedication to the people.

At first Lu Xun did not clearly see the role and place of the masses of the people in the entire course of history. As an enlightening thinker in his early years, he earnestly hoped that China would be transformed and the broad masses of the people would be freed from their miserable predicament. However, he pinned his hopes on the outstanding individuals because he underestimated the strength of the people. During the "May 4th" movement, his ideological level was greatly enhanced. But he still keenly felt that the masses were only playing the role of a spectator. From 1925 on, Lu Xun gradually discovered that the majority of the people, whom the rulers regarded as "fools," were actually the pillars of the world. After he accepted Marxism, he more consciously found that the material strength to reform China was with the masses of the people and that China's literature and art should pay chief attention to the masses of the people who constituted the vast majority of the nation. In 1930, in view of the prejudices of some bourgeois writers in our country, he emphatically pointed out: "The majority's strength is great and important. If those who aspire for reforms fail to deeply understand the masses' feelings and to try to guide and improve them, then whatever brilliant writings and great ideas--romantic or classical--they may produce will have nothing to do with the masses, but will only be for a few persons to express admiration for one another and derive some self-satisfaction in their studies." A major sign of Lu Xun's ideological maturity in his later years is that he saw that the great material strength to reform China, the strength to determine victory or defeat, lay in the masses of the people.

In order to change the old culture into the people's culture, Lu Xun made unremitting efforts. He waged resolute struggles against all sorts of erroneous ideological trends opposed to the people and of reactionary cultures. During these struggles, Lu Xun earnestly took revolutionary literature and art as part of the revolutionary cause and part of the liberation movement and struggle launched by the proletariat. Only when writers and artists act like Lu Xun can literature and art fundamentally represent the interests of the broad masses of people.

To make the masses of the people the masters of culture, Lu Xun and his comrades made great efforts to popularize literature and art. He resolutely opposed the aristocratic and scholar-bureaucrat tendencies in writing and literature, opposed the intentional choice of difficult words and affected elegance and opposed turning writing and literature into "something for the privileged" and "tools of the privileged class." With great enthusiasm he advocated the reform of the written Chinese language and promoted the picture storybooks, modern woodcuts and folk theatrical arts. At that time, popular works of literature and art loved by the people, such as picture storybooks, were not taken seriously by many people. Lu Xun stepped forward, however, to defend them most touchingly. Lu Xun was a highly accomplished intellectual in China, but he was also a fervent advocate of the popularization of science and literature and art. He set a good example in combining popularization and the raising of standards.

Lu Xun also resolutely opposed artistic "tailism" characterized by unprincipled catering and yielding to the masses. He had a revolutionary writer's high sense of mission and social responsibility toward the masses of the people. Lu Xun thought that a genuine intellectual of the people "should be knowledgeable, decisive and persistent and be able to think deeply. An intellectual may use his rights but should not deceive anyone. He may try to guide the people but not please them. He should not despise himself, thinking that he is nothing but an actor, nor should he despise others, regarding them as his lackeys. He is only a member of the masses. Only in this way can an intellectual do something for the masses." This was Lu Xun's most incisive generalization on how to correctly handle the relationship between an individual and the masses. This was also his own attitude toward life and literary writing. As a revolutionary intellectual, a revolutionary writer and artist, his lofty duty was "to give beneficial guidance" and not "to cater" to the masses. Lu Xun said: "Some people maintain that everything must meet the masses' approval. Some even say that it is necessary to 'cater to the masses' and deliberately use coarser words to please the masses. Those individuals certainly make a painstaking effort, but by acting in such a way they are becoming literary hacks for the masses." In making such a conclusion, Lu Xun was by no means deliberately exaggerating so as to create a sensation. In our era, if literature and art do not focus on the overall and long-range interests of the masses of the people, if they do not observe and understand life from the standpoint of the progressive elements of the masses, but lower the ideological level, substitute something vulgar for what is popular in the name of the masses and use some stimulating things to cater to the appetite of the backward among the masses and pollute the masses' minds, will it not turn writers and artists into new literary hacks?

Lu Xun had a strong sense of responsibility for the people. He placed the people's interests above everything else and always considered the objective social effects of literary works when published. He said: "In the course of my exploration, I always fear that my immature fruits will poison those who have a predilection for my fruits." He also said: "Some people think that I always freely express myself in my writing. In fact, I do not. I have a lot of worries." It was particularly admirable that he made a conscious effort to remold himself and seriously analyze himself. He said: "I often analyze other people, but more often I mercilessly analyze myself." This spirit of analyzing oneself demonstrated the high degree of social responsibility of a great revolutionary writer and artist. Today, our socialist revolutionary writers should learn from Lu Xun's keen sense of responsibility. It is wrong to regard this sense of responsibility as a kind of shackle to individual freedom. All revolutionary writers and artists with high aspirations should make this sense of responsibility an important part of their own artistic life and should not waver at any time. Only with this sense of responsibility can the orientation of literature to serve the people become firm and capable of standing the test of history.

Adhering to the orientation of the new scientific culture which belonged to the nation and the people, Lu Xun fought with an indomitable spirit throughout his life. His unremitting and realistic fighting spirit constituted his basic ideology and work style. This was a concentrated reflection of his profound understanding of China's society and his thoroughgoing revolutionary spirit of materialism. Without this spirit, it would be difficult to imagine Lu Xun capable of scaling the heights of our national literature and art. Without this spirit, it would have been impossible to create and develop the new scientific culture which belonged to the nation and the people. Today, when we are building a new socialist spiritual civilization, it is definitely all the more necessary to carry on and develop Lu Xun's indomitable fighting spirit.

Lu Xun pointed out: "In order to make achievements on the cultural front, one must be persistent and dauntless." Lu Xun made this conclusion on the basis of his profound understanding of Chinese society and Chinese ideology and culture. He clearly noticed that the foundation of the old Chinese society was very solid and that Chinese feudalistic and imperialistic colonial culture was very powerful. Thus, it would be very difficult to make social changes. However, Lu Xun said: "Despite the difficulty, we still have to try. The more difficult it is, the harder we have to try." It would be impossible to do so without an indomitable fighting spirit.

The opposite of an indomitable fighting spirit was the tendency to boast and exaggerate, to seek formality and superficial success and to work by fits and starts. Lu Xun repeatedly criticized this work style. According to him, people who rushed headlong into mass action and dispersed in a hubbub could be very enthusiastic at one moment and then depressed at another. These people should not be entrusted with important responsibilities. This was particularly true of China. Thus, he taught young people to "make consistent efforts rather than be in high spirits one moment and in low spirits the next." He said they should pay attention to overcoming the "shortcoming of momentary enthusiasm." Lu Xun also said: "I think it would be very dangerous for our nationals to lack wisdom and courage and to act according to their 'personal feelings.' Actually, we must start to do some work now." This was the essential spirit which led the Chinese revolution to victory. Lu Xun's teachings were sincere and of far-reaching significance.

Lu Xun warned young writers and artists not to use literature as a stepping-stone to success, not to forego hard work after publishing one or two volumes of poems or novels and making a few small achievements and not to think that publishing a few essays or magazines for a year or so was a "great, unprecedented feat." At the same time, Lu Xun also hoped that literary critics would pay attention to protecting and inspiring the enthusiasm of young people to make long-lasting efforts, and not to "assassinate" them either by flattery or by abuse. This sincere and earnest teaching merits attention by all of us.

Lu Xun clearly understood that in order to create a new national culture which would roll on incessantly like the mighty waters of the Changjiang River, it was necessary to train a large number of new soldiers. To this end, we should firmly carry out a protracted struggle to equip the new soldiers with an indomitable fighting spirit and a hardworking spirit so that they will maintain close ties with the broad masses of working people. This is our strategic task in building a new national culture. This is where the hope of our socialist literature and art lies. In this way, we can train a large number of people who uphold a firm and correct political orientation and fine militant spirit and who can scale new heights of socialist literature and art. Only when we earnestly act in this way will we be commemorating Lu Xun in the best way.

The development of China's new culture that was opened up by revolutionary Chinese writers and artists represented by Lu Xun is incomparably broad. As long as we adhere to the line of the 3d Plenary Session of the 11th CCP Central Committee and the four basic principles directed by the party Central Committee, conscientiously study the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted by the 6th Plenary Session of the 11th CCP Central Committee, insist on literature and art serving the people and socialism, unswervingly implement the policy of letting a hundred flowers blossom and a hundred schools of thought contend and arm our ranks with Marxism-Leninism-Mao Zedong Thought, then our literature and art will assuredly win still more brilliant victories. In the past century, our country has in the great struggles against feudalism and imperialism produced such cultural giants as Lu Xun, Guo Moruo and Mao Dun. Today, our country has entered a new historical period, and it is all the more necessary for a group of socialist cultural giants to come forward. Today, we solemnly commemorate the centennial of Lu Xun's birth to express our high respect for Lu Xun and also to place an earnest hope on the generation of new people of our country. In this age of ours there have already appeared many writers and artists who are taking the road of the new culture opened up by Lu Xun and other forebears. We hope to break through the thorns and charge forward to build up our country's socialist spiritual civilization.

Comrades, friends:

Although the road we have followed is by no means smooth, our country has come a long way after all and the Chinese nation is now full of vigor and vitality. In the past few years, in the field of literature and art, we have revived and carried forward the fine tradition of revolutionary realism since the "May 4th" movement and also radiated the new brilliance of revolutionary romanticism. Either in reflecting social life in depth and in breadth or in artistic forms, a number of outstanding writers and their works are pushing socialist literature and art to new levels and states. However, there are also quite a few shortcomings and mistakes in our work. As Comrade Hu Yaobang pointed out, some writers and artists lean toward bourgeois liberalization and other erroneous tendencies and have not been promptly criticized and struggled against--which they deserve--by the leadership. The weak and lax state of leadership over literature and art urgently needs to be overcome. Under the leadership of the party Central Committee, we must, correctly use the weapons of criticism and self-criticism, develop our achievements and overcome shortcomings so that our ranks of writers and artists will become more united, stronger and more militant and so that our literature and art will develop more healthily. We firmly believe that in this great country of ours in the East with its long-standing culture and historical traditions, a brand-new great socialist renaissance of an Eastern type will certainly arrive. Let us usher in its arrival by increasing our efforts a hundredfold and a thousandfold!

'BA YI RADIO' ON NEW PRC SUPPRESSION OF WRITERS, ARTISTS

OW110441 Ba Yi Radio (Clandestine) in Mandarin to China 1400 GMT 9 Oct 81

[Text] Document No 7 published at the beginning of the year, Hu Yaobang's talk at the National Conference on Problems on the Ideological Front at the end of August, the discussion meeting held by literary and art circles recently in the capital and especially Comrade Deng Xiaoping's talk at the Propaganda Department of the CCP Central Committee on 17 July this year are like a series of intensifying gusts of bone-chilling wind blown to the whole country, particularly to literary and art workers in the army.

The creative enthusiasm, which has barely come back to life since the downfall of the gang of four, is beginning to disappear again. Works of literature and art are again falling into the ruts of generalization and formalism. Many talented writers and artists, whose old wounds have not yet completely healed, are faced with new blows.

Although Comrade Deng Xiaoping and Comrade Hu Yaobang only stressed in their talks that the crux of liberalism is to oppose party leadership; that party members, writers, artists, thinkers and theoretical workers must observe party discipline; that we are still faced with contradictions between ourselves and the enemy, or with similar contradictions, so we must not lower our guard; and so forth, as in the past, a word from above becomes a gust of wind at the lower levels. In fact, a campaign to criticize writers and artists has been started now on a national scale. In the army, more than 100 people have been criticized. Undoubtedly the figure is much larger in the localities.

The most serious thing is that Comrade Deng Xiaoping has ordered that from now on workers of literature and art may not use the struggle against rightists and the Cultural Revolution as subject matter. This makes the masses of literary and art workers feel that they have again become the political tools of a handful of persons.

In the past, when it was necessary to thoroughly repudiate the Jiang Qing clique and consolidate the position of the new leaders, there were repeated calls for exposures of the fascist atrocities committed during the Cultural Revolution. In order to deal blows (?at) Hua Guofeng, Chen Xilian, Wang Dongxing and so forth, it was even encouraged to describe the tragic scene in which Comrade Zhang Zhixin's throat was cut apart. Even 2 years ago, at the Fourth Conference on Literary and Art work, Comrade Deng Xiaoping still instructed: "The question of what and how to write can only be probed and solved step by step by writers in their artistic practice. There should be no arbitrary interference."

Now, however, when works of literature and art touch upon the present erroneous domestic and foreign policies and individual leaders' erroneous course of actions, his attitude immediately makes an about-face, and he says that there is no such thing as unlimited freedom and democracy. He also accuses some writers and artists of having doubts about party leadership and socialism, committing themselves to humanitarianism, human rights and human feelings and extolling the dignity, value, freedom and place of man, and so on.

We'd like to ask, how can this trick of going back on one's word not make writers feel like the hired scribblers of feudal imperial courts? Comrade (Ruan Ming), deputy head of the Theoretical Research Office of the Central Party School, said it well: "The pernicious influence of feudalism in the party manifests itself in the habit to look down on people. Now the newspapers are reporting on democratic elections, but many people do not believe in them. The reason: the people cannot even be masters of themselves, how can they be masters of the country?"

What should be stressed now is not only democracy, but freedom. Without democracy, freedom has no foundation. Without a free people, it is impossible to develop democracy. When a man is in a state of being oppressed, how can he exercise his democratic rights? In other words, when democracy is suppressed and writers and artists are deprived of their creative freedom, how can they be expected to create works of literature and art that are full of vigor and vitality and loved by the people?

NEED FOR FAIR REWARD, PUNISHMENT FOR CADRES STRESSED

Tianjin TIANJIN RIBAO in Chinese 27 Aug 81 p 1

[Commentator's article: "There Should Be Distinct Demarcation Between Reward and Punishment"]

[Text] In dealing with cadres, there should be a distinct demarcation between right and wrong and between reward and punishment.

It must be admitted that since the smashing of the "gang of four," and particularly since the Third Plenary Session of the 11th Party Central Committee, there has been a striking change in the workstyle of our cadres, as shown by the emergence of a large number of people with the lofty ideal of advancing the national welfare. With emancipated minds and bold explorations, they are continuing to bring to light new phenomena while travelling along their difficult and tortuous road. They have gone deep into realities and conducted investigations and study, and are dedicated to their work. They uphold justice, disregard personal interests, firmly adhere to party principles, and courageously combat various unhealthy tendencies.... The continued healthy developments on the economic and other fronts are inseparable from these people of lofty ideals who are serving the motherland and the people with great enthusiasm and a keen sense of responsibility. Yet it must also be admitted that the workstyle of cadres which deteriorated under the influence of the "gang of four" has not been basically rectified and is still far short of the expectations of the broad masses. In some departments or units, including some leading organs, some cadres are still wrangling, refraining from action, or acting irresponsibly whenever any problem crops up. Others are overconservative and are working only halfheartedly. These people have committed one serious mistake after another and caused serious losses, because instead of conducting investigations and study or listening to the people's voices, they issued orders blindly out of subjectivism. There are also those indulging in departmentalism and obstructing the readjustment simply becuase they fail to consider the overall situation. Worse still, some of them are resisting the implementation of party principles and policies either covertly or overtly, forming gangs and factions, violating laws and disciplines, abusing their power for personal gain at the expense of the publice and carrying out various illegal activities.

We should highly commend and reward those with high ideals in advancing the national welfare, the practical workers and the trailblazers. We should also criticize and punish those lacking in enthusiasm and a sense of responsibility who bungle their jobs; and particularly those who give no thought to the state's difficulties and even try to gain something at others' expense. Our action in these respects only shows the effect of ideological and political work. This work, if continued effectively, will play a tremendous role in improving the cadres' workstyle, in upholding social justice and in eliminating the unhealthy social atmosphere resulting from the 10 years of turmoil.

What should attract our serious attention now is the difficulty of criticism, self-criticism and commendation in real life. Because of the weakness of ideological and political work, commendation or reward to any person will bring forth a lot of "shovels" from various directions. Those who have made new discoveries with emancipated minds, who have the courage to uphold justice by resolutely combatting unhealthy tendencies, and who always try to do more work to the best of their ability have been mocked at, eschewed and even attacked. These are by no means isolated cases.

It is difficult to commend or to reward, but even more difficult to criticize or punish. Even though there is nothing wrong with the facts cited and the methods used in criticizing or punishing certain cadres for their lack of energy or their unhealthy tendencies, these cadres may, in mild cases, refuse to admit their faults, and then voice their complaints, or, in serious cases, raise a big fuss without being able to produce anything new to support their arguments. They may even gang up to distort the truth or to forge false evidence to make a countercharge and to apply pressure on the leadership or the departments concerned. How can these people be so secure in the knowledge that they have strong backing? Boiled down to the final essence, this has something to do with the workstyle of the leadership of some departments or units, and with the weakness of ideological and political work. The leaderships of these departments or units do not uphold the party's principles and even have no hesitation in refusing to criticize or combat unhealthy tendencies, because they have substituted the decadent "science of personal relations" for strict demands on cadres, and for justifiable commendation, reward, criticism or punishment. They are afraid of affecting their personal relations or offending others. In commending or rewarding others, they are afraid of being accused of trying to win people's hearts; and in criticizing or punishing others, they are also afraid of being accused of attacking people with dissident views. Thus, with one eye open and another closed, they simply drift along. In these departments or units, good deeds are not appreciated and bad deeds are not even frowned upon; justice cannot be upheld, and unhealthy tendencies may even run wild. The decadent "science of personal relations," like a disease, is corroding the living cells of our party and the souls of our people, and is a serious obstacle to basically changing the workstyle of cadres and the atmosphere of society. We must be determined to adopt powerful measures to eradicate it.

What can be relied on to arouse the enthusiasm of millions upon millions of people to build socialist material as well as spiritual civilization? Of course, we have to rely on party principles and policies, on ideological and political work, and, at the same time, on the efforts of cadres in setting personal examples, providing guidance and carrying forward the glorious traditions of the party. Cadres at all levels, particularly the leading cadres, must set good personal examples in practice. Only such cadres can enjoy high prestige and attract attentive listeners; only such ideological and political work can be called effective. On the other hand, if the leadership has unhealthy tendencies and its deeds do not match its words, then the ideological and political work has been futile. If we do not make strict demands on the cadres and do not commend or reward them when commendation or reward is due, or fail to criticize or punish them when criticism or punishment is justified, then justice cannot be upheld and bad tendencies cannot be combatted. There will then be no distinct demarcation between right and wrong, or between reward and punishment. Then how can there be any sense of principle, prestige and militancy of the party to speak of?

Making strict demands on the cadres and a distinct demarcation between right and wrong or reward and punishment is the best way to cherish our cadres. This has been proved by numerous historical facts. Party organizations at all levels must uphold party principles and the spirit of seeking truth from facts, and carry out this work with meticulous care. The broad masses of cadres, particularly the leading cadres at various levels, should consciously implement party principles and policies, change their workstyle, display revolutionary fervor, and actively shoulder the responsibility for the four modernizations in order to improve the economic and other types of work. We must be fully aware that as soon as our cadres' workstyle is radically changed, the enthusiasm of the millions upon millions of people will be further aroused and the four modernizations will gather new momentum. Let us work hard in this direction!

PRIVATE PURCHASE OF LAND BY PARTY MEMBERS, CADRES PROHIBITED

Jiangsu Notice Issued

Nanjing XINHUA RIBAO in Chinese 4 Aug 81 p 1

[XINHUA RIBAO correspondent's report: "Based on Investigations in Jinhu County, the Provincial Commission for Inspection of Discipline Has Issued a Notice Prohibiting Private Purchase of Land by Party Members and Cadres"]

[Text] Based on investigations jointly carried out by the Jinhu County party committee and the county Commission for Inspection of Discipline under the provincial party committee recently issued a notice calling for strict prohibition of private purchases of land by party members and cadres.

The notice says: According to investigations by the Jinhu County Commission for Inspection of Discipline, the Licheng Commune has given unauthorized permission for county and commune cadres and workers to purchase land from production teams near the county city for building houses. Since 1976, land has been purchased from production team No 1 of the Licheng Production Brigade of the commune by 23 families--six families of country and commune party committee members, another six families of ordinary cadres, and 11 families of workers. The total area of land sold was 12.33 mu, averaging some 0.5 mu per family. Some families bought as much as 0.9 mu (at an average price of 368.13 yuan per mu). Instead of stopping these purchases, the secretary of the Licheng Commune party committee even bought 0.5 mu for himself. Production team No 1 of the Licheng Production Brigade has a population of more than 240, and the farmland left is only a little more than 80 mu, averaging some 0.3 mu per person. Production team No 7, which is very close to the county city, also had similar problems.

The notice continues: The standing committee of the Jinhu County party committee has held a special discussion on this matter. Such purchases were found to be entirely illegal and the standing committee proposed some corrective action: All the title deeds for these land transactions were declared null and void, and all the land purchased had to be returned to the production teams. Those who bought the land should all carry out self-examinations in their own units. This particularly applies to the secretary of the Licheng Commune party committee, and his self-examination should go deeper.

The notice points out: It is entirely necessary for the Jinhu County party committee and the county Commission for the Inspection of Discipline to conduct these investigations. Private purchases of farmland have sometimes occurred in other places. In April this year, documents were issued by the State Council and the provincial people's government to prohibit the building of any house that may take up farmland in the countryside. Party members and cadres should set personal examples in observing these regulations, which must not be violated out of consideration for personal interests. Similar problems in the future should be promptly investigated and strictly dealt with in the same way as was done in Jinhu County.

'XINHUA RIBAO' Commentary

Nanjin XINHUA RIBAO in Chinese 4 Aug 81 p 1

[Unattributed short commentary: "Private Purchase of Land by Party Members and Cadres Is Illegal"]

[Text] Private purchase of land is entirely illegal. According to our constitution, "the state may requisition by purchase, take over for use, or nationalize land under conditions prescribed by law." The "urgent notice concerning building houses on farmland in the countryside" issued by the State Council in April this year says: "It must be reiterated that the land of communes and production brigades and teams in the countryside is owned by the collective. Commune members only have the right to use the land in their custody as housing lots, private lots (or private mountains) or farmland for production under contract. They have no right to rent, sell or transfer it to others. Unless authorized, they even have no right to build houses or tombs, mines or kilns on these lots. Some people have mistaken the land, used as responsibility plots or farmland for production under contract, for their own property to be disposed of at will. This is wrong." The country party committee and the county Commission for Inspection of Discipline in Jinhu County have conducted prompt investigations and suitably dealt with the cases of private purchases of land by party members and cadres for building houses. This is very necessary. All similar problems in future should be promptly investigated and strictly dealt with in the same way as was done by the country party committee and county Commission for Inspection of Discipline in Jinhu County.

Article 3 of the "Guiding Principles on Internal Party Political Life" explicitly states: "All party members, especially leading cadres at all levels, must be models in observing the state law, labor discipline, work discipline and communist morality." The members and cadres of the party in power should take the lead in observing discipline and the law. Observing state law is indispensable for observing party discipline, and violation of state law means violation of party discipline. State laws and decrees have long prohibited the private purchase of land. The party members and cadres who have purchased land in violation of the law and party discipline and thus jeopardized party and mass interests must be strictly dealt with; otherwise it will be difficult to check this pernicious influence. Deliberate violation of the law must not be tolerated, and the culprits must be severely punished.

It is the fundamental stand of CCP members to serve the people wholeheartedly. This is also the principle which we must forever uphold. Party members and cadres should regard the urge to seek privileges and personal gain as the greatest disgrace. On admission to the party, every party member pledges "to dedicate his or her life to the struggle for the communist cause." Then how can the party members forget this solemn pledge and busy themselves with building houses for their progeny in violation of the law? This shows the need for party education to be strengthened. At present, through studying and implementing the "Resolution" and Comrade Hu Yaobang's speech at the meeting in celebration of the 60th anniversary of the founding of the CCP, we must step up the education of party members in the spirit and principles of the party and the knowledge of the party in order to give full play to the exemplary role of party members in observing discipline and the law and in uniting with the masses to carry out the four modernizations.

WRITERS, ARTISTS URGED TO SERVE MASSES

Tianjin XINGANG WENXUE YUEKAN [New Ports] in Chinese No 7, 81, 15 Jul 81 pp 12-17

[Article by Wan Li [8001 0500]: "Strive to Develop the Party's Arts and Literature Cause--In Commemoration of the 60th Anniversary of the Founding of the Party"]

[Text] At the time when the new political line, principles and policies of the Third Plenary Session of the 11th CCP Central Committee are striking increasingly deeper roots in the hearts of the people, when the political, economic and cultural life of our country shows daily improvement and deep changes are being experienced, when we loudly rejoice at the triumphant convening of the Sixth Plenary Session so full of historical significance, today, when we earnestly study the important documents of the plenary sessions, we greet the glorious 60th anniversary of the founding of our party.

In these 60 years, the CCP held high its revolutionary banner, led a billion people of various nationalities through many difficulties and in bloody sacrifices, when brave men stepped into the breach as soon as another fell, and in arduous struggle, guided by the party and its leaders, Comrades Mao Zedong, Zhou Enlai, Liu Shaoqi and Zhu De, to final victory over its domestic and foreign enemies, remove all difficulties and obstacles, ultimately overturn the three big mountains that had lain like a dead weight on their backs, and established the Chinese People's Republic. In the more than 30 years since then, our socialist revolution and socialist construction have achieved tremendous successes and our great socialist fatherland is triumphantly advancing!

During the long years of struggle and under the leadership of the party, our revolutionary literature and art has gained glorious victories. Following the revolutionary movement of the 4 May, the magnificent contributions by the revolutionary movement in literature and art, represented by the works of Lu Xun, Guo Moruo and Mao Dun, the role of these contributions in the struggle, have already been discussed penetratingly, fully affirmed and highly appraised in Comrade Mao Zedong's "On People's Democracy" and his other brilliant writings and are recorded in the annals of history. The worker-peasant-soldier orientation for literature and art that Comrade Mao Zedong pointed out, and the whole series of Marxist principles for the relationship between literature and art and the people, life and the revolution, and the principles that he later put forward, such as "weed through the old to bring forth the new," "let a hundred flowers blossom and a hundred schools of thought contend," "make the past serve the present and foreign things serve China" and other such brilliant ideas, illuminated the path on which our country's socialist literature and art was advancing and on which they were able to gain even more thorough and momentous developments. However, the road of advance was torturous. In the decade of our calamity, the revolutionary literature and art suffered grievous damage and destruction. Following the smashing of the "gang of four," particularly since the Third Plenary Session, we repudiated the ultraleftist line of Lin Biao, Jiang Qing and company and their many fallacies in the field of literature and art. We experienced a liberation of minds, eradication of superstitions, a breaking down of forbidden zones and an abandonment of restricting taboos. We implemented the correct policy, restored our literature and art organization, we corrected our orientation to one of service to the people and to socialism, implemented and carried out the "dual hundred" policy, so that through all these measures the initiative of the broad masses of workers in literature and art was revitalized, exquisite new works of literature and art bloomed forth in a steady stream, a large number of excellent pieces of literature were published, the situation was greatly improved, leading to outstanding achievements, and a completely new situation began to appear, a "blooming of a hundred flowers" as never before experienced, thriving and flourishing in great quantity.

At this time of commemorating the 60th anniversary of the founding of the party, we look back on the course of our past struggle and correctly sum up the historical experiences. Restoring and developing the revolutionary tradition in literature and art, affirming our achievements and overcoming our shortcomings, firmly adhering, under the leadership of the party, to the direction of serving the people and serving socialism, correctly implementing and carrying out the policy of "let a hundred flowers bloom and a hundred schools of thought contend," firmly upholding the four basic principles, continuing to emancipate our minds and exerting ourselves in promoting the cause of socialist literature and art, these are the glorious struggle tasks assigned to us by the new era and by the masses.

On the eve of the founding of new China, at the critical moment when the Chinese revolution was about to move into its new historical stage, Comrade Zhou Enlai called on all progressive workers in literature and art to "make an effort to get to know the Chinese communist party," to "study Mao Zedong," which was of great effect. Thirty years later, after the smashing of the "gang of four," when the focal point of our party's work has been shifted to the socialist modernizations, and when we find ourselves at a new turning point in history, Comrade Hu Yaobang also issued a call to workers in literature and art to "correctly look upon" the Chinese communist party, Chairman Mao and Mao Zedong Thought, and this was equally significant.

The historical experiences of 60 years proved that "there could be no new China without the communist party," and the great truth that "only socialism could save China." History will moreover prove in future that only the Chinese communist party could lead our people to triumphantly realize the socialist modernizations, and that without the communist party, there can be no socialist modern new China. Even though our party committed mistakes, even very grievous mistakes, in the course of our revolution and socialist construction, and even though bourgeois careerists of the type of Lin Biao, the "gang of four," and Kang Sheng wormed their way into our party and these conspirators and double-dealers brought on a serious disaster for our party, our state and our people, our party smashed and eradicated them, saved the revolution and saved the party, relying on the strength of the party and the people! This enabled our party and our socialist state to recover their vitality, and to advance along the scientific path of Marxism and Mao Zedong Thought. We see from these facts that our party is a great and glorious party that we can trust completely and that it is "the force at the core of leadership in all our undertakings." Although Comrade Mao Zedong committed mistakes in his later years, his merits are primary and his mistakes secondary. He was a great Marxist and a great proletarian revolutionary. His immortal deeds for the Chinese revolution will never be forgotten by the Chinese people. Mao Zedong Thought guides us in carrying out the four modernizations and has revitalized the theoretical foundation of Chinese thinking. There can be no doubt and no wavering in this opinion. Without a correct knowledge of, and approach toward, the Chinese communist party, toward Chairman Mao and Mao Zedong Thought, there is absolutely no possibility to correctly understand and give expression to the new era in which we find ourselves today.

To make great efforts in portraying the glorious party and portraying the members of the party is the sacred responsibility of the workers in our revolutionary literature and art.

In order to help the people, particularly the masses of our youths, to study the history of our party, study the revolutionary tradition and fine work style of our party, to have them know that our revolutionary victory had not come lightly, our workers in literature and art must exert themselves to give expression to the heroic and outstanding achievement and immortal deeds of our party leaders, our veteran proletarian revolutionaries and our innumerable revolutionary martyrs. In the long history of our revolutionary struggle, how many revolutionary heroic men have there been whose earthshaking and moving deeds will shine through all eternity! They are our nation's soul, heroes outstanding among the multitudes, pillars of the state and the heroic sons and daughters of the party and the people. With a fervent enthusiasm we must sing their praises and portray them to encourage the people to start out on their new long march. This is not only of great significance in our days, it will also throughout the ages inspire people with ideological strength to advance and will constitute a precious asset in building a highly socialist spiritual culture.

According to newspaper reports, the Society for the Study of Historical Figures of the CCP plans to compile the biographies of 500 historical figures who have influenced the history of the party. This is a very meaningful and inspiring plan. We hope that qualified workers in literature and art will participate in the compilation. Basing on the biographies of historical figures and basing on the great amount of historical facts, one should do some artistic summarizing, processing and creating, write various kinds of literary creations, such as stage plays, film scripts, biographical essays, revolutionary historical novels, narrative poems, revolutionary memoirs, in an effort to portray model images of proletarian revolutionaries and party members. This would enrich the themes of our literary and art creations and could definitely fill the needs of the masses and be welcomed by them.

In writing the biographies of figures of our revolutionary history, we must certainly uphold the viewpoint of historical materialism, and maintain a scientific attitude of respect for history and of seeking truth from facts when we assess and portray these historical figures. In this respect Comrade Zhou Yang [0719 2254] once pointed out: "When describing the lofty moral character and the great spirit of revolutionary leaders and revolutionaries, literary and art works must certainly give correct expression to the relationship of the leaders to the masses, and when describing the

the outstanding role played by leading personalities, expression must be given to the fact that it is the masses who are the motive force that creates history. The leader is the guide of the people, but also society's public servant who serves the people wholeheartedly. He must under no circumstances by an "omniscient and omnipotent" savior, arrogantly placing himself above the masses. Any deification of a leading personality and a favor-granting viewpoint toward the masses, are contrary to the objective realities of life and defy the principles of historical materialism; they are all distortions of the leading personality and a contemptuous slight for the people.

Our literary and art creations must not only portray the leading figures of the party and heroic personalities, but must also portray ordinary party members. They must not only portray the revolutionary martyrs, but also model party members of today who live among us. In the courageous attacks of the four modernizations, in the dynamic activities on the various fronts and on various posts, how great the number of fine members of the communist party! They resolutely implement and carry out the line, principles and policies of the party, and under the leadership of the party and taking upon themselves the role of models and vanguards, they organize, lead and rely on the masses. They bravely carry out reforms and with great courage create new things. Unafraid of hardships and difficulties, they struggle courageously, overcome obstacles and have created and are still creating new heroic achievements. The brilliance of communist ideology radiates from them. They personify communist ethics, discipline, moral integrity and other such lofty characteristics. They fully reflect the fine traditions and the revolutionary work style of the party. They are the pioneers of the four modernizations, the socialist new men. We must learn from them most reverently and most honestly and must furthermore enthusiastically describe them and sing their praises. Of course, in describing them we must also adhere to the viewpoint of dialectical materialism, correctly describe their relations to the masses and to the party organization; we must not willfully "glorify" them and distort their image into individualist "heroes," divorced from the masses and from the party organization.

2. Comrade Mao Zedong exhorted the workers in literature and art of the Chinese revolution, already 39 years ago: "You must go into the masses, you must go into the masses of workers, peasants and soldiers for a long time, unconditionally and wholeheartedly, go into the fiery hot struggle, go into the widest and most abundant source, observe, experience, study, analyze all people, all classes, all masses, every form of vivid life and struggle, all the original material for literature and art, only then will you be able to engage in the creative process." This fully conforms to the special characteristics and developmental laws of literature and art, and is the fundamental road to a thriving and flourishing socialist literature and art. It is not at all out-of-date and cannot become obsolete.

When Lin Biao and the "gang of four" were on the rampage, they regarded every revolutionary literature and art worker as "bourgeois intellectual," "target of the revolution," and member of the "stinking ninth category." They made use of and distorted such slogans as "plunge into the thick of life" and "remold your ideology" to destroy and oppress the literary and art workers. We must continue to expose and criticize their crimes in this respect. We must also correct our inadequate ways, influenced by past leftist ideologies, of demanding and arranging that the literary and art workers plunge into the thick of life and remold their ideology. However, under no circumstances should we waver or doubt as to the correctness of the appeal and demand of "going into the masses of workers, peasants and soldiers" and of "learning from the workers, peasants and soldiers," or even negate these demands. It is a pity that not all literary and art workers take this view.

Some young people say that there still was a certain rationale in the past for advocating "plunging into the thick of life," but that things are different today. The Central Committee of the party has already clearly stated that intellectuals are mental workers, belong to the working people and are also a part of the working class. There are some intellectuals who perform not only mental work but also physical work. They all have a "fiery hot life, bubbling over with stirring struggle," why must we then only emphasize "going deep into the life of workers, peasants and soldiers"? The composition of today's workers, peasants and soldiers has also changed very much, many new elements have entered their ranks, and these new elements are not at all wiser in "class consciousness" and "militancy" compared with the old, middle-aged and young intellectuals. Why then should the literary and art workers go into their ranks, learn from them to remold and necessarily portray them? True, the intellectuals of new China are mental workers, belong to the working people and are a part of the working class. Writers are the "engineers of the human soil," but there is still a difference between mental and physical workers, and the mental workers must learn from the physical workers. In his "Political Report to the National Congress of Writers and Artists," Zhou Enlai told us: "Literary and art workers are mental workers and, in a broad sense, members of the working class. Mental workers must learn from the physical workers. A common characteristic of mental work is individual work (of course, the work of singing groups, theatrical companies, film companies is in many respects collective activity). This easily creates a kind of noncollectivist inclination. In this respect the literary and art workers must make a special effort to learn the collectivist spirit from the working class." Comrade Hu Yaobang also told us: "Don't think that the physical workers have nothing that we can learn from them. On the contrary, in many questions the physical workers are wiser than we are. They deserve to be praised and to be portrayed."

We admit, there is today a great change in the composition of the masses of workers, peasants and soldiers. There has been an inflow of new elements; that is a fact. These people may still carry with them a lot of nonproletarian things. These things are their burden and load that hinder their advance. We must show solicitude for them, guide and help them in their studies and in their ideological remolding, so as to have them gradually acquire the fine qualities of the working class and rid themselves of the unhealthy, particularly of all backward things that are still clinging to them. Everything is developing, and there are continuously new elements flowing into the working class and into the masses of the peasantry; that is necessary. This condition exists not only today, nor is it only a thing of the past, it will possibly also be that way in the future. However, this is no reason to change the position and role of the working class and the masses of the peasantry in the Chinese revolution and socialist construction. In his "Speech at the Symposium on Writing Stageplays," Comrade Hu Yaobang emphatically stated: "Our comrades at the theoretical front, propaganda front and literary front must never forget the people who do physical work. There are two reasons for that: the first is that they make up the overwhelming majority of our population, and the second is that in the past they were the principal force of the revolution and at present the principal force for the four modernizations."

We admit, writers are "engineers of the human soul." They can be, and also must be, the spokemen and teachers of the masses. Their fine revolutionary writings can play the role of "uniting the people and teaching the people." However, if a literary or art worker does not show ardent love for the masses of workers, peasants and soldiers, does not go deeply into them and make himself familiar with them, how can he be their spokesman?

If a person does not learn from the masses of workers, peasants and soldiers, be first of all their good student, how can he very well be their teacher?

If a person does not show ardent love for the masses of workers, peasants and soldiers, does not go deeply into them and make himself familiar with them, how can he have a correct knowledge of our new era and depict it, and how can he "link up with the era of the new masses"?

We believe the themes for creative writing are incomparably wide, and that every kind of people among the masses of workers, peasants and soldiers and among the intellectuals must be depicted, the progressive, the intermediary and the backward ones. Writers have full freedom what to write and how to write. However, reflecting the struggle and life of the masses of workers, peasants and soldiers must be the primary theme. This is determined by the socialist character of our country and the socialist character of our literature and art. How can anyone reflect the struggle and life of the masses of workers, peasants and soldiers without ardent love for them, going deeply into them and without familiarity with them?

To elucidate the problem, let us study together a passage from Comrade Deng Xiaoping's "congratulatory address" at the Fourth National Congress of Writers and Artists: "To be able to teach the people, one must have first of all received education. To be able to give the people nourishment, one must have first of all oneself received nourishment. Who is to educate the literary and art workers and who is to nourish them? The answer of Marxism can only be: the people. The people are like a mother to the literary and art workers. The artistic life for all progressive literary and art workers depends on their flesh-and-blood ties with the people. Forgetting, neglecting or cutting these ties will dry up the artistic life. The people need art, but art needs the people even more. Consciously drawing material from within the life of the people, deriving main theme, plot, language, poetic sentiment and pictorial ideas from the people, drawing nourishment from the rousing spirit of the people as creators of history, that is the fundamental way on which the cause of our socialist literature and art will flourish and thrive." The people that are referred to in the above passage are in my opinion mainly still the masses of workers, peasants and soldiers. Let us firmly and unswervingly advance together along this road!

3. Leading comrades of the Central Committee have recently pointed out that if one is to promote studies, one must earnestly study the writings of Marx, Lenin, and Comrade Mao Zedong. We must primarily study philosophy, study the philosophical writings of Comrade Mao Zedong, integrated with this should be the study of a certain amount of history. This conforms with the needs of the development of the modernization projects and with the wishes and demands of the masses; it is equally of important significance in guiding the literary and art workers.

Dialetical materialism and historical materialism are the foundation of all Marxism, are the powerful ideological weapons used by the proletariat and the working class to gain liberation and build socialism, and are the ideological foundation for the revolutionary line, principles and policies set forth by our party. Only by studying and applying these principles can one correctly sum up the historical experiences, correctly assess historical events and historical personalities and effectively correct leftist and rightist mistakes.

Only by studying and applying these principles, can one correctly understand, implement and carry out the party's line, principles and policies established since the Third Plenary Session, and can one also, based on the developmental changes in the life of the society, analyze the new situation, study the new problems and smoothly proceed with the four modernization projects.

The literary and art workers must exert themselves to study Marxism-Leninism and Mao Zedong Thought, raise their own cognitive life and analyze the capacity of life, only then will they be able to see through the phenomena of the diverse and complex life of the society and grasp its essence, main aspects and the direction of its development, and only then will they possibly be able to reflect correctly the actual life of society and avoid losing their direction.

The great revolutionary writer, Comrad Mao Dun, who recently passed away, said: "Dialectical materialism and historical materialism are the world outlook of the proletariat. No work can be done without it, and departing from it will result in mistakes, and for the workers in literature and art this world outlook plays a decisive role."

There are of course many reasons for this or that fault or mistake that we committed in our creations, theories and work in literature and art, but the most fundamental reason is that we did not earnestly study Marxism-Leninism and Mao Zedong Thought and that we did not use the viewpoint of dialectical materialism and historical materialism in "surveying the world, surveying society and surveying literature and art," idealism and metaphysics are still causing trouble.

Comrade Mao Zedong very early already pointed out: "Anyone who considers himself a Marxist revolutionary writer, especially writers who are party members, must have Marxist-Leninist knowledge, but there are today some comrades who lack the fundamental standpoints of Marxism." Does this condition not still exist among the ranks of our literary and art workers today? There are, for instance, such things as "putting forward" the idea of a so-called "bureaucrat class," the "repudiation" of the revolutionary slogan of "fear neither hardship nor death," the wild talk of "breaking" the four basic principles, the "view" that, as they say, "politicians have no conscience," disregard for the social effects of works of literature and art, neglecting the needs of the broad masses, separating the subjective and the objective and "advocating" a literature and art of "self-expression" which treats "self" and the broad masses as opposites, allowing formalism and estheticism, divorced from the masses and from the realities, to "raise their heads," the lopsided opinion that only works which "expose the dark sides" are true and realistic "viewpoints," emphasizing and acknowledging only man's natural attributes and disregarding or denying his social nature, "probing" into class character, etc, etc. Isn't all this a sign of a "lack of the fundamental standpoints of Marxism"?

There is now in some people's minds the idea as if Mao Zedong Thought is no more effective and that it seems unnecessary to study it. This is absolutely wrong. One must know that Mao Zedong Thought is the product of an integration of the universal principles of Marxism-Leninism with the concrete practice of the Chinese revolution. It is a concentrated combination of the wisdom of Comrade Mao Zedong himself and of his comrades-in-arms, of the wisdom of the whole party, the proletariat and the working people. It is the crystallization of the Chinese revolutionary experiences and a valuable spiritual asset of our party and our people. In the past, it guided the Chinese revolution in gaining its great victories, and at present it is still our guiding ideology in carrying out our socialist modernizations. We must raise high the great banner of Mao Zedong Thought and earnestly study Mao Zedong Thought, particularly Chairman Mao's writings on philosophy. We must not only study "On Practice" and "On Contradictions," but also "Strategic Problems of the Chinese Revolutionary War," "Strategic Problems of the Anti-Japanese Guerilla War," "On Extended Warfare," and "Problems of War and Strategy." Workers in literature and art should particularly study earnestly such brilliant works as "On New People's Democracy," "Speeches at the Yenan Forum on Literature and Art" and "On Coalition Government." The study of Marxism-Leninism and Mao Zedong Thought must not remain merely an oral or debating exercise, but must be definitely studied most thoroughly and earnestly. One must definitely adhere to linking theory with the reality, overcome doctrinairism, guard against and abandon the pragmatist and formalist study methods advocated by Lin Biao and the "gang of four," only this will ensure genuine and fairly effective results.

4. Launching a sound literary and art criticism is an important link in promoting the flourishing and sound development of socialist literature and art and a necessary guarantee for a correct implementation of a correct direction and policy in our socialist literature and art. It is also an important method of party leadership in literature and art. The purpose of literary and art criticism should be: summing up experiences, affirming achievements, overcoming faults, correcting mistakes, helping writers and readers to improve literary and artistic creations, and raise the level of literary and art appreciation and theory, thus promoting a flourishing development of literature and art. To achieve this aim, literary and art criticism must be guided by Marxism-Leninism and Mao Zedong Thought and firmly and unswervingly follow a direction of serving the people and serving socialism and the principle of "letting a hundred flowers bloom and a hundred schools of thought contend." It must commend good works, foster the newly created works and criticize the mistaken and harmful ones, and thus raise the knowledge of the functions of literary and art criticism, which should be conducted in a correct attitude and with careful methods, giving consideration to its effects. In criticizing any work, one should start out from the true facts of the specific work and proceed according to the rules governing the characteristics and development of literary and art works.

A scientific analysis must seek the truth from facts. The facts must be fully presented and things reasoned out, helping those that are being criticized and convincing them by reasoning. We must resolutely guard against and abandon the evil methods which were habitually used when the "gang of four" were on the rampage; giving farfetched interpretations, making limitless exaggerations, willfully applying the big stick methods, indiscriminate accusations and trumped up charges, threats of death and destruction and other such oversimplified crude ways. As to contradictions among the people, especially concerning ideology and artistic perception, we must adopt methods of strengthening leadership and guidance, methods of education and discussion, and strive to have the writer carry out self-criticism. If the criticized person does not agree with the criticism, he may make an explanatory statement or write a rebuttal. There is a relationship of equality as between comrades between those criticizing and those being criticized. There must be no bluffing and blustering, using power to intimidate people or using the party organization to force certain views on people. Criticism of the work must be separated from criticism of the person of the writer or artist and both must not be mixed up. We have had many painful lessons in this respect. After the smashing of the "gang of four," are there not still people who exaggerate in their criticism and make unrestrained accusations, frightening people with "digging up embarrassing facts from the past," "making a general settlement of all accounts," or "tossing around material"?

Toward the masses of writers and artists we must adopt an attitude of loving care, support and encouragement. Toward the young writers, amateur writers and their works, we must impart even greater encouragement and support. On the one hand our demands on them must be strict, but on the other hand we must help them with warm sympathy. Under no circumstances must we show an attitude of nitpicking in every conceivable way, apply "big stick" tactics, dampen their enthusiasm, be patronizing or go to extremes in our expression of disapproval. On the other hand we must also not blindly and without good reason lavish praise on them and go to extremes in our praises. We must also change the attitude of some writers who are afraid of criticism or reject criticism. To sum up, we must raise the level of literary and art criticism, improve our methods of literary and art criticism, regularize and normalize it, carry out sound literary and art criticism and have all questions on our advancing literary and art front gradually find their reasonable solutions for the benefit of an increasingly flourishing and healthy development of our socialist literature and art.

5. Experiences of several decades have proved that revolutionary literature and art is part of the entire cause of the proletarian revolution. The party must lead literature and art, the party can lead literature and art. Without party leadership, literature and art is out of the question. This was the case in the past and will equally be so in future.

To strengthen the party's leadership in literature and art, the leadership of the party must be improved. Improvement is the heart of the matter. Improvement of the leadership of the party must be undertaken precisely to strengthen the party's leadership and not at all to break away from party leadership. Every tendency to weaken, break away from, abolish or fight the leadership of the party is mistaken.

Representing the CCP Central Committee, Comrade Deng Xiaoping demanded: "Party committees at all levels must do an effective job at leading literary and art work." Following the Third Plenary Session, especially since the Fourth National Congress of Writers and Artists, the party has very much strengthened and improved its leadership in literary and art work with important successes. However, further progress must be made in overcoming the phenomenon of oversimplified coarseness, willful interference and tendencies toward a disrgard for one's responsibilities, allowing things to slide.

How shall we set about improving and strengthening the party's leadership in literary and art work? Concluding from the successful experiences in many localities, the main points are: (1) We must carry out the literature and art line, principles and policies of the party, completely, correctly, firmly and unswervingly. (2) Based on the characteristics and developmental laws of literature and art, we must help the writers and artists gain suitable conditions (including material as well as spiritual) for creative activities in literature and art, study and work. (3) We must correctly approach literary and art work and writers and artists, affor a suitable position to literary and art work, regularly study, sum up and improve. We must on the one hand realize the good points and achievements of the writers and artists and on the other hand realize their faults and shortcomings. We must be prompt in praise and encouragement, but also at the same time give them appropirate help and instruction when necessary and ensure that our policies are applied to them. If the leading comrades in literary and art work do not earnestly study and carry out the party's line, principles and policies on literature and art, if they do not eliminate all leftist ideological influences, if they do not understand the basic characteristics and developmental laws of literature and art, if they do not exchange opinions and discuss problems with the writers and artists in an attitude of equality as comrades, if they merely rely on their "official positions" to issue orders and rely on the power in their hands to simply "run" literature and art work, it will certainly not be an easy thing to "run." If things are "run" this way, it will only result in arbitrary orders, willful interference and bad consequences for our party's literature and art cause.

The writers and artists too shoulder a very great responsibility in the matter of strengthening and improving the party's leadership in literature and art. What attitude should writers and artists adopt? Concluding from the experiences of a large number of comrades, the main points in this respect are: (1) Consciously accept the leadership of the party. Earnestly study and actively implement the party's line, principles and policies on literature and art, respond enthusiastically to the relevant appeals of the party, consciously maintain unity with the CCP Central Committee in matters of politics. (2) On your own initiative strive for leadership of the party. Give comprehensive and correct expression of conditions, in important questions promptly request instructions and submit reports. At times, necessary and appropriate propaganda and explanatory work to the party organization could help the leading comrades to understand the conditions; this could benefit carrying out party leadership. (3) Actively assist the leadership of the party. In order to assist the party in carrying out a correct leadership, we must proceed from the interests of the party in the literature and art cause, dare to reflect the conditions, explain the problems and suggest measures to solve the problems for consideration of the leadership. At the same time, faced with incorrect opinions, we must also dare to seek the truth from facts, adhere to our principles and firmly uphold the truth. To do all this, we have first of all the task of continuously studying, reforming and improving. We must furthermore feel a strong sense of responsibility for the development of the literature and art cause of the party. Otherwise, it will be very harmful for the development of the literature and art cause of the party.

We firmly believe that under the correct leadership of the CCP Central Committee, with our literature and art orientation of serving the people and serving socialism, guided by the policy of "let a hundred flowers bloom and a hundred schools of thought contend," working on the rich soil of an abundant and colorful life of our great socialist fatherland and on the foundation of the tremendous successes already achieved, also relying on the vigorous efforts of the broad masses of writers and artists and on the powerful support of the masses, the socialist literature and art undertaking of our party will flourish and prosper more and more, thrive and grow, and that it will play an even greater role in the course of building a socialist highly developed material civilization and highly developed spiritual culture.

BRIEFS

HENAN ILLITERACY ELIMINATION FORUM--To mark International Illiteracy Elimination Day on 8 September, the Henan provincial education department held a forum in Zhengzhou Municipality. The forum was attended by representatives of advanced illiteracy elimination units and teachers who have made outstanding contributions toward illiteracy elimination work. Before 1966, the province educated some 7 million illiterates. Over the past 2 years, the province has educated 800,000 illiterates. Some 170,000 people who are no longer illiterates after education have now entered spare-time primary and middle schools and some 50,000 people have entered technical schools. [HK051239 Zhengzhou Henan Provincial Service in Mandarin 1100 GMT 8 Sep 81]

XIZANG SOCIAL ORDER RALLY--On 31 August, Xizang Region and Lhasa Municipality jointly held a rally in the Laboring People's Culture Palace. The rally was attended by some 1,000 cadres, staff and workers. The rally mobilized people in the region to further tidy up social order, to stamp out all kinds of criminal activities and particularly to strike blows at all kinds of criminal activities in the economic sphere. (Zhang Xiangming), regional party committee secretary; (Guo Renting), Lhasa Municipal Revolutionary Committee vice chairman; and Jiangcun Luobu, chief procurator of the regional People's Procuratorate, spoke at the rally. 'WEN WEI PO': BAI HUA'S REACTION TO 'WENYI BAO' CRITICISM

HK091500 Hong Kong WEN WEI PO in Chinese 9 Oct 81 pp 1, 2

[Dispatch from Wuhan by special correspondent Chen Langwu [7115 2597 2976]: "Bai Hua's Reaction to Criticism Article in WENYI BAO"]

[Text] On 7 October, RENMIN RIBAO reprinted an article by WENYI BAO entitled "On the Erroneous Tendency of 'Unrequited Love'," and on the same afternoon I paid a visit to Bai Hua at his home.

On entering the door, I found him dressing a duck in preparation for a dish, an apron round his waist. When he saw me, he immediately rubbed his hands clean and enthusiastically ushered me into his study. His study was simply but tastefully furnished, and on the desk was that day's RENMIN RIBAO.

"Have you read today's article criticizing 'Unrequited Love'?" I asked. "Yes," he said.

When I asked for his reaction to the article, he said: "I have read the article once, and I feel that the article adopts a comradely attitude by reasoning things out, and this is quite convincing. Different from the past articles using a big stick, this one is well written. Especially in the fourth part of the article, it was pointed out that 'from the creative life of Comrade Bai Hua, one of the authors, and the lessons from "Unrequited Love," one cannot but think that there exist profound contradictions in the world outlook of authors.' I have written good works, but also written bad ones, and this indeed reflects the contradiction of world outlook. I shall reread the article and think it over again."

I learned in Wuhan that Bai Hua, who is a CCP member, has recently made a self-criticism at a party meeting of the political and cultural departments under the Wuhan Military Command. The topic of our conversation turned to criticism and self-criticism.

Bai Hua said: "Some people asked me: 'After studying the document of the forum on problems arising from the nation's ideological front, do you feel nervous?' I replied that I did not feel nervous but warmth. The criticism has been made by the leading comrades of the CCP Central Committee with a kind heart in the hope that I would stand on the side of the party and not get rid of or depart from the leadership of the party."

I chatted with Bai Hua for about an hour. He is quite a good talker, and seemed to have a frank and open personality as he talked without any restraint. Knowing that he still had to prepare a delicious supper, I felt embarrassed to have taken up too much of his time and took my leave. He still had to cook the duck, otherwise, I would have talked with him for a long time.

'TA KUNG PAO': DENG YINGCHAO TALKS ON UNIFICATION

HK121055 Hong Kong TA KUNG PAO in Chinese 11 Oct 81 p 1

[Dispatch from Beijing: "Our Country Should Be Unified and the Whole Family Should Live in Harmony--Deng Yingchao Talks With Guests at a Tea Party"]

[Text] Beijing, 10 Oct--Sister Deng Is Welcomed by the Guests

A tea party to mark the 70th anniversary of the 1911 revolution was held this morning (10 October) at the banquet hall of the Great Hall of the People.

The moment Deng Yingchao entered the banquet hall, a group of guests went up to greet her. Many women guests from abroad requested to have group photos taken to mark the occasion. They cordially talked about friendship handed down from generations before and their desire for the motherland's peaceful unification. Of course, those sharing the same table with Deng Yingchao would be seen in most of the group photos. Among them were Liao Chengzhi, Sun Mofo, Seimin Miyazaki and his wife, Li Moan and his wife, Huang Zhicheng and so on. This was indeed a combination of the old, the middle-aged and the young and a combination of Chinese and foreigners.

A Group Photo of Tanzhen's Wife and Five Daughters With Deng Yingchao

Tanzhen's wife Quan Ruzhen who came from the United States and her five daughters in China: Tan Yu, Tan Ming, Tan Quan, Tan Rui and Tan Kun had a group photo taken with Deng Yingchao. Deng Yingchao said to them that our country should be unified and the whole family should live in harmony and hoped that [words indistinct] our father was alive, he always held that the KMT should cooperate with the CCP. We should carry out our father's behests and make our contributions in the great cause of our motherland's peaceful unification."

Li Zhongxiu, the son of Li Yuanhong, said: "I am now 70 years old and happened to be born in 1911. I find it very touching and glorious to be able to participate in activities celebrating the 70th anniversary of the 1911 revolution." He said that the 9-point proposal made by NPC Chairman Ye and CCP Chairman Hu's speech made the day before were very good, very sincere and very touching, and for the sake of the happiness of the future generations and of the bright future of the motherland, Taiwan of course should make an enthusiastic response.

Nephew of Wang Zhengting Talks About His Feelings in Coming to Beijing

Wang Gongbin, nephew of Wang Zhengting, said that his grandfather, a doctor, was a good friend of Dr Sun Yat-sen. When his parents got married, Madame Sun gave some clothes to his mother. He also said that after he came to Beijing from the United States, he read the proposal of NPC Chairman Ye and listened to the speech of CCP Chairman Hu. Both of them were good and showed that the CCP was sincere. He hoped that the other side would put the nation's interests before other things and begin the peace talks at an early date in order to realize cooperation between the two parties.

Luo Zhunian, the son of Luo Yiqun, said that it was a great thing that CCP Chairman Hu invited personages of the Taiwan authorities and people in various circles to visit the mainland. We Overseas Chinese residing abroad wholeheartedly hoped to see the peaceful unification of our motherland and hoped that the two parties would hold talks at an earlier date in order to cooperate with each other.

HONG KONG PAPER COMMENTS ON HU YAOBANG REUNIFICATION APPEAL

HK110640 Hong Kong WEN WEI PO in Chinese 11 Oct 81 p 2

[Editorial: "Peaceful Reunification and Vigorous Development of the Chinese Nation--Thoughts After Listening to Hu Yaobang's Speech"]

[Text] At a mass rally held in Beijing to solemnly commemorate the 70th anniversary of the 1911 revolution, Hu Yaobang once again issued the call for "returning Taiwan to the motherland and accomplishing the great task of reunification." This call has evoked strong repercussions in the mainland, Taiwan and foreign countries.

In the past, Dr Sun Yat-sen issued a call for "peace, struggle and saving China." Today, Hu Yaobang has also issued his call for "peace, struggle and vigorously developing China." "Vigorously developing China" means carrying on and developing Dr Sun Yat-sen's behest and accomplishing China's present greatest historical mission.

Struggle over the past few decades drove away all imperialist forces from China. Since then China has stood proud and firm, and won its independence and liberation. The Chinese mainland has established its comparatively complete economic system in the construction over the past 30 years. This has created the conditions for further improving the livelihood of the entire Chinese people. The present task confronting the Chinese people is to reunify the great motherland and win a glorious future.

Reunification and construction are our two unified tasks which cannot be separated from each other. Without reunification, the strength of the Chinese people will be broken up and weakened in the struggle to resist the enemy. Once China is reunified, the mainland and Taiwan can learn from each other to offset their weaknesses and cooperate so that the construction on the two sides of the Taiwan Straits will be accelerated.

We are all the descendants of the yellow emperor. Why should we use weapons to kill each other and exert our efforts toward military confrontation and civil war?

We belong to the same country. Why should we refuse economic and cultural exchanges? Due to our previous erroneous practice, foreign countries controlled our capital, technology and market. As a result, our construction was delayed and harmed.

The split over the past few decades has made our motherland suffer. It is time for us to sit together and conscientiously discuss the matter of peaceful reunification and vigorously developing the Chinese nation!

We should not use historical hatred and hostility as a pretext to hamper the peaceful reunification of the motherland. A statesman who values the interests of the motherland and national righteousness above everything else should have a broad vision and seek bright prospects. He should keep abreast with the trends of historical development, accomplish the desires of the broad masses of people and follow the trends of the times. It takes a long time to eliminate hatred and hostility and to bind the wound. However, we can do so only through mutual intercourse. Now, Hu Yaobang has invited leaders and senior statesmen of the Kuomintang such as Chiang Ching-kuo and others to visit the mainland to have heart-to-heart talks or make an inspection. If Mr Chiang Ching-kuo and others accept the invitation, they will help eliminate hatred, differences of opinion and misunderstanding. In so doing, they will make important contributions to the reunification of the motherland. In the past, Mao Zedong, chairman of the Communist Party, personally went to Chongqing for the sake of peace. Now why should not Chiang Ching-kuo, chairman of the Kuomintang, visit Beijing and have a look? If both sides do not put forth any preconditions, everything can be settled easily. If leaders of the two parties cannot have contact at once, they should let people on the two sides of the Taiwan Straits establish their relations and contact each other. Any leader who claims that he is leading a prosperous society and is firmly supported by the people should have self-confidence. He should not be afraid of contacting the other side. Only by contacting each other, can we deepen mutual understanding, produce great impact, create a favorable atmosphere for peaceful reunification and open up a path. We believe that the Taiwan authorities understand this. We hope that they will not refuse this peaceful proposal.

SPEECHES AT BEIJING RALLY MARKING 1911 REVOLUTION ANNIVERSARY

Miao Yuntai Speech

OW121303 Beijing Domestic Service in Mandarin 0926 GMT 9 Oct 81

[Speech by Miao Yuntai at Beijing rally marking the 70th anniversary of the 1911 revolution--live]

[Excerpts] Compatriots: At this grand commemoration rally today, I am as excited and happy as you are. I have high hopes for China's future. Here I would like to talk about my observations and thoughts:

1. I would like to talk about my own understanding of the 1911 revolution. The 1911 revolution is the first and greatest revolution in China's history.

2. I would like to talk about my impression of the 1911 revolution. My impression is that a revolution always takes place when the people can no longer endure difficulties, suffering and oppression. If the people's livelihood is improved after the revolution, the people will support it. If the people's livelihood is not improved after the revolution, the people will rise to wage a second revolution.

I have returned to China to settle down because I think socialism is the most advanced and most modern social system in the present era. In the early years of the Republic of China I cherished the ideas of capitalism and democracy.

That was in the past. Now I have lived long enough to enjoy a new socialist life in the socialist motherland. I am all the more happy and elated.

3. I would like to talk about my hopes. The road of China's democratic revolution is long. As I have just said, the first, second and third revolutions took a very long time. The Kuomintang led by Dr Sun Yat-sen made important contributions to the old democratic revolution, but it is the Communist Party led by Mr Mao Zedong that accomplished the new democratic revolution and moved on to accomplish the socialist revolution. It came down in one continuous line from the 1911 revolution to the founding of new China. The CCP has inherited and carried forward the tradition of the 1911 revolution. Both the CCP and the Kuomintang have separately made very great contributions to the Chinese revolution and accomplished the revolutionary cause left unfinished by Dr Sun Yat-sen. I am a man without party affiliation. I represent the wish of the overwhelming

majority of the people without party affiliations, who hope that the Kuomintang and the CCP will once again join hands and cooperate with each other to reunify the motherland, make China prosperous and strong and promote world peace. Dr Sun Yat-sen hoped and fought all his life for our national independence and unification. Today, in commemorating the 1911 revolution we should better preserve and carry forward this tradition. [applause]

I sincerely support the nine principles and policies specifically elaborated by Chairman Ye Jianying concerning Taiwan's return to the motherland and the realization of China's peaceful reunification. I sincerely hope that Mr Chiang Ching-kuo will put national interests above everything else, carry on Dr Sun Yat-sen's revolutionary spirit and, for the motherland's reunification and for the well-being of future generations of the Chinese nation, respond to Chairman Ye's call, begin talks with the CCP as soon as possible and discuss national policies together. I most sincerely hope that Mr Chiang Ching-kuo will not disappoint us. [applause]

Qu Wu Speech

OW112357 Beijing XINHUA Domestic Service in Chinese 1539 GMT 9 Oct 81

["Full text" of Qu Wu's speech at 9 October Beijing rally marking the 70th anniversary of the 1911 revolution]

[Excerpts] Beijing, 9 Oct (XINHUA)--Chairman, gentlemen, comrades: We are gathered here today to solemnly commemorate the 70th anniversary of the 1911 revolution. First, let us salute Dr Sun Yat-sen, the great revolutionary forerunner who led the 1911 revolution, and those comrades who laid down their lives in the heroic struggle for the victory of the revolution.

Comrade Hu Yaobang, chairman of the CCP Central Committee, has just delivered an important speech. On behalf of the China Revolutionary Committee of the Kuomintang, I fully endorse and resolutely support his speech. The revolution of 1911, which occurred 70 years ago, was of great historical significance in the period of democratic revolution in China.

While commemorating the 70th anniversary of the revolution of 1911, we express our regret that Taiwan has yet to return to the motherland, the reunification of the country has yet to be achieved and our kith and kin on both sides of the Taiwan Straits are still artificially separated. All this is against our national interests. On the eve of the 32d anniversary of the founding of the PRC, Chairman Ye Jianying, a man of high character and great prestige, issued a statement proposing that talks be held between the CCP and the KMT of China on a reciprocal basis so that the two parties could cooperate for the third time to accomplish the great cause of national reunification. In his statement, he elaborated on a nine-point policy concerning the return of Taiwan to the motherland for the realization of China's peaceful reunification.

Kuomintang-Communist cooperation was first proposed and initiated by Dr Sun Yat-sen. We are all descendants of the yellow emperor, and we are all kinsmen. What disputes and differences are there between us that cannot be settled through negotiation? The point now is to open the door of negotiation and for the two sides to send people to meet for an exchange of views to remove obstacles and lay the foundation for the third instance of Kuomintang-Communist cooperation. Since the Taiwan authorities call themselves loyal disciples of Dr Sun Yat-sen, they should follow his revolutionary behests and put national interests above everything else, forget previous ill will, act in all sincerity and work together with us for the sake of the country's reunification and the unity of the whole nation.

Carrying on Dr Sun Yat-sen's progressive revolutionary spirit, our China Revolutionary Committee of the Kuomintang came into being and has grown in size in the long years of struggle against domestic and foreign enemies. Many among the military and administrative personnel in Taiwan are our schoolmates, old friends, colleagues and fellow officers. To realize our ideal of saving the country and people, we placed our faith in Dr Sun Yat-sen's revolutionary ideas and together followed him in working for the cause of revolution. Today, however, we can definitely join hands and strive to accomplish the great cause of national reunification and rejuvenation of the Chinese nation.

"As success for the revolution has not yet been achieved, comrades must continue to work hard." This is a famous sentence in Dr Sun Yat-sen's testament. Although today's conditions and the Chinese people's revolutionary tasks are entirely different from the past, to review this sentence is still very important. Today, the country has not achieved complete unification; the building of a country, strong, modern, highly democratic and highly cultured, has not yet been completed; the great task of rejuvenating the Chinese nation has yet to be accomplished. Our Chinese nation is a great nation. The Chinese people are patriotic. We are convinced that, under the leadership of the CCP and through the concerted efforts of the whole Chinese nation, the great task of rejuvenating the Chinese nation, which began with the 1911 revolution, will certainly be accomplished and China will make greater contributions to mankind.

Eternal glory to the martyrs of the 1911 revolution!

Long live the great unity of the Chinese nation!

Li Moan Speech

OW120535 Beijing XINHUA Domestic Service in Chinese 1640 GMT 9 Oct 81

["Text" of speech by Li Moan at the Beijing rally marking the 70th anniversary of the 1911 revolution]

[Excerpts] Beijing, 9 Oct (XINHUA)--Chairman, gentlemen, friends:

I am honored to be invited by the preparatory committee for the commemoration of the 70th anniversary of the 1911 revolution to return to the motherland, after having been away for more than 30 years, to participate in the commemorative activities. I am especially elated to see with my own eyes the tremendous achievements the motherland has made in the past 30-odd years. Here I would like first to give my heartfelt thanks and respects to the central people's government and the Chinese Communist Party.

Although I have been abroad for many years, the matter of the motherland's reunification has always been in my thoughts. Whenever I heard people abroad refer to "Chinese in Taiwan" and "Chinese on the mainland," I was always immeasurably shocked and deeply ashamed. This time, when I first arrived in Beijing, I heard Chairman Ye Jianying's talk elaborating on policy toward Taiwan, and I felt very excited. I think the talk has given consideration to not only the fundamental interests of the people of the whole country, but the interests of peace in the Far East and the rest of the world and also the interests of the Taiwan authorities. It expresses the common wish of compatriots at home and abroad for the reunification of the motherland at an early date. Realistic, fair and reasonable, it is a policy in line with the national interests. I hope that the Taiwan authorities will also proceed from the national interests, think about the future generations and decide to attend peace talks as soon as possible, to help the flesh-and-blood compatriots on both sides of the straits reunite, jointly accomplish the great cause of reunifying the motherland and make contributions to building China into a prosperous and powerful country. I think this is a golden opportunity for Mr Chiang Ching-kuo to make contributions to the country and nation and write a glorious page in the history of the Chinese nation in his remaining years. I hope that Mr Chiang Ching-kuo will do the right thing.

I also hope that my old schoolmates [meaning schoolmates at the Huangpu Military Academy] and old friends will push for the motherland's reunification from all sides so as to live up to Dr Sun Yat-sen's teaching "strive to save China in peace," and make contributions to the third cooperation between the Kuomintang and the CCP. Let us join our hands and strive to build a prosperous, powerful, socialist new China! This is the best way for us to commemorate the 70th anniversary of the 1911 revolution.

Hu Juewen Speech

OW120203 Beijing XINHUA Domestic Service in Chinese 1607 GMT 9 Oct 81

["Text" of speech by Hu Juewen at the Beijing rally marking the 70th anniversary of the 1911 revolution]

[Excerpts] Beijing, 9 Oct (XINHUA)--The 1911 revolution was a great revolution in the history of our country.

In commemorating the 1911 revolution, we should cherish the memory of all the revolutionary martyrs, especially Dr Sun Yat-sen, the great revolutionary forerunner.

The late Chairman Mao Zedong pointed out in 1956: "Save for a handful of reactionaries, the people of contemporary China are all successors to the revolutionary cause to which Dr Sun Yat-sen dedicated himself." The founding and progress of the People's Republic of China are precisely the continuation and development of the revolutionary cause to which Dr Sun Yat-sen dedicated himself. In the past 32 years, we have never forgotten Dr Sun Yat-sen's behest to seek China's unification and construction. We have a clear conscience. We also vow to closely unite with all people with lofty ideals, who are willing to carry on Dr Sun Yat-sen's behest, and work together with them to accomplish China's four modernizations.

Concentratedly reflecting the Chinese people's pressing demand and political stand to realize the motherland's reunification, Chairman Ye Jianying of the NPC Standing Committee, on the eve of National Day this year, elaborated on the principles and policies concerning the return of Taiwan to the motherland for the realization of China's peaceful reunification.

I was born in 1895, the year the Qing government ceded Taiwan. I am now 86 years old. Like many patriots from the old society, I feel deeply that "time is running out for me to work for the country, which makes me all the more anxious to do something for her." In my lifetime, I not only hope to see our country become prosperous and strong but especially to see Taiwan's return to the motherland and the realization of the great cause of the motherland's reunification. I would like to take this opportunity to say a few words to compatriots in Taiwan and all Chinese and foreign personages concerned about the great cause of reunifying the motherland.

"Is it a united front scheme?" I and many others in industrial and commercial circles and democratic parties joined the united front after the founding of the People's Republic of China. I have several decades of personal experience. True, our united front is initiated and led by the Chinese Communist Party. The united front policy, however, is not the policy of the Communist Party alone, but the common policy of all democratic parties and personages of all circles as well as the people of all nationalities throughout the country. The crux of the united front policy is to unite all people who can be united, bring into play all positive factors and turn negative factors into positive ones to serve the country's reunification and construction. What is wrong with this policy? What scheme is there to talk about? Under the guidance of the united front policy, the industrialists and businessmen on the mainland not only have played an active role in building the country, which was unthinkable in old China, but have taken up leading posts in political organs at all levels and participated in running the country. We feel deeply that the united front is indeed a magic weapon for our country's revolution and construction. I am an historical witness to the policy and practice of the united front. I feel it is my duty to sincerely advise compatriots in Taiwan and people abroad who are influenced by the allegations about the "united front scheme." When you study the series of principles and policies explained by Chairman Ye Jianying, you must do your best to eliminate the influence of such slander, establish a correct idea about the policy of the Chinese people's united front and see Chairman Ye's talk as a policy of the Chinese nation, a policy of the people of all nationalities in the whole country to win glory for our ancestors and bring benefit to posterity. Nothing can be accomplished without the people's trust. To establish mutual trust, this problem of misunderstanding should first be settled.

"Is the situation on the mainland good, or bad after all?" Not long ago, the Chinese Communist Party published the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China," which has fully and scientifically answered this question. Before the adoption of the resolution, opinions were solicited from nonparty people, including me. Therefore, the resolution not only reflects a summation of the history of the Communist Party, but also expresses the common view of us nonparty people on the history, present situation and direction of advance of new China. I think that fundamentally speaking, to comment on whether the national situation is good or bad, we must first make a comparison and next we must see how it is developing. We insist on looking at it this way: As long as the present represents progress from the past, even though the progress is not great, and is developing in a direction for the better, the situation is good. Conversely, even though the present situation is attractive, if it is beginning to go downhill and there is no hope for the trend making a turn for the better, or if the future is uncertain, the situation is then bad, not good. I went some places recently and grasped some firsthand information on urban and rural conditions. Even though I saw and heard that there still were mistakes in work, I still have reasons and grounds to say with certainty that the situation on the mainland is good as a whole. The growth of industrial and agricultural production, the development of culture, education and science, the improvement of the people's livelihood and other brilliant achievements in the past 32 years are there for all to see. So long as the whole nation continues to work hard along the road of construction suited to our national conditions, uphold truth and correct mistakes, the situation will become better and better step by step.

"Haven't you made many mistakes in the past?" In the past 32 years, indeed we have made many mistakes, some very serious. All this has been truthfully written in the above-mentioned "resolution." I lived for more than 50 years in old China and experienced different periods of rule. What made me very indignant was the fact that the rulers of that time not only committed the grave crime of surrendering the country's sovereign rights under humiliating terms and almost forfeiting the entire nation's future, but especially confused right and wrong, covered up their errors and used all kinds of despicable means to smother the will of the people. Although the Chinese Communist Party and our people's government have made mistakes, as far as the nature of the mistakes is concerned, they cannot be put on a par with those made by the rulers of old China. What is particularly gratifying and inspiring to us is: The Chinese Communist Party and the people's government have summed up past experience and lessons and made clear what is right and what is wrong in guiding ideology. Therefore, they are becoming increasingly capable of seriously dealing with shortcomings and mistakes in work, promoting democracy, conducting self-criticism and correcting shortcomings and mistakes. I myself have often put forward criticisms and suggestions on problems and errors in work which I saw or heard about, and in return I have seen only sincere welcome and earnest efforts to improve. Chairman Hu Yaobang's reply to my report on an inspection tour of Changzhou, published in the newspapers in July this year, is just one example. There never was a government in Chinese history that was so modest and open-minded, did not conceal its own shortcomings and mistakes in work and dared to expose and resolutely correct its mistakes. In view of this, I have often told my friends in the past few years that as far as those who aspire for the motherland's reunification and construction are concerned, we are standing before a golden opportunity that rarely occurs in a thousand years. So, as we southerners say, we must strain every muscle like a suckling baby to share the burdens of state and serve the country.

Let the people of all nationalities throughout the country, including compatriots in Taiwan, unite as one and join hands. We also hope that the Taiwan authorities will put national interests above everything else and join us in dedicating our whole heart and effort to reunifying the motherland and making China prosperous and strong.

CHINA LAW SOCIETY PROPOSES TIES WITH TAIWAN JURISTS

OW101133 Beijing XINHUA Domestic Service in Chinese 1420 GMT 8 Oct 81

[Text] Beijing, 8 Oct (XINHUA)--The preparatory committee of the Chinese Law Society today called for establishing ties with law circles in Taiwan to pave the way for an academic exchange.

It said that the statement made by the NPC Standing Committee Chairman Ye Jianying to XINHUA correspondents concerning Taiwan's return to the motherland for the realization of China's peaceful reunification, reflects the common aspirations of compatriots both on the Chinese mainland and in Taiwan. We will work hard for the materialization of Chairman Ye Jianying's nine-point proposals. For this purpose, we offer the following suggestions to the law circles of Taiwan and to Chinese jurists in foreign countries:

1. It is the common desire of those in law circles on the Chinese mainland and in Taiwan and of Chinese jurists in foreign countries to express their ardent love for their motherland and to see it reunified by peaceful means. We expect them to join hands and strive for the peaceful reunification of the motherland.

2. Personages from Taiwan's law circles and Chinese jurists in foreign countries are welcome to teach on the mainland of the motherland, visit their relatives and friends and to exchange visits in the interest of promoting academic communications.

3. We call on the law circles of Taiwan and Chinese jurists in foreign countries to establish ties with the Chinese Law Society so that we may communicate with each other for the purpose of promoting academic exchange.

PRC TRADE UNIONS ADDRESS LETTER TO TAIWAN WORKERS

OW141335 Beijing XINHUA Domestic Service in Chinese 1229 GMT 12 Oct 81

[Text] Beijing, 12 Oct (XINHUA)--The third session of the Ninth Executive Committee of the All-China Federation of Trade Unions today approved "an open letter to brother and sister workers and trade unions in Taiwan."

The open letter says: The fundamental interest of the Chinese nation lies in the peaceful reunification of the motherland. The reunification of the motherland is everybody's business. We, the masses of workers and staffs, are the creators of the motherland's material and spiritual wealth and are shouldering the unshirkable duty of realizing the reunification of the motherland.

The "open letter" puts forth three proposals to Taiwan workers and trade union organizations:

1. We warmly welcome brother and sister workers of all professions and trades in Taiwan to come to the mainland to visit friends and relatives. The trade union organizations and the masses of workers and staffs in the various localities on the mainland are ready at all times to receive them and provide them with conveniences. In recent years crewmen on both sides of the Taiwan Strait have been keeping friendly contacts in Jilong and other ports abroad; we hope that these friendly contacts will be developed continuously.

2. The people on both sides of the Taiwan Strait have been separated for over 30 years. They earnestly hope to hear from each other and to have a family reunion; they also hope to supply what the other side needs, to develop trade and to engage in exchanges so as to make the economy on both sides of the Taiwan Strait flourish. Our workers and staffs in the posts and telecommunications, communications and transport and commercial fields have already made all the necessary preparations. We hope that our Taiwan counterparts will make joint efforts in promoting the mail, trade, air and shipping services at an early date.

3. The All-China Federation of Trade Unions and affiliated trade unions and local trade union councils welcome the Taiwan trade union organizations in consulting on such matters as developing the above-mentioned activities, maintaining contacts and establishing ties to facilitate the reunification of the motherland.

TAIWAN COMMANDER DISCUSSES STRATEGY AGAINST PRC

OW151415 Taipei CNA in English 1344 GMT 15 Oct 81

[Text] Taipei, 15 Oct (CNA)--The Republic of China Society for Strategic Studies Thursday held a meeting with a group of former U.S. military mission chiefs in Taiwan on the strategic situation in the Taiwan Straits area.

During the discussions, Maj. Gen. William C. Chase, former chief of the U.S. Military Assistance Advisory Group (MAAG), praised the armed forces of the Republic of China for their good training and high morale. "This is one of the most important achievements of the Republic of China," he stressed.

Former commanders of the U.S. Taiwan Defense Command and other MAAG chiefs attending the meeting were Vice Adm. William E. Gentner, Vice Adm. John L. Chewn, Vice Adm. Walter H. Baumberger, Vice Adm. Edwin K. Snyder, Rear Adm. James B. Linder, Maj. Gen. Kenneth O. Sandborn, Maj. Gen. Dwight B. Johnson, Maj. Gen. Chester A. Dahlen and Maj. Gen. Slade Nash.

Tao Hsi-sheng, chairman of the society, gave a hearty welcome to the U.S. visitors. Afterwards, Gen. Wego Chiang, commander-in-chief of the Combined Service Forces, delivered a speech stressing the use of "flexible offensive" as the best strategy to attack the Chinese communist regime.

Only after the Republic of China recovers the mainland from the Chinese communists, can the Free World stop the expansionism of the Soviet Union, Gen. Chiang said.

On the other hand, the U.S. military experts urged the Republic of China to publicize positively its economic achievements and reconstruction abroad and let other nations of the world understand fully the cause of this country.

They also asked this nation to insist on its strategy of no talks with the Chinese communists.

'CHINA POST' EDITORIAL CALLS YE OVERTURE 'A DUD'

OW140520 Taipei CHINA POST in English 6 Oct 81 p 4

[Editorial: "Yeh Chien-ying's Overture, a Dud"]

[Text] Chinese communist observation of its October 1 anniversary took the form of a statement issued by old cadre Yeh Chien-ying on September 30 outlining a 9-point program calling for peaceful unification and talks between the Chinese Communist Party and the Kuomintang. If Yeh expected his statement to arouse the people of Taiwan to respond favorably, he was absolutely wrong. For his statement has proved to be a dud, not taken seriously by any people on this anti-communist bastion, for they all know that Yeh's statement represents the oft-employed united front tactics which could not deceive anyone.

The statement was first refuted on the same day by Dr James Soong, director-general of the Government Information Office, who described the statement as "a continuation of their united front propaganda" and containing "nothing new." He said that Yeh's intention is to subjugate the free Chinese in Taiwan, Penghu, Kinmen and Matsu under communist rule. Yeh was trying to gain control of Taiwan, Penghu, Kinmen and Matsu by deceit and treachery without firing a shot. It is typical Chinese communist ploy which cannot deceive anyone.

Premier Sun Yun-hsuan, replying to an interpellation by legislator Jao Ying-chi, stated on October 2 that the so-called peaceful reunification overture of Yeh Chien-ying is merely one more trick of the treacherous Chinese communist united front ploy. He said that the reunification of China must be conducted under the Constitution of the Republic of China and should be based on the implementation of Dr Sun Yat-sen's three principles of the people calling for a government of the people, by the people and for the people.

Premier Sun also mentioned the communization of Tibet as the best example of the malicious intent of such a ploy. He said that "not only people of free China but also people of the Free World should remember this lesson and see through the communists' united front tricks and not be deceived." He also pointed out that the real conflict between the ROC Government and the communists is the conflict between principles and systems, the conflict between benevolent and tyrannical rules, but not the scramble of interest and advantages. He said that Yeh's overture has not gone to the heart of the problem which is whether China should adopt a free and democratic system or a totalitarian and dictatorial one.

Premier Sun also declared that there is no room for compromise between the benevolent rule of the Republic of China and the tyrannical one of the communists. It is certainly not what the Chinese communists have claimed as the confrontation between the Kuomintang and the Chinese Communist Party and that real peace will come as soon as two parties share political power. He urged the Chinese communists to give their allegiance to Dr Sun's three principles of the people, return to the national system established by Dr Sun and strive for the happiness and bright future for all the people.

The above statements should be carefully noted by free people everywhere including the Overseas Chinese people around the world. They should not be deceived by the Chinese communist tricks in believing that the Chinese communists are peace-loving and willing to cooperate with the Republic of China. Their overture was issued at the weakest moment of their strength and in the midst of turmoil and crises prevailing on the Chinese mainland. They try to hide the true deteriorating conditions on the Chinese mainland by launching a peace offensive hoping to generate a smoke screen to divert attention from the discontent and resistance of the mainland people.

But the Chinese ploy cannot fool anyone. Not only the people of the Republic of China but also the free people all over the world have seen through their sinister designs and paid no attention to their ridiculous claims. The fact that Yeh's statement evoked no responses even among the leftists and that they did not observe the October 1 anniversary proves the declining of the Chinese communist prestige and influence.

As a marked contrast, the enthusiasm with which people are preparing for the celebration of the double-tenth National Day of the Republic of China shows the tremendous support the government of the Republic of China under the valiant leadership of President Chiang Ching-kuo is receiving. There is no doubt that the remaining days of the Peiping regime are numbered indeed.

TAIWAN LEGISLATOR URGES EASING MAINLAND VISITOR ENTRY

OW140345 Taipei CHINA POST in English 7 Oct 81 p 12

[Text] Legislator Pu Shao-fu Tuesday suggested the government loosen restrictions on visitors from mainland China by allowing some selected ones to enter this territory, saying this will help this country carry out its movement of reunifying China under the guidance of the three principles of the people.

Interpellating the Executive Yuan, Pu said that since the trial of the gang of four, Red China has been trying to create a vision of peace among nations, giving certain convenience to either foreigners who wish to visit the mainland or mainland Chinese who wish to tour abroad.

Pu pointed out that many distinguished scholars in mainland China who were purged in the Cultural Revolution have been allowed to visit the United States.

According to Pu, scholars including mathematician Hua Lo-keng, sociologist Fei Hsiao-tung and painter Liu Hai-su were turned down by the government here when they asked to visit the island.

He urged the Ministry of the Interior to think better of its restrictions on mainlanders, saying the restrictions might turn away those who wish to affiliate themselves with this country.

The government has achieved what is internationally reputed a "miracle" in Taiwan in the past 30 years and is now advocating the movement of reunifying China under the three principles of the people, Pu said. However, reverse effects may be resulted if the government continues to stick to its restrictions on mainland visitors, he indicated.

TAIPEI PAPER LAUDS CHIANG STAND ON PRC TALKS

OW141210 Taipei CHINA POST in English 9 Oct 81 p 4

[Editorial: "Exposing Chinese Communist Tricks and Chicanery"]

[Text] President Chiang Ching-kuo's remarks on Chinese communist tricks and political chicanery at Wednesday's Kuomintang Central Standing Committee meeting should expose Chinese communist lies and deceit in proposing peaceful unification talks by Yeh Chien-ying.

Recalling the Chinese communist record of bad faith in "gestures of surrender twice during the last 60 years," President Chiang told the Central Standing Committee members that "these bitter lessons have convinced us that the communists raise the slogan of 'cooperation' as part of their demands to be accepted only when they are weak and need to strengthen themselves by clinging to the Kuomintang. When they have become stronger, they lash out once again. He also recalled that from beginning to end both Dr Sun Yat-sen and the late President Chiang Kai-shek 'found not a single word of the communists that was not a lie and not a single move that was not political chicanery.'"

President Chiang pointed out also that the Chinese communists are now frightened by the proliferating crisis of faith within their party and the military, unnerved by our compatriots repudiation of communism, the communist system and communist rule and by our compatriots yearning for the political and economic progress and prosperity found in our bastion of national recovery. They are also panicking under the shock wave generated by our determination to "unify China under the three principles of the people." They therefore proposed "a third cooperation" between the Chinese Communist Party and the Kuomintang.

But there is vast difference between our benevolent government and the tyrannical rule of communism. No confusion can be allowed between the two political philosophies. Chinese communist peace talk clamours, as pointed out, are designed to weaken our resistance and lead us to death. They create a false impression that we do not want peace. They want to deprive the people on the Chinese mainland of any hope of our national recovery and their eventual liberation.

President Chiang's forthright stand to tell our compatriots on the Chinese mainland of our confidence and determination to deliver them and our solemn mission to carry out the three principles of the people and unify China is most timely and serves to refute Chinese communist insinuations and double-talk.

We hope that the people of the United States would not be deceived by phoney peace gestures of the Chinese communists. They should realize that behind their smiling face, there is a hidden dagger ready to kill us.

JAPAN DIET LEADER SUPPORTS YE JIANYING STATEMENT

OW092059 Beijing XINHUA in English 1840 GMT 9 Oct 81

[Text] Tokyo, October 9 (XINHUA)--Haruo Okada, vice-speaker of the House of Representatives of the Japanese Diet, told XINHUA today that Chairman Ye Jianying's statement on Taiwan's return to the motherland for a peaceful reunification of China is "an important proposition of historical significance" which "we vigorously support and would like to offer our assistance with its realization."

Okada said, "From a long-term point of view, the Kuomintang authorities founded on a small base of only 10 million odd residents in Taiwan is getting increasingly isolated in the world. Criticism of them by the residents in Taiwan is also growing. They are obviously on the path of decline. On the other hand, the government of the 32-year-old People's Republic of China with the support of 1,000 million people is stable and active in the United Nations and other international organizations. Its actions are closely followed by the whole world." This shows that the proposal places before the people of the world a concrete line for Taiwan's return to the motherland and for the reunification of the Chinese nation. It is "really an important proposition of historical significance." He said that Ye Jianying's statement demonstrated the greatest sincerity of the Communist Party of China in its effort for a peaceful reunification of the country and its firm confidence in the stability and development in the mainland.

Okada said, "The proposition will contribute greatly to the struggle against the Soviet-U.S. rivalry for hegemony and to the promotion of peace in the Asia and Pacific region and the whole world."

Okada said that the 70th anniversary of the 1911 Chinese revolution befalls this year. Dr. Sun Yat-sen had dedicated his whole life to China's national unification and social progress. One of his greatest achievements was the great unity of the Chinese nation through cooperation between the Communist Party and the Kuomintang.

This is a patriotic proposal as it advocates the third cooperation between the two parties. "Like the cooperation on two previous occasions between the Communist Party and the Kuomintang which served as important turning points in the advance of Chinese history, the present proposed cooperation will also constitute a great turning point in the development of China and Asia," he stressed.

Okada said: "The return of Taiwan to the motherland is certainly China's internal affair. However, the realization of national unity and national self-determination is the common objective of the nations and people in Asia and the world. In addition, the struggle against hegemonism and for safeguarding peace in Asia and the world is also the common task of all the countries and people in the world. Therefore, we express our active support for the proposal on the return of Taiwan to the motherland and are willing to offer our assistance for this end."

"For the people in Taiwan," he said, "this proposal is very specific and should not be difficult to implement. Their desire to see Taiwan return to the motherland will grow stronger and stronger. The Overseas Chinese also wish for the reunification of the motherland. From a long-term point of view, this proposal will surely be materialized."

Okada said: "For the Taiwan authorities, it is better to choose cooperation with the Communist Party rather than facing decline and destruction in the future, and proceeding from the overall interests, they should make up their mind to embark on the road of national unity, a road of historical certainty."

FILIPINO GROUP SUPPORTS PRC REUNIFICATION CALL

OW131230 Beijing XINHUA in English 1211 GMT 13 Oct 81

[Text] Manila, October 13 (XINHUA)--The Filipino-Chinese Amity Club recently issued a statement calling on the Taiwan authorities to respond to the statement made by Ye Jianying on the peaceful reunification of China and Hu Yaobang's speech on the same issue.

The statement said Ye's statement is "on a firm footing and moderate, and really contains the will of seeking a complete solution by various ways."

It pointed out that the statement shows the Chinese Government's sincerity for achieving peaceful reunification of the Chinese nation by respecting the existing interests of different parties.

"Peaceful reunification of China is the common will cherished by the overwhelming majority of the Chinese people. Both the Chinese Government and the authorities in Taiwan have consistently held that Taiwan is an inseparable part of China. Yet the mainland and Taiwan have not been reunified in the past more than 30 years, and this is what we regret for a long time," the statement said.

Referring to Hu Yaobang's speech on the eve of the 1911 revolution anniversary, inviting Chiang Ching-kuo and other KMT officials to visit the mainland, the statement said, "It seems no loss would be brought about to the Taiwan authorities if tourist delegations can be organized to visit the mainland and make on-the-spot surveys of the present situation of the mainland."

"We further hold that trade between Taiwan and the mainland be further developed with both parties supplying the other side what they have and getting what they lack." "We also hope that post and telegraphic communications between Taiwan and the mainland be improved, so that the Chinese living on either side of the Taiwan Straits may communicate with their relatives and friends on the other side," the statement concluded.

NEW YORK CHINESE SUPPORT PRC ON REUNIFICATION

OW130738 Beijing XINHUA in English 0730 GMT 13 Oct 81

[Text] United Nations, October 12 (XINHUA)--Many Overseas Chinese in New York supported China's policy concerning the return of Taiwan to the motherland expounded recently by Chairman Ye Jianying of the N.P.C. Standing Committee, the local paper CHINA DAILY NEWS reported.

Eng Hack Chen, permanent honorary chairman of the Fu Kien Association of America, said the nine-point policy is the most elaborate and clear-cut formula to date concerning reunification of the motherland. Reunification is a must of history and cannot be hampered by any forces. Anyone, he noted, who goes against this aspiration of the Chinese people will become an unforgivable traitor in history. If Taiwan does not put forth any detailed plan for the reunification and only makes repeated counter propaganda, it can only prove that it is Taipei, not Beijing, that has a sense of guilt concerning reunification. He urged Mr. Chiang Ching-kuo to make an immediate reply.

Chun Yick Lau, manager of Oriental Culture Enterprises Co., said that any excuse advanced by any party or group to impede reunification runs counter to the desire of the Chinese people. Those who disregard the interests of the nation and state will certainly be spurned by the Chinese people. He described Ye Jianying's statement on peaceful reunification as "timely, sincere and reasonable."

To repair the separation of decades, talks must first be held between the Communist Party and the Kuomintang, he noted. Now that one side has put forward a proposal, the other can also make a counter proposal, and let the Chinese people form their judgment.

Fai Tang It, president of New York Fay Chaw Merchants' Association, expressed the support of his association for Ye Jianying's statement. The Chinese Government and the Communist Party have displayed extreme forbearance for the reunification of the motherland by making such a great compromise. He hoped Mr. Chiang Ching-kuo would put the national interests above everything.

Kowk P. Chan of Lep Yan Company said that the proposal should be acceptable to Taiwan. But it would be difficult to realize it in the near future if Taiwan is only concerned with one-party interests and has no concern for national interests.

Wun Chi Ming, director of Youth Club of New York Tsung Tsin Association, Man She Yen, first vice-president of Chinatown Planning Council, Simon Ho of the Chinatown Gallery and Art (Supplies), and Peter Yao, manager of Tung Feng Travel and Tours, also praised the Chinese Government's policy and urged the Taiwan authorities to set great stores by the national interests, to go with the trend of history and to make contributions to the cause of reunification.

MA WENRUI ADDRESSES SESSION OF SHAANXI PEOPLE'S CONGRESS

Xian SHAANXI RIBAO in Chinese 22 Aug 81 p 1

[Article by Wu Jingmin [0702 7234 2404] and Wang Hongge [3769 3163 7041]: "Shaanxi People's Congress Emphasizes Economic, Ideological and Political Work"]

[Text] The Standing Committee of the Fifth Shaanxi Provincial People's Congress concluded its 10th session on 20 August. During the session, Ma Wenrui, chairman of the Standing Committee of the provincial People's Congress, pointed out: During the second half of this year, special efforts must be made to promote economic work and work on the ideological front. We must promote material production and insure success in building a socialist spiritual civilization.

When the Standing Committee was in session, its members conscientiously studied speeches delivered by the leading comrades on the Central Committee and related documents, freely exchanged their experiences in studying the "Resolution," and discussed our province's economic work in detail. Also discussed were the "Report on the Results of the Readjustment of the National Economy in Shaanxi Province. Since the Beginning of this Year" delivered by Hui Shigong [1920 0013 1872], vice governor of Shaanxi Province, and the "Report on the Implementation of the 1981 Fiscal Budget by Shaanxi Province During the First 7 Months of the Year" delivered by Jiang Yi [1203 0001], vice governor of Shaanxi Province. The session approved some resolutions on official appointments and dismissals through discussion.

Chairman Ma Wenrui presided over the session. At the end of the session, he delivered a speech on economic, political and ideological work. In this connection, he said: Our province has scored an initial success in the work of readjustment of the economy. Although the overall economic performance has been good, we still face many difficulties and problems. The proposal for the fulfillment and overfulfillment of this year's national economic plan calls for hard work. We must firmly and confidently implement the economic measures in order to achieve a development compatible with the actual local conditions in the course of readjustment.

Comrade Ma Wenrui pointed out: The work for the next several months is very urgent, work we must grasp without fail. We must strive to fulfill and overfulfill this year's national economic plan. While efforts are being made to reap a bumper harvest throughout the year, special attention must be focused on the implementation of our industrial production plan. In this connection, we must concentrate on grasping firmly the following points: 1) Specific guidance should be strengthened.

Fatal weaknesses in the work of the current economic leadership that have come to the surface are the lack of a healthy workstyle and of specific guidance. Leading groups and leading cadres at all levels must establish the system of responsibility, under which all jobs are well defined, all tasks are unequivocally specified and everyone has a specific role to play. Leading cadres at all levels must keep in constant contact with the lower units and help grassroots cadres solve problems. General directives must be accompanied by specific guidance. General directives not accompanied by guidance in explicit terms won't work. Those who do a good job should be commended, while those who have performed poorly should be criticized. Financial losses caused by bureaucratic practices should be investigated and those responsible identified. 2) Ideological and political work should be strengthened. Rural villages, factories, and economic affairs departments, must give priority to ideological and political work. At present, we must study the "Resolution" thoroughly. Only in this way can we unify our thinking, strengthen unity and boost the morale of the masses. 3) We must be prepared to widely put into effect the economic system of responsibility. 4) The principle of "to each according to his work" should be resolutely implemented and take the place of egalitarianism and the system of distribution in which everyone can eat out of "one big pot of rice." 5) Efforts must be made to strengthen the leading bodies. In the course of consolidating the enterprises, first priority must be given to the consolidation of their leading bodies. We must resolutely remove the "three categories of people" from the leading bodies. We must transfer to the lower units those who have used power to serve their private interests, who are found guilty of violating law and discipline, and who are aloof from the masses. Those who cannot do a good job in their present posts should be reappointed to other suitable posts as soon as possible. Young cadres of political integrity who are popular with the masses and who know technology must be selected to assume leadership positions. Only in this way can the leading bodies of enterprises be transformed into vigorous and militant contingents capable of leading workers to fulfill production tasks and of surviving any test.

Commenting on the problems facing the ideological front, Comrade Ma Werui pointed out: Although our province has scored some success in improving the ideological and political work since last year, this work still needs to be strengthened, because some of our leaders have failed to truly attach importance to it. Some who originally believed that "politics and education can perform miracles" have changed their minds and are preaching that "material incentives can perform miracles. Foremost in their minds is a desire to increase their individual income in whatever they do. In this way, they have led the people to "do everything for the sake of money." On the political front, criticism has lost its momentum. Some people have taken criticism and self-criticism as a tendency to wield the stick and as a form of intimidation, rather than as an excellent tradition inherited by our party or a driving force that pushes our work forward. Actually lurking behind this argument is an attempt to quit the leadership of the party or a tendency to derail us from the socialist track. Some people have even openly voiced their opposition to the four basic principles, while cherishing the bourgeois form of freedom. Clearly, the leadership on the ideological front remains weak and in disarray. This situation is mainly caused by the 10-year catastrophe and the erosion caused by bourgeois ideas and ways of life from abroad.

Comrade Ma Wenrui stressed: The state of disorganization and weakness that exists in the work of leadership on the ideological front must be changed. There still exists in our society a trend of thought which reflects a desire to steer away from the socialist orbit, to quit the leadership of the party and to promote the bourgeois form of freedom. We must sternly and correctly criticize and struggle against this trend of thought in a well-reasoned way, just as we treat the "leftist" errors. No one should view all forms of criticism as a tendency to wield the stick or a form of punishment. In so doing, we may be forced to give up all forms of criticism. In political life, we should never lay down the weapon of criticism. True, in the course of developing criticism and self-criticism, we must persist in applying the correct methods, seek truth from facts, present facts and reason things out, and take a friendly attitude toward the people. Harsh and violent measures, unauthorized criticism and struggles should be avoided along with any political movement. As for those remnant followers of the Lin Biao and Jiang Qing counterrevolutionary cliques who are still embarking on subversive activities, and other elements who are hostile to socialism and desire to create trouble for everyone, we must treat them differently because they fall under another category of people. We must resolutely expose them and strike them down. We must criticize fallacies spread by them and eliminate their pernicious influence.

Comrade Ma Wenrui concluded his speech by saying: We must study carefully the "Resolution" adopted by the Sixth Plenum for the purpose of unifying our thinking and strengthening unity, boasting the people's morale, and promoting production and other work.

The session was attended by vice chairmen of the Standing Committee of the Shaanxi Provincial People's Congress: Chang Lifu [1603 7812 1133], Yang Wenhai [2799 2429 3189], Zhang Yichen [1728 3015 1820], Lin Yinru [2651 5419 1172], Hou Zonglian [0186 1350 3425], Yuan Chengting [0626 2398 1656], Dong Xueyuan [5516 1331 3293], Shi Feng [4258 6912], Wang Jie [3769 2638], Xiong Yingdong [3574 2019 2767], and Liu Lizhen [0491 0500 6297]. Attending as observers were Hang Shangzeng [2635 1424 1073], vice president of the Shaanxi Provincial Higher People's Court, Yang Cunfu [2799 1317 1381], deputy chief procurator of the Shaanxi Provincial People's Procuratorate, responsible comrades of the provincial level departments and bureaus; responsible comrades of the county, municipal and district people's congresses; and members of the Standing Committee of the Xiang Municipal Committee of the Chinese People's Political Consultative Conference.

SHANGHAI GARRISON COMMAND EMPHASIZES STUDY OF MAO WORKS

Shanghai JIEFANG RIBAO in Chinese 28 Sep 81 p 1

[Article: "Under the New Situation, How Should We Study the Works of Mao Zedong?"]

[Text] Under the new situation, should we adhere to studying Comrade Mao Zedong's works? How should we study Comrade Mao Zedong's works? An investigation conducted recently by the Political Department of the Shanghai Garrison Command summed up the conditions and experiences of the 8th Company of a certain artillery regiment. This has universal significance. This company once had many problems: Leading cadres were in a state of inelasticity, and there was a phenomenon, in varying degrees, of inelastic organizational discipline and unfavorable sentiments among some cadres. Under the guidance and assistance of a higher echelon in a concrete way, they earnestly analyzed its causes, and understood clearly that they must strengthen both political and ideological work and accelerate their ideological revolutionization. Comrade Mao Zedong's works are the powerful weapon of remoulding ideology. It is for this reason that under the new situation, we must resolutely study Comrade Mao Zedong's works and educate cadres and fighting men with Mao Zedong thought.

Since April the party branch of this company has organized its cadres and fighting men to study 15 articles of Comrade Mao Zedong's works; such as, "Serve the People," "On Combating Liberalism," "On Practice," and "On Contradictions" and the like. At the same time, they have clearly set forth five objectives in their study: To make clear the purposes of life and establish the ideology of serving the people; to establish lofty ideals and adopt a correct approach toward individual honor and progress; to cultivate a noble sense of morality and inherit and develop the tradition of our party and military for arduous struggle; and to strengthen the ability of observing and analyzing problems.

After studying for several months, the spirit of the cadres and fighting men took on a new look. The company has developed further solidarity, alertness, solemnity and vitality. Many comrades have said from their first hand experience that "although the study of Mao Zedong's works cannot directly solve practical problems, it definitely helps us to heighten our awareness, develop our open-mindedness, nurture our morality and strengthen our fighting spirit. Thus, all of this helps us adopt a correct approach toward practical problems."

In the process of its practice, this company recognized that in studying Comrade Mao Zedong's works under the new situation it must draw three lines of demarcation and handle well three relationships. (1) One must draw a line of demarcation between necessary formality and formalism, and resolutely brush aside such formalism of ways of doing things in the past as "looking at the number of articles in reading, computing the number of characters which one gained from one's study and the frequency of application of what one has learned." However, one must adhere to proceeding from the different situations and the ideological practice of cadres and fighting men, establish a study system and a set of measures and requirements, pay attention to practical effects, and conduct investigations and sum up conclusions as well. (2) One must draw a clear line of demarcation between learning basic viewpoints and memorizing a phrase or two. One must not use the old ways of simply memorizing Mao's quotations. But one must emphasize the sincere study of Mao's original works, and completely and accurately grasp the basic viewpoints of Mao Zedong Thought and its spiritual substance. (3) One must draw a line of demarcation between the integration of theory with practice and getting quick results, and must guide every one to recognize that getting quick results actually denies the fact that the transformation of spirit into substance must go through a certain process and that this simplifies and vulgarizes the study of Mao Zedong's works. However, one must adhere to the revolutionary style of learning to integrate theory with practice. One cannot deny the importance and necessity of integrating theory with practice.

In the process of organizing the study of Comrade Mao Zadong's works, this company also paid attention to three combinations. The first is to combine the study of Mao's works with political education. For example, in the education of "Four Haves," "Three Discussions," and "Two Don't Fears," this company organized every one to study "In Memory of Bai Qiu-en," "Serve the People," and "The Direction of the Youth Movement" and the like, thereby improving the quality and quantity of education. The second is to combine the study of Comrade Mao's works with the company's operational duties. For example, when the company was burdened with the heavy duty of both conducting military training and supporting local areas, it organized every one to study such articles as "The Foolish Old Man Removes the Mountain," and "Continuously Maintain the Spirit of Arduous Struggle," thereby raising their revolutionary spirit and giving them the courage to overcome adversity. The third is to combine the study of Comrade Mao's works with the ideological practice of cadres and fighting men. For example, under circumstances where the spearhead of struggle was carried out against some comrades whose discipline was inelastic, the company let them study such Comrade Mao's works as "On Combating Liberalism" and the like, thereby strengthening organizational discipline and the development of work style.

NINETEENTH CENTURY EASTERN REFORMS EVALUATED

Beijing LISHI YANJIU in Chinese No 4, 15 Aug 81 pp 88-101

[Article by He Fangchuan [0149 5364 1557], Lecturer, Department of History, Beijing University: "Reform Movements in the Upper Levels of Eastern Countries in the Middle of the 19th Century"]

[Excerpts] In the modern history of the East, there is one phenomenon that deserves our attention: more or less around the middle of the 19th century, reform movements were set afoot in the upper levels of some of the major countries with ancient civilizations in Asia and Northeast Africa, excepting India, which had already been reduced to the state of a colony. For instance: the reforms of Mirza Taki Khan in Persia, 1848-1851; the series of reforms in the Osman Empire, climaxing in the "Imperial Decree of [Gulhaneh] Park" in 1839; the reforms of Mohammed Ali in Egypt, which ended in 1841; the reforms of Theodore II in Ethiopia, 1855-1868. The "Westernization Movement" that started in our country in the sixties of the 19th century and the Meiji Restoration in Japan also occurred at that time.[1]

Why should all these reform movements occur in the East around the middle of the 19th century? Why should these reforms occur in those countries with ancient civilizations that for long periods of time since the Middle Ages had slowed down in their developments? What are the common features of these reforms, and how are we to assess their role in history?

The present article tentatively probes into these questions.

1. That the above-mentioned reform movements should all occur around the middle of the 19th century is not a chance coincidence, and it is also not accidental that they occurred in some major Eastern countries with ancient civilizations.

The most fundamental reason that brought about these reform movements was the development of world capitalism.

The first half of the 19th century was an important period, a turning point, in the modern history of the Eastern countries. This is particularly true of the major countries with ancient civilizations on the Asian and African continents.

Although Western colonialism had already invaded the Eastern countries for 300 years before that time, it was at that time only the initial stage of primitive accumulation. The objectives in this period of primitive accumulation were the plunder of gold, spices and black slaves. Colonial invasions, using undisguised brute force as their method of plundering, resulted in immense calamities for the countries of the East: 2.5 million kg of gold and 100 million kg of silver were plundered in Spanish South America and shipped to Europe, whole tribes and races of American Indians were practically wiped out. Africa lost 100 million people in the heinous black slave trade. These are some of the tragic consequences of the early colonial incursions. However, the areas which sustained the most grievous harm from the Western colonialist invasions were generally speaking mainly either countries of a comparatively low degree of social development, or, if they were indeed already somewhat advanced, areas and countries small in territory and population, whose powers of resistance were weak. These cases were often quite different from the conditions in the Eastern countries with ancient civilizations which had highly developed state and social organizations. The Western colonial invasions inflicted serious disasters in these places too, but were not able to subjugate them completely or utterly devastate them. Apart from the special case of India, not one of the major Asian and Northeast African countries with ancient civilizations suffered the fate of the Latin-American countries or the lands on the African continent south of the Sahara. On the contrary, at times the aggressive moves of the colonialism met with serious setbacks in these countries, as, for instance, in the 17th century when the Ethiopian people, led by their King Fasilidas, drove off the Catholic Christian forces that had come with evil intentions. Our own people, led by our national hero Zheng Chenggong [6774 2052 0501] drove out in one sweep the Dutch colonialists who at that time were at the zenith of power and prosperity, the "coachmen of the seas," and recovered our fatherland's precious island, Taiwan, etc.

Toward the end of the 18th and the beginning of the 19th century, conditions had changed. The industrial revolution developed and reached full fruition, and the Western colonial aggression moved from primitive accumulation into the era of "free" capitalism. Commodity markets and places of raw material production took the place of precious metals and black slaves as the major objectives pursued by the colonial aggression in this new era. The means of colonial aggression also underwent new developments and changes. Apart from plundering by naked force, the export of commodities gained an increasingly important significance. Marx and Engels exposed the character of this "free" capitalism when they pointed out: "The low prices of their commodities were their means to break down all 'great walls,' and constituted the heavy guns that subdued the tenacious hatred of foreigners by the barbarians." Against the heavy guns of cheap Western commodities, none could withstand, neither the Eastern countries with feudal organizations and a fairly high degree of development, nor those with natural economies with closely integrated agriculture and handicraft industries.

The cheap Western commodities flooded the East like a tidal wave. Due to the 100-year calamity of the black slave trade, the vast expanse of Africa south of the Sahara was devastated to a state of utter destitution. Latin America too had suffered the ruthless plunder and extortion of colonialism. These conditions, for a time, disqualified them from becoming ideal commodity markets, so that the cheap Western commodities naturally poured like an unrestrained tidal wave in even greater volume into the Asian continent and into North Africa, into countries with ancient civilizations that had previously not been fundamentally encroached upon.

The dumping of commodities by Capitalism unsettled the foundations of the feudal societies that had existed from ancient times in all Eastern countries. It shattered the economic basis on which the eastern autocracies had relied for hundreds of years, namely the village communes with their natural economy of self-sufficiency. It threw millions of peasants and handicraftsmen in the Eastern countries into the deep abyss of bankruptcy and ruin, and as a consequence aggravated the social contradictions in these countries in an unprecedented way, throwing the rotten feudal societies of the Eastern countries into a crisis from which they had no way of extricating themselves, moving closer to collapse and disintegration with every passing day.

In the wake of the industrial revolution, the Western war industry similarly experienced never-ending changes and developments, bringing huge modifications and advances in military organization, armament, equipment and strategy and tactics. The disparity between East and West in military matters sharply increased. Even Eastern countries that had been paramount powers for ages, like the Ottoman Empire, Persia and China, were now easily defeated by the Western colonialists. The invaders were even able to drive deep into these countries and capture their capitals and heartlands. Examples of this kind are Napoleon's expeditionary force invading Egypt (at that time nominally a province of the Ottoman Empire) and occupying Cairo in 1798 and the joint invading armies of England and France occupying Beijing in the second Opium War, 1856-1860. The Western colonialist powers relied solely on their military superiority to step up their aggressive moves, be it as vanguard or as the backing force for their commodity dumping. In over half a century since Napoleon's expedition to Egypt, there was almost no letup in the Western aggressive wars against the East or in humiliating peace terms with the West throughout all the area of Asia and Northeast Africa. All the major civilized countries of the East were facing the fate of being reduced to complete or semi-colonization and the national crises deepened sharply.

Marx pointed out: "The true task of bourgeois society is to establish world markets (or at least a general layout of such) and a production based on these markets. Because the world is round, the process seems to have been completed with the colonization of California and Australia and the opening up of China and Japan." ("Collected Works of Marx and Engels," Vol 29, p 348). From the first part of the 19th century on, the national and social crises in the major Eastern countries with ancient civilizations occurred on the whole in unison with the capitalist process of establishing world markets; it progressed in an eastward flow extending to China and finally to the easternmost land of Asia, Japan.

Even if one were to say that the unprecedented social and national crises created by the Western colonialist aggression and the fate of being reduced to a semi-colonial or colonial status were not consciously realized by the people of the various Eastern countries, the effects were well felt by them personally.

Because the broad masses of the lower strata of the population in these countries with ancient civilizations could not bear the exploitation and oppression by the colonialist aggression and by their own feudal systems, they rose in revolt, as for instance, in the great rebellion of the Indian people, the uprising of the Babist sect in Persia and the Taiping Rebellion in our own country, which all constitute the first upsurge of modern national liberation movements in Asia in the middle of the 19th century. These surging movements dealt heavy blows to the colonialist aggressive forces, displayed the strength of the Eastern people and moreover acted as the forerunners of the national liberation movements in the modern history of the East.

The colonialist aggression, and the deep crises that it engendered, forced the upper ruling classes in the Eastern countries to respond with some action on their part. They could no more go on ruling as they had done in the past. If they would go on ruling as before, they would call in doubt the very existence of their own ruling class. Finally, there emerged at this historic moment one wing (made up either by members of the original ruling class or by a new force of a ruling clique suddenly coming to the fore). Although national conditions in the various countries differed widely, there was not one society throughout the first half of the 19th century in the above-mentioned Eastern countries that carried out reforms in which a new class, representing the new production methods of capitalism was making its appearance. The forces that took charge or gave impetus to the reforms, in all their immense variety, were therefore all fundamentally not relinquishing their links with feudalism. All they undertook was therefore reforms merely to safeguard their own feudal rule. There was of course no reason for such reforms to occur in countries where feudalism had developed to only a low degree. However, countries that had already developed feudal societies but were rather weak and small and right at the start of events came face to face with the threat to their existence, as for instance Indochina, were also left with no time to realize any kind of reforms.

This is the background for the reform activities in the major Eastern countries with ancient civilizations at around the middle of the 19th century.

2. The content of the various reform activities in the upper strata of the Eastern countries around the middle of the 19th century covered a wide range over the years, however, they have certain aspects in common.

The army is an important component of the state's political power. The rapid decline of the Eastern feudal system became particularly acute in the decline of its armies. The feudal armies were no more capable to suppress people's uprisings at home nor to withstand Western colonialist aggression from abroad. This was a great worry for the feudal ruling class in the various Eastern countries that would not let them sleep in peace. "Strengthening of the army," that is, military reforms, were therefore placed on top of the agenda and became the central content of reforms in the various Eastern countries. The various major Eastern feudal states all had enormous armies, but by the 19th century all these armies had rotted and decayed irredeemably.

What had become of the armies of the Ottoman Empire that had been invincible in past days? "The number of men was too large with no enemy to fight. They were their own enemies, and with regard to state treasury, they were nothing but true robbers. They ... would run away even before the enemy was in sight."

This was the way the troops of the Ottoman Empire were portrayal, but it was a portray that also fitted the armies of all major Eastern feudal countries. Military reforms would therefore have had to start, first of all, with the reform of these rotten troops. This was the uppermost common problem that met the eyes of all who advocated reforms in the various Eastern countries. When our "Westernization Party" began to pursue their "Westernization Movement," they also placed the training of modern troops into primary position. It was expressed as follows: "The way to govern a country is to strive to become strong, to judge the right hour and to size up the situation correctly. In striving to become strong, the main thing is to train soldiers. To train soldiers one must first of all manufacture arms for them," because they saw clearly that "the old way, using our banner troops and Chinese troops with their bows and arrows, swords and spears, carrying fowling-pieces, is totally inadequate to control the foreigners or to eradicate domestic banditry." In the sixties, they organized and trained modern troops and in the seventies a modern navy was created.

In order to equip its new troops, a country had to develop its own modern war industry. In that respect we might mention as the most active and most effective example the Egyptian reforms of Mohammed Ali. In that reform period, the Egyptians built the Cairo Arsenal on a rather large scale and with very modern equipment. In the large gun workshop, there were 1,500 workers and in the rifle workshop there were 900 workers.[2] In 1829, the Alexandria Naval Shipyard was built, employing 8,000 workers. Half of the ships of the Egyptian navy were built domestically. Ethiopia, which among these countries was comparatively poor, backward and secluded, was also not to be left behind in the feverish quest for modern arms. Emperor Theodore eagerly sought out European craftsmen and had his own people serve as their assistants in the manufacture of big guns. To meet the needs of this venture he collected brass all over the country for the casting of guns.

"National prosperity" was one of the objectives pursued by the various Eastern countries in their reforms, while they also wanted at the same time "strong military power." The methods adopted in the reforms of the various countries were, as we may observe, of two kinds:

One kind was carried out around military reforms. Because establishment of a modern army or developing modern war production requires enormous funds, it forced financial reforms on these countries. These kinds of reforms mostly started out with opening up widely new sources of revenue and an emphasis on eliminating the many long-standing abuses of feudalism.

The other kind of reforms embraced a much wider field, they were purely financial reforms. Apart from eliminating age-old malpractices, greatest attention was given to adopting measures for a development of production. The Ottoman Emperor Mahmud II abolished the feudal system of military fief towns, that had been outdated and disintegrated for a long time, and the Ethiopian King Theodore II forbade the slave trade, both actions were significant in removing tumors which had obstructed the advance of social production. In that respect, it is still the reforms carried out by Mohammed Ali that appear exemplary. In agriculture he not only abolished the land property rights of the Mameluks, abolished the system of tax franchises and reformed the whole taxation system, but also undertook water conservancy projects and developed agricultural production. Under Mohammed Ali's rule over 20 canals had been built and 30 dikes. The area of arable land, which in 1800 had been 3.2 million feddan had steeply increased to 4.5 million feddan by 1852.[3] Moreover the planting of such economic crops and cereals as cotton, tobacco, corn, rice and wheat was greatly encouraged. In industry, apart from war production, great attention was given to the industrial production for civilian use, and factories were set up for the production of textiles, sugar, oil extraction and dyestuffs. Most effective among these were the textile enterprises, 30 textile mills were built in that period. Mohammed Ali proudly told the French consul: "In the past, Egypt had to buy your woolen goods and silks and pay a lot of money to Europe's factories. Now we have opened our own factories and that sum of money stays in Egypt."[3]

There was yet another outstanding feature that the reforms in the various Eastern countries had in common, namely the eagerness to learn advanced science and technology from the West, an endeavor to bring their countries into the modern age. Apart from a class of feudal diehards and their ostrich policy, the advances of Western science, technology and other fields were facts that could not be more clearly demonstrated. Even the "Modernization Party" in China was very fond of the Western "special skills." "Why the 'special skills'? One, for the excellence of warships, and one for the effectiveness of machines." Mohammed Ali expressed it even more frankly. When he sent the children of his native country to study from the foreigners, he fervently hoped that "they will well remember what they have learned from the foreign engineers so that they can replace them in future." He also promised that "those who will have first learned all there was to learn, will be given high salaries by the government and promoted to factory directors." As to Theodore II of Ethiopia, his zeal to learn the Western "special skills" almost reached the stage of frenzy. When a group of European missionaries presented him with a set of religious books, he declared that he would have been more pleased if he were presented with a box of British ammunition. To immitate the European big guns, Theodore eventually insisted that these missionaries serve him as engineers to help casting guns. The day the first gun was completed he declared to be the happiest day of his life.[4]

We must point out here that this learning from the West in the middle of the 19th century, from training of troops, establishment of various army units, manufacture of armament, explosives techniques, down to the setting up of a modern machine industry for civilian requirements, covered a very wide range. In the thirties of the 19th century, the Ottoman Emperor Mahmud II even went so far as to emulate Western methods for his administration. In imitation of European models, he established a ministry of the interior, a ministry for foreign affairs and a ministry of finance. He also changed the title of his Grand Vezir to premier.[5] Although these emulations of foreign methods were very superficial and shallow by today's standards, it was a trend (not merely individual or sporadic imitations, but a mass surge) which, as far as the modern East is concerned, was the first manifestation of a coming custom.

3. All the above-mentioned reforms in the countries of the East ended up in failure. This is another point that all reform movements in the various Eastern countries in the middle of the 19th century have in common. Why did this unfortunate result come about?

First of all, there were the colonial aggressions of Western capitalism that created the external reasons for the failure of these reforms.

The Western colonial powers, at the stage of full development of free capitalism and engaged in "freely" transforming the East into their economic dependencies, were of course not willing to allow the East to become truly powerful and prosperous. Toward the reforms in the various Eastern countries they therefore maintained an antagonistic attitude and obstructed and sabotaged these reforms in a thousand and one ways.

Undisguised armed interferences and aggressive wars were the major methods by which Western colonialism sabotaged the reforms in Eastern countries. It was not the unique experience of only one reform movement in the Eastern countries for a country to suffer an aggressive war unleashed by Western powers.

Egypt under the rule of Mohammed Ali, situated at the communications hub between Europe, Asia and Africa, was highly important for the incursions of Western colonialism into Asia as well as Africa, for control of the eastern Mediterranean and even the lands of the Balkan. Napoleon once pointed out the strategic importance of Egypt: "If France can occupy Egypt, the British will be in an untenable position in India." How would the Western powers allow the Egyptians at that time to institute reforms on that piece of land to transform it into a rich and militarily powerful state? How would they allow that land, which "at that time was the only viable part of the Ottoman Empire," ("Collected Works of Marx and Engels," Vol 9, p 231) to develop its own power and prosperity, somewhat like Russia after the reforms of Peter the Great, and allow, in the Near East so close to themselves, a great Arabic empire to arise with its own modern army and industry? Eventually, the Western powers stirred up the second Turkish-Egyptian war of 1839 with the object of using the hands of the Ottoman Sudan to destroy the Egyptian reform enterprise. When the imperial Ottoman army suffered a crushing defeat, the Western powers themselves appeared on the scene and staged an armed intervention. In 1840, the four powers, England, Russia, Prussia and Austria, issued an ultimatum to Mohammed Ali and the British land and sea forces launched a fierce attack against the Egyptian army. Under the threat of a bombardment of Alexandria, they finally forced Mohammed Ali to surrender. The terms of surrender were very harsh. They destroyed Mohammed Ali's painstaking labor of half a lifetime: he had to surrender the entire fleet, was allowed a land force of only 18,000 men and was to accept the conditions of the 1846 Anglo-Turkish Treaty of Commerce. In the end, Egypt was also reduced to a dumping ground for their commodities and a raw material producer for Western capitalism. By 1846, the 30 textile mills existing at the height of Ali's reforms had been sharply reduced to only 3 remaining in operation.

In the same sense one may also say that the historical period of the 30-year "Westernization Movement" in China was also finally bankrupted by the Sino-Japanese War of 1894-1895.

The Western colonial powers also adopted all kinds of other methods, besides open armed interventions and aggressive wars, to destroy the reform movements of the Eastern countries. These other destructive methods also had the effect of ruining the reforms and to finally turn the Eastern countries into colonies or semi-colonies. For instance, England, in 1838, forced the Ottoman Empire to sign the Anglo-Turkish Trade Agreement which fixed the Turkish customs duty for imports at a low 5 percent, prohibited monopolies for any kind of commodity and permitted foreigners to engage in trade anywhere within the borders of the Ottoman Empire. In this way, without firing a single shot, an agreement on paper basically cancelled out with one stroke of the pen the positive achievements of all past reforms, and even those to come, in the Ottoman Empire. From then on, the Ottoman Empire was wide open for the commodity dumping of the West. Not only that, in the fifties, England and France dragged the Ottoman Empire into the Crimean War to serve as their junior partner. Nominally, the Ottoman Empire was a victor in this war, but actually it sank deeper into a state of dependency toward the West. In 1856, an imperial edict on the Sudan was outwardly a continuation of the 1839 "Imperial Edict of Gulhaneh Park" as it agreed to establish banks, build railways, open up canals and develop trade. It loudly proclaimed "to devise means to utilize European science, techniques and capital in the reform projects," etc. However, the basic direction of developments had already changed. Banks were indeed opened, but their capital all belonged to England and France. Railways were indeed built, but the railway concessions were in the hands of foreign capitalists. The foreign indebtedness of the Ottoman Empire steeply increased from 75 million francs in 1854 to 2.5 billion francs in 1870. Turkey had mortgaged its customs and other revenue to its creditors. The economic lifelines of the state had fallen into the hands of foreigners Western colonialism had used equally successfully non-military means to destroy the reform movement of an Eastern country.

Due to the fact that the societies that in those days pursued reforms had not yet produced a modern bourgeoisie and proletariat, representative of the new forms of production, and due to the fact that the peasantry and the handicraftsmen in these countries were not able to adopt a more effective struggle form than that of the old peasant wars, these reform movements could only be pursued by groups or factions of men with vision within the feudal ruling class. This determined the fundamental innate weakness of these reform movements.

Cruel extortion of the peasantry and of the other working masses was at the basis for these reforms and one of the fundamental objectives pursued in these reforms was to consolidate and strengthen this rule over the masses.

All the varying undertakings in these reform movements, including the establishment of a modern machine industry, which at that time was a most progressive undertaking in the East, bore the deep imprint of feudalism and were thus afflicted with a fatal malady.

Egypt's establishment of a modern industry made it an outstanding case among reforms in the various Eastern countries. However, the many modern factories with machine production that Egypt built, were basically operated on a system of feudal state ownership. For instance, the arsenals were controlled by the ministry of war. The managerial staff were active or retired military men. Machinery and factory building expenses were not made part of the costs of their products. Raw materials provided by one factory to the other were provided without profit. The ministry of war industry provided its products directly to the troops without taking part in any market exchanges. Workers were mostly conscripted by force and had a status similar to peasant serfs. They were moreover organized on military lines in battalions, companies and platoons without any personal freedom. As a consequence of this ownership system, the system of personal bondage and the administrative system, all of a feudal character, enterprises were run very poorly. Some cotton mills equipped with imported looms were running at only half their capacity because their machines were producing for the military departments.

Conditions of the "Westernization Movement" in our country were in certain respects very similar to those in Egypt. Taking war production departments as example, their production also did not participate in market exchanges, but were provided directly to the military without cost calculations. For instance, the ships built by the Bureau of Shipping Administration were "sent to various provinces who were charged not one penny for the costs," "construction of the ships and the operation of the ships are all in the hands of the state, so the two sides naturally need not haggle over it." There was also a military system to control the workers. "In our employment for all our work we have every day 800-900 able-bodied workers. If not treated strictly according to military rules, they may scatter, be hard to hold together and calling out to them may not elicit a response, so finally we appointed one corporal for each file of ten men to control them and for every five corporals one group officer to be in control, and ordered diligent and able military officers to be in overall control. ... This is the way we established our camps of able-bodied men." We hardly need add anything as to demonstrate the incompetence of this kind of an enterprise management.

Moreover, due to the fact that the groups and factions advocating the reforms were men of vision from within the feudal ruling class and that the reforms had no new social class or forces as a basis to rely on, their strength was generally weak. The reform groups and factions often met with deep-rooted powerful and desperate opposition from feudal diehards within their own class, and on the other hand, due to their cruel exploitation and oppression of the masses of working people, also could not count on support from the people. It was therefore very easy for the forces of domestic diehards and foreign colonialist aggressors to break up and destroy the reform movements.

The failure of reforms in the Eastern countries clarifies this problem: the feudal lord class in its time was unable to prescribe an effective remedy for the disease of the feudal system which was sick to its very vitals. It was also unable to stop or divert the course of history that moved the Eastern societies toward semi-colonialism and colonialism. The old-type peasand wars of the lower strata of working masses ended in failure. The upper strata ruling group also failed in the reform activities they sponsored. Finally, the entire East, including all the most powerful countries with ancient civilizations on the Asian and African continent, were reduced to colonies or semi-colonies of the West. The only thing that could save the East was a new social force, a new class, to rely on.

4. It is a rather complex question how to assess the historical role of the reforms in the various Eastern countries. Presently, scholarly circles are often poles apart and sometimes diametrically opposed to each other in their views on these reform movements. For instance, there are widely divergent opinions on whether to priase or condemn Mohammed Ali's reforms. Those who praise him believe "he left lasting influences in all spheres of Egyptian life and laid the foundation for the country's economic, social and political development." Those who condemn him denounce him as a "tyrant" who "paved the way for the exploitations by foreign capitalism."

Why is it that although the available historical data are more or less the same, their evaluation can differ like that? To solve this problem, in our opinion, further detailed data are required as well as a uniformity of criteria for judgement. The present article merely attempts to present, from one angle, a humble opinion for reference.

The purpose of all reforms in the various Eastern countries around the middle of the 19th century, judging from the subjective aims of the groups and factions that promoted them, was to preserve and consolidate the feudal systems and feudal rule. All these efforts at reforms, one after another, ended in failure because of the sabotage, in one way or another, by Western colonialism and the opposition of the domestic feudal diehards, and also because of the innate defects of the reforms themselves. Can we then determine their historical role based on these points, namely based on the outcome of their subjective aims and the certainty of their failure? We cannot.

In certain historical undertakings, such as reforms, change of political institutions, etc, the subjective aims that were pursued and the final success or failure are undoubtedly of major significance in evaluating these affairs, but we must not make them the only or the major criterion for our evaluation.

Lenin said: "In judging historical merits and achievements, we must not base our judgement on the fact that the historical event did not contribute to what we are presently demanding, but rather base on whether it contributed new things in relation to the generation that preceeded it." ("Collected Works of Lenin," Vol 2, p 150). Historical figures should be judged in this manner, the same as historical events. Even though the reforms in the various Eastern countries in the 19th century had as their fundamental aim the preservation of a declining feudal rule, and although the stamp of a backward and decadent feudalism was deeply imprinted on the reforms themselves, let us rather look squarely at the historical facts which will then show us clearly that these reforms, to a greater or smaller extent, "provided new things."

The reforms in the various Eastern countries around the middle of the 19th century were instituted and promoted by historical figures of all shades. Can we then base our judgement of the merits and faults, right and wrong, of these reforms on this point, namely on the personalities that instituted and promoted the reforms? We cannot.

Indeed, the reform movement and the launching of it on the one side and the personalities who support the reforms on the other, are two things and no hard and fast line can be drawn between the two. This is so because the latter, to a high degree, influence or even determine the subjective aims of these reforms, their political trends as well as their course and outcomes. The reforms in the various Eastern countries around the 19th century mostly suffered defeat at the hands of the Western colonialist aggressors. Among the historical figures who supported these reform movements, there were such types as Theodore II, who met military defeat in his fight against aggression and committed suicide, a hero who chose death rather than humiliation, but then there were also such figures as Li Hongzhang who persistently compromised and sought peace by betraying his country. The former gave the reform movement a tragic complexion, while the latter branded it as a shameful event. Our evaluation of the leaders of the reforms closely affect the historical role that we assign to the reforms themselves, but we also must not simply use the evaluation of the historical figures as an assessment of the historical events that these historical figures have engendered. For instance, as to the attitude with which they dealt with the Western colonialist aggressors, Theodore II was evidently firmer than Mohammed Ali, who surrendered to the Western powers when their armies reached his city walls. Theodore's way of concluding the conflict was also so much more heroic, but Ali's reforms stand out as much more important in the modern history of the East; the depth and breadth of his reforms clearly by far exceed Theodore's reforms, a point on which there can hardly be any doubt.

The reforms in the various Eastern countries around the 19th century have indeed, objectively, a certain positive and progressive significance. In summary, these are approximately in the following respects:

(1) In political respects, these reforms mostly strove to strengthen the centralization of state power and the unity of the country. Emulating Western patterns, they organized modern armies, enhanced the unity of the country and the strength of resistance against foreign aggression. Some countries, moreover, established ministries in the central administration and devised new local administrative districts, which was of definite positive significance in weakening local separatist forces and for the formation of a modern national state.

(2) In economic respects, these reforms mostly strove to learn Western advanced science, technology and to introduce the productive forces of Western capitalism. Some abolished or rectified long-standing abuses, some actively set up modern industries, etc. These activities provided some necessary prerequisites and foundations for the later development of capitalism.

(3) In ideological and cultural respects, these movements were the start of breaking out of the state of seclusion and out of the trammels of conservatism, the emergence of a new atmosphere of learning from the West. They nurtured contingents of qualified native engineers and technicians and, what is even more important, started to bring into being modern intellectuals who had received initial education in Western capitalism.

In a critical review of the reform movements in the Eastern countries, we must frankly and realistically state what objectively had been their positive and progressive functions. This is an attitude demanded of us by historical materialism. However, whether a historical event of objectively positive and progressive functions is thus also certain to have been positive and progressive in its own nature, should be concretely analyzed according to the concrete conditions.

As everyone knows, Marx already gave a detailed exposition of the objective historical effects of British colonial rule in India. In his essay "The Future Effects of British Rule in India," he clearly pointed out that several items that England brought to India in the course of its ruling that country, such as political unity, a modernized army, an independent press, a land system, a new stratum of intellectuals, as well as telegraph, the steam engine, etc, were all of positive significance for India's future, independent of man's original intentions. Marx, moreover, most pertinently, pointed out: British colonial rule "created in Asia the largest social revolution, which frankly was also the first and only one in Asian history." ("Selected Works of Marx and Engels," Vol 2, p 67)

The various consequences which were listed above, in particular the largest social revolution in Asia, which was also Asia's first and only one, we cannot but consider objectively as of huge progressive significance, but can we therefore judge that British colonial aggression against India and its rule over India were of a progressive character, or simply say that it was a progressive rule? Obviously, this would be absurd. In pointing out the objective consequences created by British rule over India, Marx still adopted a stern, critical attitude toward this rule and pointed out that it "inflicted a calamity on Industan which in comparison with past calamities suffered by Industan was undoubtedly of quite a different character, but in degrees many, many times more serious." (Ibid., p 63) Moreover, when discussing British colonialism "serving unconsciously as the tool of history" and its creating a social revolution and other such objectively progressive effects, Marx emphatically declares: "It appears that whatever the English bourgeoisie will be forced to do in India, it will neither bring freedom to the masses, nor basically improve their social condition, because these two things are not merely determined by a development of productive forces but decided by whether the productive forces belong to the people."

It is true, Marx discusses here the relationship between oppression of people and people suffering such oppression, but the statement allows us to draw some conclusions with regard to the question of assessing the modern reforms in the Eastern countries.

Now, in the same manner, as to the reforms in the Eastern countries that did possess the above-mentioned positive effects, what makes us decide whether their character is after all progressive or reactionary?

Comrade Mao Zedong pointed out: in all the contradictions in modern China, "the contradiction between imperialism and the Chinese nation is the principal among all the various contradictions." ("Selected Works of Mao Zedong," one-volume edition, p 594) This method of analyzing can be equally applied to the entire modern East. The contradiction between imperialism (including its precursor: free capitalism) in the various Eastern nations is the most important contradiction among all the contradictions that beset the various Eastern countries in modern times. In assessing the reforms in the Eastern countries, we must in the final analysis firmly grasp this most important contradiction and subject it to observation and study. We must look at the reforms and see what effects they have had under the new historical conditions, when the fatherland suffered aggression and humiliation from colonialism and imperialism, whether the reforms contributed "new things" previously not extant to the new historical era, and whether they made contributions toward the struggle of resistance against colonialist and imperialist aggression and toward the protection of national independence and unity.

One aspect of modern Chinese history is "the collaboration of imperialism and Chinese feudalism in the process of rendering China into a semi-colonial and colonial state." (Ibid., p 595) However, this "collaboration" was not accomplished in one move. It came about step by step in the course of the entire process of China's transformation into a semi-colonial state. If we do not give due consideration to the conflict of interests also existing between the two, and to the fact that in the beginning the conflicts were the primary factor which yielded to collaboration as primary factor only in the later period, and that conflicts persisted even in that later period, we shall find it difficult to understand the repeated aggressive wars that the capitalist and imperialist powers launched against our country in modern times, the two Opium Wars, the Sino-French War, the Sino-Japanese War and the war of the Eight-Power Allied Forces. Similar conditions prevailed in all the Eastern countries in modern times. We are therefore of the opinion that in analyzing the reform period in the Eastern countries around the middle of the 19th century, we should place the above-mentioned reforms (including the positive roles which they played, objectively) into a framework of the contradiction between colonialism and imperialism on the one hand and the relevant Eastern nations on the other hand for the purpose of observation and study. In concrete terms it means that we must observe what position is taken by the feudal lord class that promotes the reforms, especially also the groups and factions that institute the reforms, in the contradiction between imperialism and its own nation, and whether they are primarily in a state of conflict with colonialism and imperialism or primarily cooperating, whether the reforms that they instituted were launched in conflict with colonialism or along the road of smooth cooperation with colonialism. If it is the former, it is undoubtedly a progressive movement; if it is the latter, it is basically a reactionary movement, even if it has objectively certain positive consequences independent of original human intentions, and even if we must admit and cannot evade mention of these positive consequences, because in its basic functions this kind of reform did not produce "new things" demanded by the new historical era, namely taking a militant stand against the encroaching forces of colonialism and imperialism.

Measured according to these standards, the reforms in the various countries of the East present different conditions.

The "Westernization Movement" in our country was one of the latest reform movements of the upper strata among such movements in the various countries of the East. In its outward conditions, its inception, development and ultimate bankruptcy, we see that it roughly coincided with the process of change of capitalism into imperialism. Considering the internal conditions, we see that when the movement started, our country had been on the road to be reduced to a state of semi-colonialism for 20 years. In that period, our feudal ruling class had been defeated already twice in aggressive wars unleashed by the Western colonialists and had a record of having twice capitulated on its knees, suffered national humiliation and forfeiture of its sovereign rights. It was moreover creating yet another and even more monstrous record: in collusion with the aggressors, the feudal ruling class suppressed the Taiping Rebellion. The "collaboration" of imperialism and Chinese feudalism displayed at that time was not a singular historical event, but merely the high tide of such actions. The 30 years of the "Westernization Movement" were a process of basically "integrating" the two elements, the step by step incursion of the Western powers as they passed on to the stage of imperialism and the step by step surrender of the Chinese feudal class (the complete "integration" came after the invasion of the Eight-Power Allied Forces). Looking at it from the perspective of the entire process of developments, we see that although there were conflicting interests at the time of the "Westernization Movement" between the Chinese feudal ruling class and foreign capitalism and imperialism, collaboration between them was obviously the primary factor. Even if at some times and in some places the "Westernization Movement" did show certain conflicts between the feudal ruling class and colonialism, the "Westernization Movement," which was the main practical activity of the Chinese feudal ruling class at that time, was in its general direction going the road of compromise and cooperation with colonialism. In this sense we may say: even if the "Westernization Movement" in its objective social significance was far superior in depth and breadth to the reforms in the other Eastern states, its fundamental character was such that we still cannot approve of it, cannot praise it as "a movement which had a progressive nature." We can even less regard it as a reform of any kind of a progressive character.

FOOTNOTES

1. There is a common historical background to the Meiji Restoration and the reforms in the other Eastern countries. However, the result was that Japan as the only Eastern country developed into a fully developed capitalist state. This was due to internal conditions in Japan which enabled it to break away from the common pattern of upper strata reforms and to develop a modern capitalist national

democratic revolutionary movement. This question must be reserved for a special study and shall, for the time being, remain outside the discussions of this article.

'BA YI RADIO' VIEWS INJUSTICE OF LIN BIAO CASE

OW181350 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 16 Oct 81

[Text] After the Sixth Plenum of the party drew an official conclusion on comrade Mao Zedong's mistakes Huang Yongsheng, former chief of staff of the PLA, who is presently sick in jail, wrote a letter to comrade Deng Xiaoping, chairman of the military commission of the CCP Central Committee, clarifying the so-called Lin Biao case. Meanwhile, letters were also written by Jiang Tengjiao and Li Zuopeng, as well as former deupty chief of staff (Luo Ping) and former combat department head (Lu Min) of the air force headquarters, requesting that an investigation be conducted to reveal the truth of this case in accordance with the spirit of the resolution adopted at the party's Sixth Plenum, so that mistakes made in the trial and judgment of the case can be corrected. In addition, dozens of PLA cadres who were mistreated several years ago have staged sit-in demonstrations in the offices of the general political department and the general staff department during the past few months to demand correction of their wrong verdicts. All this indicates that though the assessment of comrade Mao Zedong's merits and mistakes and the exposure of the mistakes of the cultural revolution made by the Sixth Plenum of the party were far from being thorough, the people have seen a gleam of hope from such assessment and exposure.

Comrade (Su Renzhi) points out in the organ of the party: "In his late years comrade Mao Zedong was extremely suspicious and did not trust any old comrades within the party. He let the expansion of the scope of the class struggle affect the whole party and viewed the normal differences in opinion in andparty as a life-and-death class struggle. At the time preceding the cultural revolution, there were no forces whatsoever that could restrain comrade Mao Zedong." Besides, many comrades hold that the cultural revolution was a real counterrevolutionary movement. During the period when the fascist autocratic rule prevailed many military leaders rose up to oppose the gang of four and the savage acts of comrade Mao Zedong regardless of the danger to their lives. How can this be regarded as a towering crime? Even comrade Deng Xiaoping said at the party's Sixth Plenum that it would be impossible to overthrow the gang of four if comrade Mao Zedong were not dead.

In his letter to the central authorities, Jiang Tengjiao raised three questions which are worthy of our earnest attention. In the first place, since the mistakes committed by Mao Zedong during the cultural revolution were so serious, isn't opposing him different from opposing the party and the revolution? Secondly, during the trial it was stipulated that no mention should be made about anything concerning Mao Zedong, and that nobody should shift the responsibility to Mao Zedong. Now that the party's Sixth Plenum has made a preliminary assessment of Mao Zedong's mistakes, the legal basis for the original trial and sentence is completely untenable. Thirdly, when the former principal leaders of our army were put on trial a lot of [words indistinct] crimes were fabricated to meet the needs at that time. For example, it was fabricated that a plan was made to assassinate Chairman Mao by using flame throwers and 40-mm bazookas to attack his train. By firing anti-aircraft guns point-blank, by using aircraft to bomb and by blowing up the Hongqiao Oil Depot. Now these rumors fabricated by Kang Sheng and the gang of four should be clarified according to the principle of seeking truth from facts.

The above-mentioned opinions and requests are quite right. In the past Liu Shaoqi, Deng Xiaoping, Tao Zhu, Peng Zhen and Hu Yaobang were accused of the crimes of opposing the party and Chairman Mao and being renegades, hidden traitors and scabs. Haven't their cases all been corrected today? Why is it impossible to change the cases of the former principal leaders of our army and the tens of thousands of PLA cadres who have been wrongly charged and have been suffering from persecution?

CRITICISM PRAISED AS WEAPON TO CORRECT MISTAKES

Shijiazhuang HEBEI RIBAO in Chinese 19 Aug 81 p 1

[Article by a fan [7093 1581]: "The Banner of Criticism Cannot Be Abandoned"]

[Text] I.

At a time when the bourgeois laissez-faire tendency is still prevalent in our society, the task of further settling accounts with and eliminating the "leftists" really presents a difficult problem. At the heart of the laissez-faire tendency is a desire to abandon, resist and even openly reject the leadership of the party. To overcome this tendency is an important concern of our current criticism campaign. In the face of this challenge, some localities and units have failed to provide strong and well-organized leadership on the ideological front. They have also failed to criticize and struggle against certain erroneous tendencies and misleading statements and wrong-doings as well as bold challenges to the four basic principles. Some Communist Party and CYL members have also failed to face this situation squarely and distinguish right from wrong. This situation is in urgent need of change.

As a matter of fact, the leading comrades on the Central Committee have repeatedly emphasized this problem, calling on us to reach a consensus in this connection. For example, we must recognize that the criticism of the "leftist" guiding ideology and the struggle against the laissez-faire tendency are two indivisible aspects of a single program, and that we cannot concentrate on grasping one aspect and forget the other. If we fail to eliminate the erroneous "leftist" aspect from our guiding ideology, we will find it difficult to overcome and combat the influence of the bourgeois laissez-faire tendency in our society. Like wise, if we fail to take stern measures against the influence of the bourgeois laissez-faire tendency, we will hand over victory to the adherents of the erroneous "leftist" ideology on the propaganda front. We must carry out the struggle on the two fronts simultaneously for the single purpose of better implementing the party's line, principles and policies adopted since the Third Plenum as an indispensable step in the direction of implementing the guidelines of the Sixth Plenum.

The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" calls for applying correctly the weapon of criticism and self-criticism, for further liquidating the "leftist" errors, and for struggling against erroneous ideologies that deviate from the party's correct principles. Under no circumstances can we depart from this position. However divided over the issues of the past, we communists should present a united front on the major issues of principle and should follow the decisions adopted by the Central Committee. Otherwise, our party will stand no chance of strengthening its fighting power. In dealing with the bourgeois laissez-faire tendency now prevalent in our society, the following options are open to us: First, we can choose to shut our eyes to what is taking place and let everything take its natural course; second, we can show courage by criticizing what is wrong by means of reasoning and persuasion. Since justice is on our side and erroneous ideas are unpopular with the masses, why should we fear them? Of course, criticism is a process of seeking truth from facts, a process of exposing the cause of disease in order to save the patient. In this process, we must emphasize appropriate methods for the purpose of achieving unity; we should refrain from engaging in any political movement. Nor should we conduct criticism on the basis of a clash. When we emphasize these points, we must first conduct criticism conscientiously. Without criticism aimed at distinguishing right from wrong, can anything be done?

II.

Originally, there was a clear distinction between the regular form of criticism and self-criticism and the tendency to wield the stick. Gone, however, is this distinction as a result of the turmoil spaning 10 years. Today, some comrades have responded to all forms of offensive criticism with the outcry: "The stick is being wielded again."

Excessive struggles within the party often culminate in a desire to abolish the regular form of criticism and self-criticism as an antidote to such excessive struggles within the party. Whatever the outcome, we must denounce all wrongdoing but not the correct ideas. Although excessive struggles should be avoided by all means, the banner of criticism can never be abandoned. Criticism can be called a debate. Socialism can develop only through debate and application of dialectics. It is certain that some individuals associated with the "leftists" for years may tend to wield the stick under the pretext of criticism. Although this cannot be totally avoided, it should never be cited as a reason for resisting criticism. For example, fish also have bones. If someone who chokes on fish bones due to his own fault suggests that all species of fish be wiped off the earth, I will certainly view him as the most unwise person in the world. If we want to carry forward the party's excellent tradition and workstyle, we must conscientiously pick up the weapon of criticism and self-criticism.

III.

Unlike eulogy, criticism will make its targets flush and feel uncomfortable. Nevertheless, you must understand that only good comrades who truly love you will conscientiously criticize and help you correct mistakes when you commit them. In this connection, I would like to quote the following passage from an ancient poem: "The sun rises in the East, the rain falls in the West; Nature exudes cold as well as warmth."

On the other hand, remember that if someone refrains from criticizing you when you commit mistakes, and instead praises and flatters you, never forget to ask him why.

I have noted another unhealthy phenomenon: when an individual is the subject of correct criticism, some people, rather than helping to educate him, start to flatter him, encourage him to resist criticism, and make him happy and look like a hero.

This unhealthy practice merits our attention. Historical experience shows that just nodding one's head in the process of criticism is a metaphysical approach which is harmful to those being criticized.

When expressing his views on "excessive criticism" and "excessive flattery," Lu Xun maintained that no one should fear excessive criticism, but that everyone should guard vigilantly against flattery. Lu Xun was never fooled by flattery. In 1936, Lu Xun received a letter from a Troskiyite praising him as a man of great wisdom. After going over this flattering letter, Lu Xun wrote a reply giving the sender a dressing-down and categorically pointing out that his letter harbored ulterior motives. We must learn from Lu Xun and carefully analyze the motives for flattery so that we will never be misled by it.

NECESSITY OF CAPITALIST STAGE DISCUSSED

Taiyuan SHANXI RIBAO in Chinese 14 Aug 81 p 3

[Article by Guo Dekui [6753 1795 1145]: "Is A Capitalist Stage Still Necessary in China?"]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" pointed out: "Only socialism can save China. This is an unwavering conclusion drawn from the intimate knowledge of the people of all nationalities throughout the country over the past 100 years, and the most fundamental experience of history in the 32 years since the founding of the People's Republic of China." A summation like this is undoubtedly the most correct one. However, in recent years, there have been those who have quoted the classics in finding fault with our socialist system and in questioning it. One of the viewpoints among them was: Since the new-democratic revolution has achieved victories throughout the country, our productive forces remain at a level too low to provide a ground for the transformation into socialism, therefore, it is necessary for us to undergo a capitalist stage and to practice socialism only after the level of productive forces has been improved. This argument is untenable and must be clarified.

To Follow the Socialist Road is Determined by the Specific Course of Historical Development in Our Country.

One of the bases of the above-mentioned argument is: Marx and Engels once said that socialist revolution cannot take place separately in any single country but will first achieve victories simultaneously in the developed capitalist countries. On this ground, it is felt that it is not compatible with the tenets of Marxism for our country to directly practice socialism by overstepping the capitalist stage.

True, Marx and Engels have once imagined it to be this way, but they did not confine their own thought and thereby rule out the possibility of waging socialist revolution in countries where capitalism was not yet well developed. In 1894, Engels pointed out in his article "Peasant Problems in France and Germany": "We do not have to wait until the time when the consequence of the development of capitalist production is manifested everywhere in an extreme form or when the last small handicraftsmen and the last small farmers have become victims of the capitalist large-scale production to bring about this change." (p 312, Vol 4 "Selected Works of Marx and Engels"). In 1923, based on the practical experience of the Russian Revolution, Lenin further elaborated Engels' viewpoint in his article "On the Revolution of Our Country." He pointed out that the proletarian class can fully utilize the alliance of workers and peasants which has already been in existence to seize state power and then to rely on the proletarian regime to develop economy and culture so as to realize socialism. In the light of the view expressed by the opportunism of the Second International that "productive forces in Russia have not yet been developed to a level at which socialism can be realized," he sharply pointed out: "why cannot we first create in China such prerequisites of civilization as banishing the landlords and Russian capitalists and then march to socialism? Just what books are you reading that say changes of this kind are not allowed or possible under the ordinary historical order? (p 692, Vol 4, "Selected Works of Lenin"). It is thus obvious that it is untenable if we neither proceed from reality nor consider the objective situation which has already changed but merely apply the classic views of a time prior to socialism has become a reality as the basis to argue that our country should not turn towards socialism.

Owing to the fact that different historical conditions exist in different countries, it is inevitable that they follow different revolutionary roads. The reason why our country can overleap the stage of capitalist development and move directly to the socialist road after victories achieved in the new-democratic revolution is that it is entirely conditioned by the specific course of historical development in our country. Viewed from international conditions, the world has entered an era of imperialism and proletarian revolution. The revolution in our country has become a part of the worldwide proletarian revolution and we can win the support of international proletarian classes. Particularly the victory of the October Revolution in Russia has turned socialism from a scientific prediction into a living reality which has provided a successful precedent and set a glorious example for the underdeveloped countries to directly enter into a developing stage by surpassing capitalism. It has had a profound influence on the revolution in our country. Precisely as Comrade Mao Zedong pointed out: "Follow the path of the Russians—and that is the conclusion." As far as our domestic conditions are concerned, first, we are under the correct leadership of the proletarian class and its party--the Chinese Communist Party armed with Marxism-Leninism and Mao Zedong Thought. We have a firm worker-peasant alliance. Especially since the establishment of the new type of state power of people's democratic dictatorship, that is the proletarian dictatorship, after the democratic revolution has achieved victories throughout the country, the proletarian class has in its hands absolute political predominance and firmly grasped the revolutionary leadership. Although there were only a few modern industries in our country, yet they were comparatively more concentrated in the hands of the bureaucratic-capitalist class which amounted to approximately 80 percent of the total capital. We have confiscated bureaucrat capital and put it under the possession of the state led by the proletarian class and thus enabled the people to control the economic lifelines of the country to make the socialist state-owned economy the leading power of the whole national economy. By relying on both the state and the economic leadership firmly grasped by the proletarian class we can establish socialist public ownership and enter into a socialist society by carrying out socialist reforms on both individual private ownership (agriculture and handicraft industry) and private capitalist industry and commerce. Since we can directly carry out socialism under the condition of a backward economy, why must we for a period of time run counter to the course of historical development to once again return to the capitalist road and let the people once again suffer capitalist exploitation?

To Follow the Socialist Road is the Objective Requirement of the Development of Productive forces in Our Country.

The second argument of those who do not feel that there is ground for us to transform into socialism is: Socialism must be established on the basis of a well-developed economy, but our economy lags far behind and production relations in our country outstrip the development level of productive forces.

There is no denying the fact that production relations must suit the development level of productive forces, but it must not be mechanically interpreted as that only when productive forces have developed to a very high level can we then establish socialism. Since it is only a relative concept to say that the level of productive forces is high or low, or it is advanced or backward, nobody can possibly determine a clear and unambiguous norm as the standard and demarcation line for bringing about a change to the old production relations. According to the viewpoint of Marx, the key to the change of production relations lies in the question of whether productive forces can still be accommodated by production relations conditioned by the productive forces itself. When productive forces have developed to a point at which it can no longer be accommodated by that kind of production relations, or when contradictions have developed to a certain critical extent, it is bound to set off a revolution in order to destroy the existing production relations and establish new ones which will suit a certain level of productive forces. During the initial period of the founding of the People's Republic, especially after the task of confiscating bureaucrat capital for putting it under state ownership as well as that of agrarian reform have been accomplished, five different kinds of economic status including socialist state-owned economy, individual economy such as peasants and handicraftsmen, private capitalist economy, cooperative economy which is semi-socialist in nature, and state capitalist economy were at that time in co-existence. Judged by the condition of productive forces, our country was then indeed far behind the developed nations. However, sharp contradictory conflicts yet existed between this very low socialist productive forces and the then existed production relations. In the cities, although capitalist industries and commerce have still played a certain positive role in promoting production, restoring national economy and satisfying people's demand under the situation when our economy was seriously damaged, but the aim of its business activities was to extract excess value, therefore, the workers were still exploited by them. The very nature of profit-before-everything mentality resulted in blind competition among the capitalist enterprises themselves and that was a blow against the economic plan of the state. The capitalist class at the same time employed the "five evils" to wage savage onslaughts on socialism. In rural areas, although the system of feudal private ownership of land has been abolished and the peasant private land ownership system has been established through agrarian reform and thus enabled agricultural productive forces to be liberated from the fetters of feudal exploiting relations, this individual and backward small-scale peasant economy was unable to reasonably utilize land and labor force, nor would they be able to adopt agricultural machinery and advanced technology or to resist natural disasters because of their limited production scale and decentralization of management. As a result, it was difficult to expand reproduction. This kind of small-scale peasant economy which stood at the crossroads was also very unstable and easy to produce a polarization. Situations such as this told us that contradictions between the working class and the capitalist class as well as that between the socialist road and the capitalist road had become principal contradictions at that time and turned out to be shackles hindering further development of the productive forces. Therefore, to carry out socialist reforms for agriculture, handicraft industry, and capitalist industry and commerce making them compatible with the situation in China in order to transform the system of private ownership of the means of production into the system of socialist public ownership and to lead the national economy as a whole onto the socialist track is not only the objective requirement of the development of productive forces in our society, but also a shining example set by our party and Comrade Mao Zedong through specifically applying the law of adapting production relations to the nature of productive forces for solving practical problems of our country.

The establishment of socialist system has brought about the liberation of productive forces in our society. For this reason, even though it has been only a short period of time since the founding of the People's Republic and we are inexperienced in leading the socialist construction, yet by relying on the superiority of the socialist system, we are able to establish, step by step, the independent and comparatively more comprehensive industrial as well as national economic systems on the basis of a mess of poverty and blankness of old China, and thereby build China from a backward agricultural country into an industrial-agricultural country at a fairly good level. Our economic power has been much improved. At constant prices, it is calculated that in 1980 the total value of industrial and agricultural output increased 15.1 times compared with that of 1949, of which the total value of agricultural output increased 2.8 times, total value of industrial output increased 45.2 times, while that of light industry increased nearly 26 times, and our gross national income increased more than 9 times. Such a high rate of development not only was hard to imagine in old China, but even the developed capitalist countries nowadays are far far behind. In the 28 years from 1949 to 1977, the total value of industrial output in our country has had an average annual increase of 13.5 percent, while in such capitalist countries as the United States, Japan, West Germany, Great Britain and France, industrial growth rates only registered as 4.3, 12, 6.2, 2.3 and 5.3 percent respectively. It is obvious that the rate of industrial development in these countries is far far behind ours. Besides, we have also achieved tremendous successes in some sophisticated branches of technology. In short, since the year we started to implement the first five-year plan until 1980, we have in a period of only 28 years achieved successes unprecedented in old China, and traversed various courses which many developed capitalist countries have spent more than a half century time to cover. The fact fully proves that socialist system is in conformity with the situation in our country. It can create a labor productivity higher than that of any other social system. Compared with any other social systems, its superiority is matchless. Such being the case, why must our country take the capitalist road for a period of time or turn back to make up the "absence" of the capitalist stage? Of course, we have to admit that the level of productive forces in our country is low and it has really caused numerous difficulties to the socialist modernization construction, however, these difficulties can gradually be overcome through arduous struggles of the people throughout the country. It is absolutely not allowed to negate the objective inevitability and practical possibility for practicing socialism in our country simply because of these difficulties.

We Must Objectively Treat Problems Which Have Emerged in the Course of Socialism in Our Country.

At a time when we are achieving tremendous successes in the socialist construction in our country, we have also made mistakes, especially the protracted grievous mistakes of the "Great Cultural Revolution" which affected the overall situation. Some people attributed these faults and mistakes to the socialist system itself and, therefore, were doubtful of the superiority of it, or even expected to negate it once and for all. It is absolutely wrong.

The mistakes and errors we have made in the course of socialist construction are primarily due to subjective factors, and are not necessarily intrinsically related to the socialist system itself.

First, one of the superiorities of the socialist system is the rapid development of productive forces which have opened broad prospects and provided objective possibilities. However, in order to turn such a possibility into reality, not only certain objective conditions are necessary, but the more important is that the subjective guidance must be correct. Owing to the fact that socialism is a completely new cause never undertaken by our forefathers, our understanding of the objective development law of socialism must be probed through practice and we have to pay certain price. Therefore, it was only natural that we should make mistakes of one kind or another. For instance, in a certain period of time, we made mistakes by enlarging the scope of class struggle politically, impetuously rushing construction economically and attempting speedy transition in production relations. All of these mistakes were related directly to our inexperience, our insufficient understanding of the objective law of socialism and our subjective deviation from objective reality. They were not the mistakes of the socialist system itself.

Second, socialism in our country is still in its initial developing stage and it is naturally imperfect in some aspects, especially in certain specific links of socialist production relations and superstructures where malpractices detrimental to the development of productive forces still exist. For instance, in the system of economic management, power is over-concentrated in the central government and it is thus harmful to bringing the initiative of the local authorities and enterprises into full play. In the management method, executive orders have been a usual practice and economic measures have not been well applied for administering economics. In financial aspect, the large-scale system of payment partly in kind and partly in cash by practicing unified revenues and expenditures has resulted in the phenomenon of "eating out of a common pot." In addition, in the style of work, such evil trends as bureaucracy and red tape still exist.

All these have presented obstacles to bringing the superiority of the socialist system into full play and thereby hamper productive powers in our society to move forward at an accelerated rate. These evils and shortcomings are not innate in the socialist system itself, but are problems of our understanding and work. So long as we can correctly sum up our experiences and lessons, and continuously probe and reform in practice, it is certain that the socialist system will gradually be adapted to individual specific links and to socialized mass production, and thereby give full play to the superiority of the socialist system. As for the interferences and obstructions originating from the two counterrevolutionary cliques of Lin Biao and Jiang Qing, it is an issue which is different in nature and the socialist system is not to blame.

CALL FOR EFFORT AT IMPLEMENTING THE 'RESOLUTION'

Wuhan HUBEI RIBAO in Chinese 29 Aug 81 p 2

[Article: "Exert Effort in Implementation"]

[Text] The 6th Plenary Session of the 11th Party Central Committee passed the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" which accords with the heart of the party and with the will of the people. Many party organizations not only seriously study it and widely promote it, but moreover they are attentive to uniting it with reality and using the spirit of the "Resolution" in moving to solve the salient problems of their their own areas and units. This sort of excellent study style which intimately combines study and promotion with implementation and execution has not been seen for many years and is worthy of strong support.

Exerting effort in implementation does not mean that we should overlook study and promotion, nor is it to say that we already did a sufficient job of study and promotion in the period prior to this. An historical document as rich in content, as ideologically profound, and with as far-reaching significance as the "Resolution" first requires time and energy for serious study and penetrating research. We must comprehend the spiritual essence, raise our individual understanding, and also adopt numerous ways of carrying out broad and penetrating promotion with great fanfare among all party members and the masses in order to unite our ideology and allow us to look forward in unity. This is the foundation for implementing the spirit of the "Resolution." The study and promotion of the previous period was only the beginning. We still need to further strengthen these areas. Otherwise, we will have but a smattering of knowledge half understood, mere light and shadow, or we will not reach full understanding in our ideology in which case there is basically no way we can speak of using the spirit of the "Resolution" to direct our work. But what is clear in guiding ideology is that study and promotion must take implementation as the point of departure and the stepping stones. The two must be intimately combined and not distinctly separated.

The reason that in guiding ideology we must be clear on this point is reflected in the fact that in some areas and units the party style and the style of study that was damaged by Lin Biao and the "gang of four" has not yet been completely corrected. This makes it conspicuously clear that in recent years some leading comrades in their treatment of the new spirit of the Party Central Committee and its established principles and policies have been satisfied to simply transmit them to the masses, halting efforts after ordinary promotion and calls for adherence have been made, and having no concrete plans or actions regarding how they and those under them should implement things. For these comrades it seems as though transmitting, promoting and organizing several study sessions can be considered implementation. This causes the spirit of the Party Central Committee and its principles and policies to be put poorly into effect at the grass roots level so that problems that should and could be solved do not get solved. The masses are very dissatisfied with this and criticize it as a "gust of wind." This time around in our study and promotion of the "Resolution" we should naturally consider this to be a taboo and exert greater effort in implementation, not stopping after merely blowing a "gust of wind."

That which is called implementation is the thorough manifestation or embodiment (of principles, policies, spirit, methods, etc.). Obviously, study, transmission, and promotion of the spirit of the Party Central Committee is not equivalent to implementation. In implementation we must look to practice where we still need to make great efforts. If energy is lacking, if the workstyle is lethargic, and if duties are discharged in a perfunctory manner, then it is impossible for a leader or a party committee to thoroughly implement the spirit of the Party Central Committee, and they will forever blow a "gust of wind." Also, some comrades believe that the spirit of the Party Central Committee has deeply captured the hearts of the people and that by simply promoting it among the masses inside and outside of the party the masses will consciously bring it to realization. This viewpoint is onesided. Besides needing the initiative of the masses, implementing the spirit and the principles and policies of the Party Central Committee requires a great deal of work by leaders who must understand the actual situations of their own areas and units, including the actual ideas and demands of the masses, the advantageous and disadvantageous conditions, the primary experiences and lessons learned in their work, every contradiction and important problem, etc. This will make it possible to intimately combine the spirit of the Party Central Committee, its principles and policies, and the reality of the particular area or unit, and to come up with concrete measures and methods to implement. Actually, implementation is the best promotion. In promotion, of course we must first communicate and explain the spirit. We must see to it that the broad party members and the masses grasp the important elements of the "Resolution" and understand its essence. But, the deepening of understanding still rests with practice. Only by carrying out the spirit of the Party Central Committee in our actual work and achieving clear results, things which the masses can see and feel, can the masses' understanding and comprehension of that spirit deepen. This is a much more forceful education for the minority who harbor doubts in their hearts about certain policies and certain conclusions or who lack confidence in being able to put the spirit of the Party Central Committee into effect.

At the same time, how the spirit of the 6th Plenum is implemented is the standard for measuring the effectiveness of our study and promotion. This is because whether or not the "Resolution" and other documents passed by the 6th Plenum are truly accepted ideologically, the depth of the understanding of them, and how complete and unprejudiced such understanding is is not primarily a matter of how attitudes are expressed, but rather is mainly a matter of how implementation proceeds, whether or not attitudes are resolute, whether or not measures are forceful and can solve real problems and whether or not problems are thoroughly solved. In the period just prior to this, there were a small number of persons who, although they studied every word concerning the spirit of the 6th Plenum and transmitted documents in their original form, didn't seriously implement the spirit in their work, and even failed to reach ideological understanding after a fairly long period of time. This makes it clear that their study and promotion was not conscious, but rather they adopted attitudes of merely coping.

Implementing the spirit of the 6th Plenum requires that we continue working hard to improve economic work and further strengthen the construction of a spiritual civilization. Without doubt, in accomplishing these two important tasks we will meet with many concrete difficulties and problems, and so we must proceed in a planned and orderly way. Every area, department and unit in accordance with their actual situations should suggest concrete needs and plans concerning how to do a good job in grasping economic work and the construction of a spiritual civilization. This involves making clear what should be tackled this year and what next year, everything being laid out clearly in our minds. There are still 4 months until the end of this year and, since time waits for no man, the problems to be solved and the measures to be implemented should be more practical. We should seriously tackle several problems and actually solve the outstanding problems obstructing our own progress. Why fear tackling but two or three problems first, for this is far better than the mediocre workstyles of saying you can't do things or failing to distinguish right from wrong, failing to thoroughly solve problems and leaving matters unresolved. The key here is in every leader mobilizing his energy to display the spirit of the foolish old man moving the mountain in overcoming all difficulties in economic work and changing the weak and disorganized state of ideological work.

SELF IMPROVEMENT FOR LEADING CADRES URGED

Guangzhou NANFANG RIBAO in Chinese 21 Sep 81 p 4

[Article by Fang Yisi [2455 0001 1835]: "Don't Forget 'Pursuit'"]

[Text] After the October Revolution, the petty bourgeois democratic faction represented by Sukhanov and the heroes of the Second International used the notion that Russian culture had not yet developed to a level necessary to realize socialism to attack the socialist revolution led by the bolsheviks. In facing this attack, Lenin wrote an article called "Discussion of Our Nation's Revolution (Notes in Criticism of N. Sukhanov)" as a refutation. Lenin asked why, since they said that a definite cultural level is necessary to build socialism, can we not first use revolutionary means to obtain what is a prerequisite for reaching this definite level, and then from this foundation pursue the level of peoples of other nations.

This viewpoint of Lenin's is certainly correct. The Russian Revolution and the revolution of our country both achieved victory under the guidance of just such thinking. But, in actual life, many people remember only the first half of this well-known discourse by Lenin, and forget the second half. They only emphasize that even if you haven't reached a definite cultural level, you can still seize political power, and they overlook the fact that once political power is gained, you must still "pursue" that cultural level.

During the period of the "Great Cultural Revolution," Lin Biao and the "gang of four" greatly revolutionized culture. They considered all the inherited culture of mankind to be poisonous feudal, capitalist and revisionist weeds and made a clean sweep of it all turning a country of 9.6 million square kilometers into a cultural desert. But I will not speak of this sort of senseless behavior here. Within our ranks, in 30 odd years of nation building, we have known the kind of people who do not study or read newspapers, who brag that they are "simple rustics," who believe that the less culture one has, the less knowledge one has, the firmer his class standing, and the higher one's cultural level, the more knowledge one possesses, the more questionable his class standing. Because of this, they not only do not consider not working hard at studying culture and increasing knowledge to be shameful, but they view total illiteracy as a glorious thing. Under this kind of ideological direction, they naturally are not going to go of their own accord and study science and raise their cultural level.

In recent years, because of the forceful call by the Party Central Committee, the Secretariat of the Party Central Committee has taken the lead in inviting specialists from the Chinese Academy of Sciences and other units to give classes to the leading comrades of the Secretariat and the State Council so that studying culture and science will become customary and there will be no more instances of persons beating their chests with self-satisfaction and proclaiming that they are "simple rustics." But, is it true that all persons, especially those cadres with specific leadership responsibilities, recognize the importance of raising our cultural level, and so seriously study with a positive result? I really have my doubts. I have heard of this kind of thing happening: in one instance agronomists at one unit or other wanted to try soilless cultivation of rice seedlings. The one in charge of this unit asked how they could do well at soilless cultivation when they couldn't do well at cultivation with soil, and how could anyone cultivate rice seedlings without soil? In another instance, technicians and scientists at a plastics factory wanted to research a breathable artificial leather and needed some funding. The concerned department asked what there was to research about the breathability of artificial leather; wasn't it enough to punch some holes in it? They refused to give any funds. Of course, there are still more situations such as these. Lenin called this kind of unstudied, unskilled, obstinate, "I may approve it, and then I may not" leadership the chit-chitki [phonetic] approach. It is best not used. Those in the dark are in no position to light the way for others.

Socialism is mankind's most advanced social system. Only by grasping the culture that mankind has created in the process of its complete development, and by reforming and developing this culture can we complete socialism. Without this high level culture we cannot complete this task. Therefore, while we are carrying out the four modernizations, let's not forget this task of "pursuing" the cultural levels of peoples of other countries.

PARTY EXHORTED TO DO GOOD MILITIA WORK

Nanjing XINHUA RIBAO in Chinese 22 Aug 81 p 3

[Article by Lu Yulin [4151 3768 2651], secretary of the Jiaoxie Commune CCP Committee in Hai'an County: "Maintain the Party's Control of the Armed Forces and Strengthen Militia Building"]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted by the 6th Plenary Session of the [11th CCP] Central Committee pointed out: "Under international conditions in which the threat of war still exists, we must strengthen the modernization of national defense." "The People's Liberation Army must strengthen its military training, political work, logistical work, and military science research so as to further improve its combat effectiveness.... Militia building must also be strengthened." This is the new demand imposed upon militia building in the new situation.

The militia is an armed force that does not wear military uniforms but is an important force in defending the four modernizations. Especially under conditions in which modern war can suddenly escalate, the handling of militia is an even more effective means to deal with an enemy's surprise attack. Imperialism, particularly social-imperialism, in launching a war of aggression will most likely make surprise attacks of the blitzkrieg type. Relying on modern equipment, it will launch a large-scale offensive. To cope with this kind of enemy, there must be cooperation between regular units and militia in using the tactics of mine, hit-and-run, and ambush warfare so as to continually harass, pin down, and wear down the enemy, delaying the enemy's movements or raiding his supply bases, frontline airfields, guided missiles positions, petroleum pipelines, signal communications systems, and command organizations, thereby dispersing the enemy's forces and annihilating all the enemy soldiers.

The key to handling militia is to have the party committees at all levels control the militia. In a previous period of time, some people thought that, with the shift in focus of the party's work, "economic construction will be given top priority and militia work will be given up." This idea was mainly caused by their gradually forgetting about war because they were in a peaceful environment. This idea is very dangerous. We certainly must conscientiously sum up experiences, carry forward the party's fine tradition of controlling the armed forces, and build up the militia well.

At present, when the responsibility system of pooled output and planned remuneration is being universally carried out in the rural areas, the party controls the armed forces and must strengthen the militia's ideological and political education, help the militia to establish the correct outlooks with regard to honor, suffering and happiness, and life and death so that the militiamen will consciously fulfill their obligations and responsibilities. The party must conscientiously make investigations and studies, timely analyze the new conditions of militia work, solve the new problems encountered in militia work, do well in readjusting the militia system and in reforming military training, and in a down-to-earth fashion do good militia work in the new situation.

BATTALION POLITICAL INSTRUCTOR HAILED AS NEW LEI FENG

Taiyuan SHANXI RIBAO in Chinese 29 Jul 81 p 1

[Article by staff commentator: "Li Junjia--Lei Feng of the 80's"]

[Text] On the day that we celebrate the 54th anniversary of the founding of the Chinese People's Liberation Army, we specially introduce to everybody a serviceman who possess a high degree of spiritual culture--Li Junjia [2621 0193 3946].

Comrade Li Junjia is the political instructor of the 1st Battalion of a certain unit of the forces stationed in Shanxi. During his student days, he persisted in learning from Lei Feng, did good deeds, and was many times appraised as a "three-good student." After enlisting in the armed forces in 1970, under the cultivation of the party, Li Junjia even more consciously took the Lei Feng path to maturity. He assiduously studied Marxism-Leninism-Mao Zedong Thought and consciously reformed his world outlook. He loves the party, the motherland, and the socialist system, is concerned for the four modernizations, and of his own accord shares the cares and burdens of the party and the state. He has both ambitious goals and a down-to-earth style in his own job. He is selfless, put others before himself, finds pleasure in helping others, and with his whole heart and mind serves the people. He struggles arduously, is modest and prudent, and gets in close touch with the masses....Li Junjia is a model in learning from Lei Feng and in building a socialist spiritual civilization, and is a model soldier of the revolutionary army-men in the "four have's, three stresses, and two fearlesses." His unit has conferred upon him the title of "Lei Feng-type cadre," and the masses have praised him as a "living Lei Feng". The Beijung Units recently held a victory meeting at which they gave Li Junjia a merit citation, first class, and urged all officers and men to learn from him.

Li Junjia is the Lei Feng of the 80's

The great river flows east and history rolls on. Since time immemorial, in the great motherland--this 9.6 square kilometer piece of mother earth--many advanced personages have glittered like the flashes of light from a brilliant galaxy. In the 60's, the great communist fighter Lei Feng emerged before our eyes. Lei Feng was a exemplary member of the CCP; the Lei Feng spirit is the crystallization of the Chinese nation's several thousands of years of spiritual civilization. The birth of the Lei Feng spirit has further removed the private ownership mentality from people's minds and further established the new relationship between people under our country's socialist system. Encouraged by the Lei Feng spirit, new people and new deeds have emerged in an endless stream, and heroic models have become too numerous to count. Today, history has already developed into the decade of the 1980's. Our country, after undergoing the 10 years of civil strife of the "Great Cultural Revolution," brought order out of chaos and is now in a great transitional period. Under the party's leadership, the people of the whole country are determined to surmount every difficulty and with one heart and one mind construct the four modernizations. This great era will certainly produce new Lei Feng's, and exemplary models in learning from Lei Feng like Li Junjia will be produced under these circumstances.

The model deeds of Li Junjia are many sided, but two of them that are most important and rich in significance for this era are: 1) he regards the interests of the party and the socialist motherland as higher than everything else; 2) he contributes everything he has to the construction of the four modernizations. These "two everything's" show Li Junjia put it this way: "Our generation thinks of nothing else but being united heart and mind with the party and struggling all our lives for the party's cause!" He also said: "If we suffer a little in building up our forces so as to strengthen national defense and make the state secure, the people can live in happiness." By promoting China's lofty aspirations and great ideals, by fulfilling the lofty duty of helping the country to get over its difficulties and of relieving the people of their anxieties, by carrying forward the selfless spirit of sacrifice of the war years, and by being absolutely sincere with the party and the motherland, he has composed a stirring new "Song of Lei Feng."

To regard the interests of the party and the socialist motherland as higher than everything else and to contribute everything to the construction of the four modernizations--this is the demand of the era and the great trust of history. This is because today we are faces with the greatest task, vis, constructing a modernized powerful socialist country which is highly democratic and highly civilized. The road is tortuous, but the prospects are bright. Before our eyes are the hearty smiles of victory but also the possibility of the bitter wails of defeat. To triumph over difficulties in attaining our goal of struggle, every communist, every revolutionary cadre, every revolutionary armyman--in a word, every good-hearted Chinese person--should, like Li Junjia, carry out these "two everything's." And they are precisely the important content in the 80's of learning from Lei Feng and of building a spiritual civilization. Just as the "resolution" of the 6th Plenary Session of the [11th] CCP Central Committee pointed out: "Socialism must have a highly spiritual civilization...a patriotic spirit of resisting the influences of the decadent bourgeoisie ideology and of the remnants of feudal ideology, of overcoming the influence of the petty bourgeois ideology, and of putting the motherland's interests above everything else; and a spirit of contributing everything in constructing modernization through arduous effort."

Some people say: The Present era is different and "learning from Lei Feng is outmoded"; still other consider those who carry forward the Lei Feng spirit to be "fools". Is this really so? My ideal is to be like Lei Feng." This is correct! Not only in the past were people like Lei Feng needed; they are needed today and will still be needed after the passage of many years. If one speaks about the differences between learning from Lei Feng today and learning from him in the 60's, then the only difference is that to develop the Lei Feng spirit today seems even more important and urgent than in the past. This is not only because the advocacy and spread of the Lei Feng spirit was stifled and damaged during the 10-year "Great Cultural Revolution" and must be restored and developed; even more important is that if we want to build a socialist China, we ourselves must possess the trait of being highly civilized. Without a spiritual civilization there will be no four modernizations. So how can it be said that the Lei Feng spirit is "outmoded"!

The Sixth Plenary System of the [11th] CCP Central Committee was held in order to learn from Lei Feng and to launch the activity of the "five stresses and four beautifuls so as to open up a new world. Living Lei Feng's like Li Junjia will appear in great numbers like mushrooms springing up after a rain. We hope that the great number of armymen and civilians throughout the province will, while studying the documents of the 6th plenary session, conscientiously study the deeds of Comrade Li Junjia, take him as a model, and strive to be Lei Feng's of the 80's.

ROLE OF SURPRISE ATTACK IN GUERRILLA WARFARE DESCRIBED

Jinan DAZHONG RIBAO in Chinese 17 Aug 81 p 3

[Article by Zhang Lianzhang [1728 6647 4545] et al.: "Surprise Attack--One of the Tactics of Guerrilla Warfare"]

[Text] Surprise attack means, on the basis of full preparations, and with swift concealed movement, suddenly to make a courageous and resolute attack on the enemy. It is a method of warfare that can quickly decide a battle and is one of the main tactics of guerrilla warfare. During the periods of the war of resistance against Japan and the war of liberation, our province's militia frequently used this tactic to make harassing attacks and deal blows to the enemy that caught him unawares, thereby seizing victory in battles. In July 1947, our guerrilla forces of Beitongshui in Ju County, Lunan Prefecture, at the instruction of the higher authorities, after making full preparations, taking advantage of the darkness of night after a rain, suddenly make a surprise attack on a motor transport corps of the Chiang [Kai-shek] army stationed in Quanguan village (25 li from Beitongshui) in Yinan County, and won a victory in which it annihilated many of the enemy and captured over 20 motor vehicles. This example of a surprise attack was one that cannot be surpassed in the previous history of militia struggle.

Because surprise attacks employ different concrete methods, they can be divided into "rush attacks," "astonishing attacks," "stealthy attacks," and "strong attacks." For cavalry or motorized infantry to come from a long way off and, after making a surprise attack, swiftly withdraw, is called a "rush attack"; for guerrillas to disguise themselves as peasants or dress in camoflauge clothing and then infiltrate the enemy camp and suddenly launch a surprise attack or make a surprise attack in coordination with outside forces, is called an "astonishing attack" or a "stealthy attack"; and for guerrillas to attack in force an enemy who has a superior force firmly entrenched in defensive works, is called a "strong attack."

In a future war against aggression, the surprise attack will remain an effective tactic for militia guerrilla forces to strike at and annihilate the enemy. The idea that, because in a future war our principal adversary will be an enemy who possesses highly modernized weapons and equipment, surprise attacks will not be as highly effective as they were in the past, is a one-sided idea. In fact, in a future war, because the enemy's equipment will be complex, with many tanks, armored cars, and motor vehicles for which movement is inconvenient and which are easily exposed, they will provide the militia guerrilla forces with even more attacking opportunities. For example, in a modern war, the damage rate of the enemy's weapons and equipment will be greatly increased, and when the enemy is replenishing his weapons and equipment at the front, he will certainly have to carry out on the battlefield crash-repairs of his damaged vehicles, weapons, and equipment. In that case, the guerrilla forces can make surprise attacks on the enemy's maintenance detachments and thus weaken the restoration and regeneration of his combat strength.

In a future war against aggression, in order to make good surprise attacks it is extremely important to do the following several things well. First of all, meticulous reconnaissance must be carried out in order to truly ascertain the enemy's situation, the terrain and the inhabitants in the area under consideration, to clearly find out the patterns of the enemy's activities, to find the enemy's weak points, and to then draw up a thorough plan of action. Next, we must correctly choose the targets of attack and determine the opportune moment for making the attack. Conditions for determining the target of attack are that the enemy is scattered and isolated, his guards are careless, his defense works are not strong, his morale is low, his martial spirit is shaky, his command is irresolute, or the terrain he occupies is disadvantageous for him, etc. Generally speaking, the enemy's logistical facilities, supply structures, guards, and repair detachments can all become the principal objects of our surprise attacks. The opportune moment for making a surprise attack can be determined according to the actual situation. For an enemy who is isolated and cut off, if there is little threat from his air force, we will choose a time before dawn, so that it will be easy for us to utilize the darkness of night to get close to the enemy. For a small enemy group, we will choose the time of dusk, so that it will be easy for us to hide ourslves by camoflauge, and if our surprise attack does not succeed we can slip away under cover of the darkness of night. For an enemy whose defenses are weak and who is relaxed or weary, we can take the opportunity of weather conditions such as wind, snow, rain, or fog to make our surprise attack, and if the target and moment of our attack is well chosen, we can attack him while he is unprepared and catch him unawares, so that we can fully display our own strong points and the role of the enemy's superior weapons will be diminished or not be brought into play at all. This is the key to defeating one's opponent by a surprise move. Moreover, when moving close to the enemy, we must be hidden, secret, and swift and avoid by all means revealing our intentions or acting rashly and alerting the enemy. When making a surprise attack, we whould move with the suddenness of a thunderbolt, attack boldly and powerfully, and force the enemy to fight at close quarters, so that he will lose the protection of his "tortise shell" and we can fully display the power of our hand grenades, submachineguns, and bayonets. We must subdue the enemy quickly, striking accurately and relentlessly with blitzing tactics so that the battle is decided as quickly as possible, and then swiftly withdraw from the fighting zone.

'BA YI RADIO' ON SUICIDE OF PLA PRISONERS OF WAR

OW160055 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 13 Oct 81

[Text] Not long after their return to China, our army's 11 commanders and fighters who were captured by Vietnam committed suicide out of grief and indignation. This is a sad incident. Their suicide has been the result of the erroneous policy of discriminating against and mistrusting captured personnel which our party and army have pursued since the 1930's. Though only a dozen commanders and fighters have committed suicide, the impact on the thinking of the masses of commanders and fighters has been enormous.

Some comrades on the CCP Central Committee's military commission held that the incident was because the ultraleftist thinking of overthrowing everything, doubting everything and calling cadres, who had once been captured and jailed by the KMT "renegades," "special agents," and "degenerates," which was very common during the cultural revolution, had not been completely eliminated. This is by no means an attitude of seeking truth from facts.

We have always condemned Chiang Kai-Shek's cruel philosophy that it is better to kill 1,000 people by mistake than to let a single enemy escape. On the other hand, we have pursued a policy of discriminating against and mistrusting captured commanders and fighters for fear that there may be some untrustworthy degenerates among them. [Words indistinct] commanders and fighters who have been captured on the battlefield after they have been wounded, outnumbered by the enemy and after they have failed to break out of an encirclement, have never won any sympathy except a bad record which affects their political career and future. This has been so even though in most cases their capture has been caused by the mistakes of higher-level leaders in planning and directing operations.

A good example can be cited from the war to resist America and aid Korea. Having made a wrong assessment of the war situation, Mao Zedong ordered the main force to cross the 38th parallel. But logistics support could not reach the frontline because the line was overextended. Our units were cut in half when U.S. troops landed at Inchon. Although our units heroically broke out of the encirclement, tens of thousands were captured. Although the number who chose not to return to China were small, those who returned faced disaster. Whenever there was a political movement, they were the target of investigation. Several hundred committed suicide out of grief and indignation in those few years. Among them were veteran cadres of the war of resistance to Japan and even the long march.

During the war against Vietnam, a large number of our army commanders and fighters were captured. The main reason for this was the mistakes in operational direction and a wrong assessment of the fighting strength of the Vietnamese troops. It should be particularly noted that troop movement was decided solely by the subjective will of a few leaders. Before an agreement on ceasefire was reached between China and Vietnam, China unilaterally and riskily withdrew its troops giving Vietnamese troops an opportunity to pursue and attack Chinese troops. This resulted in the capture of a number of commanders and fighters.

Modern warfare is extremely complicated. As paratroopers and landing troops are used to launch an offensive, the capture of commamders and fighters is a routine matter. Our army's morale will be affected if the pursuance of the policy of discriminating against and mistrusting captured personnel is continued.

POLITICAL COMMISSAR PUBLICIZES 'RESOLUTION' AMONG TROOPS

Nanjing XINHUA RIBAO in Chinese 24 Aug 81 p 1

[Article by Yang Hanlin [2799 3352 2651] et al." "Nanjing Air Force Senior Officer Goes to Mountainous Area To Publicize the 'Resolution' to a Unit"]

[Text] From 12 August until yesterday, Xiao Qian [5135 0467], political commissar of the Nanjing Air Force, while stationed at a certain unit in a mountainous area on inspection work, made the publicizing of the "resolution" ["Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC"] his most important task. Once he arrived at the unit, he investigated and came to an understanding of the unit's study, work, and ideological situation. With the topics of "Conscientiously Learn the 'Resolution' and Do Good Troop Work" and "Correctly Understand the Historical Position of Comrade Mao Zedong," he separately publicized the "resolution" to cadres at the regimental level and above and to cadres and fighters at the basic level.

Political commissar Xiao Qian, when explaining the great significance of upholding Mao Zedong Thought, pointed out that Mao Zedong Thought was formed during half a century of extremely difficult and hard struggle and is the crystallization of the collective wisdom of our party, and that the upholding of Mao Zedong Thought is an unshakeable principle. He exhorted the great number of officers and men to conscientiously study Comrade Mao Zedong's scientific writings, as well as Vice Chairman Deng's important speech made in 1979 concerning Mao Zedong Thought, and to arm their minds with the stand, viewpoints, and methods of Marxism-Leninism-Mao Zedong Thought, closely unite around the party Central Committee, enhance their vigor, and work hard to build up the unit well.

SOCIOLOGICAL, EDUCATION AND CULTURE

GUANGDONG PROVINCE SEES NEED TO UPGRADE EDUCATION WORK

Guangzhou NANFANG RIBAO in Chinese 14 Aug 81 p 2

[Text] At its 11th meeting on 7 August, the Standing Committee of the People's Congress of the province adopted the "Resolution on Strengthening the Work of General Education in Guangdong Province," the full text of which follows:

At its 11th meeting, the Standing Committee of the 5th Session of the Guangdong Provincial People's Congress heard a comprehensive report given by Deputy Governor Yang Kanghua [2799 1660 5478] on the work of general education in the province. Following a discussion, unanimous approval was given to the views expressed and the measures outlined by the Provincial People's Government regarding the development of general education in the province.

It was agreed at the meeting that since the smashing of the "gang of four," and especially since the implementation of the instructions issued by the CCP Central Committee and the State Council regarding the work of education, our province has put a series of programs on general education into practice and achieved good results in its central task of making readjustments in the work of education and in upgrading the quality of teaching. However, the serious damage done to education as a result of the 10-year period of turmoil caused by the Lin Biao and Jiang Qing counterrevolutionary clique has yet to be further remedied. Furthermore, sufficient recognition has not been given in the past few years to the important role played by education and the effects of education on the reconstruction of the national economy. Adequate investment has not been made in intellectual development on a long-term basis. There remain a number of problems and difficulties in education work. The backward state of education in our province has yet to show basic improvement. Many problems remain which require urgent solution.

It was agreed at the meeting that the development of education has a significant role to play in the implementation of special policies, in the adoption of flexible measures, and in the speeding up of the four modernizations in our province. It is necessary to heighten the awareness of the position and function of education and of intellectuals in modernization constructions and to resolutely eradicate the long-existing but totally erroneous views which downgraded education, science and culture, and which fostered prejudices against intellectuals at the height of the "cultural revolution." The various levels of the people's government must honestly exercise their leadership in strengthening education work, accord high priority to the problem of speedily reversing the backward state of education in the province, and find solutions without delay for the major problems in education.

We must firmly uphold the educational policy of promoting moral, intellectual and physical development, promote the idea of the importance of being both Red and expert, strengthen coordination among intellectuals, laborers and farmers and coordination of mental and physical labor. We must pay due attention to the importance of intellectual investment, increase the education budget, and raise the percentage of investment in education in the national economy year by year. We must make sure that expenditures in education should not fall below the average in proportion to the total expenditures of the province for the 17 years prior to the "cultural revolution." Newly incurred expenses must be met, and outstanding debts must be paid in installments so that the conditions for the operation of schools may continue to improve. Although laboring under financial difficulties, the provincial people's government has allocated educational funds for the current year amounting to 42 million yuan. Those at the meeting were of the opinion that the amount was entirely justified. We must continue to implement the educational policy of "walking on two legs." While education is being developed by the government, we must also take active steps to encourage the industrial and mining enterprises, the communes and brigades and the various organizations in society to operate schools. We should take advantage of the favorable conditions in villages with large numbers of overseas Chinese and encourage them and our compatriots in Hong Kong and Macao to demonstrate their love for their country and their hometowns by lending their financial support to the development of education. We must actively promote the introduction of reforms in the structure of middle school education so that education work in our province may meet the needs for the implementation of special policies and for the adoption of flexible measures in the interest of economic development. The various levels of government and the concerned departments should take concrete measures to upgrade the social position of teachers and to improve gradually their working and living conditions. Those who are guilty of assaulting teachers and of making trouble in schools must be dealt with severely. Serious offenders must be prosecuted according to the law. Readjustments, improvements and reforms must be made within education circles. Serious effort must be made for the training of teachers, the development of a contingent of teachers, the strengthening and improvement of ideological and political work, the expansion of activities to promote emulation of Lei Feng [7191 6912] (a soldier who died on duty and who purportedly left a diary in which he recorded his thoughts and his efforts to learn from the works of Mao, and who was hailed as a model young man for the youth of China to emulate), the establishment of a new style, the achievement of the three goods (good health, good study and good work) and the "Five Stresses and Four Points of Beauty," the development of good thoughts and good conduct on the part of the students and the continual upgrading of the quality of education so that it may meet the needs of the four modernizations in our province.

The meeting called for people throughout the province to give their attention and support to the development of education and to promote the establishment of a social climate of respect for teachers. The various departments must establish close coordination in rendering their active support and substantial assistance to the work of the educational departments. The large number of teachers and staff who have labored long and hard in education must continue to devote themselves honestly and loyally to the party's educational endeavors, to play their roles as "gardeners" to better effect, and to engage in the strenuous struggle to speed up the development of general education and talent in our province, and the establishment of our country as a modern, highly democratic, highly cultured and powerul socialist nation.

OVER-EMPLOYMENT OF INTELLECTUALS AWAITS PROPER SOLUTION

Beijing GUANGMING RIBAO in Chinese 7 Sep 81 p 1

[Text] According to XINHUA reporter, Wang Chunhai [3768 2504 3189], the Chinese Communist Committee of Benxi Municipality and the United Front Work Department, following a recent survey, proposed that the problem of high-level intellectuals holding too many part-time jobs should be adequately solved. The result of the survey indicates that the problem is a serious one. The 21 high-level intellectuals working for the 5 systems such as the Benxi Steel Company and the Benxi Mining Bureau, for instance, hold a total of 138 part-time jobs in addition to their own. On the average, each of them holds as many as six jobs. The one with the most number of jobs has 17, while the one with the fewest holds 3. The holding of too many part-time jobs has had a deleterious effect on high-level intellectuals in their scientific research, their teaching and in their work of developing cadres, not to mention their own health.

The Chinese Communist Committee of Benxi Municipality and the United Front Work Department have come forth with the five following ideas to help solve this problem:

1. Making suitable arrangements for the part-time employment of intellectuals and making good use of their specialties. For those among the scientific and technical workers who are engaged in scientific research, who have achieved good results and who are capable of further development, full opportunity should be given them to exercise their leadership roles in the scientific field and arrangements should be made to avoid giving them concurrent jobs as leaders in the area of administration. As for scientific and technical workers who steadfastly uphold the party line, who have special knowledge in a particular field, who have organizational and leadership ability, who are young and vigorous and who are most capable of playing administrative leadership roles, they should be selected without hesitation to fill the leadership ranks. Arrangement should be made for them to assume responsibility as leaders in business operations so that they may give full play to their special skills and that they may have the job, the authority and the duties within the area of their responsibility.

2. Arrangement for the holding of part-time jobs by scientific and technical workers should be made with consideration to the respective jurisdictions of the cadres. The responsible units are to give due consideration to every aspect of the matter, to exercise a firm hold on the situation, and to make reports and comments to their superiors. As for the arrangement of part-time jobs for nonparty members,

prior consultation should be held with the United Front Work Department. As a rule, scientific and technical workers holding jobs of an administrative leadership category should not be given another part-time administrative job. Those who hold part-time jobs may be permitted to do so within the same system and the same unit. Arrangement should not be made for a worker to hold a part-time job outside his system and unit. As for political and honorary jobs, one is permitted, as a matter of principle, to hold only one part-time job, and one holding a higher position should not hold a part-time job in a lower position so as to avoid duplication and the overlapping of duties. In the academic field, one may only take part-time jobs which are related to his specialty, and the number of part-time jobs should be limited. The number of part-time jobs which one may hold may be left to his own discretion. If necessary, arrangement may be made for those who have established reputations to hold honorary jobs. Strict control should be exercised for the various levels of academic bodies to assume their respective responsibilities.

3. Steps should be taken to reduce the amount of time spent by scientific and technical workers in attending meetings and in taking part in social activities so that they may devote more energy to the study of their business operations and give full play to their special skills. If the person concerned feels that it is not necessary for him to attend a meeting, he should be given a leave of absence. If he feels that it is not necessary for him to take part in a certain social activity, his unit should assist him in sending his regrets.

4. In arranging for part-time jobs for intellectuals, the department in question should first consult the unit in which the person concerned is employed as well as the person himself. With their approval, the responsible department should make the arrangement on an overall basis after having given consideration to various aspects of the matter. Arrangement should not be made for the person concerned without his approval.

5. Investigation and study should be strengthened so that the problem arising from the holding of too many part-time jobs by scientific and technical workers may be adequately solved. The various units must engage in a serious study to find a solution on the basis of the existing problem.

The concerned departments in Liaoning Province are of the view that the holding of too many part-time jobs by high-level intellectuals at the present time is a prevalent problem, that it should be given serious attention, and that an honest effort should be made to find a solution.

HONG KONG PAPER: AUTHORITIES SUPPRESS DEMOCRATIC MOVEMENT

Hong Kong TUNG-HSI-FANG [EAST AND WEST] in Chinese No 29, 5 Sep 81 p 37

[Article by the Information Center for Democratic Movement: "The Democratic Movement Is Being Supressed by the Chinese Communists"]

[Text] Unannounced Arrest of Champions of Democracy Continues

The Chinese Communists have arrested Wang Yifei [3769 0001 7378], a champion of the democratic movement in Guangzhou, on charges of engaging in "counterrevolutionary" activities. The arrest came after he tried to gain freedom for comrades in arms also dedicated to this movement who were arrested earlier by the local authorities.

Wang Yifei is an auto maintenance worker in Guangzhou who is now in his thirties, born to the family of a railway worker. He was imprisoned and tortured for getting involved in the big-character poster [Li Yizhe; 2621 0001 0772] case. After he was rehabilitated and his status as a resident of Guangzhou reinstated in July 1980, Wang joined the staff of the PEOPLE'S ROAD. He also devoted himself to theoretical research which culminated in the publication of an article entitled, "New Class and New Society," aimed at analyzing the nature of the Chinese society and its prospects.

When Wang Xizhe [3769 1585 0772] was arrested on 20 April 1981, agents of the public security bureau searched the home of Wang Yifei, where they confiscated books, reams of paper and printing equipment. During the search, he was also cross-examined. Despite this, Wang insisted on defending his legitimate right to publish unofficial journals and never retreated from that position. He also mounted a campaign against the government's suppression of the democratic movement and its secret moves to round up comrades associated with the movement, calling on others to fight for the freedom of those detained and to support the democratic movement.

But the government arrested him for taking this legitimate and justifiable action. Late in July, Wang was arrested by the Guangzhou Municipal Public Security Bureau on charges of engaging in "counterrevolutionary" activities. This massive crackdown on the democratic movement undoubtedly stemmed from a desire to cover up facts by locking up the voices of the people in prison cells. On the other hand, it reflects the fact that the democratic movement remains strong and alive under the crushing pressure.

Nanjing's Xu Shuiliang [1776 3055 5328] Under Arrest

According to foreign news reports, Xu Shuiliang and Yu Weimin [0060 5898 3046], champions of the democratic movement in Nanjing municipality, were arrested by the local authorities along with Yang Xiaolei [2799 1420 7191], another champion of the democratic movement in Hangzhou. Their backgrounds are as follows:

Xu Shuiliang is a native of Nanjing in his thirties. After graduation from college, he was employed by a pharmaceutical plant.

A veteran champion of democracy, Xu's devotion to this struggle dates back to 1975, when he displayed big-character posters in Nanjing streets. Among them was a poster entitled "10 questions and answers concerning socialism." He shocked the entire city of Nanjing with a denunciation of some then popular erroneous theories, for which he gained fame as a Li Yizhe-type person in Nanjing, and he was subsequently arrested by the local authorities. After his arrest, the local authorities originally planned to organize writers and hold meetings to criticize him. But this plan had to be abandoned lest public criticism expand his influence. He was later sentenced to a prison term, until he was rehabilitated and freed from prison in 1978.

After he was freed, Xu continued his theoretical research while writing articles for use by unofficial journals expressing support for the democratic movement. Many unofficial journals in various localities carried his articles in which he adopted the Marxist attitude of thoroughly analyzing the nature of the Chinese society while interpreting it in accordance with his own views. He is a theoretician of the democratic movement. Among his articles are "The Process of Transition from Capitalism to Socialism," "Questions Concerning the State and Class," "Matters Concerning Unity and Contradictions," and "Problems of Socialist Distribution."

Yang Xiaolei is a champion of the democratic movement and a worker in Hangzhou.

Yu Weimin is a champion of the democratic movement in Nanjing.

Beijing University's Hu Ping [5170 1627] and Fang Zhiyuan [2075 1807 6678] Under Pressure

Although a large number of persons responsible for the unofficial journals have been arrested in China, the democratic movement still shows no sign of being crushed. Although unofficial journals in various localities have reportedly been closed down, RESPONSIBILITY, organ of the National Federation of Unofficial Publications, remains in operation. In the face of severe tests, the democratic movement has demonstrated an incredible vitality!

Also under pressure are Beijing University students Hu Ping and Fang Zhiyuan, who at the end of 1980 sent a draft "election law" to the National People's Congress for consideration while collecting signatures in support of this draft. Now at stake is their status as students. Apart from the previously mentioned cases of persecution, college students throughout the country are being mobilized to study "document No 9."

Tao Sen [7118 2773] Expelled From Hunan Normal College

Tao Sen was a candidate during the 1980 election campaign in Hunan who lodged a protest with the party committee of the Hunan Normal College for violating the election law. Since winning victory in this struggle, he has been the subject of retaliation and has been ordered to leave the college, while no action has been taken against the party committee for violating the election law. Liang Heng [2733 1854], another student representative, received the same treatment. Also affected is his wife, who is of foreign nationality and who has been forced to resign from a college position. Measures have also been taken to isolate them from society so as to prevent this story from leaking to the public.

It has been reported that most of the persons associated with defunct unofficial publications in various localities were summoned to the public security bureau offices for interrogation with the aim of persuading them to give up their journalistic careers and of gathering more information on the democratic movement.

SELF-SACRIFICE DEMANDED OF COMMUNIST PARTY MEMBERS

Hangzhou ZHEJIANG RIBAO in Chinese 14 Aug 81 p 4

[Article by Wang Zhifang [3076 1807 5364]: "Party Members Should All Have the Spirit of Self-Sacrifice"]

[Text] Comrade Hu Yaobang [5170 5069 6721] in his "Speech at the Meeting in Celebration of the 60th Anniversary of the Founding of the Communist Party in China" said: "For us Communists, serving the people means primarily dedication to the cause of communism and readiness to sacrifice ourselves for the interests of the people." That is to say that the brilliant spirit of communism is self-sacrifice is a manifestation of a communist's profound understanding and great knowledge. Every party member must have this type of selfless and fearless revolutionary spirit.

The Communist Party member's spirit of self-sacrifice is the most fundamental phenomenon in our party's wholehearted purpose of serving the people. Just by depending on this spirit of self-sacrifice has enabled our party to be victorious over all difficulties and obstacles, to go through the three great mountains, and establish the People's Republic. After liberation, our party widely held this spirit in esteem and spread its reputation for worthiness everywhere, educating and encouraging the multitudes.

Some people say that this spirit of self-sacrifice on the part of Communist Party members was necessary in the extremely rude environment in which the party was established, but that now and in the future, without an opposing class it is obviously not so necessary. But, in fact, this is a misapprehension. We say that while this era of peaceful construction does not require us to pay out such a large-scale price in lives (although in particular times and environments there still has to be that kind of sacrifice), in it we do frequently encounter the contradiction between public and private interests. For example, as part of economic readjustments some enterprises need to cease production or move, some comrades must change careers, and other comrades lose some income. These are kinds of sacrifice. In the immediate future housing for the masses will be in short supply, and the country, for a time, will be unable to fill the demand and so, in this area, we party members must work to put the people first and ourselves after. That also will be a kind of sacrifice. Because the remote areas require strengthened leadership, some cadres will be sent there from the cities or other more comfortable posts. This is a kind of sacrifice. That there are limited promotion openings requires our comrades to show a modest style which is also itself a kind of sacrifice. Being righteous and brave, helping those in distress and combating evil even at the risk of injury, are also kinds of sacrifice.... It can be seen that the communist's spirit of self-sacrifice manifests itself in many ways, ways that recognize that in this era of peaceful construction we can lose the revolutionary spirit and not share the bitter and sweet of life with the masses and in our thoughts and actions put individual profit above benefiting the masses, which is entirely wrong.

Still there are some comrades who worry: because the "cultural revolution" led to 10 years of internal disorder, the party's excellent traditional work style was poisoned so that it will be difficult for us now to restore and expand the spirit of self-sacrifice! This kind of anxiety is understandable, but one ought to see that although our excellent party spirit was severely abused by the counterrevolutionary clique of Lin Biao [2651 1753] and Jiang Qing [3068 7230], there are still a good many excellent Communist Party members who have preserved and enhanced the revolutionary spirit that willingly sacrifices individual benefits for the people's good, even to the point of giving up ones own life. As for the martyrs Zhang Zhixin [1728 1807 2450] and Shi Yunfeng [0670 0061 1496] who were sacrificed for the truth, were they not dedicated heroes of the revolution and remarkable Communist Party members? At the same time one must also see that after the smashing of the "gang of four" and especially since the Third Party Congress, with rebellion put down and order restored, the spirit of self-sacrifice, in the face of insults and rejection, has been restored. Everywhere within the ranks of our party's cadre, comrades who for the sake of party and people "worry before anyone else worries and are happy only after everyone else is happy" are appearing. Their spirit of self-sacrifice is the hope of the party for reviving the nation's institutions.

That party members should all have the spirit of self-sacrifice is not to deny party members an appropriate individual reward. It is to say that in every matter before us we ought to think about and pursue what benefits the party and the people, we should thoroughly eliminate the "when the times are peaceful and happy all come for profit, when the world is shaken all go for profit" viewpoint of the exploiting class and the "without profit I don't get up early, if there is a profit I look forward to the sunrise" type of individualistic behavior. In fact, originally to be a party member meant to endure more hardships than other people. Moreover, in our socialist society, if you sacrifice for other people then at the same time other people will sacrifice for you. But party members should make more sacrifices than the masses in general, their sacrifices should be greater, and they should come first.

The revolutionary pathfinder Xiao Chunu [5618 2806 1166] has said: "It resembles a candle, lighted at the top and burning down to the bottom, it is constantly bright." Communist Party members, taking the world upon their shoulders, should have this "spirit of the candle," to offer unselfishly their own brilliance to mankind, even if it means their own death.

CITY OF NINGBO WORKS ON IMPROVING SOCIAL ORDER

Hangzhou ZHEJIANG RIBAO in Chinese 18 Aug 81 p 1

[Article by Shen Gongxuan [3088 0501 5503]: "In the Jiangbei Ward of Ningbo All Areas Are Closely Coordinating To Put Into Practice Collective Management of Reforms in the Security of Society"]

[Text] Unified under the leadership of the ward council, each department of the ward government and the judicial organizations of the Jiangbei Ward of Ningbo have cooperated closely to give direction to society and to mobilize the masses collectively to manage and improve social order, achieving laudatory results. Up to July of this year, the rate for major crimes compared with the same period last year fell 50 percent; cases of gang violence also declined at a great rate.

The ward has emphasized youth and children in its improvement of social order and peace and used legal education as the major tool, greatly expanding ideological and political work. Over 500 unemployed youths in the ward were organized to study the socialist legal system, current political affairs, scientific culture, and to receive instruction in many types of commercial skills so as to improve their qualifications to enter schools or obtain jobs. Because they have people's attention ideologically and have been given instruction educationally, these youths have gone down the road ahead of them full of faith and hope and, usually, they also have participated positively in public beneficial labor and the defense of law and order. Recently they have also propagandized vigorously the spirit of the 6th Plenary Session of the 11th CCP Central Committee, developing the "5 lectures" and "4 beauties" campaigns. They organized an exhibition, showed slides at a movie house, and conducted some lively legal education. Using all means, they also enlarged the place of the literary movement, enriching its contents thereby enriching and giving variety to the nonworking lives of young workers and the vacation lives of students, improving the physical health of both groups. Each street also organized public security personnel, block and resident cadre, and retired workers to participate in an educational assistance group that positively improved the work of ideologically transforming delinquent youths and strengthening the legal education of persons released from labor reform or restored from labor education, transforming negative factors into positive factors.

Simultaneously with strengthening educational work, the ward strengthened the detection and disposition of criminal cases, according to the law, severely and quickly attacking the activities of criminal offenders. Public security, procuratorate, and judicial organizations forcefully strengthened the ideological and occupational development of the rank and file security and judicial personnel. The police's efficiency in handling cases and the quality of their work has been continuously raised. In important cases or criminal cases involving more serious harm, the three organizations have closely cooperated, each proceeding with the critical work and greatly raising the momentum in the handling of criminal cases and reducing the time taken to handle a case successfully. Up to July of this year, for the whole ward the solution rate for serious crimes reached 100 percent, affairs of juvenile gang violence fell sharply, and the success rate for criminal cases in general rose 30.6 percent as compared with the same period of last year. The procuratorate and the courts have both filed indictments and conducted trials in a timely fashion, always concluding cases within the time limits set by law, thereby suppressing the arrogance of the criminal elements.

The ward also established and put into operation at each of the three levels, ward, street, and block, mutual defense organizations that practiced united leadership and direction, strictly administered public security, thoroughly strengthening the work of preserving the peace. The various units designated nearly 400 people to take part in these mutual defense ranks. Military personnel stationed in this area assisted positively and cooperated closely. Day and night these mutual defense groups patrolled the major thoroughfares, little alleys, public areas, and major transportation routes to maintain social order. According to statistics, up to July of this year, these mutual defense patrols had arrested 40 criminals of all kinds, and 4 escapees from labor reform and labor education; 120 criminals of various sorts were investigated and tried. Each street and block also established a system of mediators and people's juries, equipped security personnel, and used extensively the "security gate" movement. Some blocks also separately organized and systematized a "public security covenant" for mutual surveillance. The public security organizations intensified their basic work so that in a timely fashion and responding to social conditions, the whole ward produced a strict network of mutual defense of public security, and caused criminal elements not to lightly undertake reckless actions.

OVERSENSITIVITY TO 'CRITICISM' CAMPAIGN REBUKED

Beijing BEIJING WANBAO in Chinese 29 Aug 81 p 3

[Article by Shi Hua [4258 0553]: "Mistaking the Reflection of a Bow in a Cup for a 'Stick'"]

[Text] In discussing how some comrades turn pale as soon as they hear of criticism, the article "Lu Xun on Literary Criticism" in the "Words of a Hundred Schools" column of WANDAO used the analogy of "mistaking the reflection of a bow in a cup for a 'stick.'" This use was very appropriate.

"Mistaking the reflection of a bow in a cup for a 'stick'" of course evolved from the idiom "mistaking the reflection of a bow in a cup for a 'snake.'" That idiom is ordinarily something with which everyone is well acquainted. But some young comrades may still not know it, so there is a need to give it a brief introduction here.

It is recorded in "Biography of Le Guang," Volume 43 of "The History of the Jin Dynasty": "There was once an intimate guest who failed to return for a very long time. When Guang asked him why, he replied: 'When I was at your table last time, you granted me a cup of wine. Just as I was about to drink it, I saw a snake in the cup. This was rather loathsome to me. After I drank it, I became sick.' At that time, there was a horn hung on the wall of the guest hall of this magistrate of Henan which was painted in the form of a snake. What he took as a snake in his cup was nothing more than the reflection of this horn. Guang therefore again set a table at the previous location, and when the drink was given to the guest, he asked him: 'Do you not see something in your cup again?' The guest replied: 'I see the same thing as I did last time.' Guang thereby told him what was the matter. The guest's mind suddenly opened up, and his long illness was instantly cured."

What is said here has to do with "mistaking the reflection of a bow in a cup for a snake." Some say that the "horn" was actually a bow, because there has been the usage of a "hornbow" since antiquity: others say that it was a musical intrument used in the army in ancient days. I believe the latter interpretation. The story of someone really mistaking the reflection of a bow in a cup for a snake was told in FENGSU TONGYI [General Implications of Certain Customs] by Ying Shao [2019 0508] of the Eastern Han Dynasty.

Ying Shao's grandfather Ying Bin [2019 1755] once invited Du Xuan [2629 1357] to drink with him. A red bow was hung on the wall; as the bow was reflected in the cup, it looked like a snake. Du Xuan was possibly somewhat nearsighted and could not see very clearly. He became scared, but he was Ying Bin's subordinate and dared not decline the drink. But once he drank that cup of wine, Du Xuan went home and got sick. He felt pain in his chest and abdomen and could not eat; all efforts failed to cure him. Later, Ying Bin went to see Du Xuan and only then learned that Du Xuan thought the snake was making trouble in his stomach. Thus, Ying Bin invited Du Xuan back to the same place and poured another cup of wine to let him see the "reflection of the snake" in the cup and then also let him see the bow on the wall. Du Xuan's sickness was immediately cured.

It looks like Le Guang's guest and Du Xuan were both oversensitive. But their fear was by no means unfounded. Even if they did not experience it personally, at least they had heard about how harmful a poisonous snake was. The problem was that they lacked a serious, careful, observant attitude. It was really not worth it for them to become scared into sickness without getting a really clear grasp of the situation.

Worthy of praise are Ying Bin and Le Guang. They both held a caring attitude toward their relative and subordinate. After perceiving the other's mental problems, they did not laugh at or satirize them, nor did they reason with them in the abstract, but they let the other person first see the reality. This is a very good method of education. Today, those comrades who think that they see a stick as soon as criticism seems to be in sight, and who take it as a "signal" of some movement underway, would do well to take a good look at reality first. Have several months not passed since the so-called "signal" you saw? Has the thing "come," after all, which you thought was "coming" again?

Materialism tells us that a judgment can only be made on the basis of facts; a judgment based on "reflection," whether because of impatience or as a result of "lingering fear," is liable to cause one to suffer.

LIAONING, HEBEI CONFERENCES EMPHASIZE IDEOLOGICAL WORK

Self-Criticism by Municipal Leader

Shenyang LIAONING RIBAO in Chinese 3 Sep 81 p 1

[Report by He Shanzhen [0149 3790 3791]: "First Secretary of Shenyang Municipal Party Committee Carries Out Self-Criticism Over Soft, Impotent Ideological Leadership; Asks Cadres at Various Levels To Encourage Healthy Revolutionary Trends and Do a Good Job of Fostering Party Workstyle"]

[Text] In the forenoon of 1 September, the Shenyang Municipal Party Committee convened a meeting of party-member leading cadres from units above county and corps level. Li Tao [2621 3447], first secretary of the CCP Committee of Shenyang Municipality, took the lead in carrying out self-criticism over the matter of the dissipated, soft condition of the municipal party committee's ideological leadership and the matter of deviation in the party's workstyle in organs at the municipal level. He thereby set himself as an example for the participating comrades.

Comrade Li Tao said that since the beginning of this year, because the municipal party committee has gradually corrected leftist errors in guiding ideology, the political situation and the economic situation in Shenyang Municipality has generally been fine. But several recent incidents also have reflected how soft and impotent the municipal party committee's leadership has become. For instance, without prior appeal for approval or report, the service department of the gas company undertook to suspend its gas supply to the Shenyang electric bulb factory, resulting in suspension of production at the factory. After the incident, several secretaries and the mayor gave the gas company the opportunity to carry out relevant repair and resume the gas supply, but the gas company was unmoved. [In another matter,] the long-distance telecommunications bureau had taken possession of a clubhouse sometime ago. The municipal party committee made a decision, and several secretaries on several occasions undertook to urge to vacate, but the party committee of the long-distance telecommunications bureau dragged on without taking any immediate action. These problems illustrate that the leadership of the municipal party committee has fallen into a soft, impotent state. We must conscientiously launch criticism and self-criticism sessions in order to get rid of such unhealthy things.

Comrade Li Tao also made a self-criticism over the existence of unhealthy trends in organs under the jurisdiction of the municipal party committee. He said that in order to revive and give full play to the party's fine tradition and workstyle, we must first of all do a good job of correcting the workstyle of the leading organs. Today there also is evidence of favoritism among organs directly under the jurisdiction of the municipality; in supplying commodities in urgent demand and short supply, such as beer and cigarettes, some markets have adopted a "special distribution" approach, which has resulted in a delay in domestic supplies. This is a dislocation with respect to the masses; in such a case, if you wish to criticize others, you won't be able to stiffen your own back. There are not too many instances like this, but they are very harmful. If such trends are allowed to spread, things will be hard to handle. We can no longer look but fail to see such phenomena. Insofar as unhealthy trends are concerned, we must dare to restrain and control them and do a good job of fostering our party's workstyle in a down-to-earth way. Only thus can we grasp and achieve practical results.

Comrade Li Tao asked leading cadres at various levels not to be afraid of launching criticism sessions, but to make criticism and self-criticism really the good habits in our political life in order to solve existing problems in a practical way.

'Wash Away Political Dirt'

Shenyang LIAONING RIBAO in Chinese 6 Sep 81 p 2

[Article by Zhang Rufu [1728 0320 1382], Secretary of Yuanbao District CCP Committee, Dandong Municipality: "Master the Weapon of Criticism; Cleanse Away Political Dirt"]

[Text] Criticism and self-criticism constitute our party's heirloom and are a powerful weapon for overcoming the enemy and achieving victory. The "Resolution" passed by the Sixth Plenary Session of the 11th Party Central Committee fully demonstrates the spirit of criticism and self-criticism and has set a brilliant example for the whole party. The document not only summarizes scientifically the major party events since the founding of our state but also provides a correct appraisal of the position of our great leader Comrade Mao Zedong in relation to the Chinese revolution and also of his merits and demerits. Such an open, aboveboard, and practical spirit of adhering to the truth and correcting mistakes suggests our party's prosperity and development, and it indicates to the whole world; the Communist Party of China has great hope.

Marxism tells us that no proletarian party or leadership personality can avoid having this or that kind of defects and faults. The question is whether such a party or personality can reach the point of admitting one's mistakes when mistakes are made and correcting one's mistakes when mistakes are discovered, so that, through criticism and self-criticism, the political dirt is cleansed from oneself and one's revolutionary youth is thus forever preserved. More than once, Comrade Mao Zedong admonished the whole party to do its best to guard against arrogance and maintain clear thinking. He wanted party members to listen regularly to criticism by the masses and to continue to eliminate erroneous ideas just as they would wash their faces. Practice has fully proved that this is an irrefutable truth. Whenever we pick up this weapon of criticism and self-criticism, daring to correct our mistakes and faults in a sincere and open manner, those above and below in the whole party are always united and the undertakings of the party develop smoothly; but whenever this weapon is abandoned, we deviate from the masses, deviate from reality, and cause the party's undertakings to suffer losses. While comprehensively and fairly appraising Comrade Mao Zedong's great historical merits, the "Resolution" at the same time analyzes, in the manner of seeking truth from facts, the mistakes made by this great Marxist, pointing out that in his late years, because of complex social and historical reasons and the fact that his own prestige had gradually reached a peak, he gradually became arrogant and gradually drew apart from reality and from the masses, his subjectivism and personal and arbitrary workstyle became more and more serious, and he more and more imposed [his will] on the Party Central Committee. All this led to the continued weakening of, and eventual damage to, the principle of collective leadership and democratic centralism in the political life of the party and the state, and it brought about serious losses to the cause of the party. This is a painful lesson. Through the summing up of this lesson, the whole party is able to recognize anew how extremely important to our party is the weapon of cricitism and self-criticism. In this sense, this will constitute a momentum for us to continue to advance and a wealth for our party building.

At this great historical turning point today, as our party engages in construction of the four modernizations, reviving and giving scope to the party's fine tradition and launching criticism and self-criticism sessions are a very urgent and salient matters. Since the smashing of the "gang of four," and especially after the Third Plenary Session of the 11th Party Central Committee, along with the revival of the party's fine traditions and the strengthening of democracy within the party, the atmosphere of criticism and self-criticism has become increasingly pronounced. Many leading cadres have gone deep among the masses, humbly listened to the opinions of various sides, carried out self-criticism, and gained the support of the masses as well as their love and esteem. On the other hand, because of the sabotage of Lin Biao and the "gang of four," and because of the influence of unwholesome trends in society, the launching of criticism and self-criticism sessions today still encounters great obstacles. Some cadres like to listen to "minor criticism" but cannot bear to listen to "major criticism"; some can listen to "remote criticism" but not to "close criticism"; and some listen only to abstract criticism but cannot listen to specific criticisms. Some simply cannot tolerate criticism at all; they are arrogant and supercilious and overbearing with others. When they hear compliments, they become conspicuously pleased, but when they hear harsh remarks, their eyes begin to bulge and they even ignore party discipline and the laws of the state and proceed to retaliate. This is very dangerous. If such people do not sensibly convert [their ways], they are bound to trip up.

Through study of the "Resolution," comrades of our district party committee have conscientiously reviewed our work during the past few years and have formulated measures to strengthen our study and improve our workstyle. We are determined to place ourselves at all times in the position of a common party member, accept the supervision of the people and the collective, guard against arrogance, preserve our revolutionary youth forever, and forever work as the people's public servants.

Prefecture First Secretary's Remarks

Shijiazhuang HEBEI RIBAO in Chinese 27 Aug 81 pp 1, 3

[Report by Liu Zhihua [0491 1807 5478], Zhang Huifeng [1728 1920 1498], and Xin Yandong [6580 1750 2639]: "First Secretary of Baoding Prefectural Party Committee

Xing Chongzhi [6717 1504 2535] Maintains Contact With Realities in the Prefecture and Sums Up Experiences and Lessons; Continue To Cleanse Away Leftist Ideas, and Complete the Historical Task of Returning to Order from Disorder"]

[Text] From 30 July to 14 August, the Baoding Prefectural CCP Committee convened a study meeting in which more than 500 responsible comrades from the standing committee of the county party committee and departments, divisions, commissions, offices, and bureaus under the direct jurisdiction of the prefectural party committee took part. Participating comrades kept contact with reality while studying the "Resolution" passed by the Sixth Plenary Session of the 11th Party Central Committee and Comrade Hu Yaobang's "1 July" speech. Using the "Resolution" as their norm, they conscientiously sorted out the influence of "leftist" and other erroneous ideas, inspected their work, summed up their experiences, studied problems, proposed measures to solve the problems, and achieved the expected goal of unifying their thinking and looking forward in unity.

During the process of study, they kept contact with the reality of their own thinking, analyzed certain historical incidents in the manner of seeking truth from facts, and unified their ideological perception under the spirit of the "Resolution." Many comrades said: In the past, we lacked the spirit of seeking truth from facts in our appraisal of Chairman Mao ideologically, and we also lacked the spirit of seeking truth from facts in understanding ourselves. As for our perception of the "Cultural Revolution," the "Resolution" puts it very clearly: The "Cultural Revolution," the "Resolution" puts it very clearly: The "Cultural Revolution" was an internal disturbance erroneously launched by the leaders and utilized by counterrevolutionary cliques; it brought serious calamities to the party, the state, and the people of the various nationalities. Today, we recognize that if we leave aside this general premise of "internal disturbance," if we leave aside the calamities suffered by the people, and we still vie with each other to see who is better or who is right from a personal standpoint or from the standpoint of a small circle, this will evidently not be a reflection of our high degree of consciousness, of our high level, or of our strong party character. On the contrary, this would be a reflection of our low degree of consciousness, our low level, and our poor party character. Everybody indicated that he was ready to treat historical and realistic problems and to consider problems of the state and the people from the standpoint of the party and the people, to liberate himself from the small circle of personal feelings of gratitude or resentment, and to strengthen his consciousness of winning glory for the party and of working in the interests of the people.

During the process of study, everybody also analyzed the work of his own county or department in the manner of seeking truth from facts. Everybody was of the opinion that the turmoil in Baoding Prefecture during the "Cultural Revolution" was more serious and lasted relatively longer. After the smashing of the "gang of four," and especially since the Third Plenary Session of the 11th Party Central Committee, great results have been achieved in various aspects of work, and a situation of stability and unity has been secured. But because of influence by the "left," the uncovering, criticizing, and inspecting tasks in some localities expanded. The reason for the expansion was because "leftist" influence was still present in the guiding ideology in the first place, because boundaries were not drawn clearly in the second place, and because factionalism interfered in the third place. The responsible person of the previous provincial party committee said that, except in Baoding, everyone in Hebei resisted the "gang of four"; this does not correspond to reality and is "leftist" stuff. Taking the question of factionalism as the question of class struggle and taking the attitude toward the responsible person of the previous provincial party committee as the standard for judging right and wrong were also important reasons for people to make those mistakes. Through study, all participants have unified their understanding; the ideological lumps some comrades have grown for a long time have become dissolved, the wounds brought about by leftist mistakes have gradually healed, and a momentum of surging vigorously upward and of striding assertively forward has already begun to appear.

At the conclusion of the meeting, Baoding Prefectural Party Committee First Secretary Xing Chongzhi made a summation speech on behalf of the prefectural party committee. He first of all affirmed how, since the smashing of the "gang of four," and especially since the Third Plenary Session of the 11th Party Central Committee, party organizations at various levels, the vast ranks of cadres, and masses throughout the whole prefecture have done a great deal of work in returning to order from disorder, cleansing among leftist ideas, rectifying unjust, false, and erroneous cases of litigation, checking up on the "three kinds of people" and "four kinds of people," readjusting the leading groups, and solving questions relating to the exposure, criticism, and inspection of remnant problems, as well as to the development of industrial and agricultural production, and have achieved very great results. Then he pointed out they because the period in which the leftist ideology endured was rather long, its influence was rather deep, and its sphere was quite broad, plus the fact that the responsible person of the previous provincial party committee resisted the carrying out of the line, principles, and policies of the Third Plenary Session of the 11th Party Central Committee, with the result that no discussions on practice as the criterion for testing truth were seriously launched, the schedule for returning to order from disorder and for the cleansing away of leftist ideas in our prefecture has been affected and the speedy realization of the spirit of the Third Plenary Session has been hampered. Thus it is necessary to spend a great deal of energy and a great deal of effort to continue to cleanse away leftist ideas and complete the historical task of returning to order from disorder. Comrade Xing Chongzhi emphatically proposed, in view of the actual situation in Baoding Prefecture, that we must seriously solve problems in the following areas.

First, continue to eliminate the ideological influence of "the two whatevers." The "Resolution" differentiates between Mao Zedong Thought and the mistakes Comrade Mao Zedong committeed in his later years, repudiates the theory of uninterrupted revolution under the dictatorship of the proletariat, criticizes personal worship, and explicates the Marxist theories concerning leadership, political parties, and the masses; this serves thoroughly to overthrow the viewpoint of "the two whatevers." But in our actual life, it is by no means easy to adhere to seeking truth from facts and to eliminate the influence of "the two whatevers." In our Baoding Prefecture, such thinking as "only the book counts" and "only the superior counts" continues to show up in our actual work, and there is a great tendency to carry out directives from above blindly. In passing judgment on what is right and what is wrong, some comrades use as their criterion not social practice but "the book," or the speech or a certain directive of a certain leader. They place accountability to the higher level in opposition to accountability to the masses. This is bound to lead them to erroneous conclusions, and it becomes forever impossible for them to secure improvement from historical lessons. If we fail to break through the constraint of "the two whatevers" and fail to break the fetters of "the two whatevers," the historical cases of unjust, false, and erroneous ligitation cannot be rectified, the internal turmoil of 10 years of "Cultural Revolution" cannot be negated, negative results brought about by the "Cultural Revolution" cannot be eliminated, the large contingent of old cadres cannot come forth to work again, "leftist" mistakes cannot be corrected, and the party's glorious tradition cannot be revived and developed. Thus we are liable to proceed along the road of "leftist" mistakes right to the very end. Because of this, we should resolutely discard the thinking of "the two whatevers," insist on analyzing all major events that occurred in our locality and our unit with the spirit of the "Resolution," affirm or negate them in the manner of seeking truth from facts, and dispose of them decisively. Only thus can we accomplish the tasks of returning to order from disorder in our actual work.

Second, eliminate the ideological influence of "taking class struggle as the key link." An important aspect of the fact that over the years leftist mistakes have occurred in the guiding ideology of our party is the erroneous appraisal of the situation of class struggle in our country and the resort to an escalation of class struggle. During the "Cultural Revolution," it was even characterized as the great political revolution of one class overthrowing another class. Because of the very deep influence of this erroneous theory and erroneous practice, some of our comrades inadvertently tend to follow the habit of taking the various political movements of the past as struggles of the proletariat against the bourgeoisie, struggles of the socialist path against the capitalist path, and struggles of the correct path against the erroneous path. And in theory, too, this has been the case--that is, they usually regard themselves as proletarians and regard others as bourgeois; they think that what they themselves are following is the socialist path and that what others are following is the capitalist path; and they designate what they are carrying out as the correct line and what others are carrying out as the erroneous line. This serves to make an invisible demarcation among our people and to lead to discrepancies in people's perceptions and to disunity in their work. We should carry out a concrete analysis of concrete problems, and not regard all things and all problems as matters of class struggle. Of course, when we say we no longer need to "take class struggle as the key link," we do not mean that there is no longer any class struggle; class struggle continues to exist in certain realms and requires us to correctly analyze and handle it according to the spirit of the "Resolution."

Third, overcome the idea about someone being "always correct." During the "cultural Revolution," this idea that someone was "always correct" was employed at random. People called themselves leftists, thinking that only they were revolutionaries and that only they were leftists. This contributed to the theory of someone being "always correct." In Hebei, among those representatives who were "always correct," the principal responsible person of the previous provincial party committee was one of them. We should absorb lessons from his mistakes. Wishing to be "always correct" also had its influence in Baoding Prefecture. In the past, those who had supported so-and-so were always taken as being correct, and those who had opposed so-and-so were always taken as being erroneous. Today, once the mistakes of the principal responsible person of the previous provincial party committee are exposed, some comrades in turn assume themselves to be those who opposed so-and-so and thereby they look upon themselves as having been "always correct." Actually, none of these attitudes can be said to correspond to reality. During the past 20 years, our party committed leftist mistakes in its guiding ideology. "The movement of the Great Proletarian Cultural Revolution" was completely wrong. Then how can anyone who participated in the "Cultural Revolution" turn out to have been "always correct?" A communist should seek truth from facts and remain open and aboveboard. We should adhere to what is good for the interests of the people and to correct what is mistaken in the interests of the people. We should be able to treat people in the manner of one dividing into two, and we must furthermore be able to treat ourselves in the manner of one dividing into two, regularly inspect our thinking and our work with the method of criticism and self-criticism, and brush the political dirt from ourselves.

Fourth, eliminate the remnant poison of "drawing the line according to the people involved." "Drawing the line according the people involved," along with the idea about someone being "always correct," is an offspring of the "Cultural Revolution." It is a reflection of the idea that someone is "always correct" on the organizational line. Such influence has not yet been eliminated even to this day. But there are three most salient manifestations of this at present: one is factionalism, as people look at problems not from the standpoint of the party but from the small circle of this or that faction; another is that, in their organizational life, people resort to sectarianism and not universality; and the third is personal attachment, as people attach their own destiny to the person of a certain leader, taking party cadres as this person's men or that person's men. For a long time an incorrect trend has existed: When the party wishes to transfer a cadre's work, he refuses to go and the receiving unit thus refuses to accept him. Some people treat the transfer of cadres not from the principle of party character but always from the old-fashioned factionalist point of view. When others are transferred, their thinking also begin to waver along with them; thus they become active everywhere in order to fish out information. They conjecture at random, discuss the matter with gusto, and spend all their energy on it! Also, once a cadre is transferred, some inquire a little here, talk a little there, and stir up trouble everywhere: This is another factor that affects the unity between the higher level and the subordinate level and among comrades. In still another example, once a cadre is transferred, some persons immediately say that he has committee some mistake or he has some problems, etc. All of these are phenomena that should never exist, but they are a reflection that the negative consequences of the "Cultural Revolution" have not yet been eliminated. We must eliminate the influence of "drawing the line according the people involved" and restore the party's organizational work under the party's glorious tradition and correct organizational principles.

In order to speed up the pace of returning to order from disorder in Baoding Prefecture, to make a go of our economic work and our spiritual civilization, and to build the ranks of the cadres into a strong leading force guiding the people of the whole prefecture to carry out smoothly the construction of the four modernizations, Comrade Xing Chongzhi also made concrete demands concerning the work of the readjustment of leading groups, the close grasping and proper handling of our economic work, and the fostering of good social customs and other similar matters.

PROPER APPROACH TO STUDY OF FOREIGN TECHNOLOGY NEEDED

Beijing BEIJING WANBAO in Chinese 10 Sep 81 p 3

[Article by Gu Zhaoji [7357 5128 1015] in "Words of a Hundred Schools" Column: "Scornful Eye, Covetous Eye, and Envious Eye"]

[Text] In the old society, some people always said that "the moon of a foreign country is rounder than China's." This was typical foreign-worship thinking. After liberation, the Chinese stood up; in the face of the imperialist forces of aggression, they calmly confronted them with raised eyebrows, standing erect and fearless. The pitiful complexion and sense of inferiority of the sick man of the East in the past were all forgotten. The magnificent stanza "Facing the ocean and looking at the world with scornful eye" most fully exemplifies such great national fortitude and dauntless revolutionary spirit.

There is also another kind of scornful eye. As we recall, the Qing government called itself the "Celestial Dynasty," looked down arrogantly upon everything, closed the country to international intercourse, assumed a ludicrous air of conceit, resisted the workd's civilization, and took even trains and railroads as monstrosities, intending to throw them into the sea. In the end, it sustained the blows of imperialism's foreign rifles and guns. Hence, blind arrogance turned into blind self-denigration, and it lay prostrate at the feet of the powers.

Victory is bound to bring about pride. The great victory of China's resolution and construction also put the heads of some comrades in the clouds. They looked upon themselves as persons who could accomplish everything, and they also looked at everything capitalist with a scornful eye, adopted a nihilist attitude, imprisoned themselves in a world of backwardness, and thereby seriously hampered our pace of advancement and speed of construction. In order to change our backward outlook and catch up with the world's advanced level, we must import advanced science and technology and study other countries' advanced experiences. Hence, our door to international intercourse has been thrown wide open, and many comrades have been working diligently at carrying out exchanges with foreign countries and importing technology. Along with this, to some people there has also been the appearance of a colorful world never before seen; there sense of admiration and sense of inferiority welled up involuntarily in their hearts.

A sense of inferiority tends to produce hallucinations. When one looks at the world through self-denigrated eyes, others always look 10 feet tall while one's own self always seems like a midget. Consequently, one exhibits the tendency of facing the ocean with a covetous eye and facing the ocean with an envious eye. When one sees things foreign, one becomes not only covetous but even envious. In the worst possible case, even the trash others have long buried in tombs or thrown onto the garbage piles may be embraced as treasures by some people.

We are not xenophobists, and we definitely do not object to studying the good things of foreign countries. Marxism and steam engines were both learned from foreign countries. But we cannot learn just anything; we cannot behave like country woman Liu Laolao entering the Grandview Garden once we catch a glimpse of the capitalist world, thinking that everything is just fine and praising unceasingly, drooling even over the life of slaves.

We are socialist builders, and we must have a basically analytical attitude toward the capitalist world. We cannot behave in such a way that "when we want to be cold we are willing to lie on ice, and when we want to be hot we are willing to sit in a steambath."

A man must have some spirit; a nation must do so all the more. A nation with backbone will never covet other people's things. A towering edifice starts from the ground. As long as millions of us can work together with one mind and one heart and can struggle hard, we are bound to be able to build a garden of happiness on our own ground according to our own design.

PARTY AND STATE

WORK OF EDUCATIONAL JOURNALS REVIEWED, PRAISED

National Work Forum

Beijing RENMIN RIBAO in Chinese 25 Sep 81 p 3

[Report by staff reporter Xiong Yongnian [3574 3057 1628]: "Party Journals Must Actively Launch Correct Criticism--Sidelights on National Work Forum on Educational Journals for Party Members"]

[Text] At the recently convened national work forum on educational fournals for party members, this reporter came to understand that educational journals for party members in many provinces and municipalities such as Shanghai, Tianjin, Anhui, Fujian, Hebei, Sichuan, Liaoning, Jilin, and Heilongjiang all pay great attention to commendation and criticism. They insist on taking commendation as the main approach, but they also launch criticism actively against unwholesome tendencies. In the 12 issues of ZIBU SHENGHUO [LIFE UNDER THE PARTY BRANCH], Shanghai in the first half of this year, a total of 143 manuscripts of a recommendatory nature were published, while in the same period 67 manuscripts of a critical nature were carried. Each issue included a familiar essay, four cartoons on familiar subjects, and critical sections such as "Warning of an Overturned Cart Ahead" and "Correct Your Mistakes When You Discover Them."

Critical articles are well received by the readers. ZIBU SHENGHUO, Tianjin, recently issued a letter to solicit readers' opinions and discovered that the sections most welcomed by them, are of a critical nature, such as "Make Party Discipline Strict," "The Warning Bell," and "Case Analysis." Readers often send in letters expressing support and encouraging the journal to launch critical discussions. Among the critical manuscripts published, half were provided by readers.

Eliminate Obstacles; Insist on Launching Critical Discussions

The head of the Bureau of Engineering and Communications of Yanting County, Sichuan, Li Dazhang [2621 1129 4545], was hospitalized on account of illness; deputy head Wang Zongru [3769 1350 0320] and other comrades purchased a great deal of expensive medical supplies from abroad in violation of regulations. They also let staff members of the bureau take turns visiting him in Chengdu, and booked two rooms at the guesthouse exclusively for themselves. After Li died of his illness, they further mobilized many people to stage a pompous funeral and to resort to feudal, superstitious activities. The whole extravagant operation cost more than 10,000 yuan of public funds, and its influence was very bad. ZIBU SHENGHUO, Sichuan, published a letter, an appendix on investigation and criticism, from a reader in order to criticize this kind of operation. But some people were not happy, alleging that this was "making a mountain out of a molehill," "getting at the living through the dead," etc. Wang Zongru also made accusations everywhere. The editorial department received anonymous phone calls which castigated the article as a rumor. At a meeting of county party committee secretaries convened by the provincial party committee, some even suggested that ZIBU SHENGHUO should not publish manuscripts critical of the incident. But in the face of such pressure, the editorial department did not cringe. They sincerely believed that correctly launching critical discussions in newspapers and journals is entirely justified. They therefore published five more letters from readers, in a continuation of criticism of this incident at the Bureau of Engineering and Communications of Yanting County. They relied on the support of the Commission for Inspection of Party Discipline and the prefectural party committee, and prompted the county party committee to handle this question seriously; they then reported the results of the handling.

Launching critical discussions in publications persistently requires determination and courage. From early last year to August of this year, ZIBU SHENGHUA, Tianjin, published a total of 107 critical manuscripts, of which many ultimately were published a total of 107 critical manuscripts, of which many ultimately were published only after multifarious efforts and struggles.

Help Others; Correctly Launch Criticism

How to launch criticism correctly? Facts must be accurate, attitudes must be sincere, the timing must be appropriate, and efforts must be made to observe equity and decorum and pay attention to results: these things are commonly understood.

Accuracy of the facts is the foundation. Before critical manuscripts are put out, editorial departments usually have made an investigation and a verification; only if and when the reported situations are true can the manuscripts be published. In order to assure the accuracy of the facts, to control the timing of criticism properly, and to strive to achieve better results, party journals in various places not only adhere to reliance on concerned party organizations by listening to their opinions before criticism is launched, but also show such critical manuscripts to those who are criticized and conscientiously listen to their opinions. ZIBU SHENGHUO, Shanghai, prepared an article criticizing the secretary of the party committee of a certain factory for having taken the initiative to assign good housing to himself. The original manuscript mentioned that the party committee secretary had taken a fancy to one suite on the housing distribution chart and thereby had erased the factory director's name and replaced it with his own name as the assignee. But after looking at the galley proof, the party committee secretary suggested that he actually erased two names, but that he did not change the namelist and only changed the original fine print into bolder print. Examining the distribution chart closely, the reporter discovered that this really was the case. He therefore had the opportunity to avoid misreporting the truth.

Party journals in various places pay great attention to helping others in order to carry out criticism in the manner of saving the patient while curing his illness. They do their best to launch sharp but not acrimonious criticism, to be unequivocal but yet leave some room for amendments, and to insist on principles yet give those criticized some quarter, so as to encourage those who have made mistakes to look forward. Through ideological and political work, they encourage those who are to be criticized to carry out self-criticism as much as possible. Emphasis in launching such criticism is usually placed on helping those criticized to correct their mistakes. It was learned that one party-member technician in Shungliao County, Jilin Province, had become ungrateful and was on the verge of abandoning the fiancee whom he had loved for 6 years. The girl reported the matter in a letter to ZIBU SHENGHUO, Jilin. After its publication in the journal, this incident aroused strong repercussions. The editorial department selected and published some of the letters from readers and also sent people to the county to help concerned departments work on the person being criticized. After repeated, patient education, this technician ultimately made up with his fiancee and got married this spring. ZIBU SHENGHUO, Jilin, published this news and the technician's self-examination at the same time. As soon as that issue of the journal came off the press, people just grabbed it and read it avidly, praising ZIBU SHENGHUO for having done a good thing.

Improve Work; Study Ways To Air Criticism

Party journals in various places have thought of a number of ways to strengthen and amplify the results of criticism. Some choose to make penetrating reports from the side on a negative character. The report in GONGCHANDANGYUAN [COMMUNIST], Liaoning, on gold thief Guang Jingchang [7070 2529 2490] is one which chose to dig deeply into the matter of to how, after he had stolen 800 taels of gold, he sneaked into the party; the educational effects of this type of handling are very good. Some seize one example and report it in a series of articles. In dealing with the incident of how Guo Yufeng [6753 3558 5358], director of the children's welfare institute under the jurisdiction of the municipal bureau of civil administration, let his son do evil and prey on the orphans, ZIBU SHENGHUO, Tianjin, issued five manuscripts from different viewpoints within half a year. It first exposed this question; then it published readers' reactions; the third time it published a report on how Guo Yufeng was punished and how his son was doubly sentenced heavily; on the fourth occasion it published the communique issued by the municipal party committee on this question, while at the same time it also published the story of three fine party members in this case who adhered to principles (through its commendation of these fine party members, it also exposed the matter of how some leaders of the bureau of civil administration had shielded Guo); and finally it published news on the children's welfare institute and two pages of photographs to reflect the conspicuous changes effected by leaders of the bureau of civil administration in their effort to reform the children's welfare institute after the case of Guo had been disposed of. The propagation of this incident, therefore, had its beginning and its conclusion. Readers' reactions turned out to be very enthusiastic.

Not a few readers hope to see responses to the criticism expressed. Accepting the opinions of the masses, the editorial department of ZIBU SHENGUO, Shanghai, set up a special section entitled "After Criticism by the Party Journal." In its No 9 issue this year, it published the article "Such a Family Head" to criticize how a party-member staff member of a certain warehouse of the municipal metal supplies company shielded his criminal, murderous son. Thereafter, it also published the reply from the warehouse party branch which reported that the party branch had carried out solemn criticism of that party member and meted out to him the punishment of being placed on probation within the party for a year, and it also organized all party members and staff members to study the report in ZIBU SHENGHUO. An investigation contained in a reader's letter published in its No 14 issue this year criticized certain party-member cadres residing at Lane 660, Macao Road, who made the mistake of ignoring the interests of the masses and building houses against regulations. The relevant departments had felt that if they wished to rectify the building activities that were in violation of regulations, the obstacles would be very great; hence, for a while no action was taken. Reporters therefore went to the lane, street, and district government's relevant departments to ascertain their plans. The district director convened a meeting of the relevant departments to study the matter and formulated rectification measures. Seeing that the problem had been taken care of and that the party's workstyle was being improved, readers became encouraged and their confidence was strengthened.

Summary Report

Beijing RENMIN RIBAO in Chinese 25 Sep 81 p 3

[Report: "Number of Educational Journals for Party Members in Various Parts of the Country Doubles; They Are Increasingly Being Run Well"]

[Text] At present there already are 24 provinces, municipalities, and autonomous regions in the country which print a total of 20 educational publications for party members; this number is double that of a year ago. These publications in the various places are all issued quite extensively and reach every party branch, totaling 5.6 million copies; this represents a 110-percent increase over the number of a year ago.

In the light of actualities, these publications propagate the party's line, principles and policies, the four basic principles, and basic knowledge about the party and about party regulations and party laws. They energetically exalt what is advanced, and launch critical discussions on unhealthy trends and illegal and undisciplined practices. Thus they have played a significant role in educating party members and in guiding the party's work at the basic level. Under the guidance of the Central Propaganda Department, a national work forum on educational publications for party members was held recently in Beidaihe, where participants exchanged experiences with one another and considered how to propagate and realize the spirit of the Sixth Plenary Session of the 11th Party Central Committee and the forum on questions on the ideological front from now on.

PARTY AND STATE

CASES OF CRITICISM AND SELF-CRITICISM REPORTED

Beijing RENMIN RIBAO in Chinese 5 Oct 81 p 8

Sun Yat-sen Criticized

[Commentary by Deng Weizhi [6772 0251 1807]: "Let's Start With XIANGTAO's [THE GUIDE's] Criticism of Sun Yat-sen"]

[Text] As the 70th anniversary of the 1911 revolution approached, I received Comrade Shao Chuanlie's [6730 0278 3525] new work "Sun Zhongshan [Sun Yat-sen]." After I flipped it open, my glance rested at the passage of XIANGTAO's criticism of Sun Zhongshan.

As the dawn of Sun Zhongshan's promotion of KMT-CCP cooperation first loomed, the well known Communist Ts'ai Hesen [Cai Hesen] [5591 0735 2773] somehow happened to publish an article in the party's organ XIANGTAO which criticized Sun Zhongshan: if he single-mindedly relied on imperialists and feudal warlords to manipulate affairs in order to resist violence, the vitality of his revolution would be lost; if he wished to make his revolution successful, "it would be necessary for him to forge an intimate association with the people on the one hand, and establish an irrevocable alliance with Soviet Russia on the other hand." Ts'ai Hesen also suggested that Sun Zhongshan audaciously oppose the two evil forces of imperialism and feudalism.

At a time when friendship between the two sides had just begun to bud, such a criticism was immediately launched; this could not but make one wonder what the effect would be. We cannot say that Ts'ai Hesen's framework of criticism was not lofty enough--because it was published in the party organ; nor can we say that the tone of his criticism was not sharp enough--lest "the vitality of his revolution would be lost." Still more significant was the fact that the person subject to this criticism was of great stature. Although, as a personality Ts'ai Hesen was by no means very small, but compared to China's No 1 great man at the time, he was indeed far smaller. Yet, the effects of the criticism were not at all bad. Sun Zhongshan readily accepted the good advice and made changes immediately correcting his mistakes. The three policies Sun Zhongshan put forward 1 year later, "alliance with Russia, accommodation of the Communists, and support and assistance to the workers and peasants," may not be said to have been due entirely to Ts'ai Hesen's criticism, but it is beyond any doubt that the advocacies of the two were almost identical in content.

As the common saying puts it, "When a man is not a sage, who can avoid making a mistake?" Actually, this saying is not entirely correct either. Even when a man is a sage, he would still make mistakes. In the eyes of the ordinary people, Sun Zhongshan could indeed be regarded as a great sage. But he had his faults, and these were: not enough attention paid to the strength of the workers and peasants, and not enough resolve exhibited in anti-imperialism. It was somewhat beneficial to have them criticized. When one criticizes, one must of course pay attention to methods. In Ts'ai Hesen's article, there were both sharp criticism and positive suggestions; the methods he used were fairly good. Sun Zhongshan was not a Marxist but a bourgeois democrat. If even a bourgeois democrat can treat criticism correctly, why should some of our own comrades be afraid of normal criticism?

In Beijing last month I heard a well known economist say that he had already made arrangements with another well known economist in preparation for their mutual criticism of each other in the newspapers. He also said that his purpose in doing so was to set an initial example for airing criticism, but he must make this different from the affectedly timid kind of criticism. I feel that this initial example was well set. When one expresses criticism, one must be confident and forthright. There are too many criticisms of the half-hearted kind nowadays. There are too many criticisms which are expressed half-willingly and half-hesitantly. There are too many criticisms which leave implications to people's conjecture. Of course, we cannot altogether exclude this as one of the methods for expressing criticism. But we must also promote the kind of criticism which mentions names and facts. Criticism and self-criticism is an old tradition of our party. We must let criticism become regular in time and general in space. When these two, regularization and generalization, are established, who would still pale when talking about "criticism"? And who would still take the reflection of a bow in his cup as "criticism"?

Images, Other's, One's Own

Beijing RENMIN RIBAO in Chinese 7 Oct 81 p 8

[Commentary by Yao Ben [1202 1149]: "Flashlight and Mirror"]

[Text] Flashlights and mirrors are articles used in our daily life; even children a few years old know how to use them. Apart from helping a walker at night to illuminate his path, a flashlight may also be put to many other uses; for instance, when a physician examines a patient for oral diseases he uses a flashlight to illuminate his mouth. In such a case, the patient of course listens to what the physician has to say and opens his mouth for him to examine it; if some disease is discovered, he also asks the physician to treat it with care. As for a mirror's uses, they are even more numerous; haircutting at a barber's shop and players putting on theatrical make-up both rely on mirrors. Women applying cosmetics and men shaving themselves must of course all use a mirror. When one's face is smeared with something dirty or develops some pimples or boils, he must likewise look at himself in a mirror in order to identify the dirt or where the inflictions are. Those who love to look at themselves in a mirror also evince different psychological states; one kind of people who look at themselves in a mirror always feel that they look very handsome and they therefore are inclined to secretly praise themselves: "What enchanting eyes!" Another kind of people, however, can look well at themselves in a mirror in the manner of seeking truth from facts; if and when they discover dust and dirt on their faces, they simply wipe them off honestly.

Such uses of the flashlight and the mirror often remind one of the weapon of criticism and self-criticism; how to use this weapon correctly also incurs quite some study. Some people only like to use their flashlight to shine on others and when they look at the defects and faults of others they often act like Ji Chang [4764 2490] learning how to shoot an arrow, i.e., by treating a louse as if it were the size of a cartwheel. On the other hand, while they are very strict in applying discipline to others, they are somehow unwilling to look at themselves in a mirror, and even when they do so, they tend to merely gloss over the defects they discover and treat them perfunctorily. When this kind of people criticize others, they often carry some subjective prejudice and cannot seek truth from facts; when they engage in self-criticism, too, they seek to exonerate their faults and camouflage their wrongdoing, and hide their illness from proper treatment. Criticism and self-criticism are the two sides of a single weapon which happens to provide the uses of both the flashlight and the mirror. Only those who are sincere and honest in following the spirit of self-criticism can humbly accept other people's well-intended criticism and correctly turn their flashlight on other people in the spirit of helping them. Criticizing a comrade is meant to help that comrade correct his defeats and faults; in doing so one must have the spirit of a physician taking the responsibility for his patient; anyone who only examines and diagnoses his patient but does not take responsibility for treating him, or who diagnoses the illness but prescribes heavy medication at random, can hardly be a good physician.

Can anyone be so stupid as to decline examination by a physician after he discovers his illness and has ask him to diagnose and treat him? But in real life, some of our comrades might actually do such a stupid thing with respect to criticism and self-criticism; they would tolerate little critical opinion, nor are they willing to really criticize themselves. There are also those who regard self-criticism as writing up a permit for travel for themselves; once they run through the routine, everything is forgotten. Hence they often look as if they are humble on such occasions, acknowledging all mistakes and severely scolding themselves; but in reality this is really deceiving themselves as well as others, an irresponsible attitude lacking any sincerity in repentance.

In using the analogy of the flashlight and the mirror, we are trying merely to cause comrades to reflect and consider how better to learn expertise in applying the weapon of criticism and self-criticism, to overcome their weak points, give scope to their strong points, prevent the pollution of political dust, protect the organic health of the revolutionary ranks, and thus do an even better job with the work on hand.

PARTY AND STATE

QUESTIONS, ANSWERS ON RESOLUTION ON HISTORICAL ISSUES

Harbin XUE LILUN [THEORY STUDY] in Chinese No 7, 1981 pp 13-22

[Article: "Questions and Answers on 'Resolution on a Number of the Party's Historical Issues since the Founding of the Nation'"]

[Text] What is the guiding ideology of the "Resolution on a Number of the Party's Historical Issues since the Founding of the Nation?"

Rich in content, the "Resolution on a Number of the Party's Historical Issues since the Founding of the Nation" unanimously passed at the 6th Plenary Session of the 11th Party Central Committee reviews the fighting course followed by our party in the past 60 years and summarizes the party's basic experiences in the 32 years since the founding of the nation. Then, what is its guiding ideology?

1. Expounding the Historical Position of Comrade Mao Zedong and Mao Zedong Thought. This is the key and foremost issue of the "Resolution." By means of the basic viewpoints of dialectic materialism and historical materialism, the "Resolution" scientifically expounds the historical position of Comrade Mao Zedong in China's revolution and the tremendous significance of Mao Zedong Thought as the guiding ideology of our party. Citing irrefutable facts throughout the document, it discusses Comrade Mao Zedong's great contributions to the revolutionary cause of China, the liberation of the oppressed peoples in the world and the progress of mankind. It points out that Comrade Mao Zedong was one of our party's founders and the main creator of the glorious Chinese People's Liberation Army. At China's most difficult moment, he was the first to discover the correct path for the revolution and, in the collective struggle of the party and the people, successfully integrated the universal truths of Marxism-Leninism with the concrete practice of China's revolution, summarized and created a series of new experiences, formulated the correct general strategy and produced a scientific guiding ideology adapted to China's conditions --Mao Zedong Thought.

Analyzing Comrade Mao Zedong's shortcomings and mistakes, especially his mistakes in the Great Cultural Revolution, the "Resolution," by seeking the truth from the facts, points out that, though he made serious mistakes in his late years, his merits, in terms of his lifetime, far exceeded his mistakes.

2. Seeking the Truth from the Facts and Evaluating the Right and Wrong and the Merits and Mistakes in the 32 Years since the Founding of the Nation. With a host of facts, the "Resolution" fully affirms our party's history since the founding of the People's Republic of China. It points out that, on the whole, it was our party which, under the guidance of Marxism-Leninism and Mao Zedong Thought, led all nationalities in the country to carry out the socialist revolution and make tremendous achievements, and laid the foundation for all future progress and development of China. At the same time, the "Resolution," with a Marxist attitude, makes a correct summary of the party's momentous historical events, especially the "Great Cultural Revolution," in the 32 years since the founding of the nation, comprehensively and fully analyzes the accuracies and errors of the party's guiding ideology in such events, and studies the subjective and objective reasons for the mistakes. It also fully affirms the lines and policies since the Third Plenary Session and the gradual establishment of a correct path adapted to China's national conditions for the building of a modern socialist power, and further points out the direction of the continuous progress of China's socialist cause and the party's work.

3. Seeking Unity of Thinking; Uniting as One and Looking Forward. The fundamental goal of the "Resolution" in making a scientific exposition and appraisal of Comrade Mao Zedong and Mao Zedong Thought and comprehensively and matter-of-factly summarizing the history of the past 32 years is to clarify the confused understanding, seek unity in the thinking of the entire party, entire army and all nationalities in the country, unite as one and look forward, and make a concerted effort in pursuing the four modernizations. Therefore, it devotes much space to the discussion of the nature of China's society and its major contradictions, points out the goal of struggle, and reveals the truth that only socialism will save China, that, without the Communist Party, there is no new China, and that likewise, without the Chinese Communist Party, there is no modern socialist China.

Xu Zhenqing [1776 2182 3237]

Why was the establishment of the socialist system the most profound and greatest social change in China's history?

The "Resolution" points out that "the establishment of the socialist system was the most profound and greatest social change in China's history and the foundation of all future progress and development of China." This thesis epitomizes the great significance of the victory of China's socialist cause.

Why was the establishment of the socialist system the most profound and greatest social change in China's history?

We know that ours is a great nation rich with revolutionary traditions. In the past, whenever unable to tolerate the rule of dark forces, the Chinese people always rose up and struggled courageously and attempted to make social reforms. In China's history of several thousand years, there were hundreds of major and minor peasant uprisings, resulting in the many changes of dynasties. Nevertheless, such uprisings failed to attain the goal of fundamentally changing China's dark rule. Due to the fetters of the old system, China's society long remained in a state of extremely slow development. Beginning in mid-19th century, it was gradually reduced to the status of a semi-feudal and semi-colonial society, suffering the ruthless exploitation, enslavement and plunder of the imperialist powers. Many Chinese with the determination to make China strong painstakingly searched for the truth of social changes. Those like Hong Xiuquan, Kang Youwei, Yan Fu and Sun Zhongshan wanted to follow the road of the West to make China powerful and prosperous. Nevertheless, their dream of emulating the West was broken and the social reforms attempted by them encountered failure time and again. Only after the birth of the Chinese Communist Party did China's revolution assume a new aspect. After the course of 28 years, the three big mountains were overthrown, and a new China was created.

For many years, there was never a regime in China's history where the people were the masters. Only with the establishment of the socialist system did the Chinese people truly become the masters of society. For many years, China often found itself in a situation of being all split up, with the princes and warlords tangled in warfare and society in upheaval and unrest. Only with the establishment of the socialist system did China truly realize national unity (except Taiwan province) and achieve and consolidate the great unity of the people of the whole country. For many years, China's social production was extremely backward, to the extent of calling nails "foreign nails," matches "foreign fire," petroleum "foreign oil," and machine woven fabric "foreign cloth." With the establishment of the socialist system, China's construction has made great achievements, winning the attention of the world. For many years, the Chinese people were known as "the sick men of East Asia," suffering such insults as "no Chinese and dogs admitted." With the establishment of the socialist system, the people of China have stood up proudly and truly demonstrated their strength, wisdom and dignity to the whole world. For many years, China suffered under the iron hooves of almost all the imperialist countries in the world, signing treaties of national betrayal and humiliation time and time again. With the establishment of the socialist system, China stands lofty and firm in the world, truly maintaining its own security and independence and overcoming the imperialist and hegemonic aggressions and provocations.

All these fully indicate that only socialism can save China and that the establishment of the socialist system was indeed the most profound and greatest social change unprecedented in its history. All our achievements since the founding of the nation have been made by relying on the socialist system. The view negating the basic fact that China has established the socialist system and entered the socialist society is untenable. Such a profound change and such great achievements have laid a firm foundation for all China's future progress and development. As long as we fully develop the superiority of the socialist system, conscientiously summarize the experiential lessons of history, start from our available foundation and firmly advance along the socialist path, the success of the four modernizations will be ours.

Jin Shi [6855 4258]

Why is it a grave mistake to overlook or negate the achievements of the past 32 years?

The "Resolution" points out that overlooking and concealing mistakes are in themselves a mistake. However, the achievements made by us in the past 32 years are primary. Overlooking or negating our achievements and successful experiences are also a grave mistake.

Why is it a grave mistake to overlook or negate the achievements? The reasons are as follows:

1. Overlooking or negating the achievements of the past 32 years is a deviation from the Marxist standpoint, viewpoint and method. The Marxist standpoint, viewpoint and method ask us to tightly grasp the main current and the essence of things when observing situations, analyzing issues and studying history. In the 32 years since the founding of the nation, we have made both achievements and mistakes in our socialist revolution and construction. Concealing and negating mistakes are naturally improper, for it will only lead to bigger mistakes. However, in the short span of 32 years, we have made great achievements. Such brilliant achievements are the dominant aspect of the socialist cause and the historical essence of the past 32 years. The large numbers of achievements made by us cited in the "Resolution" are completely factual, without the slightest exaggeration and misrepresentation. Overlooking or negating such achievements is a violation of the epistemology of seeking the truth from the facts and the dialectics of understanding; it is also a deviation from the Marxist standpoint, viewpoint and method when analyzing issues.

2. Overlooking or negating the achievements of the past 32 years signifies discarding the successful experiences of the socialist cause gained by us. In the course of guiding the socialist cause in its tremendous achievements, our party has gained many valuable experiences of success. Today, the level of our party's understanding of the socialist revolution and construction obviously surpasses that of any period since the founding of the nation. Besides certain material and technical conditions for our modernization construction, what is more important is that we have a large group of backbone forces in economic and cultural constructions and their experiences. The experiences of success already gained by us are the foundation for our continued progress in the future. If the tremendous achievements of the past are negated, naturally the many valuable experiences of success gained by us will also be overlooked and negated, and the knowledge of the laws of socialist construction acquired with a strenuous effort will be thrown away. Thus, the success of the socialist modernization construction will turn into an empty phrase.

3. Overlooking or negating the achievements of the past 32 years is failing to recognize the great future of the socialist cause and will lead to the loss of confidence and strength in our advance. The achievements made by us under the socialist conditions were basically impossible in the old China. Our achievements are a preliminary, but effective, manifestation of the superiority of the socialist system, eloquently proving the great and bright future of our socialist cause. Some people shake their heads and sigh at the mistakes and setbacks in the past, and feel pessimistic and discouraged at the difficulties and obstacles before their eyes, but fail to see the brilliant achievements already made by us and to recognize the superiority of the socialist system as the long-range and decisive factor; therefore, they lose confidence in the future. Obviously, overlooking or negating past achievements is no good.

Affirming past achievements is for the purpose of opening the way for the future. Our successes of the past are but the beginning of the 10,000-li long march. As long as we, under the party's leadership, fully develop the superiority of socialism and make a determined effort, we will conquer the "18 bends," ascend the "South Heavenly Gate," reach the "Imperial Jade Peak," and march toward new summits.

Guo Zhen [0948 2182]

What were Comrade Mao Zedong's main contributions to the theories of the socialist revolution and socialist construction?

Comrade Mao Zedong was a great Marxist. In leading the people of the whole country in the great practice of the socialist revolution and construction, he made new contributions to the Marxist theories. They were mainly the following:

1. The Theory on the Socialist Reform. After seizing political power, the proletariat, by means of peaceful redemption, reformed the capitalist economy into a socialist economy. It was a conception long proposed by Marx and Lenin but never before realized. Comrade Mao Zedong creatively applied the Marxist-Leninist principle and, integrating it with China's concrete reality, opened a path for the socialist reform compatible with China's special characteristics. Comrade Mao Zedong and the Chinese Communist Party scientifically analyzed the dual character of China's national bourgeoisie, proposed the policy of "utilization, restriction and reform" on the capitalist industry and commerce and successfully accomplished their socialist reform. They followed the principle of integrating the reform of private industry and commerce with the reform of the industrialists and businessmen, proposed the correct policy of unity, education and reform, and promoted the conversion of the exploiters into self-supporting laborers. In the course of reforming individual farming, they followed the principle of voluntary participation and mutual benefit, setting up typical models and state aid, created a series of transitional forms, advancing from temporary mutual help teams to year-round mutual help teams, to elementary cooperatives of a semi-socialist nature, and finally to advanced cooperatives of a socialist nature, and led the broad peasants to the socialist

path. In theory and practice, the arduous task of building a socialist system in an economically and culturally backward large country as ours was accomplished.

2. The Theory on the Socialist Construction. Comrade Mao Zedong's article "on the 10 Great Relations" is a shining document guiding China's socialist construction. In the article, he proposed the basic policy of the socialist construction, analyzed the 10 great contradictions in the socialist economic construction, and made the ideological and theoretical preparations for China's overall socialist construction. He proposed that we start from the fact that China is an agricultural country, readjust the proportionate relations among agriculture, light industry and heavy industry, increase the proportion of investment in agriculture, and arrange the economic construction according to the sequence of agriculture, light industry and heavy industry. At the same time, he proposed properly arranging and readjusting the relations between economic construction and national defense, among the state, the production units and the individuals, between the central and local governments, etc. In 1962, he again proposed a series of correct walking-on-two-legs policies "with agriculture as the foundation and industry as the leading factor."

3. The Theory on the Two Kinds of Contradictions of Socialism. In his article "on Correctly Handling the Contradictions within the People," Comrade Mao Zedong scientifically analyzed the domestic political economic situation, created the theory on the contradictions of two different natures in a socialist society, and proposed the method of their correct handling. The contradictions within the people are large in number and primary. As they are formed on the foundation of their basic identity with the people's interest, we can only use the democratic method for their solution, viz., "unity--criticism--unity" in politics, "long-term coexistence; mutual supervision" in the relations between the Communist Party and the democratic parties, and the policy of "a hundred flowers blooming; a hundred schools of thought contending" in scientific and cultural work. The other kind is the contradictions between ourselves and the enemy. Such contradictions emerge under the condition of fundamental opposition and conflict of interest, and we can only resort to dictatorship for their solution.

4. The Theory on the Building of the People's Political Power. Following the Marxist-Leninist principle and integrating it with China's reality, Comrade Mao Zedong proposed the scientific theory of the people's democratic dictatorship, built a powerful and flourishing regime of such dictatorship, and created the proletarian dictatorship, a new political form. It was an outstanding contribution to the Marxist theory on the building of political power.

Shu Fang [3219 5364]

How do we understand that the 10 years between 1957 and 1966 were the period when we began to build socialism generally?

The "Eighth Congress" indicated that our party had adjusted to the changes in the situation and shifted its attention to the socialist construction. The 10 years from 1957 to 1966 were the period when our party led the people of the whole country to begin the general building of socialism.

In 1957, we completed above quota our 1st 5-Year Plan. In 1958, Comrade Mao Zedong sponsored the formulation of the general line to build socialism. In 1961, the 8-word policy of "readjustment, consolidation, reinforcement and improvement" was introduced, hastening the recovery and development of the national economy. At the end of 1964, Comrade Zhou Enlai, in accordance with Comrade Mao Zedong's suggestion, proposed the magnificent goal of building a socialist power with modern agriculture, modern industry, modern national defense, and modern science and technology within this century. In the 10 years, our party concentrated on construction and made many achievements. When 1965 and 1957 are compared, the total industrial and agricultural output value increased 59 percent, including close to 10 percent for agricultural growth and 98 percent for industrial growth. National income increased 52.7 percent; the total retail of social commodities increased 39 percent; the people's living was considerably improved; such undertakings as culture, education and public health also made advances; the successful experiment of the atomic bomb, in particular, signified a new level in scientific research.

In leading the socialist construction, our party, in the 10 years, gained many important experiences. To formulate and carry out new policies for the socialist construction in such an economically backward agricultural country like ours, the Party Central Committee made many investigations and studies in 1956, and Comrade Mao Zedong's speech "on the 10 Great Relations" was their conclusion. In 1957, Comrade Mao Zedong proposed correctly handling the contradictions within the people, activating all positive factors and building a powerful socialist country. In 1958, the party formally proposed the general line for the building of socialism. In 1961, the Party Central Committee went one step further and proposed the general policy for the development of the national economy with agriculture as the foundation and industry as the leading factor. The enlarged Central Work Conference in early 1962 summarized the experiential lessons in the socialist construction since the founding of the nation, mainly since 1958.

Naturally, the socialist construction of the 10 years was not all plain sailing. In the course of advance, we made mistakes and suffered setbacks. The mistakes made by us were leftwing mistakes, mainly manifested in three aspects: First, we exceeded the objective level of the development of the productive forces, continuously changing the productive relations, blowing the communist wind, practicing equalitarianism and indiscriminate transfer of resources in the commune movement, and being overanxious in transition. Second, we exceeded the potential of the finance and resources of the state, appealed for the great leap forward in economic construction, and sought high targets, large reserves and speed, giving arbitrary directions and proning to boasting and exaggeration.

At the same time, the socialist construction general line also had the defect of overlooking the objective economic laws. Third, we attempted to promote the socialist construction by means of the class struggle. From the anti-rightwing struggle, the Lushan Meeting, to the 10th Plenary Session of the 8th Party Central Committee, the class struggle was aggravated. The "four-clean-up" movement subsequently launched in some areas also injured a group of cadres.

However, we ought to realize that most of the mistakes in the 10 years of socialist construction were promptly discovered and corrected by our party. At the Wuchang Meeting at the end of 1958 and Zhengzhou Meeting in February 1959, Comrade Mao Zedong criticized the communist wind and the tendency to boast and exaggerate. At the Beidaihe Meeting in July 1960, readjustment of the national economy was proposed, and it was formally passed at the 9th Plenary Session of the 8th Party Central Committee and introduced in January 1961. At the Guangzhou Meeting in March 1961, Comrade Mao Zedong sponsored the "Work Regulations of the Rural People's Commune (Draft)" (namely, the "60 Articles"), which was formally passed at the 10th Plenary Session of the 8th Party Central Committee in September 1962. After the "60 Articles" were transmitted to the lower levels, agricultural production began to improve. With the implementation of the eight-word policy, the entire national economy also rapidly recovered and developed. The socialist construction of the 10 years from 1957 to 1966 advanced in tortuosity and, in spite of the serious setbacks, made great achievements.

Su Li [5685 7812]

How do we understand that the "Great Cultural Revolution" was a civil strife causing a severe disaster to the party, the state and the people?

The "Resolution" points out: "As a result of the erroneous mobilization by the leaders, the 'Great Cultural Revolution,' utilized by the counterrevolutionaries, was a civil strife causing a severe disaster to the party, the state and the people." This exposition epitomizes the essence of the "Great Cultural Revolution." Recognizing the essence of the "Great Cultural Revolution" is an important link in our study of the "Resolution" and our correct understanding of the series of momentous historical events since the founding of the nation. We may, in the following aspects, acquire a deeper understanding of this exposition in the "Resolution:"

1. That the "Great Cultural Revolution" was a civil strife was primarily because it was launched and led by Comrade Mao Zedong, the leader of our party. He shouldered the main responsibility for this general and protracted serious leftwing mistake. Instead of "throwing the enemy into confusion," it only confused ourselves.

Comrade Mao Zedong's motive in launching the "Great Cultural Revolution" was to consolidate the proletarian dictatorship and prevent a capitalist restoration. As a Marxist party in power, doubtlessly the party must constantly guard against following the road of oppressing the people at home and promoting hegemony abroad, and always adhere to the Marxist and socialist path. The issue was that the theoretical viewpoint for launching the "Great Cultural Revolution" was incompatible with Marxism and China's practical conditions, the appraisal of the domestic political situation was contrary to reality, and the assessment of the class struggle situation was excessive.

2. The erroneously launched "Great Cultural Revolution" was utilized by the counterrevolutionary cliques. It was of a fundamentally different nature from the criminal activities bringing calamity to the country and the people committed by the two counterrevolutionary cliques organized by Lin Biao, Jiang Qing and others who, utilizing our error and acting behind Comrade Mao Zedong's back, conspired to seize the supreme power of the state.

The difference was mainly manifested as follows: First, the purpose of the "Great Cultural Revolution" launched by Comrade Mao Zedong was completely different from that of Lin Biao and Jiang Qing in utilizing it. When making grave mistakes, Comrade Mao Zedong all along considered his own theory and practice Marxist, and necessary for the consolidation of the proletarian dictatorship; they were mistakes with the best of intentions. The counterrevolutionary cliques of Lin Biao and Jiang Qing utilized the mistake of the "Great Cultural Revolution," performed conspiratorial acts behind the back of Comrade Zedong, sabotaged socialism, and devoted themselves heart and soul against the revolution. It was evildoers performing evil deeds. Second, though our party adopted erroneous methods of struggle in the "Great Cultural Revolution" and injured large groups of cadres and masses, the severe disaster to the party, the state and the people was more a result of the activities of Lin Biao and Jiang Qing who, utilizing the power in their hands, enforced a fascist dictatorship over the people of the whole country, created large numbers of unjust, false and wrong cases and ruthlessly persecuted many old revolutionary cadres and masses devoted to the party. Third, the Party Central Committee and Comrade Mao Zedong waged a firm struggle against Lin Biao and Jiang Qing's counterrevolutionary conspiratorial activities. Comrade Mao Zedong exposed Lin Biao's conspiracy to usurp the supreme power, smashed the rebellion launched by him, revealed Jiang Qing's ambition to form a cabinet and criticized the "gang of four."

3. The "Great Cultural Revolution" was not, and could not possibly have been, a revolution or social progress in any sense; it was a civil strife which caused a severe disaster to the party, the state and the people. As proved by practice, the so-called great political revolution whereby "one class overthrew another class" under the socialist conditions had neither an economic, nor a political, foundation. It was inevitable for it to lead to serious confusion, destruction and regress. In regard to certain dark sides existing in the organisms of the party and the state, we must make correct appraisals and solve them by correct measures; we absolutely must not resort to the method of the "Great Cultural Revolution."

Zhang Baoju [1728 1405 7467]

Why were Comrade Mao Zedong's mistakes the mistakes of a great proletarian revolutionary?

The "Resolution" emphatically points out that, though Comrade Mao Zedong made serious mistakes in his late years, "such mistakes were, after all, the mistakes of a great proletarian revolutionary." We can interpret this exposition in the following aspects:

1. In terms of his unsurpassed contributions to the theory and practice of the proletarian revolution, Comrade Mao Zedong was undeniably a great proletarian revolutionary. Without his rescue of the revolution from crises time and again, without the Party Central Committee led by him, possibly the party and the people of all nationalities in the country would have fumbled in the dark for an even longer period of time. After the founding of the nation, under the leadership of the party and Comrade Mao Zedong, the people of the whole country won great victories in the socialist revolution and construction. In the party's and people's collective struggle, Comrade Mao Zedong integrated the universal truths of Marxism-Leninism with the concrete practice of China's revolution, summarized and created a series of fresh experiences, and formed a scientific ideology suitable to China's conditions, viz., Mao Zedong Thought. As proved by practice, Comrade Mao Zedong was a great Marxist and a great proletarian revolutionary, strategist and theoretician.

2. When Comrade Mao Zedong's merits and mistakes in his lifetime are compared, his merits far exceeded his mistakes. His merits were primary and his mistakes secondary. It is possible for great proletarian revolutionaries to make mistakes. There is no pure gold, nor perfect man. Everyone may make mistakes, and so do great proletarian revolutionaries. After the founding of the nation, especially with the series of victories in the socialist revolution and construction, Comrade Mao Zedong's prestige rose ever higher. He gradually became conceited, suffering ever more seriously from the personality cult, severed from the masses and from reality, following subjectivism and the practice of making arbitrary decisions, and placing himself ever higher above the Party Central Committee. It was thus inevitable for him to make many mistakes, especially such serious ones as the "Great Cultural Revolution," in his late years. Comrade Mao Zedong must be mainly responsible for such mistakes, yet we cannot blame him completely for them. Though he made serious mistakes in his late years, in terms of his lifetime, his contributions to China's revolution far exceeded his mistakes.

3. Comrade Mao Zedong's mistakes in his late years were fundamentally different from the criminal acts of Lin Biao's and Jiang Qing's counterrevolutionary cliques by utilizing the party's mistakes. Besides the subjective reasons of Comrade Mao Zedong himself, objectively, his mistakes occurred because the socialist movement had not been pursued for long, the socialist country had been in existence for even a shorter time and, while some of the laws of the development of socialism had become relatively clear, the greater part of them required further exploration. Meanwhile, another important reason was the influence of China's long feudal history which undermined the party's democratic centralism. Comrade Mao Zedong paid serious attention to overcoming the

defects in the party and state life. However, he failed to correctly analyze many issues in his late years; therefore, he made wrong decisions and took wrong actions. When making mistakes, he all along thought that he was being Marxist in theory and practice. While he held on to the mistake of the "Great Cultural Revolution" as a whole, he did curb and rectify certain concrete mistakes, took the lead to smash Lin Biao's counterrevolutionary clique, protected and emancipated a group of cadres, and criticized and exposed those like Jiang Qing and Zhang Chunqiao, preventing them from carrying out their conspiracy to seize the supreme leadership power.

Evidently, though Comrade Mao Zedong made serious mistakes in his late years, they were the mistakes of a great proletarian revolutionary. He made great contributions to the liberation of China and the oppressed peoples in the world and to the progress of mankind. His great merits are immortal.

Li Yuanshu [2621 0337 2579]

Why is it extremely necessary to distinguish Mao Zedong Thought from Comrade Mao Zedong mistakes in his late years?

The "Resolution" finds that it is extremely necessary to distinguish Mao Zedong Thought, a scientific theory long tested by time, from Comrade Mao Zedong's mistakes in his late years. Why do we make this distinction? The reasons are as follows:

1. Comrade Mao Zedong's erroneous theses in his late years ran counter to Mao Zedong Thought and deviated from its track. Mao Zedong Thought is a scientific concept with a special meaning. The "Resolution" points out: "Based on the fundamental Marxist-Leninist principles, the Chinese communists with Comrade Mao Zedong as the main representative made a theoretic summary of the unique experiences of China's long revolutionary practice and formed a scientific guiding ideology compatible with its conditions. It was the product of the integration of the universal truths of Marxism-Leninism with the concrete practice of China's revolution--Mao Zedong Thought." From the scientific summary of Mao Zedong Thought in the "Resolution," we can see that Mao Zedong Thought is the application and development of Marxism-Leninism in China's revolution, the correct theoretical principle and experiential summary of China's revolution repeatedly verified in practice, and the crystallization of the collective wisdom of the Chinese communists in their common struggle. Therefore, we have no reason to feel that each word and phrase uttered by Comrade Mao Zedong belong in the realm of Mao Zedong Thought. His mistakes in the theory and practice of the class struggle in a socialist society were serious. His erroneous theses were completely incorrect in terms of China's class situation and the political conditions of the party and the state at that time. They were incompatible with either Marxism-Leninism or China's reality; therefore, they obviously strayed from the track of Mao Zedong Thought which integrates Marxism-Leninism with the concrete practice of China's revolution, and must be distinguished completely from it.

2. Mao Zedong Thought is the fundamental guiding ideology of our party and our state; therefore, it absolutely should not contain any non-Marxist ingredient. Scientific things and erroneous things cannot be mixed together. If Comrade Mao Zedong's erroneous theses in his late years are considered as Mao Zedong Thought, it is equivalent to saying that such theses are also part of the fundamental guiding ideology of our undertaking. Thus, people's mind will become confused, their actions will not be unanimous, the socialist cause will go astray and all the correct expositions of Mao Zedong Thought, which has become a scientific theory after the long test of history, will lose its guiding effect. It will become impossible to unify the ideology and actions of the party and the people or to rally people under the banner of Marxism-Leninism and Mao Zedong Thought, so that they will concentrate their determination and strength on the great goal of building a modern socialist power.

3. Only by distinguishing Mao Zedong Thought from Comrade Mao Zedong's mistakes in his late years will we be able to matter-of-factly and correctly understand his historical position and his ideology. Currently, some erroneous understandings exist in the appraisal and handling of Mao Zedong Thought. Taking the dogmatic attitude, some people feel that every word uttered by Comrade Mao Zedong is an immutable truth, and must be copied and followed verbatim, while others, seeing his mistakes in his late years, exaggerate such mistakes and negate the guiding effect of Mao Zedong Thought on China's revolution and construction. Though expressed in different forms, there is only one reason for the emergence of such erroneous understandings and attitudes--the failure to distinguish Comrade Mao Zedong's mistakes in his late years from Mao Zedong Thought. If we can truly distinguish the two, then we will realize that there are mistakes in Comrade Mao Zedong's views, and they are not part of the content of Mao Zedong Thought. We must not blindly follow them and practice dogmatism. Meanwhile, we will also realize that, though Comrade Mao Zedong made mistakes, such mistakes are not Mao Zedong Thought.

Wan Quan [8001 2938]

Why must we continue to uphold Mao Zedong Thought?

The "Resolution" points out that Mao Zedong Thought is our party's valuable spiritual asset and will guide our actions for a long time. This exposition fully affirms the scientific value and guiding effect of Mao Zedong Thought.

In the struggle practice of the Chinese Communist Party and the Chinese people through the decades, Marxism-Leninism and Mao Zedong Thought have always been the guiding ideology of our party and our state. All our victories in the past were won under their guidance, and the successful completion of the various tasks of the socialist revolution and construction in the future and the realization of communism must also be guided by them. As proved by the practice of China's revolution, we cannot rely only on the general principles of Marxism-Leninism for the victory of the revolution. Only when the general principles of Marxism-Leninism are integrated with the concrete practice of our revolution will we discover the correct path and method of our revolution, while Mao Zedong Thought is precisely the product of integrating the universal truths of Marxism-Leninism with the concrete practice of China's revolution. Only with its concrete guidance will China's revolution and construction get on the road of victory.

Comrade Mao Zedong made serious mistakes in theory and practice in his late years. With the vigorous distortion and sabotage by Lin Biao, Jiang Qing and others on top thereof, people are unable to distinguish between Mao Zedong Thought and Comrade Mao Zedong's mistakes in his late years. Therefore, some people feel that we should no longer uphold Mao Zedong Thought. This view is wrong. Mao Zedong Thought must not be confused with Comrade Mao Zedong's mistakes. Dust and sand do not dull the radiance of pearls. Nor will Comrade Mao Zedong's mistakes in his late years erode the great effect of Mao Zedong Thought.

Enriching and developing Marxism-Leninism in many ways, Mao Zedong Thought is our party's valuable spiritual asset, and it will guide our actions for a long time to come. Our revolution and construction cannot depart from it even for an instant. Some people feel that, as many important works of Comrade Mao Zedong were written during the democratic revolution and the socialist reform period, they are "obsolete" and no longer suitable. This view is also wrong. The process of the formation and development of Mao Zedong Thought was the process of the concrete application and victory of the basic Marxist-Leninist theories in China and that of our party's gradual maturity and development. Studying Comrade Mao Zedong's works is studying the history of the party. Not only enabling us to understand China's past, but it will help us solve the issues of today, learn the many basic truths, principles and scientific methods of Marxism-Leninism, and master their application to the concrete revolutionary practice and the socialist modernization construction. Take "on Protracted Warfare" for instance: Though it deals with the war of resistance against Japan, such thinkings as starting from China's reality to wage a protracted war against imperialism and opposing the "theory of a quick victory" have a guiding significance in our endeavor to understand China's national conditions, act according to our capabilities, advance steadily and pursue the modernization construction in steps and stages. The exposition in the "Resolution" on the path of building a modern socialist power adjusted to China's conditions is an embodiment of the principles with direct and long-range bearings in the socialist revolution and construction hereafter as found in the Mao Zedong ideological system. The theories on the new democratic revolution, on the socialist revolution and socialist construction, on the building of revolutionary troops and military strategy, on ideological-political and cultural work, and on party building, and the scientific thinking, work and leadership methods with an even more universal guiding significance in our work hereafter, all found in Mao Zedong Thought, are powerful ideological weapons in the new historical period for us to build a great party, construct a glorious socialist motherland, train a generation of revolutionary successors, forever continue the proletarian revolutionary cause, and finally realize the magnificent goal of communism.

Gu Yue [0657 2588]

Why, when rectifying the slogan of "continuous revolution under the proletarian dictatorship," do we still need to continue with the revolutionary struggles in the various aspects?

The "Resolution" points out that, when we firmly rectify the erroneous slogan of "continuous revolution under the proletarian dictatorship" of the "Great Cultural Revolution" where one class overthrew another class, it absolutely does not mean that the revolutionary mission has been completed and that the revolutionary struggles in the various aspects are no longer necessary.

Is there a contradiction in rectifying the erroneous slogan of "continuous revolution under the proletarian dictatorship" and stressing the necessity to continue the revolutionary struggle in the various aspects? Actually, there is no contradiction.

"Continuous revolution under the proletarian dictatorship" had its special meaning. In the process of launching and leading the "Great Cultural Revolution," Comrade Mao Zedong proposed a number of erroneous leftwing theses. Such leftwing theses were incompatible with either Marxism-Leninism or China's reality and did not belong in the realm of Mao Zedong Thought. However, they were summarized into the "continuous revolution under the proletarian dictatorship" whereby one class overthrew another class and utilized by Lin Biao's and Jiang Qing's counterrevolutionary cliques. Since the slogan of "continuous revolution under the proletarian dictatorship" had its special meaning, it is completely proper for our party to clearly and firmly rectify its error today. Rectifying the error of this slogan is rectifying the error of the leftwing theses, and it absolutely does not mean that we should give up eating for fear of choking and no longer pursue the revolution.

Marxism tells us that the socialist cause is a great revolution unprecedented in human history. In the past, we launched the socialist revolution, eliminated the exploiting system and exploiting classes, and established a socialist system founded on the production means public ownership with the broad people as the masters. However, it was only the first step in the 10,000-li long march, and the journey of the revolution remains long and the tasks extremely arduous. Socialism must, on the foundation of eliminating the exploiting system and exploiting classes, vigorously develop the social productive forces, perfect and improve the socialist production relations and the superstructure, and gradually eliminate the three major distinctions until the realization of communism. Our current struggle to build a modern socialist country is precisely one stage of this great revolution.

The practice of the new historical period also tells us that the revolutionary tasks are far from being completed and that we must continue with the revolutionary struggles in the various aspects. Today, though the exploiting classes no longer exist, the class struggle has not vanished. Open and hidden enemies in society and other saboteurs are still watching for their chances to make trouble, and some of them are very rampant. Therefore, we must continuously reinforce the state machine of the people's democratic dictatorship, raise our revolutionary vigilance, firmly defend the revolutionary interests and crack down on the activities of the enemies and other saboteurs. Meanwhile, we must also realize that the remnant poison of the feudal ideology and the influence of the bourgeois ideology are still in existence, corrupting some of our people, especially the young, and blocking the progress of the socialist cause. The situation indicates that vigorously building a socialist spiritual civilization, reinforcing and improving ideological-political work, educating the people and the young with the communist ideals, ethics and beliefs, and overcoming the decadent and degenerate feudalist and capitalist ideological and cultural influences remain the important tasks of the socialist revolution. Our current socialist productive relations and superstructure require further perfection and development, which are also the important contents of the socialist revolution. In short, we must fully recognize the arduousness and complexity of the revolutionary tasks confronting us and vigorously pursue the socialist revolution to the final end.

Naturally, our revolution today and the revolution before the overthrow of the exploiting system are different in many ways in content and method. By recfifying the erroneous slogan of "continuous revolution under the proletarian dictatorship" and casting off the leftwing ideological fetters, we will be able to truly assimilate the experiential lessons of history, avoid confusion, destruction and regression, make proper appraisals of the situation, and successfully pursue the socialist revolution and construction.

SHANDONG RENAMES TEACHER'S COLLEGE TEACHER'S UNIVERSITY

Jinan DAZHONG RIBAO in Chinese 23 Aug 81 p 1

[Text] With the approval of the provincial government, the Shandong Teacher's College has recently been renamed Shandong Teacher's University.

The former Shandong Teacher's College was established in 1950. In the past 31 years, it has produced for the nation some 18,000 graduates and has made great contributions to the work of socialist construction of the country. This institute of learning now has 12 departments, 14 specialties and relatively strong liberal arts and science faculties. It has also established 18 research groups and 2 research institutes. The qualification of its teachers and its facilities are also relatively superior. It has some 650 teachers, including some 100 professors and associate professors and some 260 lecturers. Its library has over 800,000 volumes. The value of its teaching equipment totals over 2 million yuan. The chief purpose of changing the teacher's college into the teacher's university is to develop undergraduates of a high caliber, to gradually increase the ratio of graduate students, to assume the responsibility of developing teachers for teacher's colleges, to afford teachers the opportunity to pursue further studies, and to strengthen research in the theory and practice of the science of pedagogy. This new university will further upgrade such basic requirements as its campus buildings, the qualification of its teachers, its equipment, and its library so that the quality of teaching and the standard of scientific research may continue to be raised, that the function of key universities in the province may be fully developed, that the Shandong Teacher's University may develop into a center for the education of teachers and for research in the science of pedagogy, and that it may produce a larger number of talented people for the work of building the four modernizations.

STATE COUNCIL APPROVES MORE SCHOOLS OF HIGHER LEARNING

Jinan DAZHONG RIBAO in Chinese 1 Sep 81 p 4

[Text] The State Council recently gave its approval for the establishment of 26 additional institutions of higher learning, including 6 engineering schools, 2 medical schools, 13 normal schools, 4 schools of finance and economics and 1 school of physical education.

The 26 institutions of higher learning are:

Tianjin College of Science and Engineering (Tianjin municipality)

Wuhan College of Construction (Wuhan municipality in Hubei)

Shanghai School of Prosthetics (Shanghai municipality)

Yangzhou Industrial School (Yangzhou municipality in Jiangsu)

Jiangsu College of Chemical Engineering (Changzhou municipality in Jiangsu)

Beijing School of Electronics (Beijing municipality)

Beizhen Medical College (Beizhen in Shandong)

Taishan Medical College (Tai'an in Shandong)

Liaocheng Teacher's College (Liaocheng county in Shandong)

Yuncheng Teacher's School (Yuncheng county in Shanxi)

Chaoyang Teacher's School (Chaoyang municipality in Liaoning)

Beijie Teacher's School (Bijie county in Guizhou)

Shangqiu Teacher's School (Shangqiu municipality in Henan)

Lingling Teacher's School (Lingling county in Hunan)

Suxian Teacher's School (Suxian in Anhui)

Fuzhou Teacher's School (Fuzhou municipality in Fujian)

Baicheng Teacher's School (Baicheng municipality in Jilin)

Changchun Teacher's College (Changchun municipality in Jilin)

Hulan Teacher's School (Hulan county in Heilongjiang)

Keshan Teacher's School (Keshan county in Heilongjiang)

Lanzhou Commercial College (Lanzhou municipality in Gansu)

Nanjing College of Food Economics (Nanjing municipality in Jiangsu)

Liaoning School of Commerce (Jinzhou municipality in Liaoning)

Heilongjiang School of Finance (Harbin in Heilongjiang)

Jilin College of Physical Education (Changchun municipality in Jilin).

According to informed sources in the Ministry of Education, approval was given for the establishment of these institutions of higher learning in order to fill a gap and to strengthen certain weak links in the chain and on the strength of the fact that the basic requirements for the establishment of such institutions have been met.

SOCIOLOGICAL, EDUCATION AND CULTURE

NEW FIGURES, SOCIAL CONTRADICTIONS IN CURRENT LITERATURE

Beijing WENXUE PINGLUN [COMMENTS ON LITERATURE] in Chinese No 4, 15 Jul 81 pp 81-84

[Article by Lu Guishan [7120 6311 1472]: "Portraying New Figures and Reflecting Social Contradictions"]

[Text]

I.

The appearance of works portraying new figures is not accidental. In the final analysis, it is determined by a life that has changed. In Engels' words, "the greater ideological depth" of these works is refined and epitomized in the "historical content understood" by the authors, and their creative motives for portraying the new figures "stem not from trivial individual desires, but from the historical high tide in which they find themselves." The path followed by China's literary creations in recent years eloquently proves the historical necessity that a literature portraying the new man appear.

After the smashing of the "gang of four," writers first of all "understood that the historical content" was the pain and suffering caused the people by the evil political influence of Lin Biao and the "gang of four." Facing cold reality, authors deeply experienced the desires and cries of the millions of revolutionary masses who were demanding that the poison and calamity spread by the "gang of four" be exposed and cleansed away. They were lashed and shaken by this powerful "historical tide," and uncontainable creative impulses were aroused; thereupon, a great quantity of the "literature of the scarred" emerged, as the times required.

After this, out of the "historical content which they understood," writers began trying to uncover the social origins which had caused and multiplied this ugly, deformed phenomenon. Writers began to be wise and profound. Then an "antithought literature" appeared. "Antithought literature" was the result of the writers dissecting and pondering the history of disorder and chaos of that period when the "gang of four" ran wild wreaking havoc. This literature dared to face life, pierced the abuses of the time, and at the same time announced the methods, ways, and hopes of salvation.

After the Third Plenary Session of the 11th Party Central Committee, there was a change for the better in our lives. The party's correct line, direction, and policies had enormous power to change the old society and create a new historical situation. On all fronts there began to emerge new socialist persons with socialist consciousness and a spirit of practice. To realize the four modernizations and to promote the great goals of China, these advanced forces looked reality straight on and put their calm consideration of life into action, eradicating society's abuses and healing life's wounds. They were pathfinders who hacked through difficulties, and they were bold and resolute innovators. Innovation and transformation became the wish of the people, the ideal of society, and "the high tide of history." Writers expected and "understood" this "high tide of history" and reflected it in their works with great enthusiasm, with the result that a literature of innovation and transformation appeared. This literature, which reflected social transformation through the portrayal of the new figures, was determined by the great practice of transforming society. The appearance of this literature, which had a sense of the times and a sense of reality, was delightful and naturally "should have its own place in the realm of realism."

Gorky said that literature walks in the steps of life. From the "literature of the scarred" to "antithought literature" and then to the "literature of transformation"--this marked the track ahead and reflected the deepening of understanding by writers of the real life of this historical period. It was a development of China's literary creation in accord with the laws after the smashing of the "gang of four."

II.

In the clash of contradictions, the portrayal of new figures became a pattern of artistic creation both old and new. This is because contradictions are not immutable. The deepening of realism and the deepening of character portrayal fundamentally are derived from the breadth and depth of the social contradictions reflected in the work. The most outstanding characteristic of the literature of transformation of the new period is that it can unite very closely and self-consciously the reflection of social contradiction and the portrayal of new figures.

Dealing with the relationship between portraying new figures and reflecting social contradictions frequently gives rise to two kinds of biases: either new figures are portrayed which are divorced from the reflection of social contradictions, so that they lose their basis in life and become either lifeless strawmen or awe-inspiring, fabricated gods who are hollow eulogies; or they are reflections of social contradictions without the portrayal of new figures, which can also become pure exposure and even become lost in their sombreness and gloom and sink into pessimism and hopelessness. We should not exclude works which incline to eulogy or to exposure, but we should even more advocate those which combine the reflection of social contradictions and the portrayal of new figures even better. By contrast, the literature of transformation in the new period has provided us with beneficial experiences. These words try hard through the portrayal of new figures to intervene directly in life, to attack abuses, to bring out important social questions, to be aware of contradictions in the areas of politics, economics, law, and morality, and to emphasize showing the soul-stirring struggle which is advanced by the social transformation from the activity and disputation of the worlds of the soul and of emotion.

The works "Honest Official With Household Duties," "The Pathfinder," and "There's Internal Strife Afoot," which are about new figures, expose incisively and in a timely fashion the contradictions encountered in social transformation, including the reform of the cadre system and the economic management system, and in particular the all-out effort to resist and obstruct feudal traditional thinking and the force of custom. These works are like a mirror which reflects China's present national situation, and the social contradictions we see in them are even broader and deeper than in works which merely expose. Although these works are about the struggles and contradictions among the people, the struggles and contradictions among the people have situations as full of perils as whirlpools and rapids. From the writers' pens, the characters all join in the raging tide of struggle in the new period. They often throw themselves into the perils of the new long march as innovators, men of action, and professionals at revolution, smashing through barriers and overcoming dangers. These works pay special attention to portraying the firm faith, tenacious character, and lofty and admirable soul of the socialist generation's new man. Xin Qiming [6580 0796 2494] in "Soil" is a model of upholding the materialist ideological line. He loses his party membership to maintain his party spirit, but he is still unswerving in his loyalty and shows the lofty sentiments of a true communist. The writer shows that remolding the social soil is much more arduous and important than remolding the natural soil. If the soil of society is shrouded with the poisonous mists of sham, lies, and flattery, then not only will it be impossible to turn the desert into an oasis, but even that land which has been turned into an oasis will once again be swallowed up by the desert.

"Honest Official With Household Duties" shows incisively the test of strength between the new and old ideology concerning the reform of the cadre system. The work praises the old cadre Liang Yu [2733 5038] who yielded to Quan Fuxian's [2938 2105 6343] stirring deeds, revealing the political foresight, class character, and crystal clear inner world of the older generation of revolutionaries. And yet his acts encounter the unreasonable entanglement and obstruction of his wife Yang Qingwei [2799 7230 5588], who is superstitious and worships authority. The battle between them goes from a falling out to hatred. The feudal concept of the authority of position and hereditary thinking poisoned the soul of this "power-hungry woman," with the result that she lost her self-respect and love for herself and suddenly became ugly, second-rate, and lower class. As far as Yang Qingwei is concerned, "power" is simply a very effective weapon for her to use to pursue the things she wants, like the nuisance which Jia Baoyu wore around his neck and which attached his soul to his body, and if one day that "spiritual precious jade" was lost, then his soul would be lost or sunk in dejection or even become bewitched. This artful depiction tells us that if the feudal hereditary obstinacy is not eliminated and the persistent ailment of worship of power is not pointed out, it will not be possible to realize the reform of the cadre system.

"The Pathfinder" and "There's Internal Strife Afoot" bravely expose the struggle between innovation and conservatism in the process of readjusting the economic management system. This struggle has a powerful sense of reality. It reaches into the many areas of the economy, politics, and law; it merges and runs through the contradictions of party and government, politics and business, the central authority and the local areas, the "rules" and "local needs," the upper echelons and the lower subordinates, the general situation and the particular situation; and it reveals the intricate contradictions and struggles between the historical high tide of reforms in the new period and the force of old habits and traditions.

With their trenchant pens, the writers isolate the genes behind this contradiction and struggle: social transformation cannot but affect the political and economic interests of the local areas and sections which are readjusted, and thus it must encounter the resistance and boycott of those areas and sections. The leaders of the Jiajin District portrayed in "There's Internal Strife Afoot" are representatives of the conservative forces with which the historical high tide of social revolution must contend. Without any consideration at all for the overall interests of the nation or the long-range interests of the local area, their vested, inflated, collective political and economic interests are drawn together, and their mutual help and protection are deep-rooted and ingrained. They adopt patriarchal administrative organizational methods, consolidate at every step, erect defensive lines, conduct a power struggle with the opportunistic and cunning trickery of the exploitive class officialdom, and build a bastion against reform. This work may lack a precise and appropriate sense of propriety in describing the Jiajin District Party Committee, but in it we can see how feudalistic thinking, tradition, and force of habit can flaunt the banner of reinforced party leadership and use the central authority's slogan to develop local initiative and, with rational and lawful forms and auspices, can do their utmost to support and inflate their special local interests in order to resist and boycott the social transformation which is under way. This must come to our attention. This work has the protagonist Fu Lianshan [0265 6647 1472] in desperation unlawfully breaking down layer after layer of interference and obstacle after obstacle in the destruction of the electrical network, and breaking the law to shock and wake up those people who are blinded by special interests. The tragic conclusion, which is beyond all expectation, may harm the character of Fu Lianshan or even make the reader disappointed with social transformation. But just like this determined, innovative protagonist, we have been through a shock of the spirit and the igniting, spurting, and sublimation of emotional suffering. Why shouldn't an innovator such as Fu Lianshan, burning with impatience to revive China, earn the praise and support of the party and of society?

The new people and the social contradictions they face are many and varied. There are Che Pengkuan [6508 4659 1401] and Fu Lianshan, who master important social contradictions, and there is also Lu Wenting [7120 2429 1250], who gives out radiant splendor through a tempering in contradictions and everyday life. Lu Wenting has great forbearance, accepts the torments of life, and bears heavy burdens at work. This is a new figure who is tough, tenacious, and extraordinary. She does not engage in big empty talk, but her thought and deeds shine with the brillance of ideals. She is like a camel in the desert; she can put up with all kinds of hardships and shoulder heavy responsibilities. She is like an ox that plows the fields; what she eats is grass, and what she produces is milk. She is like a candle; she consumes herself and sheds light for others. Lu Wenting is ordinary, but she is also great. Her spirit of devotion, like "the silkworm that spins until death," makes her a special person. We firmly believe that Lu Wenting, who is loyal to the enterprise and loyal to the people in trial before Liu Hulan [0491 5170 5695], can certainly become Liu Hulan; in the struggle of Fu Lianshan and Che Pengkuan, she will certainly become Fu Lianshan and Che Pengkuan; in Liang Yu's situation, she will certainly become Liang Yu. There is absolutely no doubt of this. This is the great spiritual force of our revival of China.

III.

Combining the portrayal of new figures and the reflection of social contradictions is useful for accomplishing the following:

Combining praise and exposure. Exposure is necessary. Attacking old things which endanger revolution and the physical and mental health of the people is a responsibility which writers cannot push off onto others. Exposure can help people reject evil influences, while negative phenomena can, through denying ugly methods, reach the goal of affirming beauty. But recognizing ugliness is not the same as discovering beauty, just as praise cannot substitute for exposure and exposure cannot substitute for praise. But rather than preferring praise or preferring exposure, we should advocate combining praise and exposure to reflect completely the battle between light and darkness. Portraying new figures and reflecting social contradictions not only do not overlook exposing the dark and negative sides of life, but they also accomplish good things on the positive side by intervening in life and seeking truth from facts and praising advanced social forces, as well as [accomplish] the heroic achievements of facing up to and resolving social contradictions, of striving to discover the trend of historical development that light must win out over darkness. Experience in writing novellas shows that only by exposure in praise can exposure be effective, and that only by praise in exposure can praise be forceful. In "Honest Official With Household Duties," isn't praise for Liang Yu's noble deed of yielding to Quan Fuxian a last against Yang Qingwei's desire for greedy use and pursuit of personal authority? On the other hand, pointing out the persistence of Yang Qingwei's obsession with and worship of authority can more forcefully set off and throw into relief the unselfishness, purity, and nobility of Liang Yu's spiritual world.

Combining summarizing historical experience, directly facing earnest reality, and looking to the future. Portraying new figures and reflecting social contradictions require looking back at yesterday, looking today in the eye, and looking ahead to tomorrow; thus it combines traditional education and ideal education. The new figure understands best that the past is today's past and the future is today's future. By portraying and describing new figures as revolutionary professionals, men of action, and transformers of society, many works not only expose incisively the abuses of social life and discover the lessons that should be remembered from the unwise and misguided in history, but also through developing measures, proposals, and blueprints to transform society they establish new milestones and point out the goals ahead. This is beneficial in arousing the people's spirits and raising and strengthening the people's faith and courage to struggle for the realization of long-range ideals; and it is very beneficial in stopping and overcoming the perplexed hesitation and dejection of tragic disappointment which pure exposure can bring. By showing Xin Qiming's fate, "Soil" explains that only by having a correct ideological and political line and dispelling and sweeping away the filthy social practices of exaggeration and falsity can the ideal of "making every inch of the motherland become fully fertile" be realized. By showing the tragic encounter of Lo Qun and Teng Jingfeng, "Romance in Tianyun Mountains" bids farewell to years which devastated and humbled people, painfully turns over an absurd and irrational page of history with profound and sincere hope, and foretells a strong and vigorously developing tomorrow.

Socialist literature and art should use socialist and communist ideology to educate the people. Only by portraying new figures and reflecting social contradictions can positive education and negative education be better combined and thus completely realize the educational function of art. Simply exposing can only tell people what they should not do but cannot tell them positively what they should do; only through praise combined with exposure--through a comparison of the positive with the negative--can people be given a comprehensive education; i.e., tell the people what they should not do and at the same time tell them what they should do, and from a positive angle give the people a clear and direct model that they can study. "The Story of the Criminal Li Tongzhong" writes for the people the biography of Li Tongzhong, who gave his life for the cause, while at the same time it paints a portrait of the hypocritical and selfish Yang Wenxiu. People respect the pure and noble spirit of Xin Qiming in "Soil" and at the same time view with contempt Wei Daxiong, who rose to high position braving the wind and the waves. People ridicule, detest, and even curse Wu Yao in "Romance in Tianyun Mountains," while at the same time they are moved and imitate the firm character, lofty sentiments, loyal and steadfast conviction, and spirit of devotion of Luo Qun and Feng Jingfeng, who tenaciously pursue and readily bear a cross. The works uncover the spiritual beauty of the new figures, flash brilliance from the implicit, reveal strength from the depths, give people hope and encouragement, and can play a very positive role in raising the spiritual borders of the Chinese people.

Marx said that the proletariat "cannot draw its own poetry out of the past, but only from the future." Although our lives are filled with difficulties and dangers, the revolution has hope. Socialist literature and art should excel at discovering the positive factors which shine forth sharply from life and, by portraying new figures and reflecting the social contradictions of the new period, encourage and stimulate people to fight for the bright road ahead.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CHINA, MODERNIZATION VIEWED IN INTERNATIONAL CONTEXT

Kunming SIXIANG ZHANXIAN in Chinese No 4, 20 Aug 81 pp 11-19

[Article by Si Mu [1835 1970]: "The Present International Situation and Modern Socialist Construction in Our Country"]

[Text] Our undertaking of modern socialist construction has its domestic and foreign considerations. First, we must pay attention to our national conditions and understand them soberly. The general and specific policies adopted for the construction of the four modernizations must be in accord with national conditions. Secondly, we must also realize that China is a great country with an international character. We are carrying out modern construction in a definite international environment here on earth, not on the moon, and we cannot do so with the door closed and in isolation. In undertaking the four modernizations, we are affected and restricted by international conditions. Therefore, in addition to understanding national conditions, we must learn about conditions in the world. In other words, we must soberly, realistically, and comprehensively consider what is before us, the present stage of the international environment, and the characteristics of the international situation, as well as possible changes in this respect. From this we can judge the hour, size up the situation, and make correct calculations and policy decisions. In specific terms, we must be clear about what conditions exist in the international arena that are favorable to the construction of our four modernizations and what conditions or resistance are unfavorable; we must be clear how we can increase and utilize favorable conditions to remove or reduce unfavorable conditions or resistance. We should make careful considerations, combine our national conditions, deal with what is before us, the present stage of the international situation, and the kind of general and specific policies that should be adopted in our diplomacy, national defense, and even economy in order to gain the advantage and avoid harm, so as to realize more smoothly and safely the construction of the four modernizations. Centering on the construction of the four modernizations, two important international conditions must be combined with the present international situation for our consideration: First, what is the possibility of striving for a long-term, peaceful international environment? Second, what is the possibility of gaining foreign aid?

Strive for a Long-Term, Peaceful International Environment

In brief, the special conditions of our country include a vast territory, a large population, a particularly large agricultural population, a backward economy, and a low level of culture and science. Having been delayed twice since liberation, our country is behind developed countries by several decades economically, culturally, and scientifically. We must therefore make a high degree of modernization a reality. It will not be achieved in 8 or 10 years like West Germany and Japan but will be a matter of 30 or more years. Quick success is not possible, and even the goal of becoming "comfortably well off," as mentioned by Comrade Deng Xiaoping, will not be reached until the end of the century. This requires a peaceful international environment that is as long-term as possible in order to safeguard the smooth implementation of the construction of the four modernizations. Local and small-scale wars are not avoidable. In fact, during the 35 years since the end of World War II, local wars throughout the world have been taking place continuously. The question is: Will a new world war (be it nuclear for the first time or conventional) break out in the near future, or will Soviet hegemonism launch a war of aggression against China? In the former case, even if war starts in Europe or the Middle East, our country might not be able to remain uninvolved. In the latter case, it might develop into a world war and our country would itself become the first battleground. Under the conditions of a world war, not only would we be unable to continue with the four modernizations, but existing construction and achievement might be destroyed. True, since the end of the World War II a peaceful international environment has generally been maintained and some rather serious local wars did not expand into a world war. However, as we entered the decade of the 1970's, following the fall of the Soviet Union into social imperialism, changes have taken place in the relative strength of the Soviet Union and the United States in favor of the former. The Soviet Union has become a superpower (especially a military power) obsessed with ambition. In order to dominate the world it has pursued an aggressive and expansionist policy with increased vigor, launched a global offensive, and replaced American imperialism as the most dangerous source of a new war. On the other hand, following its economic and military decline, and in addition to its crushing defeat in the war of aggression against Vietnam, American imperialism has taken a defensive posture in global strategy, but it is still struggling with all its might to restore its forces and resist, even though it is on the defensive. Therefore, despite the period of so-called "detente" in the 1970's, the contradictions between the Soviet Union and the United States are, in short, becoming increasingly acute and the international situation is becoming increasingly tense. Particularly following the Soviet military occupation of Afghanistan at the end of the year before last, war has overshadowed an unstable world. Confronted with this situation, quite a few observers in the West have cried out in alarm that the world today is very similar to that on the eve of World War II. Some have even predicted that the Soviet Union may provoke a world war in the mid-1980's. The outbreak of the incidents in Poland has further increased people's apprehension concerning the dangers of a new war.

Which predictions and views are in accord with reality? Is it possible to strive for a rather long-term, peaceful international environment? Because the world situation today is complicated and changing all the time, in order to answer these questions we must analyze all related factors realistically dialectically, and comprehensively.

First, let us examine the existing factors that may lead to or accelerate war:

1. Basically, as long as the Soviet Union remains committed to social imperialism and hegemonism, it will never abandon its ambition for world domination but everywhere will be bound to continue to promote, subvert, and scramble for strategic

points as well as new spheres of influence. Even if it encounters temporary difficulties and obstacles, it will never abandon its global strategy. In the future it will remain the main source of tension in the international situation and the most dangerous place of origin of a new world war. We should not have nay illusions about this.

2. Shielded by the smokescreen of "detente" during the past 10 years, the Soviet Union has taken advantage of the stagnation of military industry in the West to step up the expansion of military preparations. Its annual average increase in military expenditures is 4 to 5 percent, which is over 14 percent of the total national output value. Today, the Soviet Union has become one of the strongest countries in the world and is generally equal in strength to the United States. Not only does it possess an increasing number of strategic nuclear weapons, but it also has the capability of a second nuclear strike. Compared to the United States in terms of the quality of nuclear weapons and oceangoing navy, the gap is narrowing. It should be pointed out that the emphasis of Soviet economic construction in recent years is on heavy industry, particularly military industry. It has the most massive military industry and is actually the largest trader in munitions. Consequently, an interest bloc for military industry has developed within the Soviet economy which is closely linked to Soviet military circles, is influential in Soviet foreign policy, and is gradually taking an aggressive and expansionist path. Moreover, as the Soviet Union has those conventional and strategic nuclear weapons which can neither be used for food nor clothing, they will not be put aside in disuse for a long period of time. Therefore, if these weapons are not used to carry out military adventure, they will be used for military blackmail. The two go hand in hand. Hitler proceeded from military blackmail to military adventure, provoking World War II.

3. In the past 10 years, some Western countries have feared war and the Soviet Union. Obsessed by the immediate advantages, they have fallen victim to the Soviet fraud of false "detente." As a result, they cherish unrealistic illusions about the Soviet Union, appeasing it, tolerating it, and even conceding to it. The more one concedes, the greater is the appetite of Soviet aggression and the more unbridled it is in extending its actions. This policy of pacifism and appeasement cannot postpone war but will accelerate its outbreak. The facts are very clear. In recent years, the Soviet Union has put its hands in every part of the world, creating "hot spots" in the Middle East, the Persian Gulf, Cambodia, and Afghanistsn which can easily lead to and trigger a military confrontation. Europe is still the emphasis of Soviet global strategy, but at present the Soviet Union is avoiding direct advance by adopting the southern route to outflank and surround Europe. The occupation of Afghanistan is its more formidable move, pressing even closer to the concentrated oil-producing region of the Persian Gulf and the Strait of Hormuz, through which the transportation of petroleum must pass. Moreover, it will not stop there. The next target may be an invasion of Pakistan or Iran, enabling it to control the warmwater ports of the Indian Ocean and to control the Persian Gulf. Control of the Indian Ocean and the Persian Gulf signifies control of the Middle East and of Petroleum. Besides, in concert with this southern route, if the strengthened Soviet fleet together with the forces of little Vietnamese hegemonism invade westward, the strategic Straits of Malacca can easily be occupied. The Strait of Hormuz to the Straits of Malacca is the passageway for Middle Eastern oil. If the Soviet Union has control of Middle Eastern oil and of its transport

route, Europe and Japan will be threatened, and to a certain extent also the United States. This gradual advance, which threatens the lifeline of the United States and its Western allies and which reaches a stage of either surrender to the Soviet Union or fight, will result in a World War. Moreover, the Polish situation has come about since the Afghanistan incident, adding a new "hot spot." Poland is strategically located in Central Europe and is the gateway through which the Soviet Union can gain access to the West. The Soviet Union will absolutely not allow Poland to break away from its control and go its own way. Recently, the Soviet attitude toward Poland is stiffening and is becoming increasingly dissatisfied with the Polish Party Secretary Kania and Premier Jaruzelski. The Soviet Party Central Committee has also written to the Polish Party Central Committee, wantonly interfering in the internal affairs of Poland. The Soviet Army pressing against the border has already completed preparations for military intervention and can enter Poland at any time. However, the Polish people are rich in national pride. If the Soviet Union again plays the old trick of invading Poland, as it did in Czechoslovakia, it is bound to encounter resistance from 35 million people and over 300,000 Polish troops. At the same time, the United States and its Western allies have already assumed a posture of treating this possible Soviet military adventure seriously. Thus, direct confrontation between the Soviet anion and the Western countries in Poland cannot be totally eliminated.

However, it is not possible for the world situation to develop entirely according to the wishes of Soviet hegemonism. The vain hope of the Soviet Union to use military blackmail and military adventure to dominate the world is one thing, but whether it can succeed is another. Let us look at the other side of the question--the various factors that favor the safeguard of peace in the current international situation:

First, the consciousness of the people of the world to oppose hegemonism and safeguard peace is on the rise, and its strength is increasing.

1) The Soviet Union is hopelessly outnumbered in a "multipolar" world. For a rather long period of time after the war, the two large countries of the Soviet Union and the United States were the main force that influenced and determined world politics; war and peace were mainly decided by the relationship between them. But since the late 1960's, the trend has been increasingly clear that the "bipolar" world of the Soviet Union and the United States is being replaced by a multipolar one. The new superpower of Soviet social imperialism can be considered a "pole" and an antithesis. In the capitalist world of the West, the United States is still the most powerful country, even though it has gone downhill. Because of the role of the law of the unbalanced development of capitalism, Western Europe and Japan depended on the United States. Following rapid economic development, the economic strength of the West European community and Japan is increasingly closer to that of the United States. They are striving for an equal footing with the United States, each becoming a "pole" with an increasingly greater say in international politics. As for the Third World countries, they are individually different, more loosely organized, and cannot form their own bloc like the West European community, but because their basic interests are generally the same, through the "nonallied movement," the unity of the Islamic countries, the Southeast Asia Treaty Organization, and others, the unique influence and role they have increasingly played in international politics in recent years also make them a "pole." Moreover, although our

China is still far, far behind the Soviet Union and the United States in economic and military strength, it has also become a nucleus socialist country and a main actor on the stage of international politics, objectively playing a decisive role. Our country is certainly a "pole." From this, one can see that the entire world situation is different from that on the eve of World War II or in the early postwar period (before the 1970's). In today's multipolar world, the "pole" of the Soviet Union is the most prominent. In expanding and in provoking war with the whole world, it is not only the foremost enemy of the peace-loving peoples of the whole world, but it is also the common "antithesis" of the other five "poles," which to varying degrees demand peace and stability and are threatened by the Soviet Union. In this way, no matter how Soviet hegemonism makes threatening gestures and couples threats with promises, objectively the Soviet Union is sourrounded and hopelessly outnumbered In other words, this contradiction and struggle between one "pole" playing the tyrant and many "poles" opposing the tyrant constitute an important factor which favors the safeguarding of world peace.

2) Through the lesson of the reality of the negative teacher, the countries of the world have united to oppose hegemonism, and the consciousness of using struggle to safeguard peace is on the rise. As we have mentioned above, a chief reason why Soviet hegemonism has succeeded in recent years in its aggressive expansion throughout the world is that the United States and other Western countries appease, tolerate, and connive with the Soviet Union, as they are poisoned by the Soviet false detente and smokescreen. The fraud of false detente has been exposed by the Soviet Union's own actions. From Angola and Ethiopia to Cambodia and Afghanistan, and from Czechoslovakia to Poland, the series of real-life lessons of Soviet hegemonism's being insatiable and pressing harder with each step, and the provocation of war for world expansion, have played an extremely good role of negative teacher for the people of the whole world and the rulers of the Western countries. It is like an alarm bell which gradually awakens the countries of the west from the dream of "detente." Washington authorities, who were once intoxicated by American-Soviet detente and the honeymoon of understanding, have discovered that they have been tricked by the American-Soviet nuclear talks, delivered nuclear superiority to the Soviet Union, and helplessly watched [America's] vital interests throughout the world jeopardized by the Soviet Union and could do nothing about it. The Soviet invasion and occupation of Afghanistan in particular, an operation on the so-called "soft-belly" of the West, made the United States feel the pain even more keenly. To retrieve itself from an inferior position and to mend the fold after a sheep is lost, beginning from the late period of the Carter administration Washington made a fresh start by adopting a tougher line against the Soviet Union and a series of military and economic measures of containment and sanctions. After Reagan, who has been praised as being tough with the Soviet Union, took the stage, the United States has on one hand drastically increased its military expenditures and strength, particularly its strategic nuclear capacity, so as to offset Soviet superiority in this area with the so-called "nuclear offset policy." On the other hand, diplomatically it has adopted the so-called "new containment policy" toward the Soviet Union. Accordingly, the containment of the Soviet Union and the safeguarding of Amarican interests occupy the central place in the new global strategy formulated by Secretary of State Haig. The policy of arms expansion and of preparations for the use of force at the outbreak of a crisis has replaced the policy of relying on arms limitation talks with the Soviet Union and has become the nucleus of policy toward the Soviet Union. Before the House Foreign Relations Committee, Haig even

said: "We must understand that there are things worth fighting for." This tough policy of the United States toward the Soviet Union has already begun in its dealing with the Afghanistan incident and the crisis in Poland. To varying degrees, the policy of the West European allies toward the Soviet Union has toughened recently. They have simultaneously condemned the prolonged Soviet occupation of Afghanistan and any intervention in Poland. The NATO countries are strengthening their defenses as well as their efforts toward military cooperation. Among them, the Iron Lady of Britain, Prime Minister Thatcher, is the most positive. To deal with the increasingly serious Soviet threat, Japan is abandoning its "all-directions diplomacy," strengthening the American-Japanese alliance, enthusiastically supporting the strategic division of work proposed by the United States, increasing its military budget, and shouldering even more military responsibilities. Japan has also developed friendly and cooperative relations with China, and has coordinated the action of matching against the Soviet Union. As for the Third World countries, although their internal conditions are complicated, although conflicting interests exist among them, and although some of them are even pro-Soviet, since the Soviet invasion of Afghanistan the real appearance of the so-called "natural allies" has been more exposed, the interests of developing countries have been increasingly threatened, and the struggle against Soviet hegemonism has shown new heights among quite a few Third World countries. Confronted with this situation, the Soviet Union, which at one time had boasted that "detente is irreversible" cannot but bewail that "detente" is now at a "low tide" and is even "in danger of melting into thin air." Facts have proven that appeasement and concession to seek temporary ease will only bring war, and that unity and struggle to seek peace will achieve peace. Since the majority of the countries in the whole world and the absolute majority of the people take the latter path to varying degrees, this is the factor which at present is most favorable to the safeguarding of world peace.

Second, there are quite a few weaknesses in the Soviet Union and its empire. In mobilizing for a large-scale war, its ability will fall short of its wishes.

As the chief enemy of peace, the Soviet Union is militarily powerful and also is rather powerful economically. We must pay attention to this reality. On the other hand, the Soviet Union and its empire have all kinds of weaknesses, difficulties, and problems. No matter how successful the Soviet Union has been in its external aggression and expansion in recent years, this has brought quite a few difficulties and problems:

1) Numerous economic difficulties. The year with the worst internal economic conditions since Brezhnev came to power was 1979-80. After over 10 years of being relatively rapid, economic growth has slowed to the lowest point in peacetime since the 1930's. The target for 4 years was barely completed in the Tenth Five-year plan. In the early 1970's, the annual rates of increase for national income, industrial output value, and productivity were 5.1, 7.4, and 6 percent, respectively. From 1975 to 1979 they decreased to 3.7, 4.5, and 3.2 percent, while in 1980 they were 3.8, 3.6, and 2.6 percent, respectively. The newly announced Eleventh Five-year Plan originally specified that the annual rate of increase for national income would be around 3.4 to 3.7 percent--lower than the implemented result of the previous five-year plan. This clearly shows that the Soviet economy is heading for stagnation. Besides, Soviet agriculture is having poor harvests yearly. The supply of agricultural products, light industrial products, and industrial products

for everyday life is tight, which has given rise to supply by quota and rationing tickets. It appears that although the Soviet economy and finance are still not afflicted with such ills as the Poles, the situation of having to mind both guns and butter is hard to sustain.

2) It is isolated in the world as never before. The specific circumstances in this connection have already been discussed previously, when we talked about the Soviet Union being surrounded by enemies on all four sides. Here we merely add two points. 1. As a leader of the nonallied movement, Yugoslavia's condemnation and opposition to Soviet hegemonism are increasingly open and sharp. Another East European country Romania, is also heading toward a parting of the ways with the Soviet Union. 2. In the international communist movement, the two major parties of European communism, the communist parties of Italy and Spain, have not only improved relations with our party but have jointly opposed the Soviet Union regarding the problems of Afghanistan and Poland, and were not bothered in denouncing the Soviet Union at the 26th Congress of the Soviet Communist Party. Recently the Japanese communists have issued an "outline for peace" which also openly condemned Soviet intervention regarding the problems of Afghanistan and Poland.

3) The Soviet backcourt and the internal crisis in the Soviet Union itself. Here we cannot avoid mentioning Poland again. Since the end of World War II, Poland has been in turmoil more than once. This time is the most serious; it can be said to be the central expression of the contradictions among the Soviet Union and Eastern Europe. It is also the most severe test of the so-called economic and political "Model" of the Soviet Union and Eastern Europe. The nationality question, religious influence, and political dissenters are all centrifugal forces that can disintegrate the Soviet empire. They are also obstacles to Brezhnev in the implementation of his external expansionist policy. Within the Soviet Union, the masses are dissatisfied and social problems intensify. In the past year, incidents of workers going on strike or slowing down their work because of poor supplies occurred in Gorkiy and several other cities. Last October in Talinn, the capital of the Estonian Soviet Socialist Republic, several hundred students demonstrated on the streets because their food and drink were undesirable. They chanted the slogans "Return the freedom of Estonia to us" and "Separate from the Russians." The Polish incident has also compelled the Soviet people to ponder these problems and has deepened their doubts about the Soviet model and current policy. True, because the Soviet leadership clique has a grip on the massive party, government, and military propaganda machine and espionage network, its control is tight. The influence of pro-Western intellectuals and political dissenters is not great; religious influence and the influence of the centrifugal minority nationalities still have not been able to form a serious threat against the Kremlin. Nevertheless, an increase in these weaknesses and difficulties is bound to cause the Soviet Union to be unable to fulfill its wishes or to have trouble back at home if it launches a major military adventure. We must give this more consideration.

4) The burden is heavy, and their feet are getting stuck in mud. Problems in this aspect are serious consequences directly brought about by Soviet military intervention and adventure. Soviet hegemonism and its hatchetmen have carried out aggressive expansion in the world in recent years, and the advantages obtained are really not few. But if we take Cambodia and Afghanistan as examples, the fruit of its aggressive war has drastically diminished. The price it has paid is extremely high.

Someone has estimated that to maintain its sphere of influence from Cuba through Vietnam to Afghanistan, the Soviet Union has to spend over U.S. $10 billion annually. In Vietnam this year alone it has to give the Hanoi authorities U.S. $5 million each day, or U.S. $1.8 to U.S. $2 billion in 1 year. We believe that the amount of money it spends on Afghanistan is even greater. It can be said that the Soviet plight in Afghanistan today is really one of having its feet stuck in mud with an increasingly heavy burden, just like the United States in Vietnam during those years. Let the Soviet Union get stuck in the mire of Afghanistan and Cambodia, and let the heavy burden weigh on its back so that it will understand that aggressive expansion has more to lose than to gain in the end, and perhaps its actions in the future may be a little more cautious. In this connection, we can imagine that if the Soviet Union outrageously carries out military intervention in Poland, even if it succeeds temporarily, not only will it have to deal with the prolonged armed resistance of the Polish people fighting for independence and freedom, but it will also have to tidy up the economic shambles of Poland, repay over U.S. $20 billion of foreign debt for Poland, and carry a burden that can only reach an unbearable stage. We also think this way in connection with the possibility of a Soviet invasion of our country. No matter how the Soviet Union is bent on subjugating our country, how easy it is to talk about invading a land of over 9 million square meters (over 10 times the area of Afghanistan) and a socialist China that has a billion people (several tens of times the population of Afghanistan)! Some people have argued that if the Soviet Union goes to war with us, it will have to prepare to fight at least 20 years. Moreover, China is a large country that cannot be conquered or "digested." This also restricts the Soviet Union in launching a war against China. Such a view is not unreasonable. In terms of the struggle against the Soviet Union, we fight from where we stand and do not relax our vigilance. But in terms of the world situation, an invasion of China by Soviet hegemonism in the near future is not too great a possibility.

In summary, we can see that in the struggle between aggression and antiaggression, hegemonism and antihegemonism, the forces of war and the forces of peace in the whole world, in each case the latter is to a certain extent getting the upper hand. At this time it is favorable for our country to strive for a long-term, peaceful international environment and to carry out the construction of the four modernizations. This superiority is not absolute or decisive. To develop this superiority, to reach the goal of greatly postponing or preventing the outbreak of a new war, the key lies in the formation of a structure for joint resistance against the Soviet Union and in the consolidation of an international united front against hegemonism.

True, in the 1980's the incident of the Soviet invasion of Afghanistan has further exposed the miscalculation of the appeasement policy of the United States and other Western countries, as well as their inadequate strength in resisting the Soviet Union. People increasingly and clearly recognize that the United States does not have sufficient strength to resist the Soviet Union alone. It is necessary to strengthen the cooperation between the United States and its allies as well as the cooperation with all forces that resist the Soviet Union, including China and other Third World countries, in order to effectively deal with the Soviet challenge to war. In the face of continued expansion and intensified threats by the Soviet Union in the past year, the structure of joint resistance against the Soviet Union among the various forces in the world has been initially formed. However, the development of this international united front against hegemonism is still not sufficient and solidified, because there still exist problems and obstacles that cannot be overlooked.

1--The undercurrent of appeasement and forbearance toward the Soviet Union is still doing mischief. No matter to what extent toughness against the Soviet Union and the path of containment are tending to become the mainstream in the United States today and are gradually becoming predominant in certain Western allied countries, some people in the West have still not totally awakened from the dream of "detente," Soviet-phobia has not been uprooted,aand arguments for compromising with the Soviet Union still appear from time to time. For instance, some people have actually suggested placating the Soviet aggressors, saying that Soviet expansion has exceeded the bounds of the Yalta Agreement, making it even more necessary to recarve the spheres of influence and to redelineate the areas for rule. Some people feel that we should not overreact against the Soviet invasion of Afghanistan and heighten the tense relations between East and West, but that we should negotiate a "political solution" to the Afghanistan crisis and enable the Soviet Union to "back down with face." On the question of Cambodia, there are similar arguments for compromise in the West and in SEATO. Some people in Djakarta believe that the Cambodian question is actually a conflict between China and Vietnam, not between Vietnam and SEATO; they demand that Thialand's attitude toward Cambodia be a little flexible and believe that if only Vietnam would withdraw some of its forces, everything would be allright.

2--Resorting to economic appeasement of the Soviet Union for the knack of doing business. We all know that the United States and some Western allies (particularly West Germany and France) carry out economic cooperation with the Soviet Union for the sake of immediate economic advantages, selling large quantities of military goods and materials to the Soviet Union and continuously supplying it with advanced technology and equipment. This is an important cause of the rapid increase in Soviet economic strength, particularly military strength. After the Soviet invasion of Afghanistan, Washington undertook economic sanctions against the Soviet Union, but some major European countries did not give positive support and even took the opportunity to expand trade with the Soviet Union. Even in the United States, many people advocated the cancellation of the Soviet grain embargo and the relaxation of other economic sanctions and measures. Under the influence of this force, Reagan ultimately lifted the grain embargo. This made people feel that the tough line of the Reagan government is still vacillating and that its actions are not in keeping with its promises. Recently the Soviet Union has cast out the bait of cooperation with Western countries to install a large-scale natural gas pipeline in Siberia and to develop the engineering for the exploitation of oilfields in Siberia. This is no small temptation to the monopoly capitalists of the West. They are planning to provide the Soviet Union with capital and technology, and their starting point is no doubt easing their own economic decline and energy crisis. At the same time, they also fancy that this can reduce the danger of Soviet meddling in the Middle East oil-producing areas. To a certain extent, such shortsighted economic appeasement has obstructed the development of international unity to resist the Soviet Union.

3--The divergences and contradictions between the United States and some Western allies on the issues of resisting the Soviet Union and of defense. This is an extremely delicate and acute problem which has great effect on the development of the united front between the United States and Europe in opposing hegemonism. The divergence and controversy are briefly this: Quite a number of Americans blame Western Europe for persisting in pacifism, or for being concerned with only local and immediate advantages of Europe and with the economic advantages obtained from detente, without considering problems from the whole situation or a long-term point of view. When the Soviet Union was creating crisis situations elsewhere, Europe was still hoping to become a stable island of "detente," content to rule in just its part of the world, unwilling to fulfill its promise to increase military spending; it did not coordinate closely with the United States on questions of defense, and it still fancied resolving disputes through negotiation with the Soviet Union. On the other hand, European countries, particularly quite a number of people in West Germany, blame the United States for lacking an explicit, firm, and consistent policy toward the Soviet Union in the past and for doing nothing, all of which led to the outbreak of the Afghanistan incident. Now it is being too extreme and may move tension into Europe and destroy the achievement of "detente." They are particularly unhappy with Washington for taking hasty actions without prior discussion with them. Some time ago, some people in West Germany were critical that Americans wanted to station nuclear weapons in Europe solely to safeguard the security of the American homeland in case of nuclear confrontation with the Soviet Union. They are worried that Europe may again become the main theater of a world war, while the United States will remain unaffected.

The three types of conditions discussed above, and particularly the third type, give the Soviet Union the opportunity to sow discord and cause division, and are unfavorable to the full development and consolidation of a united front against hegemonism. The offensive of "detente" launched by Brezhnev after the conclusion of the 26th Congress of the Soviet Communist Party, and recently the old trick of coupling threats with promises, were all used to deal with such weakness in relations between the United States and its Western allies. The three types of conditions discussed above also enable us to recognize that the course of the formation and development of an international united front against hegemonism is not plain sailing nor as smooth as one would wish. The measures and steps taken by the concerned parties against the Soviet Union will not be entirely consistent. However, in terms of the entire international situation, since the ambition of Soviet social imperialiam to dominate the world will not weaken or disappear, and since its global strategy will remain basically unchanged, joint antihegemonism will still be a common necessity for all countries that demand peace and stability; this is still the mainstream of the present situation. Regardless of the divergence and contradictions that Western Europe and Japan have with the United States, however strong they demand an equal footing with the United States because of the steady increase in their economic and military strength, and despite their plight and their own vital interests which differ from those of the United States, and which cannot be easily cleared up, Western Europe and Japan still need the help of the protective military umbrella of the United States for a rather long period of time. Their mutual economic dependence on the United States is also very deep. Their common interests are greater than their contradictions. As a result, if only the United States treats them as equal partners and consults with them in case of incidents, even when they are confronted with a great enemy they can still seek common ground while reserving their differences and jointly resist the Soviet Union. Thus we believe that, following the footsteps of Soviet hegemonism in intensifying its aggressive expansion, the United States, China, Japan, Western Europe, and the Third World countries will continue to readjust their relations, coordinate their actions, and continue to advance on the tortuous path toward joint antihegemonism. This development shows clearly that it is possible to postpone and even avoid the outbreak of a new war. But this tendency does not come naturally. It is necessarily promoted by the effort of the peace-loving people of the whole world and by all farsighted politicians. In this regard, our country's initiative and efforts will also play a positive and key role.

Conditions for Gaining Foreign Aid

Having analyzed somewhat the possibility of striving for a long-term and peaceful international environment, let us now briefly examine the actual possbbility of gaining foreign aid.

Originally, construction in our country was based primarily on self-reliance, and striving for foreign aid was supplementary. This was a correct stand put forward by Comrade Mao Zedong. However, for a time in the past, we overemphasized self-reliance to the extent of closing the country to international intercourse, isolating ourselves; we did not borrow foreign loans and did not enthusiastically introduce advanced technology and equipment from foreign countries. As we see it now, this method is unfavorable to the progress of modern construction. There are three reasons for saying so: First, from the time of the Opium War the development of our country's economic and scientific culture and that of the industrially developed countries also widened. Second, developed countries have already experienced three scientific and technological revolutions. Their science and technology, production equipment, and production programs change with each passing day. If we do not learn what is advanced from foreign countries, introduce foreign capital, technology, and equipment, but work behind closed doors, our economic and cultural construction will be like an old ox pulling a cart, and it will be difficult to catch up with world levels. Third, under the basic premise of self-reliance, appropriate introduction of foreign capital, technology and equipment, and carrying out economic cooperation with foreign countries can speed up modernization. We have postwar Japan and West Germany to serve as precedents to go by. The question is how great the possibility is of using foreign aid. Particularly after our country implemented economic readjustment, we have perhaps had some fresh doubts about the possibility of acquiring foreign aid. We believe that however we look at it from the present world economic situation or international political struggle, the possibility of acquiring foreign aid still exists and is rather great.

1. Viewing from the world economic situation: the world economic situation is very complicated. Here we will only mention several characteristics:

(1) According to general estimates, although a very serious economic crisis will not occur in developed capitalist countries in the West in the 1980's and there will not be any new upsurge, the so-called "recession" (stagnation in production and inflation) is still very hard to break away from. According to various predictions, the average annual increase of the total national output value in industrially developed countries of the West in the 1980's will merely be around 3 percent (5 percent during 1961-1973). Some people even estimate that in the first 5 years of the 1980's, the increase will be slow and that in the last 5 years there will be either no increase or only a slight decrease. The consequences of

"recession" include excess production (particularly of machinery equipment), a relative surplus of capital, inflated prices (usually reaching double-digit figures), and a rise in unemployment.

According to estimates of the OECD, the total unemployment figure among its 24 member countries at the end of last year was over 22 million and will increase by 11.5 percent in 1982 to 25.5 million. The unemployment rate will reach a record high of 7.5 percent (a record except for the great crisis in the 1930's). To solve the economic problems and the social problems that follow, the industrially developed countries need to seek outlets abroad--commodity and investment markets. This will create a so-called "buyer's market" (supply greater than demand, favorable to the buyer), and as a great developing country with a population of 1 billion people, China has great potential for absorbing surplus commodities and capital funds.

(2) The present world trade is shrinking, and international revenues and expenditures have lost their balance. Together with the unbalanced development of major capitalist countries, competition in trade is further intensified. According to statistics, trade volume in 1980 increased by only 2 percent--not even a third of the growth rate in 1979. In terms of trade revenues and expenditures, the trade deficit of developed capitalist countries last year reached U.S. $130 billion (related to the rise in oil prices), creating a record high. This state of imbalance will continue to develop, and it is estimated that the adverse balance of payments in trade for developed capitalist countries of the West will be around U.S. $40 billion this year. Such circumstances will cause trade competition and trade protectionism among Western countries to intensify further. Moreover, the unbalanced growth among the United States, Western Europe, and Japan is increasingly serious. The total national production output value of the Western European Economic Community has exceeded that of the United States by a great deal. Japan has already become an economic power, and its commodities have a particularly high competitive capacity in the world market.

Starting last year, Japan's automobile production exceeded that of the United States for the first time, and large quantities poured into the American and European markets. The intensification of competition among them is favorable to our choice of trading partners and sources of foreign capital. For example, machinery equipment is particularly produced in excess in the developed Western countries. Unsold idle inventory will not earn profits but will cost more capital. Moreover, the sellers competing with one another would like to sell their commodities as soon as possible, while there are still profits to be made. Thus it is possible for us to borrow low-interest foreign loans for the purchase of machinery equipment. This is favorable to us.

(3) No doubt, the implementation of extensive economic readjustment in our country, which has postponed the construction of some major projects and halted the import of certain complete sets of equipment from Japan and West Germany, has for the moment actually shaken the view that "China is an enormous market for the West in the midst of difficulties." Last year, the exports of West Germany, Japan, Britain, France, and Italy to China all decreased. However, Chinese-American trade last year more than doubled, with a total volume of U.S. $4.8 billion, and the United States has replaced West Germany as China's second biggest trading partner. The United States is also preparing to supply us with equipment and technology for

textile and clothing trades. Trade between the two countries this year is estimated to increase to above U.S. $6 billion. In contrast, American-Soviet trade last year was cut in half because of economic sanctions, and China gained more than what the Soviet Union lost. Moreover, men of insight in industrial and commercial circles in the United States and other countries of the West still believe that even though our country is going through the period of economic readjustment, if we "look at problems from the long-term point of view," "and discover the correct programs that suit the change in emphasis in China's economic development," then there is still "plenty of business to do." A European who attended the China Trade Week of the European community even said, "In the long run, China's moderate growth, built on a relatively strong foundation, as compared to insisting on some large projects and proceeding from uncertain conditions of profit and loan repayment, may be even more advantageous to both sides. China is actually a reliable trading partner of the West."

(4) Besides, the energy crisis of the West and the last large jump in the price of oil are also favorable factors in gaining foreign aid for our country. In the past 2 years, due to excessive exploitation of oil in our country, and even though the production increase has ceased, we are not short of petroleum resources. In particular, joint exploitation of the rich offshore oil resources is highly attractive to foreign capital. Even if our oil reserves are not as rich or as geographically concentrated as those in the Middle East, the diversity of oil resources is also sought by the West and especially by Japan. According to reports, oil merchants and engineers have come to our coastal ports one after another from the United States, Japan, and France to undertake the prospecting of offshore oil. China and Japan are jointly exploiting oil in the southern Bohai Sea. Recent news said that extremely hopeful oilfields have been discovered here, with a daily production of about 1,000 metric tons of crude oil. Subsequently, in the Beibuwan Bay region of our Nanhai Sea, Chinese-French cooperation also succeeded in opening up a high-yield oil gas well. It can be said that oil is a "trump card" for our country in gaining foreign aid.

On the other hand, some people have pointed out that in the next 10 years the picture is somewhat dismal as the world economy readjusts in an even more realistic direction. This will also have some effects on China's development (construction of the four modernizations). In terms of foreign investment, capital funds and particularly low-interest loans will be harder to obtain. Import prices will also increase along with inflation in the world. China's effort to open new markets will be restricted because of the slow economic growth of the West. This observation is not unreasonable, and we must be fully aware of the effects of these negative factors.

2. The situation of international political struggle is also favorable for our acquiring foreign aid. The reasons are:

(1) China is a great country in the world. However poor economically and backward militarily, its strategic position in international politics is very important. It holds the balance, and this is particularly true today in the joint opposition against hegemonism. It cannot be underrated, and even moreso it cannot be overlooked. No matter how some people in the United States and Western Europe (such as ke-lai-yin of the "Taiwan gang" and the like) believe that China itself is quite powerless, has no economic and especially no military significance, and is strategically

dependent on the United States, while the United States has no need for our assistance, facts have refuted such nonsense which belittles our country. Just take the military aspect as an example: on the eastern front alone, our country has pinned down 1 million Soviet troops--a quarter of the entire Soviet military force used for aggressive expansion. This will put the Soviet Union at least in the position of having to fight on two fronts when it conducts a military adventure. Facts speak louder than words. Recently the West has gradually changed its view of China. As for the United States, Haig believes that the normalization of relations between the United States and China is a strategic question. They share a common strategic view. President Reagan also believes that developing relations on friendship and cooperation with China is a realistic question that is fundamental and has strategic significance. It is a strategic question that must be resolved, and it has overriding importance for safeguarding the stability of the international situation and world peace. Not long ago, Haig indicated even more clearly at the end of his visit in China: The Reagan government is resolved to develop cooperative relations between the two countries according to the communique on the establishment of diplomatic relations between the United States and China. It is precisely because of the changes in the international situation and the change in the views about China that American foreign policy is transformed from the "triangle diplomacy" of maintaining a balance among the United States, the Soviet Union, and China to today's policy of strategic coordination and economic cooperation between the United States and China. During his China visit, Haig also announced that the United States was preparing to sell weapons to China. At the same time, Japan also changed its so-called "equal distance diplomacy" toward China and the Soviet Union to strategically act in coordination with our country, having suffered under Soviet military threats and having been rebuffed by the Soviet Union on the question of the four northern islands. Some major countries of Western Europe were at first afraid that strengthening cooperation with China might arouse the Soviet Union. Recently, they have come around to us to varying degrees.

(2) It is true that China's economy and national defense are backward, but precisely because of this we need the four modernizations. When China is modernized and becomes powerful, it will be able to play a more effective role in the struggle against hegemonism. This reasoning is gradually being recognized by men of insight in the West. It can be prejudged that following modernization, our country will be able to pin down half and not just a quarter of the Soviet military force, and what will be so bad about that? No doubt, the West and even some Third World countries have incorrect views and unnecessary worries about the emergence of a modernized China, such as fearing that our country is powerful or worrying that we might one day reconcile with Soviet hegemonism and jointly deal with the West. However, such nonsense comes from only a minority of people. It does not have a large audience and cannot withstand the test of facts. We have repeatedly declared that we will never be a superpower, will never play the tyrant, and will never benefit ourselves by injuring others, use our strength to bully the weak, or make empty talk. The stand we take against the Soviet Union is explicitly based on principles. After the Soviet invasion of Afghanistan, we broke off our negotiations with the Soviet Union. As long as the Soviet Union does not abandon hegemonism, displays a million troops along our border, continues to occupy Afghanistan, and supports Vietnam in the occupation of Cambodia, we will proceed from global strategy and will never negotiate with the Soviet Union on improving relations between the two countries. In summary, support for our country's modernization is hastened by the international

opposition against hegemonism. Even if the governments of individual Western countries do not positively support our modernization and ignore our protests for the sake of immediate advantages, but instead support the military modernization of Taiwan like the shortsighted actions of the present Dutch Government, they will only eat their own bitter fruit. Recently, some people in the United States also have gone against the current. Under the pretext of implementing the so-called "regulations regarding relations with Taiwan," they play the game of "Balanced arms sales" to Taiwan, which is also a stupid move that will bring woe to themselves.

To summarize the above, we can make the following conclusions: 1) Looking ahead at the whole international situation, it will continue to be turbulent and tense in the future, local wars will occur one after another, the so-called "hot spots" will still exist here and there, and the possibility that Soviet hegemonism will risk the provocation of war cannot be totally removed; however, a new world war is not likely to break out in the immediate near future. It can be postponed and avoided. As a result, it is possible to strive for a rather long-term, and peaceful international environment for the four modenniaations. 2) With regard to gaining foreign aid for the construction of the four modernizations, the present world economic situation, and especially the international situation, provides some favorable factors but also has some negative ones. In the future we should strive to increase and suitably utilize favorable factors, deal with negative ones, and reduce their effects.

PARTY AND STATE

NORMALIZATION OF PARTY DEMOCRATIC WAY OF LIFE STRESSED

Hangzhou ZHEJIANG RIBAO in Chinese 10 Sep 81 p 4

[Article by Zhu Jien [2621 0256]: "Perfect the Party's Democratic Way of Life"]

[Text] In his 1 July 1981 speech, Comrade Hu Yaobang made clear an important point in the direction of strengthening the building of our party, that is: "We must put democratic life in the party on a sounder basis and strengthen party organization and discipline." In this article, I want to emphasize the subject of perfecting the party's democratic way of life.

At present, we must discipline the organizational life of the party and rectify its style of work as two steps in the direction of strengthening the building of the party. The reason is that whether or not the democratic life within the party can be normalized will have a direct effect on its style of work. For this reason, the task of improving the party's democratic way of life will undoubtedly have a very significant role to play in eliminating certain unhealthy practices that still exist in the party's political life, in improving and strengthening the leadership of the party and in increasing its fighting power.

When the party is striving to improve its democratic way of life, it is important that every Communist Party member consciously take part in its organizational activities, irrespective of his rank or position, and accept supervision from the party. In other words, his primary obligation to the party is his willingness to take part in its regular activities, and he should regard disciplining its organizational life as a matter of principle and of importance to our party, for our party had devoted the past several decades to upholding this principle and has used it to unify the will and actions of its members behind the common goal of preserving its fighting power and winning victory such as we enjoy today. What merits our attention nowadays is that some party organizations and party members are on the way to losing their sense of party organization. For a long time, some party organizations have failed to organize their members to take part in internal party activities, and have slackened their efforts or even abandoned their commitment to education, examine and discipline party members. Although some party organizations do have organized party members participate in internal party activities, they just do so as a matter of form and in such a way that no ideas are exchanged and no criticism or self-criticism is exercised. Some leading cadres of the party have long put themselves in a special category of party members, failing to attend the regular activities organized by their party branches or groups.

As long as this situation remains unchanged, our party will find it difficult to strengthen its fighting power or improve and strengthen its leadership. Today on the shoulders of our party rests the historic mission of leading the entire Chinese people to build a modern socialist power. To fulfill this great mission requires that our entire party membership unify its will and action behind a common goal. To achieve this unity, our party needs a well-disciplined organization. In view of this, party organizations at all levels must strive to put the system of their organizational life on a sounder basis, keep themselves abreast of current events, acquaint party members with the ideological and political work, make every party member think and act in a way consistent with the line of the Third Plenum and the basic conclusions contained in the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted by the Sixth Plenum. Every Communist Party member must put himself under the command of the party organization, take an active part in its organizational activities, and consciously accept supervision from the party. Only in this way can we make our party more united and stronger than ever.

Another important point in the normalization of the party's democratic life is a correct handling of the relationship between those at higher levels and those at lower levels. How can we achieve success in handling this relationship? Our primary task is to rectify the relationship between the leaders and those led. Within the ranks of the party, the leaders and their followers are all comrades serving the party in different posts. As far as the followers are concerned, they must perform their work with a sense of initiative and responsibility. Gone are the days when every move depended on instructions from the leaders. The assumption that the followers will never be held responsible for whatever goes wrong is also no longer true. For this reason, they must all act in the interests of the party and the people, respect and support the leadership of the party, and cooperate with each other in doing a good job. Within the framework of the party life, they are entitled to criticize their leaders for their shortcomings and mistakes in a spirit of goodwill. If their leaders make wrong decisions, they are also urged to point them out so that the leaders can correct such decisions. The responsible comrades of party organizations at all levels should remember the following teaching from Chairman Mao: "We are all servants of the people, irrespective of our rank or position." Only in this way can the distinction between "officers and men" be eliminated. The leaders must consciously accept supervision from the party and the masses just like all other ordinary party members, abide by party discipline and the law of the state, maintain their ties with the rank-and-file and broad masses, respect the authority of their subordinates, and never feel ashamed to ask and learn from comrades at lower levels. It is especially important that they report to the regular meetings of party organizations what they have in mind from the position of an ordinary party member. On such occasions, they should examine what they have done and conscientiously listen to criticism from other comrades. Only in this way can we add liveliness and vitality to our party's political life and bolster our party's fighting power.

Another important point in the normalization of the party's democratic life is the call for upholding the collective leadership of the party. Historical experience tells us that only by upholding the collective leadership of the party and relying on the collective political experience and wisdom can our party and state pledge to provide correct leadership and guarantee a high degree of unity among the party members. At present, however, there still exist in some party committee two unhealthy tendencies. Under the influence of on tendency, some comrades are inclined to impose their opinions on others; under the influence of the other, labor is often divided without specific definition of responsibilities. We should strive to overcome these tendencies. Comrade Mao Zedong once said: "The leadership of a party committee is a collective leadership rahter than a form of dictatorship by its first secretary." In other words, decisions concerning important matters must be made after collective discussion by an appropriate party committee, and no one individual is allowed to have the final say. The key to the exercise of collective leadership lies in whether the secretary of a party committee can rectify his democratic style of work. If he enforces what he says as law, the enthusiasm of other party committee members will be dampened and collective leadership will become an empty slogan. The relationship between the members of a party committee and its secretary should not be viewed as one between the leader and the led, because they are on an equal footing. The secretary is not a "family head." Although he has the responsibility to preside over the daily affairs, he has no power to make dictatorial decisions. In view of this, as a secretary, he must be always soberminded, put himself in the position of an ordinary party committee member, and discuss problems from a position of equality. At the same time, in performing practical work, we must prevent the development of a situation in which a leader may tend to make decisions concerning important matters without going through collective discussion by an appropriate party committee or a situation in which every proposal, whether important or unimportant, is submitted for discussion by party committees. Comrade Mao Zedong once said: "We must take care that neither collective leadership nor personal responsibility is overemphasized to the neglect of the other." Collective leadership must be backed up by the division of labor and responsibility to discharge and take charge of certain work. On the one hand, a party committee member must report promptly what he has done to the committee and seek instructions from it. On the other hand, he must actively and voluntarily carry out work in accordance with decisions by his party committee. Under no circumstances can he be allowed to disregard his responsibility in the name of collective leadership, thus leaving a power vacuum in his department. At present, some "ball-kicking" games are going on with some party committees. In this atmosphere, some comrades have long developed a bad habit of being "unwilling to assume responsibility." What they want is the power but not the work. Other comrades never get anything done but are interested only in criticizing work done by others. This unhealthy style of work has caused serious damage to the cause of the party and the people in some localities. This situation should be thoroughly changed. All party members, especially party cadres, must make positive and voluntary contributions to the cause of the party and the people in a creative way.

TRAINING OF MIDDLE-AGED, YOUNGER CADRES EMPHASIZED

Beijing BEIJING RIBAO in Chinese 7 Sep 81 p3

[Article by the party committee of the Beijing Radio Rectifiers Plant: "Helping Train Middle-Aged and Younger Cadres Is A Matter of Our Concern"]

[Text] During the past 2 years, we have promoted a number of middle-aged and younger cadres to fill leading positions in the party and administrative units at all levels. As a result of this effort, a contingent of younger, well-educated and professionally competent cadres has emerged in our plant. At present, the average age of the upper echelon cadres in the plant is 45; three out of every six upper echelon cadres are college graduates. The average age of the middle echelon cadres is 42. Of the 43 middle echelon cadres, nearly 50 percent are higher school and college graduates. The plant has only five cadres in their fifties, accounting for only 3 percent of the total. We have taken the following three measures with the aim of speeding up the growth of middle-aged and younger cadres:

First, look after cadres politically. A cadre, especially an upper or middle echelon cadre, must have relatively high political consciousness and must be aware of the need to implement the party's principles and policies. For this reason, we have paid special attention to the political growth of middle-aged and younger cadres. We have encountered some comrades whose methods of work are very simple and whose observation of problems is unilateral. We have held heart-to-heart talks with them, and have patiently, carefully and specifically helped them overcome such shortcomings. For example, one of our plant's deputy directors drew praise for his high morale from the masses but was criticized by them for pursuing an "unimaginative" method of work. After receiving this reflection from the masses, we invited him to a series of heart-to-heart talks, teaching him how to observe and analyze problems. In this way, he has greatly improved his methods of work.

Apart from this effort, we have provided middle-aged and younger cadres with opportunities to pursue further studies on a priority basis whenever such opportunities occurred. Some comrades have been repeatedly sent to take courses in enterprise management, quality control, the system of specific responsibilities and socialist economics offered by various companies, bureaus, economic planning committees, municipal party committees, and party schools. The aim is to raise the level of their knowledge on policy and political consciousness.

In the meantime, we have helped middle-aged and younger cadres solve some ideological problems and encouraged them to take bold steps in work. The director of our plant, now 41 years old, is a college graduate. During the "Great Cultural Revolution" he was wrongly criticized for being a former landlord. The memory of this still weighed heavily in his heart. After the "Great Cultural Revolution" was over, he was still bothered by a lingering fear, hesitating to take bold steps in work. A lengthy investigation of his background which we conducted revealed that he was a staff member of a certain establishment. On this basis, he was rehabilitated in accordance with the related policy in 1978. Since he was relieved of this worrisome ideological burden, he has taken more initiatives in work and has worked harder than ever.

Second, make sure Administrative assistance is available to cadres. Following their promotion, we cannot take an aloof attitude toward them. The party committee and the experienced veteran cadres have given them sincere administrative assistance, and have demonstrated warm support for their work as their "main backup force" and intimate friends. For example, following his promotion, the director of our plant has received strong support from our party committee secretary and a deputy director of our plant, both of whom are now in their fifties. The assistance takes the form of active advice and suggestions in the drafting and formulation of the fiscal plans and semiannual and annual production plans. It covers not only matters of prime importance but also daily work. Particularly important is the fact that they have helped him solve some thorny problems. In May 1981, during the first 20 days of the month the bending machine group at the No 1 workshop completed only a little over 10,000 pieces of work, out of more than 100,000 pieces it was supposed to process for that month. The director of the plant was worried about this progress. A direct investigation of the case at the workshop by the party committee found that the trouble was due to those workers who were interested only in performing easy jobs that entailed juicy bonuses. Consequently, the plant faced difficulties in fulfilling the task for May. Noting this problem, the party committee immediately set about performing good ideological work as a guarantee for fulfilling the task. Since then, this bending machine group has overfulfilled the production plans month after month.

In addition, various functions and departments of the plant have sponsored regular professional training for their workshop cadres in response to their operational needs. To this end, they have also regularly held various study classes aimed at speedily raising the level of professional knowledge among the middle-aged and younger cadres.

Third, cadres must be trained through practice. Cadres can be discovered and trained through practice. It is our experience that practice is essential to enrich their knowledge and sharpen their professional skills. It is an effective method that can quickly lead them to success. This is why the process of deliberately and selectively testing some middle-aged and younger cadres at important posts has become our best device for promoting cadres, especially upper echelon factory cadres.

Before the promotion of one of our plant's present deputy directors, our party committee and the plant decided to let him take charge of workshop, technology and production units. It can be said that he has been promoted to his present position step by step. Our trade union chairman is also a man who has undergone repeated tests in various grassroots units. He is a former member of our political department, former workshop leader, former secretary of a party branch, former chief of our supply section and former director of a subplant. After undergoing all these tests, he was finally elected by the masses to the chairmanship of our trade union during a democratic campaign. Through practice, he has improved his professional skills and increased his ability to handle and solve problems.

Thanks to our efforts to undertake the task of selecting and training middle-aged and younger cadres, our contingent of cadres has been strengthened and has become more capable of promoting production in a positive way. During the past 2 years, the strengthening of our leading group has been responsible for increasing the output of our plant.

PARTY AND STATE

COMBAT BOURGEOIS INFLUENCE, EDUCATE MASSES IN DISCIPLINE

Fuzhou FUJIAN RIBAO in Chinese 11 Sep 81 p 3

[Article by Zhang Zhi [1728 4249] and Yuan Qixiong [5913 0796 7160]: "Grasp New Opportunities To Combat the Corrosive Influence Under the New Situation"]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" points out: "Socialist society must have a high-level spiritual civilization. Resisting the influence of decadent bourgeois ideologies and remnant feudal ideas and overcoming the influence of petit bourgeois ideologies" are an important part of building a socialist spiritual civilization."

The talk about resisting the corrosive influence of bourgeois ideologies is an old as well as a new issue. As early as the eve of liberation, the Party Central Committee and Comrade Mao Zedong issued a call to guard against bourgeois attacks by "sugar-coated bullets," so that they could lead the entire party, the entire army, and the people throughout the country to score success in this struggle. Yet today, the situation in many ways is no longer the same as it was in the past. This is why we should concentrate our attention on grasping new opportunities in the struggle against this corrosive influence.

First, the nature of this problem is no longer the same. In the past, and especially during the early days of liberation, when various exploiting classes remained alive, they could still make their influence felt after losing their political power. Not reconciled to their defeat, they still continued their desperate contest of strength with us on all fronts. At that time, however, the struggle between the corrosive influence and its opponents was clearly a form of confrontation between antagonistic classes, which is in the nature of contradiction between ourselves and the enemy. Today, the exploiting classes have ceased to exist, leaving behind only vestiges of their ideologies, including bourgeois ideologies, which may still exist in the minds of some people and be reflected in their statements and other activities. Therefore, the nature of our current efforts to resist the corrosive influence of bourgeois ideologies no longer takes the form of confrontation between antagonistic classes, although it cannot be said that it is no longer a reflection of class struggle in the ideological field. Except for some individual hidden enemies and antagonistic elements using "sugar-coated bullets" as a weapon to attain their political aims, our current struggle is largely in the nature of contradictions among the people. Only by recognizing this difference can we formulate a correct policy.

Second, the historical background has undergone changes. In the days when our country suffered from imperialist encirclement and blockade, we basically lived in a "closed-door" society. Today, we have established diplomatic relations with 124 countries and have developed economic, trade, and cultural relations with additional countries and regions. This means that our "closed-door society" has to a certain degree opened the door to foreigners. Our Fujian Province has declared itself a special zone, as an active step to expand its economic contact with foreign countries. Although this effort will benefit our economic development and other activities, it has also made the situation more complicated than ever. One of the examples is that the bourgeois laissez-faire trend and Western ways of life have sneaked into our country. If we fail to resist such decadent trash and allow "its proponents at home and abroad to work hand in glove," we may face the danger of being overwhelmend by it. It is wrong to cherish the memory of the "closed society" because of this danger. Nor is it right to assume that, since the classes have ceased to exist, this negligible "influence" can be ignored or disregarded.

Third, the mentality of the members of our society has undergone changes. In bygone days, inspired by the vigorous development of socialist undertakings, the people, sensitive to the striking contrast between the old and the new societies, often took a positive view of everything. Generally speaking, their ability to guard against and resist unhealthy tendencies and [resist] the ideologies of the bourgeoisie and other exploiting classes was greater than it is today. Today, when the people are still suffering from the "hidden wounds" caused by the "Great Cultural Revolution," their ability to distinguish right from wrong and to resist the "harmful germs" is obviously on the wane. Although the bourgeois "fragrant" wind and foul smell from abroad originate in countries known for their advanced science and technology and their affluent material civilization they have absolutely nothing to do with advanced science and technology and affluent material civilization. Some people, however, have cherishced them as a "modern way of life" worthy of emulation. This change in mentality will certainly trigger a change in our social moral conduct.

This new situation and these new developments have brought to light new requirements for us to resist the corrosive influence of the bourgeois ideologies under the new historical conditions. An urgent task is the call to change the loosely organized, weak, and soft leadership that does exist on the ideological and cultural fronts. We must uphold the four basic principles and carry on the struggle on the two fronts. In dealing with erroneous ideas, we must stress the need for education and strengthen ideological and political work. In dealing with the problem concerning the contradictions among the people, we must adopt the methods of persuasion instead of those of coercion. Unauthorized criticism and struggle will serve only to suppress the people. Only by means of education can we convince them. But education must go hand in hand with deterrent measures. Education, persuasion, and reasoning on the one hand and deterrence, rigid law, discipline, and rules and regulations on the othe other are two categories of measures which can complement each other. Neither should be overemphasized to the neglect of the other. The struggle against corrosive influences should be conceived as a mass self-education campaign, rather than as a mass movement. Our party has consistently carried on the excellent tradition of criticism and self-criticism as part of the effort to educate the masses in their own ways. But this excellent tradition has been distorted and even trampled under foot under leftist guidance. Only by restoring and carrying forward this excellent tradition and by widely launching criticism and self-criticism can we translate the efforts to resist the corrosive influence of bourgeois ideologies into conscious action by the masses in their daily political life.

We must concentrate on instilling faith in the people and educating them in the tradition of hard struggle. Man's faith is the mainstay of his spiritual life, just as the faith of a society is the mainstay of its spiritual well-being. Many of the current changes in the eating and drinking habits of members of our society and their tastes in entertainment as well as their interests and desires actually reflect a change in their view of life which confuses the beautiful and the ugly, bitterness and happiness, honor and disgrace, and public interest and private interest. This change is closely connected to the changes in their political beliefs. For this reason, only by coming to grips with the nature of the problem through studying its appearance can we lead the people to foster the correct view of life and advance firmly in the correct political direction. The tradition of hard struggle is our heirloom. Some people contend that since we can now live better than ever, it is no longer necessary to reemphasize hard struggle. This is obviously wrong. Although our current material living conditions are truly far better than in the days before liberation, this achievement is still far from satisfactory. Even if the four modernizations are realized and further improve our material well-being, we will still have to work hard. We must promote the good virtue of the proletariat, which calls for practicing economy and diligence, and do away with the decadent lifestyle of the exploiting classes in order to transform our society, boost our national morale, and accelerate the development of the four modernizations.

CHARACTERISTICS OF NEW DEMOCRATIC SOCIETY OUTLINED

Beijing XIN SHIQI [NEW ERA] in Chinese No 8, Aug 81 pp 2-5

[Article: "On the Characteristics of the New Democratic Society--Interview with Comrade Xu Dixin [6079 3321 2450]"]

[Excerpts] After the promulgation of the "Resolution on a Number of the Party's Historical Issues since the Founding of the Nation," our reporter interviewed Comrade Xu Dixin, the renowned economist, for his understanding and views of the transformation from new democracy to socialism.

Question: How should one interpret the passage in the "Resolution" which states: "From the founding of the People's Republic of China in October 1949 to the year 1956, our party led all nationalities in the country to realize step by step the transformation from new democracy to socialism?" Why was the founding of the new China the beginning of the socialist revolution and socialist construction?

Answer: With the formation of the People's Republic of China in 1949, our country, on a nationwide scale (except Taiwan), entered the new democratic society from a semi-colonial and semi-feudal society. The new democratic society was transitional in nature; therefore, from 1949 to 1956, our country transformed from it to a socialist society. Such division is a historical necessity, because the revolutionary objectives and tasks in the new democratic period were different from those in the socialist period. In the new democratic period, mainly we combated imperialism, feudalism and the bureaucratic comprador class. Concretely speaking, there were three major tasks:

The first was to confiscate the bureaucratic capital. A task with a dual meaning, it was the result of the victory of the new democratic revolution while also bearing the nature of the socialist revolution. Turning the bureaucratic enterprises into popular ownership strengthened the socialist public economy which had been started in the revolutionary bases. However, such former bureaucratic enterprises were still under the control of the feudal gang-leaders (known as "number one" in Shanghai). Therefore, in 1950, our party introduced democratic reform among the state enterprises. This, also was a task of the democratic revolution.

The second was land reform. At that time, land reform was carried out in the old liberated areas, but in the vast new liberated areas, the exploitation of the peasants by the landowner class was not yet abolished and the feudal land ownership remained to be solved. Confiscating the land of the landowners for distribution to the peasants was an extremely important historical task of the new democratic revolution.

The third was protection of the industry and commerce of the national bourgeoisie. China's national bourgeoisie had a dual nature which Comrade Mao Zedong analyzed thoroughly. At the beginning of liberation, the output value of the plants and enterprises run by the national bourgeoisie constituted 63.2 percent of the national total, which was a relatively large proportion. To recover production, we had to protect the bourgeois industry and commerce, permitting them to operate and to exploit.

Here we can see that, in the first few years after liberation, the tasks of the democratic revolution were fairly heavy. If we overlook the importance of the democratic revolution, we will be making a big mistake.

Some people ask why we did not begin the socialist revolution and socialist construction from the first day of the new China. It is an impractical idea. The revolutionary tasks of the two periods were different. The main tasks of the new democratic revolution were to combat imperialism, feudalism and the bureaucratic comprador bourgeoisie, while the principal objective of the socialist revolution was the bourgeoisie. Before the completion of the tasks of the new democratic revolution, could we skip this historical stage? Naturally not.

Question: What were the main political and economic indications in the transformation of the new democratic society to a socialist society? What were the major distinctions between the new democratic economy and the socialist economy?

Answer: The political distinction between the new democratic society and the socialist society was not great, because the political power of our state was in the hands of the people's democratic dictatorship under the leadership of the proletariat. The landowner and bureaucratic comprador classes had already been overthrown, foreign capital was gradually solved, and what remained was the national bourgeoisie. As its members supported or were sympathetic to us to different degrees in the past, what we followed was the policy of unity and education, not the policy of knocking them down, gradually introducing the socialist reform of private industry and commerce, bringing them into the orbit of state capitalism and paying them redemption. I once discussed the issue with Mr Katayama Tetsu (once the prime minister of Japan) of the Japanese Socialist Party. He highly praised our measure and said that "the Chinese Communist Party is moral and just." The China Democratic Construction Association representing the national bourgeoisie made a fairly good manifestation in this aspect. As its members obeyed the party's leadership and supported socialism, many of them received appointments in the government as assistant provincial governors and assistant mayors or served in the standing committees of the people's congresses and political consultative conferences of the various levels. After the reform of the capitalist industry and commerce in 1956, everything remained unchanged. We let the national capitalists retain their civil and voting rights. Thus, we had the initiative.

The main distinction between the two stages was economic. In the new democratic stage, the party permitted the capitalists to operate stores and make money and to exploit. Naturally, there were restrictions. After entering the socialist society, i.e., after introducing the socialist reform of private industry and commerce, we adopted the form of joint state-private operation and fixed interest and reorganized them into basically socialist enterprises. By this time, the capitalists were no longer permitted to operate plants and exploit. The presence or absence of capitalism and exploitation was the main economic distinction between the new democratic society and the socialist society.

Question: Is consolidating the new democratic order a correct formulation?

Answer: I feel that it is incorrect. The new democratic society was a transitional one, a transitional stage from the semi-colonial and semi-feudal society to a socialist society. Therefore, he could it be consolidated? If consolidated, it would exist indefinitely, and we would be unable to advance to the socialist society. The final goal of us communists is communism; therefore, how could we settle ourselves in the new democratic stage? Nor is the formulation of consolidating the new democratic order tenable in theory.

Today we say that the pace of the socialist reform was too fast, and that, if we took a little more time and worked more carefully, we would have done even better. It is a question of the length of time, and does not mean consolidating the new democratic order, and even less "long live the new democracy!" If we took 15 years to carry out the original plan, we would still have to progress after the 15 years, and we could not consolidate.

Question: Since the 3d Plenary Session of the 11th Party Central Committee, the economic policy introduced by us permits the existence of multiple economic components, a certain development of the individual economy, and even helpers and apprentices. Does it mean that we permit exploitation, and what is its difference from the economic policy of the beginning years after the founding of the nation?

Answer: We closed the doors too tight in the past, leaving state commerce as the only channel of circulation. Almost all the free markets in the northern provinces were shut down, while some remained in operation in some small areas in the south. Shanghai opened its free markets for several months, but they were later shut down. At that time, the free market was considered capitalism. Lenin said that small production bred capitalism in large numbers everyday and every hour. We interpreted his words mechanically. Lenin was talking about the conditions before the socialist reform, while we applied his words to the China many years after the victory of the socialist revolution. Therefore, we did not permit the existence of individual economy. A few years ago, shoe repairmen were occasionally seen, but the small peddlers worked furtively like petty thieves. The same held true with the agricultural cooperative movement. The change was too fast, aiming at uniformity and, regardless of the circumstances, no individual farming was permitted. There is no absolute uniformity in the world. It was the leftwing ideology doing mischief.

Is it feasible for state commerce plus the supply and marketing cooperatives to solve the needs of 1 billion people? The people's needs differ in myriads of ways, while we wanted to simplify them. Meanwhile, the population of our country has doubled in the past 30 years. If we make the process of circulation so rigid, where will the large number of young people find employment? They cannot all get into state plants. Does it mean that they do not have to eat and live? The party's policy of relaxation in the economic aspect since the 3d Plenary Session of the 11th Party Central Committee does not mean that we do not want socialism; on the contrary, it is to reinforce socialism. Solving the employment problem of the large number of young people through all kinds of channels will also supplement the economic inadequacies of the state and benefit the people. Will it not reduce the pressure on socialism?

A certain number of helpers and a certain number of apprentices now permitted by us are under different conditions from the early years of liberation. Hiring several hundred to several thousand employees, some of the plants of the capitalists were still fairly powerful at that time. To assure the development of the socialist economy, we had to restrict and reform them. Now it is different. The socialist economy has long gained a firm foothold and expanded. In addition, the number of helpers is limited, and there is no comparison with the past in terms of numbers. That we want a certain development of the individual economy is not for the purpose of returning to the new democratic society, but to open wider the doors which were closed too tight in the past, in order to solve the employment problem of a part of the young people and supplement the inadequacies of the socialist economy. It is a correct policy which starts from reality, and different from returning to the new democratic economy.

SYSTEM OF REPORT, PROPAGANDA OFFICIALS REVIVED IN HENAN

Beijing BANYUETAN [SEMIMONTHLY TALKS] in Chinese No 16, 25 Aug 81 p 38-39

[Article by Fan Qifeng [2868 1142 1496]: "Huaiyang County Revives System of Reporting and Propaganda Officials"]

[Text] Huaiyang County is situated on the plain in eastern Henan; it is a big county with a population of 1 million. It is said that the Divine Farmer of antiquity planted crops, tasted various medical herbs, and "taught the people about farming" precisely in this region. But a few years back, this county fared rather regularly only by consuming repurchased foodgrains. Ever since the responsibility system was instituted last year, however, the situation has changed considerably. Production of foodgrains, oil products, and cotton has increased across the county. Total agricultural output has increased by 32 percent, and per capita income distribution has increased by 40 yuan. When people elatedly talk about such results, they often add this sentence: "A meritorious contribution to this has also been made by our communicators and propagandists!"

Lincai Commune is one example. This commune used to be the "pot bottom" of the whole county; its production brigades had no reserves, and its individual households had no foodgrain surplus. Commune members often said: "Even hawkers of rat poison did not come to our place." When the production responsibility system was put into effect early last year, everybody talked about the matter. The obstacles were great. The commune party committee mobilized several hundred communicators and propagandists to diligently speak about the party's rural policies and to eliminate the influence of leftist mistakes, and thereby the people's hesitations were removed. After the commune carried out the fixing of work quotas based on individual households, total foodgrain production last year increased by 40 percent over that of the previous year, and the wheat harvest this summer increased again by 60 percent over that of last year.

After the Third Plenary Session of the 11th Party Central Committee, the Huaiyang Party Committee maintained that without a powerful contingent of propagandists, it would be impossible to have the party's principles and policies realized at the basic level and the construction of the four modernizations smoothly carried forward. They recalled the important roles played by communicators and propagandists during the period of resistance against America and aid to Korea and the period of socialist transformation, and therefore they decided to reconstruct this contingent. In March last year, Huaiyang County adopted the combined approaches of recommendation from below and selection from above, whereupon, 248 communicators and 9,920 propagandists were recommended and selected in the revival of the report and propaganda system of the 1950's. The propaganda department of the county party committee held eight training classes during different periods to train core cadres, and it issued certificates to the communicators and propagandists thus trained.

After these comrades got started in their work, they all asked the county party committee to supply them with propaganda materials. In the beginning, the propaganda department would select some articles from the newspapers and journals every so often and have them reproduced and distributed. But the effects of these little pamphlets were not so ideal. In the first place, the basic-level cadres and the masses had no time to read those long articles; in the second place, they could not be distributed in time, since by the time the materials reached the people's hands, it was often a case of "pasting the doorgods on 15 January--one-half month too late"; and in the third place, the cost was too high. After BANYUETAN was issued, everybody felt that although this journal is small, its content is very rich. What it uses is the land tiller's language, and what it discusses is the land tiller's affairs; its articles are short, and whether one is busy at work or not, one can always read it. Its price, too, is very cheap. So everybody likes it very much. Thus the propaganda department of the county party committee subscribed to a copy of BANYUETAN for every communicator; propagandists of many communes and production brigades also began to subscribe to it. In the end, the country as a whole subscribed to 1,362 copies, and the number of subscriptions by communes such as Anling, Xinzhan, etc, all ran above 100.

During the past year and more, this well-organized, well-led propagandist contingent, which was stationed all over the country and which put down roots at the basic level, proceeded to build a bridge by which the party was connected to the masses, thereby greatly enlivening the party's propaganda work. By adopting various flexible propaganda forms, they timely conveyed the party's line, principles, and policies.

In conjunction with the party's central work and in the light of actualities, they effected pertinent communications. On many occasions, the secretary and deputy secretary of the county party committee reported as communicators on situations, tasks, and education on revolutionary traditions. The county drama group once concocted all sorts of pretexts to issue "rewards" and "subsidies," but it still did not make out very well. Once when it was to stage a play, individual players wrangled about fringe benefits and salaries and refused at the last moment to make up for the performance, and the drama group accordingly had to change its repertoire. In view of these problems, the head of the cultural bureau and communicator Li Lanrong [2621 5695 2837] conscientiously prepared their lecture notes and made nine reports at various times. Through such propaganda and education, the county drama group voluntarily canceled seven kinds of unreasonable rewards and subsidies, and a good trend of strictly abiding by discipline and engaging in earnest work thus began to emerge.

In the fields, on the work grounds, and in households, they have organized the masses to read newspapers, listen to broadcasts, study, and engage in discussions. When the Sixth Plenary Session of the 11th Party Central Committee came to a close, the vast ranks of communicators and propagandists all passed on the word and timely organized the masses to listen to the communique and resolutions of the plenary meeting on the radio. At that time, it was right in the midst of a very busy season; quite a few propagandists brought their transistor radios to the work grounds, where they would hoe a section of the field and operate it for a while.

They have made use of evening schools, exhibition windows, blackboard bulletins, and broadcasts to carry out propaganda. Many communicators and propagandists have actively contributed articles and, through such forms as news, novels, prose, and poetry, they have timely reported the new achievements and new experiences in the construction of the four modernizations across the county, enthusiastically praised the party's policies, and thus played a definite role in enlivening people's spirit and stimulating the people's fighting stamina.

PARTY AND STATE

CADRES' DISTORTION OF CENTRAL POLICIES DECRIED

Beijing RENMIN RIBAO in Chinese 22 Sep 81 p 4

[Commentary by Zhong Huai [6945 2037]: "Why Are Good Sutras Recited in a Twisted Way?"]

[Text] As the saying goes: A monk with a twisted mouth cannot recite the sutras well.

In our life, the party and state have issued many correct calls and regulations, but when they reach certain units and certain persons, they somehow become seriously twisted.

Among the "five stresses and four points of beauty," one is beautiful environment. In order to have "beautiful environment," some units thereby go in for large-scale construction and take advantage of the opportunity to remodel their clubs, repaint offices that were originally painted quite well, or even refurbish the yards of leading cadres' residences in a big way--needless to say, at the expense of the state.

In his speech at the meeting in celebration of the 60th anniversary of the founding of our party, Comrade Hu Yaobang, in order to encourage everyone to rally his spirit and overcome difficulties, made a vivid analogy: in climbing Mount Tai, when we have reached the Halfway Gate to Heaven, we find that the three Eighteen Bends lie ahead of us; until we have negotiated these bends, we won't be able to reach the South Gate of Heaven and ultimately arrive at the Peak of the Jade Emperor. In the process of studying, some units, intent upon ascertaining the spirit of the words of the leading comrade of the Central Committee, have undertaken to organize cadres and staff members into groups to climb Mount Tai together, with the result that at the foot of Mount Tai vehicles have created a scene of hustle and bustle--once again, needless to say, at the expense of the state--while the real purpose was to joyride.

Can it be that those who have resorted to such antics really did not know what a "beautiful environment" is? Can it be that they really thought that unless they personally climbed Mount Tai, they would not be able to understand the spirit of Comrade Hu Yaobang's words? Even those as innocent as the red-scarfed [Young Pioneers] would not believe them.

No matter how good the sutras are, if we let monks with twisted mouths recite them, they cannot, of course, be done well. Similarly, no matter how good the matters from above may be, when they are enforced progressively downward and encounter cadres with a devious workstyle, they suffer either "obstacles in between" or depreciation, becoming twisted or even eventually no longer recognizable.

To return to where we have started from, the important thing is still to grasp our party's workstyle seriously. We must not only do so at the higher level but also the intermediate and lower levels. With the intermediate and basic levels following a devious workstyle, no matter how correct are the principles that are formulated and the systems and measures that are prescribed by the Central Committee, they can hardly achieve proper results. The vast ranks of the masses have a profound understanding of this and have made their complaints known. While emphasizing the rectification of our party's workstyle, we must not overlook this question.

COMMENTATOR: TOO OFTEN THOSE WHO FOLLOW CORRECT PATH ARE SCORNED

Hangzhou ZHEJIANG RIBAO in Chinese 24 Aug 81 p 1

[Article by Commentator: "Support Uprighteousness and Suppress Evil"]

[Text] After the smashing of the "gang of four," and especially since the Third Plenary Session of the 11th Party Central Committee, all of our undertakings have followed the correct path of stable development and have made great accomplishments. Upright conduct has constantly been increasing, and evil has constantly been stopped and attacked. This is the dominant direction. However, it should also be noted that in some places and units there are still some bad tendencies. For example:

In ideology and culture, while a great many good and comparatively good works have appeared, a number of works with mistaken ideological trends have also appeared, and some of them are harmful. They violate the spirit of the Third Plenary Session of the 11th Party Central Committee and the four basic principles. But these works have not received the criticism they should.

In the economic area, situations in which national interests are not considered, national supervision is avoided, and people engage in parochialism, use much public money for a little personal gain, violate the law and discipline, and practice fraud have not been handled as they should.

In the area of party style, although there have been great improvements, bureaucraticsm and special privilege still exist; in particular, dealing in "relationships" and wining and dining to get things done are still very prevalent practices.

It is in places and units where these improper practices have raised their ugly heads that an unusual phenomenon has appeared: comrades who have been supporting the line since the Third Plenary Session of the 11th Party Central Committee, comrades who work actively and whose work is very effective, comrades who dare to uphold the principles, who are meticulous about fairness, and who dare to fight mistaken opinions and evil practices not only do not get enthusiastic support and encouragement, but actually are isolated and given the cold shoulder.

How can these situations come about? The main reason is that the ideological and political work of the party organizations in these places and units is in a lax and weak state and does not dare support uprighteousness and suppress evil. In the face of right and wrong concerning the interests of the party and the people, some comrades adopt the attitude of "peacemaker"; you're OK, I'm OK; they keep peace with everyone, knowing full well that it's wrong but also knowing that it's best to say little. Some comrades worm their way into a "relationship" circle, and share and share alike; there is a tacit understanding that whether they see something or not, they will not interfere with each other. As far as mistakes are concerned, they turn a blind eye to them, adopt a laissez-faire attitude, drift with the tide, and dodge contradictions. They cannot be aroused but drift along, just wanting to get along without any trouble, and are ambiguous in the face of right and wrong principles. This negativist, vulgar workstyle is incompatible with the proletarian nature of our party. Now we should research the correct ways and means of overcoming attitudes of laxity and weakness so that our party's leadership will become strong and aroused.

Of course, strengthening isn't something that is done recklessly with a great deal of noise, or by criticizing right and left. This can't be thought of as strengthening. The only effective method is to pick up the weapon of criticism and self-criticism and, with boldness and assurance, launch ideological and political work. Dare to actively support uprighteousness, and dare to criticize and struggle against evil. Here there are clear boundaries between right and wrong and principles of action. The point of establishing a party for communists--the basic legislative point of our nation, and the will of all the party and all the people--requires us to support right and resist evil, because truth is on our side, and justice is on our side. The social-ideological tide which is divorced from the path of socialism, is divorced from the leadership of the party, and engages in bourgeois freedoms; evil ways of doing things that injure national interests and engage in trickery; the incorrect style of engaging in special privileges and taking advantages of "relationships"--these fundamentally violate the interests of the people. We certainly should bestir ourselves to launch criticism, support uprighteousness, and suppress evil, for in this way we can restore and develop the good traditions of the party.

If we wish to change this situation of laxity and weakness, it is a matter not only of strengthening the ideological leadership of the ideological and cultural front, but also of strengthening the leadership of the economic front and other areas. Every one of our leadership comrades should reflect: Is the leadership in my area strong or is it weak? Is it unified or is it lax? If we conscientiously absorb the experience of history and self-consciously pick up the weapon of criticism and self-criticism, strengthen ideological leadership, work surely and steadily, and strive unremittingly, the area of evil will become smaller and smaller and that of uprighteousness will become greater, and our socialist enterprise will grow and flourish.

PARTY MUST TAKE LEAD IN IMPROVING SOCIAL ORDER

Hangzhou ZHEJIANG RIBAO in Chinese 25 Aug 81 p 1

[Article: "Strengthen Party Leadership Over Improving the Social Order; Provincial Committee Convenes Conference of Local and Municipal Secretaries Charged with Political and Legal Work; They Demand Continuation of the Policy of Punishing Serious Crime Severely and Swiftly; Strive for Fundamental Change for the Better in Social Order in Zhejiang Province"]

[Text] From 15 to 21 August, the Zhejiang Committee of the Chinese Communist Party held a conference of local and muncipal secretaries charged with political and legal work. The conference emphatically pointed out that under the conditions in which the urban and rural security situation has taken a turn for the better but has not yet taken a fundamental turn for the better, it is especially necessary to strengthen the party's leadership of political and legal work. They demanded that party committees at all levels stress social order work and vigorously strive to bring about a clear turn for the better in Zhejiang's social order this winter and next spring.

The conference felt that strengthening and improving the party's leadership over political and legal work would constitute a guarantee of improving social order. The party leads the people in establishing laws, and it should also lead the people in enforcing them. Organs of public security and administration of justice and the people's organs for enforcing the law have assumed the heavy burden of upholding social order and protecting people's lives and property. Thus, as long as they are under the leadership of the party and rely on themasses, they can do their work well. When we talk about exercising judicial authority and procuratorial authority according to the law and independently, we are talking about the authority granted to the courts and the procuratorate to exercise national law independently, to try cases according to the law, and not to submit to any pressure from certain persons not to follow the laws and pervert the law for the benefit of relatives or friends. But this does not mean that judicial agencies do not need the leadership of the party, of that party committees can relax their own leadership. Party committees at all levels must fully understand the importance and significance of doing a good job of social order in order to guarantee unity and stability and economic readjustment, must correctly handle the relationship between stressing economic construction and stressing social order, must self-consciously make the rectification of social order part of the agenda, and must do it carefully and well. The first secretary should personally take an interest in this, and the secretaries charged with political and legal work should be conscientious and hold conscientious discussions several times a year. They should be familiar with the law and with politics, and they should lead the political and legal sections in analyzing the public security situation at all times, mastering the trends in the enemy's situation, and researching, formulating, and implementing feasible measures. They should coordinate the interrelations of political and legal sections, and should resolve problems of ideology and understanding among political and legal cadres and police and actual difficulties that come up in work. When knotty problems, important cases, and serious questions of public order appear, leadership comrades should personally go to the scene and direct things on the spot.

The conference analyzed the situation since the implementation of the spirit of the Central Committee's Conference on Public Security in Five Major Cities. The conference pointed out that although the public security situation in Zhejiang has taken a turn for the better, the public security situation in society still has not taken a fundamental turn for the better, that criminal activity is still rampant, that problems still are rather serious, and that in many places the people lack a sense of security. We should certainly still continue to overcome situations which we are not attacking effectively, and we should seize the opportunity to advance on the crest of victory. Under the unified leadership of the party, political and legal organs should continue to resolutely carry out the policy of punishing serious crimes severely and swiftly according to the law. As for the few active criminals who are harming society, such as murders, robbers, rapists and gang rapists, arsonists, bombers and others: those who should be detained should be detained, those who should receive labor education should receive labor education, these who should be arrested should be arrested, those who should be severely punished should not be lightly punished, and the few who should be executed must be resolutely executed. If social order does not take a fundamental turn for the better, the implementation of the policy of severe and swift punishment cannot waver. In attacking criminal activity we should be firm, precise, and stern, attacking the few and striving to reform the majority through education. We should continue to propagandize vigorously the third law document of the Standing Committee of the National People's Congress--the "Resolution Concerning the Reform Through Labor and the Reform Through Education of Persons Who Have Escaped or Have Committed Serious Crimes," and we should treat with lenciency all who confess or inform against and expose the crimes of others, in accordance with the policy of "leniency for those who confess" and "redeeming oneself through good service." Those criminals who resist reform and continue to be bad should certainly be punished strictly or severly according to the law, even to the point of having their urban residence registration canceled.

The conference also pointed out that the question of public order is a comprehensive reflection of the contradictions in society. Under the leadership of the party committee, we must mobilize and organize forces from various areas to implement "comprehensive governance." In order to be effective, we should adopt measures in the various areas of politics, economics, law, ideology, education, and culture.

During the conference, Tie Ying [6993 3841] first secretary of the Zhejiang Party Committee, gave a talk.

The conference was chaired by Wang Fang [3769 5364], deputy secretary of the Zhejiang Party Committee. Responsible comrades from the Zhejiang General Trade Union, the Communist Youth League, and the Women's Association gave speeches at the conference. Participating in the conference were responsible persons from the Provincial Party Committee, the Standing Committee of the Provincial People's Congress, and concerned departments and political and legal agencies of the Provincial People's Government.

A LOOK AT PRE-1911 REVOLUTIONARY-REFORMIST DEBATE

Beijing RENMIN RIBAO in Chinese 22 Sep 81 p 5

[Article by Yan Ruping [0917 1172 1627]: "The Debate Between the Revolutionaries and Reformists Prior to the 1911 Revolution"]

[Text] In August 1905, after the great revolutionary pioneer Dr Sun Yat-sen took the lead to establish the Tong Meng Hui, bourgeois reformists represented by Kang Youwei and Liang Qichao continued to propagate the need to implement a "constitutional monarchy" and exerted considerable influence among the bourgeois, petitbourgeois youths, overseas Chinese, ideological groups, and circles of opinion. In order to advance the revolutionary movement, the Tong Meng Hui opened up a fierce debate with the reformists.

The main forum for this debate was the organ of the Tong Meng Hui, MINBAO [PEOPLE'S NEWSPAPER], and XINMIN CONGBAO [NEW PEOPLE'S JOURNAL] headed up by Liang Qichao.

The revolutionary-reformist debate centered mainly on the following four questions:

(I) Whether or not to overthrow the Qing government--the debate over the so-called "ethnic revolution."

Liang Qichao declared: Under the rule of the Qing monarchy, "the people of the whole country have already become equal under the law, and there are no more privileged persons." Hence, with respect to the Qing government, there should be no overthrow but only supervision and reform.

In articles such as "National Citizens," "On Why the Manchu Government Cannot Practice Constitutionalism Even If It Wished To," and "A Fair Appraisal of Anti-Manchu Orientation" which they published in MINBAO, the revolutionaries exposed the policies of ethnic discrimination and suppression practiced by the Qing government and pointed out that the politics of the previous 260 years had been an aristocratic politics of inequality, and that the oppression of the Han nationality by the Qing government of the Manchus could be called omnipresent.

The revolutionaries also exposed the Qing government's traitorous and capitulationist behavior in "being willing to present their sovereign possessions to friendly countries rather than grant them to their household slaves." They pointed out that since the Opium War of 1840 War of 1840, none of the major or minor treaties concluded by the Qing government with "foreigners" "was anything more than damaging to itself and beneficial to others." "Major [treaties] involved encroachment on territorial rights as those having to do with railroads, minerals, and navigation routes. These have made our citizens grieve over everything they see, and they have no place to turn for redress of such grievances." In order to save the Chinese nation from its in deep and heavy crises, it was necessary to overthrow "the alien, autocratic government which denigates and abandons our country's rights and interests."

(II) Whether or not to establish a republican regime--the debate over the so-called "political revolution."

Liang Qichao, the principal advocate of the reformists, piously propagated the "constitutional monarchy" theory of Prof Bolunhake [3134 0243 5756 0344] of the University of Berlin in Germany, and did his best to trumpet that China should also practice constitutional monarchy. He opposed the establishment of a republican regime.

The revolutionaries could not tolerate constitutional monarchy. They advocated a thorough transformation of the government of monarchical autocracy of several thousand years' standing and the establishment of a republican regime that would carry out a system of people's rights and constitutionalism. They held that under such a republican regime, there would be no differentiation of the people into various ranks and classes, with the result that everybody would be equal with everybody else, which would be "the best and the most suitable."

(III) Whether or not to practice the principle of the people's livelihood--the debate over the so-called "social revolution."

As to whether it was necessary to carry out a "social revolution" in China, the reformists were entirely negative. Liang Qichao said that the economic structure of Chinese society was different from that of the countries of Europe and America; there was no serious gap between the poor and the rich, and taxes and levies were extremely light. Hence it was only necessary to carry out the principle of social reform.

Opposing the reformists, the revolutionaries pointed out in articles such as "State Ownership of Land and Public Finances," "The Principle of People's Livelihood and the Future of China's Political Revolution," and "A Refutation of XINMIN CONGBAO's Deprecation of State Ownership of Land" that although there was no serious gap between the poor and the rich in China, as there was in countries of Europe and America, a difference between the poor and the rich did exist; if the majority of people were not to curl under the control of the minority of capitalists, it was necessary to carry out a social revolution.

(IV) Whether or not to resort to revolution--the debate over the question of the merits and demerits of revolution.

The reformists were extremely afraid of revolution and cursed it, alleging that revolution would cause "great disorder under heaven" and foreign intervention, and that it was bound to lead to national destruction. Kang Youwei said: If "the whole country had talked about revolution, then by this time internal disorder would have occurred and foreign powers would have invaded us." Liang Qichao, in turn, uttered the slander that revolution would destroy "social order" and lead to "endless disorder," thus inevitably becoming unmanageable.

The revolutionaries were of the opinion that revolution was entirely beneficial and not at all harmful; only revolution could save China. They published articles in MINBAO such as "A Refutation of the Theory That Revolution Would Result in Partition" and "A Refutation of the Theory That Revolution Would Cause Internal Disorder," in order to pointedly refute the preposterous theories of the reformists. They pointed out: "The disaster of partition is already being witnessed in China; it is out of its fear of partition that the revolutionary party resorts to revolution, and not its revolution which has incurred partition." As for the theory that revolution would cause internal disorder, the revolutionaries held that revolution in China this time was different from past peasant uprisings and wars that were in contest over the imperial throne; its goal [this time] was to establish a new state of democracy and republicanism, and therefore it would serve "the internal harmony of the people's parties" and create a revolutionary path in an orderly manner.

Over the above four questions the revolutionaries and the reformists launched a great debate that lasted 2 years. Although, owing to their bourgeois and petitbourgeois ideological limitations, the revolutionaries exhibited a murky understanding of such major questions as antifeudalism and anti-imperialism, and even avoided discussing them during the debate, their opposition to the Qing Dynasty's rule and to constitutional monarchy was very firm, and they ruthlessly exposed the reactionary nature and deceptive propaganda of the reformists, thus making good ideological and public opinion preparations for the 1911 Revolution.

PRC WELCOMES CULTURAL COOPERATION WITH TAIWAN

HK161046 Beijing ZHONGGUO XINWEN SHE in Chinese 1459 GMT 15 Oct 81

[Report: "Acting Cultural Minister Welcomes Cultural Exchanges With Taiwan"]

[Text] Acting Cultural Minister Zhou Hanzhi has said: For the sake of developing academic and cultural exchanges and promoting mutual understanding, we welcome people of the cultural and artistic circles in Taiwan to return to the motherland to give performances, discuss and exchange experiences, make films, hold exhibits, conduct academic exchanges, go sightseeing, visit relatives and friends and tour the country. We will warmly welcome them and provide them with every facility.

Zhou Hanzhi was addressing a group of people all from the cultural field, of Taiwan descent and relatives of Taiwan compatriots at a meeting held this morning.

More than 50 public figures, artists, professors, actors and Taiwan compatriots in the cultural field attended this meeting.

Celebrated Beijing opera artist Zhang Junqiu, in a written statement, said: I am very happy to hear some news about the state of Beijing opera in Taiwan over the past few years. I earnestly hope that the friends and followers of Beijing opera in Taiwan can come to Beijing, visit various parts of the motherland and exchange views with us. After the unification of the motherland, I believe that there will be a greater development in Beijing opera under the joint efforts of the Beijing opera artists on the mainland and Taiwan.

Li Tongchun, the second younger brother, Li Guochun, the fifth younger brother, and Li Fengxiang, a cousin, of Li Wanchun, a celebrated actor of the Beijing opera theater, are all Beijing opera performers in Taiwan, and Li Wanchun daily looks forward to reuniting with them. Li Wanchun said: The departments concerned in Beijing are preparing to hold a celebration next year to mark my 65th anniversary in dramatic art. I hope that my brothers and relatives and their pupils can come at that time to take part in the commemoration activities and to share my honor and happiness.

Zhang Weijun, a research fellow of the Beijing Municipal Traditional Opera Research Institute and wife of the deceased well-known Beijing opera artist Xun Huisheng, said: My late husband and I have many friends and students in Taiwan. I hope that they will make every effort to bring about major cooperation between the mainland and Taiwan in Beijing opera and raise their voices in chorus for peaceful unification.

The meeting was presided over by Vice Minister of Culture Situ Huimin. Among the speakers were Zhang Boju, celebrated Chinese calligrapher, Chang Renxia, professor at the Central Art Institute, Hu Jieguan, lecturer at the Beijing Art College, Shan Shiyuan, deputy curator of the Palace Museum, and Wang Xiaju, calligrapher at the Chinese Art Center. They expressed warm support for the policies stated by NPC chairman Ye Jianying and chairman Hu Yaobang for the return of Taiwan to the motherland and the realization of peaceful unification. They hoped that both sides of the strait will actively develop academic and cultural exchanges and strive to promote the cultural undertakings of the motherland, bring about the unification of the motherland and vigorously develop China.

OCEANOGRAPHY BUREAU DECIDES ON TAIWAN TIES

OW181251 Beijing XINHUA Domestic Service in Chinese 1628 GMT 16 Oct 81

[Text] Beijing, 16 Oct (XINHUA)--In order to carry out the policy with regard to the return of Taiwan to the motherland and the realization of peaceful reunification as elaborated by Chairman Ye Jianying, the State Oceanography Bureau has adopted a six-point decision which runs as follows:

1. Make preparations to establish ties with Taiwan's oceanography departments and exchange information on maritime survey and scientific research at any time.

2. Invite Taiwan oceanographers to come to the mainland to visit, give lectures, carry out academic exchanges and make common efforts with oceanographers on the mainland to study the development of the motherland's marine resources and other maritime projects.

3. Be prepared to cooperate with Taiwan maritime survey and research units to conduct scientific investigation on hydrometeorology, biology, physics, chemistry, geology and marine resources from the China Sea to the great oceans at any time. It is also necessary to supply facilities and conveniences, including vessels and equipment.

4. Various investigation and research units on the sea coast under the State Oceanography Bureau must be prepared to invite Taiwan maritime surveys ships to visit the mainland and welcome their berthing, replenishing supply and taking shelter from the wind at any time.

5. Be prepared to consult with Taiwan oceanography departments on organizing delegations together to join international maritime organizations and attend meetings and activities sponsored by academic bodies together at any time.

6. Invite Taiwan oceanography workers to join the Chinese Oceanography Society and attend academic activities sponsored by the society.

'RENMIN RIBAO' DISCUSSES CANCUN SUMMIT RESULTS

HK280645 Beijing RENMIN RIBAO in Chinese 26 Oct 81 p 6

[Newsletter from Cancun by correspondent Yuan Xianlu (5913 0341 4289): "An Important Conference for North-South Dialogue"]

[Text] The Cancun summit for North-South dialogue has closed. At a press conference, the co-chairmen of the summit, Mexican President Lopez Portillo and Canadian Prime Minister Trudeau, said that "in a constructive and positive spirit," the participants had an extensive exchange of views on questions concerning North-South relationships and unanimously agreed to hold global negotiations on these relationships. Undoubted, these negotiations will promote improvement in North-South relations.

Many participants who had come from developing countries said that the convening of the Cancun conference itself was of great significance. The reason was that after the developing countries had won political independence, they urgently demanded that that unjust and irrational international economic order be changed so that they could develop independent economies. However, for a long time, this just demand had been ignored and contradictions between the North and the South continued to develop. At the current conference, heads of 8 developed and 14 developing countries finally sat together and discussed the question of improving North-South economic relations. This showed that changing the old international economic order and adjusting the North-South structure in light of the principle of equality and mutual benefit had become the trend of our times.

In his speech at the closing session, the host of the conference President Lopez Portillo stressed that improving the North-South relationship was the common target which needed the efforts of all participants. This is entirely correct. The development of the world economy has brought the economies of different countries closer and closer together, and the economy of one country affects another. French President Francois M. Mitterrand said not long ago: "Evidently, if the economy of the poor countries is at a standstill, the rich countries will also suffer." Therefore, "assisting the Third World means extricating ourselves from crises." Some leaders of other developed countries also expressed the same view in their speeches at the conference.

In his speech, Chinese Premier Zhao Ziyang said: "At present, the world is confronted by two major questions: One is the maintenance of peace and the other, the promotion of development. These two issues are closely related and inseparable." Leaders of many countries shared the same view. They pointed out that the economic deterioration in some developing countries and tension in North-South relations often led to turmoil in these countries and gave hegemonists an opportunity for aggression and expansion. Therefore, improving North-South relations was not only an economic question but also an important political question affecting world peace and stability.

It is very clear that improving North-South relations is tremendously important and urgent both to developing and developed countries. It was precisely because of this that the spirit of cooperation and mutual understanding was the main thrust of the Cancun summit.

According to the agreement reached at the foreign ministers' meeting held in August, the main purpose of the North-South Cancun summit was "to create conditions for global negotiations to eliminate economic differences between the industrial countries and the developing countries." In order to improve North-South relations, global negotiations will be held to establish a new international economic order. This is not only a way to hit the fundamental target but also is a pressing task at present. This idea was put forth by the developing countries long ago, but for various reasons, it has not yet been realized. Recently, the European Economic Community and some other developed countries have explicitly expressed their support for holding global negotiations. At this summit, U.S. President Ronald Reagan also reiterated the U.S. position taken, at the Ottawa conference in July this year. He expressed the view that the United States was willing to participate in the global negotiations on the basis of "the four fundamental understandings." Unanimously affirming the necessity of holding global negotiations was an achievement of the Cancun summit.

At the Cancun summit, all participants also seriously and enthusiastically discussed a number of pressing problems facing some developing countries, such as food, energy, trade, finance and so on. This was conducive to increasing mutual understanding and to putting forth concrete solutions in the future.

During the discussion over 2 days, there were also some differences. Because the situations in the developing and the developed countries are different, it is natural to have different views, but such differences can be gradually settled in the future. However, the U.S. attitude toward some questions has made people feel uneasy. As reported, agreement could not be reached on the procedures for preparing the global negotiations, simply because the United States held different views. On the question of solving urgent problems facing the developing countries, the United States one-sidedly stressed free economy, market strength and private investment and did not agree to reform the existing international economic organizations. This of course was criticized by some developing countries. Observers here pointed out that since the installation of the Reagan Administration, it had adopted an indifferent attitude toward improving North-South relations. After it had expressed at the Ottawa conference its agreement to participate in future global negotiations, it avoided the question of global negotiations in many recent speeches concerning North-South relations and put forth views which did not conform with the desires of the developing countries. Therefore, we wonder whether the United States, as the biggest developed country, is really willing to adopt an enthusiastic attitude toward improving North-South relations, or simply tries to avoid being isolated by expressing its agreement to participate in the global negotiations and is actually trying in every way to maintain the old international economic order. We have grounds to ask this question and it is also necessary for the United States to reconsider its stand from the strategic point of view.

When the co-chairmen summed up the conference and in the speeches of leaders of many countries, they all expressed their regret over the Soviet Union's refusal to participate in the Cancun summit. Many journalists who had come to cover the Cancun summit said that from this refusal alone, it was not difficult for people to see the true color of this "natural ally."

Improving North-South relations is a difficult struggle to change the old international economic order and to establish a new international economic order. We are bound to encounter obstacles. However, the entire progress of the Cancun summit showed that the trend of the times is irresistable. As long as the developing countries strengthen their unity with the enlightened developed countries and persist in making their efforts, they will certainly score more and more achievements in realizing this goal.

'GUANGMING RIBAO' ON CANCUN CONFERENCE

HK280500 Beijing GUANGMING RIBAO in Chinese 19 Oct 81 p 4

[International commentary by Di Xin [4564 2450]: "North-South Economic Relations and the Cancun Conference"]

[Text] A "conference on international cooperation and development" will be held in Cancun, Mexico, on 22 October, which will be participated in by heads of state or government leaders from 22 countries. Under the present international situation, which is turbulent and in which North-South relations are rather tense, the opening of this conference is of great significance. It will not only influence international economic cooperation and development, but also the safeguarding of world peace.

After winning political independence, the Third World countries have generally needed to win economic independence. They have made great efforts in developing their national economies. In more than 30 years since the Second World War, they have, more or less, freed themselves economically from being subordinate to the developed countries. Generally speaking, their economic development is not too slow. However, the old international economic order has not been changed or disintegrated along with the advance of our times. On the contrary, it seriously hampers economic development in the developing countries. Through transnational corporations and international financial institutions under their control, the developed countries have maintained monopolies in such spheres as production, trade, technology and finance. Thus, the developing countries can only largely depend on them and be exploited by them. Take trade, for example. The comparative prices of the developing countries dropped by 10 percent from the mid-1950's to early 1970's. In the period between 1973 and 1975, the price of rubber exported by the ASEAN countries dropped by 53 percent, and the price of tin dropped by 29 percent. For another example, the proportion of high-interest commercial loans was about 58 percent in 1980. So, in these years, annual debt servicing of the developing countries has had to be financed by over 80 percent of the total loans taken out each year. This year, alone, the interest they must repay is as huge as over $33 billion.

Therefore, in order to develop their national economies, the developing countries are eager to change the old international economic order and free themselves from the fetters of the developed countries. They began their common struggle at the Bandung conference and carried the struggle on through the nonaligned movement and various regional and professional organizations. They also established "The Group of 77." But the achievement is not obvious. The victory of the struggle of the oil-producing countries against the developed countries in 1973 encouraged the developing countries and simultaneously made the developed countries take the matter seriously. In 1974, a declaration and program of action for establishing a new international economic order was adopted by the sixth UN special session. Another two international conferences were then held in Paris in 1974 and 1977, in which 27 countries from the North and South held a dialogue. However, because some most developed countries, such as the United States and others, had tried hard to protect their vested interests, these conferences ended in failure. In order to break the deadlock, the developing countries made a concession and proposed to hold international talks. At the 34th UN General Assembly in 1979, a resolution was adopted which decided to launch global negotiations. But since the United States stubbornly clung to its wrong position, the 35th UN General Assembly and the 11th special session held last year failed to reach agreement on the procedure and agenda of the global negotiations. Again, in order to break the deadlock, Mexico, Austria and 9 countries arranged a summit conference of 22 countries from the North and South. They planned to invite the USSR to the conference, but this superpower, which time and again has called itself a "natural ally" of the Third World countries, had shown no concern about such a conference that would mean a great deal tc the Third World. The foreign ministers of the 22 countries held a preparatory meeting at Cancun in early August. They unanimously agreed that the topic for discussion at this conference would be the future of international development cooperation and the promotion of the world economy, and that the main task would be reaching an agreement on global negotiations.

Now the whole world is paying a good deal of attention to the Cancun conference. It is a common desire of the Third World countries to change the unequal and inequitable old international economic order and establish a new one on the basis of the principle of equality and mutual benefit and the principle of equitableness. It is expected that the developed countries will conform to the historical trend and, starting from the whole of the present international situation, do better at the Cancun conference. Progressive opinions in most developed countries and the United States have more or less felt the irresistibility of the historical trend. They have realized that since the developed countries are, to a great extent, dependent on the developing countries, (especially in energy resources and stratetic materials), in helping the latter to develop their economies, they are, in the final analysis, also helping extricate themselves from difficulties and crisis. This will be good for their own economic development. The pity is that, as has been noted, the United States is still very stubborn in its attitude. Only recently, instead of talking about the global talks, Reagan and other U.S. Government leaders again played the same old tune, that is, free trade and private investment and so forth. This attitude of the United States has received widespread criticism from the media, which has pointed out that if the United States insists on such an attitude at the Cancun conference, it will become isolated and will please its main opponent who is absent from the conference.

'XINHUA' REPORTS ON CANCUN SUMMIT PROCEEDINGS

Venezuelan President's Remarks

OW221226 Beijing XINHUA in English 1214 GMT 22 Oct 81

[Text] Caracas, 21 Oct (XINHUA)--Venezuelan President Luis Herrera Campins said yesterday that participants in the international conference on cooperation and development should take this opportunity to discuss frankly and openly problems affecting international relations and to examine ways to solve them.

Herrera made these remarks in an address to the nation over the radio and TV network. He left here for Mexico to attend the Cancun conference today. He stressed that there exists inequality between the developed and developing countries and that the North is pitted against the South in the present international economic system. He pointed out, "This division results in situations of profound economic and social injustice", and made it an imperative need to establish a new international economic order.

The Venezuelan president said that the Cancun conference is aimed at making the international community see clearly and use the best talent of men to seek a basic solution to the worldwide economic crisis. He pointed out that the crisis has affected all countries. No country, even the most powerful one, can live in isolation. Inflation, unemployment and the monetary instability are factors that hinder the development of world countries, he added.

Venezuelan Working Paper

OW241342 Beijing XINHUA in English 1249 GMT 24 Oct 81

[Text] Cancun, 23 Oct (XINHUA)--The United Nations should be utilized as a forum for the global economic talks between the Third World countries and the industrialised nations.

A proposal to this effect was made by Venezuela in a working paper submitted to the North-South summit here.

The paper, entitled "Problems of the Developing Countries in a Global Perspective", says that the world economy cannot afford to be controlled by the industrialised countries alone, nor can the needs of the developing countries of the Third World be met by bilateral or regional resources alone.

The paper stresses the need for global talks in the areas of trade, raw materials, energy, development, monetary matters and finance and the use of the United Nations as a forum for economic talks.

The paper says that the effort to promote global talks should be accompanied by a broadening and deepening of economic cooperation among the developing countries in order to reduce their vulnerability to the world economic crises and to replace dependence with a genuine inter-dependence.

The conventional ways of economic management have been proved to be of limited efficiency because the imbalance between the Third World countries and the industrialised countries is fundamentally structural and not merely of periodic character. To develop production, the North-South economic structure must be reformed, the paper says.

Waldheim Statement

OW270124 Beijing XINHUA in English 0107 GMT 27 Oct 81

[Text] United Nations, 26 Oct (XINHUA)--UN Secretary-General Kurt Waldheim declared today he hoped that the understanding reached among the participants at Cancun summit would lead to an early consensus at the United Nations on the launching of global negotiations.

The UN secretary-general in a statement on the Cancun summit this afternoon said he was gratified at the very constructive, positive spirit in which the issues before the meeting were addressed. He also welcomed the determination expressed by the participants to face as a matter of priority the serious challenges of the North-South relationship in the coming decade.

He said he was impressed by the recognition of the growing interdependence of national economic problems and the need for concerted action to solve economic problems and to redress economic disparities among nations. He said he "very much hopes that the political will manifested at the will be translated into concrete action on the specific priority issues and challenges facing the world economy."

Lopez Portillo Stresses Cooperation

OW230322 Beijing XINHUA in English 0309 GMT 23 Oct 81

[Text] Cancun, 22 Oct (XINHUA)--Mexican President Jose Lopez Portillo, co-chairman of the 22-nation summit meeting, stressed here this morning that the developed and the developing countries must find new answers to age-old problems and construct a new system of international economic relations based on the reality of growing and genuine interdependence and on the principles of justice and equity.

In his opening speech at the international meeting on cooperation and development, Lopez Portillo said the first important achievement of this event is the very fact that the leaders of 22 countries are gathered here together. He called for "making every effort to establish a dialogue that will replace a continuing succession of monologues, or even confrontation."

Turning to the complex and plural nature of today's world economic situations, the president said: Protectionism, speculation and manipulation distort trade. Raw material prices fall while the price of money rises. Inflation and recession prevent a harmonious relationship between guided processes of industrialization and trade, and seem aimed at freezing the present structure of trade exchange and of the international division of labor.

Furthermore, he said, transnational enterprises "ignore or trample upon the sovereignty or nations which have been unable to organize their response to the logic of the interconnection and interdependence of the world economy".

He went on to say unfairness and injustice do exist, and in many parts of this world, there is hunger, poverty and squalor. "Chronic poverty is a factor that increases political and social instability within each country, and frequently feeds the rivalry between the great powers, exacerbates existing tensions, and even further impairs existing relations. To some extent, which is doubtless large, instability brought about by underdevelopment has paved the way for the reappearance of the cold war, strengthened hegemonic aspirations, and given added impetus to the arms race."

On the interconnection and the interdependence of the North and South, Lopez Portillo said "Many of the problems of the South, of course, must be imputed to the South; but other structural problems that are both restricting and deadly stem from its relationships with the North and with the East-West conflict."

He pointed out a lasting and stable reactivation of the world economy cannot come from the prosperity of just one of its segments, if the others remain in a state of stagnation and therefore "domestic economic policies and international cooperation efforts in which everyone joins must be fitted to the new realities of global interdependence."

The president noted it is now the duty of the leaders of the North and the South to change the old type of economic relationships, whose negative effects were deliberately ignored during almost thirty years of expansion, which obviously did not benefit all to the same extent.

The president said, the world must find ways to coordinate the actions of countries having technical knowledge, unused productive capacity and unemployed manpower with those of countries having demands but limited purchasing power, and with those others which do possess financial resources, so that all can join in making international cooperation for development a reality.

Summit Participants Comment

OW241852 Beijing XINHUA in English 1841 GMT 24 Oct 81

[Text] Beijing, 24 Oct (XINHUA)--Upon the conclusion of the Cancun summit on international cooperation and development, some representatives from developing countries welcomed the decision to begin preparations for global negotiations but were disappointed that no definite date was set, according to reports from Cancun.

Philippines President Ferdinand Marcos said Friday that the North-South summit meeting had broken the logjam on international negotiations toward a new world economic system. "The key thing is that the North-South dialogue is no longer stalled, that it will be resumed soon within the framework of the United Nations," he said.

Nigerian Foreign Minister Ishaya Audu said that the conference was a success, "but the road ahead is a long and arduous one."

Mohamed Bedjaoui, the Algerian chairman of the Group of 77 developing nations, called the meeting "an open window on the future." In his view, the two co-chairmen's summary of the summit meant that the United Nations had got the necessary political promotion so that global negotiations could not be delayed any more.

A high-ranking Indian official called the summit "a partial success because it decided we should engage in global negotiations." But he said he was "disappointed" there was no agreement on an agenda or procedures. "We don't know how long this will take to get started," he added.

A number of delegates from developed countries expressed satisfaction with the result of the meeting. French President Francois Mitterrand noted that he felt "no disappointment, only satisfaction." "We have moved forward," he said. But he added, "the only question is when words will become deeds."

West German Vice-Chancellor and Foreign Minister Hans-Dietrich Genscher said the summit "created a basis of confidence" for future cooperation. "We advanced one good step ahead on the extremely important question of global negotiations, but there are many rocks to be removed," he stated.

Canadian Prime Minister Pierre Elliott Trudeau said, "The great thing about this conference is that we sat at the same table and got a real discussion going." But on global negotiations, he said that the final outcome reflected "inability to bring together those who wanted to bring the matter to the United Nations now and those who wanted to start afresh." "We failed to get an agreement on exactly what the next step would be," he noted.

TEXT OF ZHAO ZIYANG SPEECH AT CANCUN

HK271100 Beijing RENMIN RIBAO in Chinese 24 Oct 81 p 1

[Text of Zhao Ziyang 22 October speech at the international conference on cooperation and development at Cancun, Mexico--slantlines denote subhead in boldface supplied by RENMIN RIBAO editor]

[Text] Mr chairman:

I am very pleased to be invited to attend this meeting. I would like to express my heartfelt thanks to our host, the Mexican Government, for making all the arrangements.

At present, the world is confronted with two major questions: One is the maintenance of peace and the other, the promotion of development. These two questions are closely related to each other and are inseparable. If our present meeting can yield positive results in strengthening international economic cooperation for development, it will be a useful contribution to the maintenance of world peace.

//The Economic Development of the Developing Countries Is Being Subjected to all Kinds of External Obstruction//

The rise of the great number of developing countries represents a fundamental change in the world situation since World War II. They have become an independent and significant force on the international political scene. However, their status in the world economic system is far from commensurate with this fact. Their economic development is still being subjected to all kinds of external obstruction. More than 30 most underdeveloped countries still remain in dire poverty. The majority of countries whose chief exports are raw materials are confronted with worsening trading conditions and an unfavorable balance of international payments. Many developing countries that chiefly export manufactured goods are heading for an economic slowdown as a result of protectionism and mounting debts. Even the petroleum exporting countries find it difficult to smoothly achieve industrialization because of the monopoly of technology, trade, finances and the like on the international market. Moreover, the foreign exchange surpluses which they have gained in exchange for their limited and nonrenewable petroleum resources are shrinking in value due to worldwide inflation. In short, the developing countries share the same plight, although their conditions may differ. They were subjected to prolonged imperialist and colonialist domination and plunder in the past, and now are still heavily fettered by the unjust and inequitable international economic structure. It is against this historical background and under the prevailing circumstances that all the developing countries have come to share the strong demand for the restructuring of the old international economic order and the establishment of a new one. Their demand conforms with the trend of development and is just and completely reasonable.

//It Is More and More Difficult To Maintain the old International Economic Relationship//

At present, the developed countries also find themselves in a double plight of economic stagnation and inflation. Their economic crisis has deep roots in society. The prosperity of the developed countries was, in the past, built on the poverty of the underdeveloped countries. As the developing countries have already achieved independence and the people are increasingly awakening, it is more and more difficult to maintain their old international economic relationship. If the developed countries should persist in their unjust and inequitable approach toward the developing countries, tension in North-South relations can hardly be avoided. If the developing countries cannot smoothly achieve economic progress, the developed countries are bound to find their supply of raw materials and their markets shrinking. Therefore, it is unwise for the developed countries to reject outright the restructuring of the old international economic order under the pretext of their economic difficulties. Many far-sighted persons in the developed countries have, out of their own national interests, come to realize the importance and urgency of restructuring the existing international economic order and improving North-South relations. This kind of news which conforms to the historical trend of our time is well received by the developing countries.

//Cooperation Should Be Guided by the Principle of Being Just and Reasonable and of Equality and Mutual Benefit//

Under such circumstances, the great number of developing countries and many developed countries have called for "cooperation instead of confrontation" in North-South relations.

Needless to say, such cooperation should be based on the continuous restructuring of the unjust and inequitable international economic relationship. Otherwise, cooperation can hardly be maintained or confrontation avoided. Therefore, international economic aid, private investment, transfer of technology, trade, money and finance should be guided by the principle of being just and reasonable and of equality and mutual benefit. It is essential to respect the sovereignty of the developing countries and not to interfere in their internal affairs or control their economic lifelines. It is essential to help the developing countries build their independent national economies and not to make them more dependent. The present state of affairs in which they are not in a position to exercise their rights in international economic affairs must be changed. Of course, the developing countries must rely on their own strength to carry out economic construction and must make necessary internal reforms in the light of their national condition. However, their efforts in this direction are seriously hampered by the existing international economic order. Only be restructuring the old international economic order will it be possible to ensure the smooth economic growth of the developing countries, thus improving the North-South relationship and revitalizing the world economy.

//The Principle of the Chinese Government for the Establishment of a new International Economic Order//

In order to establish a new international economic order, it is essential to work out a comprehensive and total solution and make unremitting efforts. At present, many developing countries, particularly the most underdeveloped countries, are indeed faced with urgent problems which call for priority solution. This kind of solution should be a step toward a comprehensive and total solution and should accord with the demands of the developing countries in their long-term development. It should contribute toward promoting the process of the establishment of a new international economic order and should not be a limited measure that departs from the fundamental objective of establishing a new international economic order.

With a view to establishing a new international economic order and solving some of the urgent problems before it is too late, the developing countries have worked hard for many years and put forth many reasonable proposals. The Chinese Government has conscientiously studied these proposals and believes it possible to promote international cooperation for development according to the following principles:

1. Give active support to the developing countries in all their efforts to develop their national economies, achieve economic independence and practice collective self-reliance.

2. Restructure the existing international economic order in keeping with the principles of being just and reasonable and of equality and mutual benefit.

3. Correctly and closely integrate the fundamental objective of establishing a new international economic order with the solution of the current urgent problems of the developing countries.

4. The developing countries are entitled to adopt development strategies suited to their own conditions. The developed countries should not make domestic reforms in the developing countries a precondition for the establishment of the new international economic order.

5. Earnestly promote the North-South negotiations aimed at improving economic status of the developing countries in the interest of the growth of world economy and the maintenance of world peace.

//Enable the Global Negotiations To Make Substantial Progress as Soon as Possible//

Mr Chairman: In order to improve the North-South economic relationship, the most urgent task we face now is to launch global negotiations under the auspices of the United Nations as soon as possible and enable them to make substantial progress. This is also one of the major objectives outlined in the letter of invitation to the present conference. Many countries have suggested that the global negotiations defined in the resolution of the 34th UN General Assembly should actually commence before the end of this year, or early next year at the latest. China resolutely supports this call.

Allow me to make this appeal to the leaders present at this meeting: Let us jointly express our desire for an early start of global negotiations and our willingness to do everything in our power to enable the global negotiations to yield positive results.

At present, the international political and economic situation is very grim indeed. The improvement of North-South relations is closely related to the struggle against hegemonist aggression and expansion and for the maintenance of world peace and stability. The questions we have discussed are not only economic issues of great importance, but also political issues of great strategic significance. The people of all countries place great hope on this meeting. We must not let them down. Our meeting must succeed; it cannot afford to fail.

China stands ready to work hard together with all the other governments and peoples for the establishment of a new international economic order and for the maintenance of world peace.

Thank you, Mr Chairman.

'XINHUA' CITES FOREIGN LEADERS ON CANCUN SUMMIT

OW262147 Beijing XINHUA Domestic Service in Chinese 1132 GMT 25 Oct 81

[Text] Beijing, 25 Oct (XINHUA)--A number of state leaders who attended the international conference on cooperation and development issued statements, expressing satisfaction with the results of the conference.

At a press conference in Cancun on the evening of 23 October French President Mitterrand said that he was gratified at the results of the 2-day summit conference. He felt that it is possible that global talks between developed and developing countries will begin early next year at the United Nations.

On October 24 British Prime Minister Mrs Thatcher told reporters in Cancun that she felt that the Cancun conference was a "very great success," and that the Third World countries have realized their wish to continue to hold global talks within the framework of the United Nations. She said, however, that "global talks have different connotations for different people," and "the definite meaning of global talks should be defined by the United Nations."

Upon his return to Washington from Cancun on 24 October, U.S. President Reagan said that the leaders of the various countries had direct and candid talks at the meeting, that their talks were all-embracing and that "there were no mutual accusations." He said: "Together we have successfully created a spirit that gives people new hope. We intend to translate this spirit into a driving force to improve the world economy and accelerate the development of the developing countries." The Cancun conference was "quite a success." On many occasions Reagan had reiterated a number of preconditions put forward by the United States for holding global talks.

On 24 October U.S. Secretary of State Haig indicated to reporters in Cancun that the Cancun conference "took a very successful step toward greater international cooperation." He said that the 2-day summit conference will have a significant impact on the North-South dialogue. He reiterated the U.S. stand, that is, that future global talks should not conflict with existing international organizations.

At a press conference in Cancun on 25 October Indian Prime Minister Indira Gandhi said that she felt that the doors "are not closed" for resumption of North-South dialogue on the question of global talks within the framework of the United Nations. She expressed the hope that after hearing the difficulties mentioned by leaders of developing countries, U.S. leaders will give them consideration from now on. She added that the progress at the Cancun conference shows that some industrialized countries have already recognized the truth that "if the developing countries are helped, so are the developed countries."

'XINHUA' REPORTS ON EVENTS IN POLAND

Jaruzelski on Implementing Resolutions

OW191907 Beijing XINHUA in English 1850 GMT 19 Oct 81

[Text] Warsaw, 19 Oct (XINHUA)--Newly elected Polish party's First Secretary Wojciech Jaruzelski said here yesterday that he would do his utmost to realize the resolution approved at the party's latest plenary session and continue to carry out the resolutions of the ninth party congress.

He said he was assigned to an extremely difficult task by the party and he believed a change and improvement of the situation were especially needed at this critical moment.

He added that the opposition to socialism was conducting a struggle politically and extending it to other fields, thus creating a series of critical, tense situations.

He stressed that the party should bestir itself, remove its internal obstacles and believe in the correctness of the program of the ninth party's congress.

"The program has directed a way," he said. "Following this way, the crisis would be overcome, the people would benefit in many respects, the country would be strengthened and the contents of democracy and socialist revolution in our country would be deepened and broadened."

On relations with the solidarity union, Jaruzelski said, "We are willing to believe that the talks at the working level with representatives of the solidarity's national committee would achieve an expected good result. It is our earnest desire to expand the basis for the talks to all the forces serving socialist Poland."

On foreign relations with foreign countries, Jaruzelski stressed, "In this difficult situation, we particularly feel the great importance for Poland to continue its alliance with the socialist countries and be friends with the Soviet Union."

Central Committee Session Ends

OW191927 Beijing XINHUA in English 1855 GMT 19 Oct 81

[Text] Warsaw, 18 Oct (XINHUA)--The Central Committee of the Polish United Workers' Party ended its fourth plenum here today after a three-day session. The Central

Committee accepted First Secretary Kania's resignation and elected Jaruzelski in his stead with 180 votes in favor and 4 against.

In his brief speech, the newly elected first secretary proposed that the party's Central Committee hold its fifth session in a few days and propose a government reshuffle to the parliament.

The session discussed at length the implementation of the resolutions of the ninth party congress as well as the social and political situation in Poland.

Kania and Political Bureau member Stefan Olszowski made reports at the session.

Referring to the increasingly grave situation at home, both criticized the program approved by the First National Congress of the Solidarity Union as "an anti-socialist opposition program." They called on the party organizations to carry out offensive activities in implementing the resolutions of the ninth party congress, improving the political and economic situations and strengthening the ideological work.

During the discussion of the two reports, about 40 perople expressed their views, including members and alternate members of the party's Central Committee and Political Bureau. Many of them criticized the Political Bureau and government for failing to implement the resolutions of the party congress effectively and steer the country out of the political and economic crises quickly.

Many speakers strongly accused the Solidarity Union of undermining the social agreement reached in August of last year and charged that "anti-socialist forces" were making use of the union to intensify their "open political struggle" against the authorities.

A resolution passed at the end of the session criticized the former party leadership for failing to take effective actions and displaying indecision in enforcing the resolutions of the party congress and the decisions of the party and government.

The resolution instructed the party-government organizations and security authorities to take resolute actions and use all possible judicial means to combat the opposition to socialism and law violations so as to extricate the country from the existing social and political crises and maintain social system and order.

The resolution also said, "The supreme authorities of the People's Republic of Poland should avail themselves of the powers entrusted to them by the constitution at an extremely critical moment to defend the country's most immediate interests."

The resolution demanded the Solidarity Union leadership "to respect the constitution of the Polish People's Republic and existing legal order; dissociate itself from anti-socialist activities, immediately halt strike actions; constructively approach the government's program to overcome the economic crisis; acknowledge the country's alliances with socialist countries in its practical activities; oppose the anti-Soviet campaign; and meet the requirements of state security."

The resolution said that the party was in favor of dialogue, consultation and cooperation. It also proposed that talks be reopened on the agreements signed by the government and the Solidarity Union to solve the disputes between the two sides and work out a program for united action.

Professional Trade Union Congress

OW191300 Beijing XINHUA in English 1233 GMT 19 Oct 81

[Text] Warsaw, 19 Oct (XINHUA)--The first congress of the Professional Trade Union of Poland was held here from October 16 to 18.

The congress was attended by Marian Wojniak, member of the secretariat of the Central Committee of the Polish United Workers' Party; Mieczyslaw Rakowsi, vice-chairman of the Council of Ministers, and Stanislaw Ciosek, minister for trade union affairs.

The congress approved the work report for 1980 submitted by the coordination committee of the Professional Trade Union and fixed the principles of the trade union's working program in the future and the current tasks. It also elected an all-Poland cooperation committee and an auditing commission, both led by Eudeniusz Mielnicki.

The revised constitution of the trade union stipulates that it "accepts the principle of the social ownership of the means of production as the base of the socialist system in Poland and recognizes the leading role of the Polish United Workers' Party as well as Poland's international alliance."

The congress expressed concern over the ever deepening domestic political and economic crises, and pledged that the Professional Trade Union will be a "partner and ally" of the authorities in its efforts to stabilize the present situation and tide over the difficulties.

The congress urged the authorities to take resolute and prompt actions against those who are trying by every conceivable means to change Poland's state system.

It warmly welcomed the election of Wojciech Jaruzelski as the first secretary of the Polish United Workers' Party.

The Professional Trade Union was formed last December following the dissolution of the Central Council of Trade Unions. It is the second largest trade union in the country with an enrollment of four million members from 24 trade unions.

Armed Forces' Task Defined

OW191936 Beijing XINHUA in English 1917 GMT 19 Oct 81

[Text] Warsaw, 19 Oct (XINHUA)--The military commission of the Polish Ministry of Defence held a meeting today, according to PAP.

The meeting defined the task for the armed forces under the present situation in accordance with the spirit of the resolution adopted by the party's fourth plenum.

Wojciech Jaruzelski, first secretary of the Polish Communist Party and chairman of the Council of Ministers, attended the meeting.

Solidarity Communique on PZPR Plenum

OW200726 Beijing XINHUA in English 0704 GMT 20 Oct 81

[Text] Warsaw, 19 Oct (XINHUA)--A communique of the presidium of the Solidarity National Commission issued today warned the authorities "against taking decisions which could sharpen the situation and cause social conflict."

This was solidarity's first reaction to the three-day fourth plenum of the Central Committee of the Polish United Workers' Party.

The communique, signed by deputy chairman of the presidium M. Krupinski, was issued after a presidium meeting held behind closed doors without Lech Alesa who was visiting France.

The communique accused the party plenum of "ordering" solidarity to take part in a government proposed mixed commission. It said that solidarity "understands the necessity" for measures designed to fight the crisis and was ready to take part in "any enterprise able to give positive results." However, it said, "as an independent trade union" solidarity alone will decide "the form of its initiatives, while seeking society's understanding and approval." "The exerting of any pressure may cancel opportunities for cooperation and partnership," it declared.

Referring to party plenum resolution on a possible strike ban, the communique said, "We share the view that these (strikes) are economically adverse phenomena and we shall see to it that unjustified protests, or those embarked upon before other forms of reaching accommodation have been exhausted, are eliminated."

"However, we represent the view that to avoid strikes one must do away with their causes rather than resorting to embargos that run counter to international law," the communique said.

The communique also notified solidarity's local chapters to ascertain before October 20 the views of their branches in factories and their position on the party Central Committee's program resolutions for discussion by the national commission which will meet on October 22.

Wroclaw Meetings Banned

OW220820 Beijing XINHUA in English 0722 GMT 22 Oct 81

[Text] Beijing, 22 Oct (XINHAU)--Gatherings in public places were banned throughout Poland's southwest Province of Wroclaw, according to news reports quoting the Polish press agency yesterday.

The ban was the first of its kind announced since the birth of the Solidarity Union at the end of August, 1980. It followed the police detention yesterday of four solidarity activists who were broadcasting union information in a loudspeaker van. About 1,500 people gathered around the police station, demanding the release of the detainees. The police arrested 11 more for obstructing the performance of the duty.

In the southern industrial Province of Katowice on Tuesday, riot police clashed with solidarity supporters after police confiscated solidarity publications which the authorities declared were anti-socialist and anti-Soviet. But the union condemned the police action as unwarranted provocation, maintaining that it was only selling its usual newsletters.

Meanwhile, a sit-in staged by 12,000 textile workers in Zyrardow near Warsaw to protest the chronic shortage of goods has entered its second week.

In the western Province of Zielona Gora about 150,000 workers in some 700 plants went on a one-hour warning strike yesterday, demanding the reinstatement of a solidarity shop steward at a state farm and the removal of his chief and a higher official whom they held responsible for the dismissal.

Jaruzelski Meets Party, Church Leaders

OW220842 Beijing XINHUA in English 0744 GMT 22 Oct 81

[Text] Warsaw, 21 Oct (XINHUA)--The new leader of the Polish United Workers' Party, Wojciech Jaruzelski, has convened a meeting of the secretariat of the party Central Committee and consulted various social figures on domestic situation.

The party first secretary chaired the secretariat meeting yesterday to discuss how to realize the tasks put forward at the fourth plenum of the party Central Committee. The meeting has decided on concrete tasks for the party's central departments, local organs and various party organizations.

On the same day, Jaruzelski met on separate occasions Stefan Ignar, chairman of the United Peasants' Party, and Edward Kowalczyk, chairman of the Democratic Party, and discussed with them political and economic matters of the country, especially ways to overcome the crisis, stabilize the domestic situation and maintain the line of socialist renewal.

Jaruzelski met Jozef Glemp, primate of the Roman CAtholic Church in Poland today. The Polish News Agency PAP said that they exchanged views on the complicated situation in the country, and "shared the view that the state and the church must continue to take common action for the interests of the nation, domestic stability, for the promotion of the course of renewal and for ensuring the security and international prestige of the People's Republic of Poland."

He received representatives of the Central Council of the Polish Socialist Youth Federation on October 19. He told them that the party and government leadership pins hopes on the patriotic enthusiasm of the younger generation and fully understands their needs and expectations.

Walesa Ends France Visit

OW211824 Beijing XINHUA in English 1635 GMT 21 Oct 81

[Text] Paris, 21 Oct (XINHUA)--Polish Solidarity Union chairman Lech Walesa said here October 19 that the replacement of Stanislaw Kania by General Wojciech Jaruzelski as head of the Polish United Workers' Party "will not cause any unfavorable change to solidarity."

Jaruzelski is Poland's premier and was named the United Workers' Party's new leader by the Central Committee October 18.

"It will be more convenient during discussions to have all the leading functions under the authority of one person," Walesa said. "In fact, the situation is better than before. We feel fully relieved at the result of these events and the future of 'solidarity'."

Walesa just ended an October 14-21 visit to France at the invitation of French trade unions.

While there, he talked with Prime Minister Pierre Mauroy, Mayor of Paris Jacques Chirac, leaders of the French Democratic Confederation of Labor (CFDT) and the General Confederation of Labor and Workers Force.

During his stay, Walesa accepted assistance from French trade unions in the name of the Solidarity Union.

Government Rejects Strike-Ban Proposal

OW230744 Beijing XINHUA in English 0712 GMT 23 Oct 81

[Text] Beijing, 23 Oct (XINHUA)--The Polish Government headed by Prime Minister Wojciech Jaruzelski yesterday rejected the party Central Committee's proposal for a suspension of the constitutional right to strike, according to news received here.

An AFP report quoted the Polish News Agency PAP, as saying that the opposition to a strike ban came from a meeting of the government's top-level economic reform commission chaired by Jaruzelski.

On the same day, the 107-member National Commission of the Solidarity Union began a meeting in Gdansk. After the debate, dominated by concern over the police action against solidarity members in Wroclaw and Katowice, the solidarity leaders put off a decision to call a nationwide strike against police activities.

Meanwhile, local strikes and other forms of protest were reported in many regions of the country.

REUTER said that some 180,000 solidarity members began an indefinite stoppage in the western Province of Zielona Gora though the authorities had given in on their main demand for the reinstatement of a sacked unionist.

In Wroclaw Province, the governor yesterday lifted the ban on gatherings in public places throughout the province. The ban was imposed the day before following police detention of some Solidarity Union activists. The local bus and tram drivers halted work to demand the release of all those detained. They returned to work after seven hours stoppage when police released the last of the detainees, reported the PAP.

Military To Deal With 'Negative Phenomena'

OW240832 Beijing XINHUA in English 0735 GMT 24 Oct 81

[Text] Beijing, 24 Oct (XINHUA)--The Polish Government has decided to send special military units around the country to deal with the local "negative phenomena" and economic decline, while the Solidarity Union announced yesterday a one-hour nationwide strike next Wednesday, according to reports received here.

"Their principal mission is directly to inform the government of any negative phenomena, to take steps to counteract them, and to render necessary assistance to the population and local government," said government spokesman Jerzy Urban.

"Tension is growing," said the spokesman in a televised statement. "The state leaning toward a fall must undertake all indispensable actions in saving the state."

The decision was announced at the end of a government presidium meeting yesterday. The spokesman said the special units, led by career army officers and composed of enlisted men whose regular military service has been extended, would help improve the supply of food to markets, facilitate the transport of goods, combat waste and mismanagement and solve local disputes.

On the same day, the 107-member National Commission of the Solidarity Union passed a resolution at a meeting in Gdansk, for a one-hour nationwide strike between 12:00 and 13:00 on October 28. The strike, the resolution said, is designed to protest against the authorities failure to work out responses to solidarity's demands. By that time, work in all the factories will stop and street traffic will be halted.

The solidarity spelled out its demands as improvement of food supplies, an end to the actions against union activists and establishment of a social council for the economy.

The resolution stressed that if these demands are not met by the end of the month, the solidarity will organize "active strikes" in the coal mines and in the agencies for the purchase, processing and distribution of food. Union officials said "active strike" could mean that workers would dispose of what they produced as the union saw fit.

The resolution said, "The actions of the authorities are chaotic and are causing the situation to worsen, and they have lost the confidence of society." It demanded that the actions of the authorities be placed under public supervision.

Government Asks Strike Cancellation

OW260744 Beijing XINHUA in English 0713 GMT 26 Oct 81

[Text] Warsaw, 25 Oct (XINHUA)--The Polish Government Committee for Union Relations issued a communique today, calling on the Solidarity Union to cancel the one-hour nationwide strike scheduled for next Wednesday.

It said that bilateral talks will "lose all meaning" if the union does not cease its "policy of opposition in the form of strikes," for which the solidarity must "bear responsibilities."

The communique, broadcast by the Polish News Agency PAP, referred to the deteriorating conditions of supplies saying that in a one-year period, stocks of factory-made consumer goods fell by one-third, or 92 billion zlotys (2.36 million dollars). It said that at a time when there is a danger that the population will not be able to buy clothes and shoes for winter, solidarity has put the "pistol of strikes not only to the government's temple, but to the temple of the entire society."

The communique expressed "deepest concern" over the situation and emphasized that anarchy cannot be tolerated. The "restraint and good will that the authorities have shown in their relations (with the union) have been interpreted as a sign of weakness and have been abused," it added.

Referring to recent incidents in Katowice and Wroclaw, where police arrested several union activists for selling copies of union leaflets, the committee said that solidarity and its members "were not the object of any repression" and that they had "total latitude to pursue genuine union activities." However, "the government cannot accept anything being placed above the law," especially "anti-government, anti-Soviet activities carried out against the primary interest of the people," the committee said.

"The Council of Ministers demands an end to strikes in order to save society from their disastrous effects," it said, adding, "the responsibility for continuing the oppositionist policies of strikes rests fully with the extreme elements of the leadership" of the 9.5 million-member trade union.

The committee, which had refused one of solidarity's major demands for putting to work a "council for the national economy," issued a new invitation to the union to negotiate in "mixed committee". It said that the best way was for the representatives of all the unions to sit at one table to expound their views and seek agreement on the improvement of supplies to the people.

Besides, it was reported that the government had ordered special military squads of three or four into some 2,000 small villages and towns to "help solve local conflicts."

Army To Assist Food Distribution

OW271215 Beijing XINHUA in English 1200 GMT 27 Oct 81

[Text] Warsaw, 27 Oct (XINHUA)--Several hundred operational groups of army officers and soldiers have been founded on the order of the government, and started their work yesterday in 2,000 Polish towns and villages, reported the Polish News Agency PAP.

Their duty would be to ensure that food supplies reach markets, to eliminate mismanagement and waste and to prepare the country for winter.

The troops would also assist with transport and ensure that essential supplies of coal get through to the foodstuff producers.

The Solidarity Union had said it would welcome any improvement in the supply situation and that this was the main purpose of the troops at face value "unless the fact prove otherwise."

PAP also said the government was scheduled to send a special commission headed by Andrzej Jedynak, vice-chairman of the Council of Ministers, to investigate into losses caused by a strike at the sulphur mines and steel foundry in Tarnobrzeg Province.

The commission would investigate harm done by the strike to the national economy and defence industry and would publish its findings, PAP added.

Parties Condemn Strike Plan

OW271237 Beijing XINHUA in English 1218 GMT 27 Oct 81

[Text] Warsaw, 27 Oct (XINHUA)--The United Workers' Party, the United Peasants' Party and the Democratic Party of Poland yesterday issued a joint statement, calling the Solidarity Union's planned strike for Wednesday a threat to the political, economic and defense basis of Poland's survival, reported the Polish News Agency PAP.

The statement said this must be met with counteraction corresponding to the degree of the threat. It stressed that all necessary constitutional means would be used to defend the security of the state.

The statement came at the meeting of the joint action committee of the three parties on the increasingly grave internal situation. The meeting was attended by Wojciech Jaruzelski, first secretary of the United Workers' Party, Stefan Ignar, chairman of the United Peasants' Party, and Edward Kowalczyk, chairman of the Democratic Party.

The statement also accused the Solidarity Union of obstructing every measure taken by the government for overcoming the main difficulties in social and economic life.

It added that the planned strike runs counter to the line of consultation and reform followed by the party, and would only "serve the interest of those who are no longer hiding their intention of overthrowing socialism and seizing power."

REPORTAGE ON ASIAN CONFERENCE ON POPULATION IN BEIJING

Background Information

OW211349 Beijing XINHUA in English 1250 GMT 21 Oct 81

[Text] Beijing, 21 Oct (XINHUA)--Following is background information on the Asian conference of parliamentarians on population and development.

1. Background of the Conference

Following the Bucharest conference on world population in 1974, which initially explored the issue of population and development, parliamentarians of various countries held three conferences on the subject: in Colombo, Sri Lanka, in August, 1979; Kuala Lumpur, Malaysia, in September, 1980; and Nairobi, Kenya, in July, 1981.

After the Colombo conference, Asian countries decided through consultation to hold the first Asian conference of parliamentarians on population and development in Beijing on October 27-30, 1981. For this purpose, the steering committee for the conference, which is composed of Japan, India, Sri Lanka, Malaysia and China, met in Tokyo in February and again in Beijing in June this year. The committee is to meet for the third time on October 26 to decide on the details of the conference.

The conference has been supported by the United Nations Fund for Population Activities [UNFPA] in finance and other matters. Rafael M. Salas, UNFPA executive director, will attend the conference as a specially invited guest.

2. Objectives and Themes of the Conference

As is decided by the steering committee, the main themes of the conference are: to discuss the issue of population and development and the role of parliamentarians: to explore ways to expand international cooperation among parliaments of various countries in population activities.

The objectives of the conference are as follows:

A. Evaluate current population programs and policies in the Asian countries;

B. Explore ways to integrate population programs and policies with development programs;

C. Promote regional and internationalcooperation in implementing population programs;

D. Delineate the role of national, local and community organizations in implementing population programs; and

E. Define the role of parliamentarians in implementing population policies and programs.

The conference will hear some reports on special topics around the main themes, and will split into two committees to discuss in detail the integration of population with development and the program implementation at various levels.

The conference will adopt a declaration on population and development.

3. The Participants

As is decided through consultation, any Asian country is qualified to apply for attendance at the conference if it has one of the three following qualifications:

A. Member of the United Nations;

B. Member of the Asian and Pacific group of the United Nations; and

C. Following parliamentarism.

To date, the parliaments of 18 Asian countries have decided to despatch delegates to the conference. Parliamentarians from Latin American, Africa and European countries are also invited to the conference as observers.

Population Control Stressed

OW281231 Beijing XINHUA in English 1201 GMT 28 Oct 81

[Text] Beijing, 28 OCT (XINHUA)--Parliamentarians of 12 countries exchanged experiences in population control and called for regional cooperation in solving this problem at the Asian conference of parliamentarians on population and development here this morning.

Candra Bandara of Sri Lanka said his country's population growth rate has been reduced to 17 per thousand from 26 per thousand in 1953 thanks to the efforts of the government. Population control has become an integral part of the government policies. While carrying out family planning work at various levels, the government also cooperates with non-governmental organizations in this regard. A special organ was set up in 1978 for the purpose.

He said, while controlling the growth of population, Sri Lanka also makes efforts to develop its economy. Once economy is developed, the problem of population growth will also be solved.

Datuk Abdullah Haji Ahmad, chairman of the Malaysian delegation, said Malaysia attaches great importance to the population problem. The parliament passed the family planning law and worked out population policy in 1966 aimed at reducing the population growth rate of 3 per cent in that year to 2 per cent by 1985 and making the government to increase the average income of the people.

He said the cooperation among the ASEAN countries in human resources and development are fruitful.

He said population, resources and development are closely related and poverty can only be eliminated after a long-term balance of population and resources is achieved.

He proposed that Asian countries should strengthen cooperation in international population activities and exchange information and experiences so as to deepen the understanding of the parliamentarians and people of the relations among resources, population and development.

Boontium Khamapirad, chairman of the Thai delegation, said that his country is one with high birth rate. But in the ten years from 1970, when Thailand formulated a population policy, the birth rate was brought down from 32 per thousand to 18 per thousand in 1980. In the same period, the number of people practising family planning rose five times.

Thailand's efforts to contain its population enlisted the cooperation of the government and non-governmental organizations, in the form of training mid-wives and nurses and the supply of contraceptives.

Dwelling on Singapore's successful effort to contain its population, Ow Chin Hock, chairman of the Singapore delegation, said that his country's natural growth rate has come down from 4.7 percent in 1957 to 1.2 percent in 1980. His country plans to bring it further down to zero percent by the year of 2030.

Singapore's objective is to continue to improve the living standards of the people, he said. That is why we advocate that each couple should have two children by disseminating the advantages of family planning. At the same time we abrogate the anti-abortion law and encourage women to take part in labor. On the other hand, Singapore expands its educational establishments so that the literacy in the country accounted for 84 percent of the population in 1980 as against 72 percent in 1970. All these measures, he said, helped promote economic development which [was] maintained at a rate of 9.14 percent throughout the 1970s.

When Carmencita O. Reyes, chairman of the Philippine delegation, took the floor, she briefed on the medium-term and long-range population plans her country formulated, with a view to reducing the growth rate to 2 percent by 1985. To this end, she said, we call for the close coordination among all government organs. We have to adopt non-compulsory measures.

Radhe Shyam Kamaro of the Nepalese delegation noted that manpower is one of the important resources but it also consumes all the benefits of the development. Therefore, Nepal has adopted a comprehensive population growth program to bring down the birth rate, control migration and set up necessary facilities such as hospitals and houses to attract more people to the western parts of the country.

Eisaku Sumi from Japan said that the population problem is a very complicated issue and each country should adopt its own policy in the light of its cultural, geological and economic conditions. But the Asian countries should cooperate with one another, exchange views and deepen the understanding of this problem so that the population problems in Asia can be solved step by step.

Jordanian parliament member Said Suraikat pointed out that the solution to the rapid population growth will be conducive to the defence of world peace. All countries must cooperate on this issue, he said. The Jordanian Government, he said, is ready to exchange experience and views with other countries on the ways to solve housing, education and labor force migration. He proposed that a regional parliamentary organization should be set up for this purpose.

Delegates from some countries said that although there is no serious population problems in their countries, they promise to attach more attention to it.

The chairman of the Maldives delegation, Abdul Sattar, noted, although my country is small and free from a population problem, we in the Maldives pay great attention to family planning. We also adopt positive measures to improve the health of the people and lower the infant mortality rate.

Hisham Sati from Syria said his country has no national population policy yet. But it is necessary to pay attention to the manpower problem in the course of development, to strengthen adult education and improve maternal and child care facilities. At present, Syria, he said, should speed up the development of its rural areas and work for a better distribution of the population.

Mohammad Yazdi, chairman of the Iranian delegation, presented his views on the population in the name of Islamism. He said, to solve the problem of population and development, it is first of all necessary to raise the cultural level of the people and pay attention to the health of the women and children.

This afternoon the conference broke into group discussions.

THAI FOREIGN MINISTER SAYS SRV THREAT TO ASIA

OW200818 Beijing XINHUA in English 0728 GMT 21 Oct 81

[Text] Buenos Aires, 20 Oct (XINHUA)--That Foreign Minister Sitthi Sawetsila said today that the peace, progress and stability in Southeast Asia "has been jeopardized by the Vietnamese invasion and occupation of Kampuchea".

Speaking at a press conference and subsequently to the Argentine Council for International Relations here Sitthi, who arrived here Monday for a three-day visit, gave his views on the situation in Southeast Asia, Thailand's position on the Kampuchean question and development of bilateral relations between Thailand and Argentina.

He said that Vietnam is pursuing military adventures in Kampuchea with the support of a major power at an estimated cost of 3.5 million U.S. dollars a day and, in return, that power obtains a foothold in the region enabling it for the first time to project its power into the strategically important region.

Sitthi referred to two encouraging developments this year on the Kampuchean problem--the UN conference in July which adopted the framework for a political solution and the meeting in September of three Kampuchean nationalist groups which issued a declaration to work together to free their country from foreign domination and restore the Kampuchean people's right to self-determination.

Sitthi reiterated that Vietnam must withdraw its troops from Kampuchea under UN supervision and self-determination should be restored through free election in Kampuchea.

In the long run, Kampuchea should be an independent and netural country free from intervention by other countries, he added

Sitthi met with Argentine President Roberto Viola and signed with his Argentine counterpart Oscar Camilion a scientific and technical agreement between the two countries.

UN GENERAL ASSEMBLY DEBATE ON KAMPUCHEA REPORTED

Philippines' Romulo Speaks

OW200204 Beijing XINHUA in English 0145 GMT 20 Oct 81

[Text] United Nations, 19 Oct (XINHUA)--Carlos P. Romulo, foreign minister of the Philippines, this morning again called for the immediate withdrawal of all foreign forces from Kampuchea and for a political settlement of the Kampuchean problem.

Speaking at the UN General Assembly which began consideration of the situation in Kampuchea today, Romulo observed that the international conference on Kampuchea convened last July "offers the most practicable way of achieving a political settlement of the Kampuchean problem."

He said the elements for a comprehensive settlement identified by the declaration adopted by the conference are: an agreement on a ceasefire and withdrawal of all foreign forces from Kampuchea in the shortest possible time under United Nations verification; holding of free elections in Kampuchea under UN supervision; and appropriate arrangements for the maintenance of law and order prior to the establishment of a new government resulting from the elections.

Romulo noted the international community had declared its readiness to negotiate an end to the intolerable situation in Kampuchea. "We hope that those who have remained unyielding will soon give us their positive response." He said, the international community had received the Laos memorandum. But nowhere in the memorandum was there any mention of the situation in Kampuchea, which was everywhere admitted to be the main destabilizing factor in the region.

"The regional conference envisaged in the Phnom Penh proposals is not acceptable," he declared, "firstly, because it is not intended to deal primarily with the conflict in Kampuchea; secondly, because such conflict, by Vietnam's own admission, involved countries within the region as well as extra-regional powers, and, therefore, would not offer an adequate framework for a comprehensive political settlement; and thirdly, because it will be outside the aegis of the United Nations."

Romulo emphasized that the armed intervention and subsequent occupation of Kampuchea by foreign forces constituted a gross violation of the UN Charter and international law. The General Assembly could not reward the fruits of open aggression.

Kirkpatrick Cited on SRV Role

OW200224 Beijing XINHUA in English 0202 GMT 20 Oct 81

[Text] United Nations, 19 Oct (XINHUA)--Jeane Kirkpatrick, U.S. permanent representative to the United Nations, today sternly condemned the Soviet-backed Vietnamese aggression against Kampuchea.

Addressing the plenary meeting of the UN General Assembly this morning, Kirkpatrick declared that "in each of its two preceding sessions, the General Assembly, by overwhelming majorities, has found the Socialist Republic of Vietnam in violation of the fundamental provisions of the United Nations Charter." She said, "Vietnamese forces and administrators stand above the law. They deny all human rights to the conquered Khmer people."

She said the people of Kampuchea were not the only victims of Vietnam's aggression, the people of Vietnam itself, indeed all the people of Southeast Asia, "suffer from the oppressive tyranny of the Vietnamese Government."

Kirkpatrick observed that "the pursuit of an unpopular war has caused widespread misery within Vietnam; and imperialist adventures have necessitated escalation of the already scandalous level of oppression inside Vietnam."

The people of Southeast Asia, she continued, "face a precarious future as their governments divert resources sorely needed for development to strengthen their defenses against the possibility of further Vietnamese expansionism."

Repudiating the false arguments presented by the Vietnamese to cover up their aggression, she said, "Vietnamese efforts to justify their invasion and occupation of Kampuchea are both disingenous and incredible, and only serve to bring their nation into further disrepute."

She pointed out that "the Vietnamese invasion of Kampuchea is strikingly, tragically analogous to the Soviet invasion of Afghanistan." "Indeed," she added, "the new imperialism can be recognized everywhere by its aggressiveness, its violence, its contempt for truth."

"No arguments, however artfully constructed," she stressed, "could possibly obscure the reality that the Government of Vietnam, financed and supported by the Soviet Union, has conquered a member state of this organization."

In conclusion, she called on the Government of Vietnam and its Soviet patron to "heed this Assembly's urgent plea for justice and compassion, and to join in negotiations designed to resolve the tragic plight of the people in Kampuchea and end the threat to the peace and stability in Southeast Asia."

Thailand's UN Envoy

OW200230 Beijing XINHUA in English 0210 GMT 20 Oct 81

[Text] United Nations, 19 Oct (XINHUA)--Phiraphongse Kasemsi, permanent representative of Thailand to the United Nations, reitereated at the General Assembly's meeting this afternoon that "Vietnam has no right or legitimate reason to try to impose a military solution in Kampuchea on the Kampuchean people."

Kasemsi said, "The Kampuchean people should be allowed to exercise their right to self-determination, free from foreign occupation and without foreign intervention or coercion."

He emphasized that as long as the Vietnamese forces are not completely withdrawn from Kampuchea, the Kampuchean people cannot exercise this right freely. "This is why the so-called 'elections', held in Kampuchea earlier this year, were nothing more than a sham, as they were conducted under the shadow of foreign occupying forces and without the full participation of the Kampuchean people," he added.

Kasemsi said: "The problem of Kampuchean refugees as a tragic consequence of Vietnamese military actions cannot be effectively solved without a comprehensive political settlement. As long as foreign troops continue illegally to occupy Kampuchea and thus the fighting is prolonged, there is little hope of finding a truly effective and durable solution to the Kampuchean refugee problem."

He extended support for the formation of a coalition by Samdech Sihanouk, Son Sann and Khieu Samphan against the Vietnamese invaders. "So long as Vietnam persists in its attempt to impose its military might on the Kampuchean people, there is no alternative but to recognize the legitimacy of the struggle by Kampuchean patriots to free their country from foreign occupation and illegal presence, in order to exercise their right to self-determination without outside interference or coercion," he said.

Referring to the international conference on Kampuchea, Kasemsi said, "The declaration and resolution of the conference offer a reasonable framework for a comprehensive political settlement of the Kampuchean problem." It was because, first and foremost, "the right of the Kampuchean people to self-determination and the right for Kampuchea to exist as truly free and independent country are recognized and constitute the most vital element of the solution," he added.

He hoped that the draft resolution on the situation in Kampuchea sponsored by ASEAN and other countries be adopted by the General Assembly.

SRV Withdrawal Asked

OW200336 Beijing XINHUA in English 0315 GMT 20 Oct 81

[Text] United Nations, 19 Oct (XINHUA)--Speakers at the 36th session of the UN General Assembly today called for urgent measures to ensure the immediate withdrawal of Vietnamese troops from Kampuchea and allow the Kampuchean people to decide their own future without foreign interference.

The General Assembly discussed the Kampuchean situation for the third time because Vietnam defies the resolutions it adopted at its last two sessions condemning Vietnam's armed intervention and calling for its immediate withdrawal from Kampuchea.

Pakistani representative Niaz A. Naik told the General Assembly that the people of Pakistan felt special concern over the Kampuchean tragedy. "There is a close parallel between the situation in Kampuchea and that in Afghanistan, which poses a grave danger to the stability of our region and to international peace," he declared.

"The situation in Kampuchea is not a regional question; it concerns the violation of a fundamental principle of international law and its remedy is an international responsibility," he noted.

Japanese representative Masahiro Nisibori said that "the only way to restore a lasting peace to Kampuchea and to ensure the peace and security of the region is to allow the Kampuchean people to freely choose their own political future without fear of foreign intervention." He suggested that all parties and state concerned take part in negotiations for the withdrawal of foreign forces and the holding of free elections under UN supervision.

Speaking on behalf of the ten member governments of the European community, Douglas Hurd, minister of state for foreign and commonwealth affairs of the United Kingdom, expressed the belief that a solution to the Cambodian problem must be based on an independent and neutral Cambodia, with a genuinely representative government, free from any foreign military presence and maintaining friendly relations with all countries of the region." He stressed that "complete withdrawal of Vietnamese forces is an essential step in returning Cambodia to normality."

He added: "It is in the interests of all to insist on the inadmissibility of foreign interference and intervention in the internal affairs of a sovereign state."

Thomas Klestil of Austria said: "The international community has to assume the responsibility to restore to the Kampuchean people their basic right of self-determination, of deciding their own political future freely, without outside coercion and interference."

Manuel Trucco, representative of Chile, pointed out that the Vietnamese invasion concerned the entire world community, especially the non-aligned developing countries.

The representative of Vietnam, Ha Van Lau, in his speech tried hard to justify Vietnam's aggression of Kampuchea and talked glibly about the so-called "threat from China" in a vain attempt to divert world public attention.

Continued Struggle Vowed

OW200904 Beijing XINHUA in English 0825 GMT 20 Oct 81

[Text] United Nations, 19 Oct (XINHUA)--Thiounn Prasith, Democratic Kampuchea's permanent representative to the United Nations, said today: "The Kampuchean people, the National Army and the Government of Democratic Kampuchea will have no choice but to resolutely continue their struggle in the military, political and diplomatic fields until Hanoi expansionists withdraw their forces completely from Kampuchea and respect the related UN resolutions."

Thiounn Prasith said this during the UN debate on the Kampuchean problem.

He said that the war in Kampuchea is not a civil war but a struggle for the survival of his nation. He pointed out: "The Vietnamese aggression against Kampuchea, just like the Soviet invasion of Afghanistan, is part of a global strategy of the Soviet expansionists for world domination."

He condemned the Vietnamese aggressors for massacring entire villages and using toxic chemical to subdue Kampuchean people.

Thiounn Prasith restated that a peaceful settlement of the Kampuchean problem must include the following three points: total and unconditional withdrawal of Vietnamese troops from Kampuchea; free elections held under UN supervision; and guarantees for an independent, united, peaceful, neutral and non-aligned Kampuchea by the international community and the United Nations. He stressed: "The total withdrawal of Vietnamese forces is a prerequisite for the settlement of the problem. The Kampuchean conflict is, first of all, a conflict between the aggressors and the aggressed."

Thiounn Prasith also said that the Government of Democratic Kampuchea would make unremitting efforts for the realization of a firm, lasting national unity.

He called on all countries in Southeast Asia to promote peace and stability of the region.

SRV Occupation Opposed

OW210340 Beijing XINHUA in English 0206 GMT 21 Oct 81

[Text] United Nations, 20 Oct (XINHUA)--Tan Sri Zainal Abidin bin Sulong, permanent representative of Malaysia to the United Nations, declared today that "any attempt to force the acceptance of Heng Samrin in Kampuchea and to perpetuate the presence of Vietnamese forces in the country, contrary to the resolutions of the UN General Assembly, can only prolong the Kampuchean conflict and the resultant instability for the entire region."

Addressing the morning session of the General Assembly, he said, "The need for an early solution could not be overemphasized as any undue delay will only exacerbate the situation in Kampuchea where the forces of the legal government of Democratic Kampuchea is waging an armed guerrilla resistance against the occupation forces of Vietnam."

Due to the presence of around 200,000 Vietnamese troops in Kampuchea, he warned that "the potential for further spill-over of the fighting into neighbouring states, especially Thailand, therefore remains real and serious, as it has shown to be in the last two and a half years since Vietnamese forees marched into Kampuchea and overthrew the legitimate government of that country."

He rejected Vietnamese suggestions for a solution on a regional basis through regional consultations. "Such suggestions," he remarked, "which are clearly intended to legitimize Vietnam's action in Kampuchea and to gain recognition for the Heng Samrin authorities in Phnom Penh."

Anwar Sani, permanent representative of Indonesia to the United Nations, said his government's position on the question of Kampuchea remained the same as expressed in the joint statement of the ASEAN foreign ministers issued on January 12, 1979.

The statement, he added, "strongly deplored the armed intervention against the independence, sovereignty and territorial integrity of Kampuchea", "affirmed the right of the Kampuchean people to determine their future by themselves free from interference or influence from outside powers in the exercise of their right to self-determination, and called for the immediate withdrawal of the foreign forces from the Kampuchean territory."

Debate Enters Second Day

OW210342 Beijing XINHUA in English 0220 GMT 21 Oct 81

[Text] United Nations, 20 Oct (XINHUA)--Nepal, Sri Lanka, Egypt, Tunisia, Yugoslavia, Zaire and Mauritania continued to call for the immediate withdrawal of foreign troops from Kampuchea and appealed the United Nations to exert all efforts to bring about a just and comprehensive settlement of the Kampuchean problem when the debate on the situation in Kampuchea entered its second day.

Representative of Nepal Uddav Deo Bhatt declared that Nepal would reaffirm its conviction that "the withdrawal of foreign troops from Kampuchea and granting to the Kampuchean people their right to self-determination are essential conditions for a just and durable settlement of the Kampuchean problem."

Expressing the grave concern of his country over the situation in Kampuchea, he pointed out the situation had given rise to tension tending to seriously endanger peace and stability of the entire region of Southeast Asia.

He said that a powerful neighbour through massive intervention had installed a pliant regime there and the Kampuchean people had been grieviously denied of their inalienable right to determine their political destiny freely as a result of external interference and coercion. "Vietnam's pleas to justify its armed intervention in Kampuchea cannot be accepted on any ground and by any standard," he noted.

Representative of Egypt Ahmad E. 'Abd al-Meguid reiterated Egypt's support for the just cause of the people of Kampuchea, and supported the principles that rejected the use of force and resisted outside aggression of a foreign military power.

Egypt called for a cease-fire and withdrawal of all foreign troops from Kampuchea in accordance with the principles of the UN Charter and within a specified time-frame, he said.

Raouf Sa'id, representative of Tunisia, said that the installation by force of a new regime in Phnom Penh gravely affected the stability of the region. It was intolerable that one country should be able to determine the nature of a neighbouring country's government.

Ignac Golob, representative of Yugoslavia, pointed out that the situation in Kampuchea was at the core of the crisis in Southeast Asia. The principles of non-interference, non-intervention, withdrawal of foreign troops and the inviolability of the right of peoples to decide their own destiny, "are the only basis on which a lasting and just political solution of this and other crisis in the world could be sought."

He said that the crisis in Kampuchea surpassed by far the borders of the country and of Southeast Asia by its implication and impact on a broader international scale.

Sri Lanka, Zaire and Mauritania expressed their support for the draft resolution sponsored by the ASEAN and other Third World countries. They believe that the draft would be a solid base for a just and comprehensive political settlement of the Kampuchean problem.

Negotiated Settlement Asked

OW2120356 Beijing XINHUA in English 0254 GMT 21 Oct 81

[Text] United Nations, 20 Oct (XINHUA)--Representatives of five second world nations urged all parties concerned to seek a negotiated settlement of the Kampuchea problem in order to put an end to Vietnam's military occupation of Kampuchean and to bring peace and stability to Southeast Asia when they spoke at the plenary meeting of the UN General Assembly today.

Australian representative H. D. Anderson said that his government regarded the methods employed by Vietnam to install a puppet administration in Kampuchea "as totally unacceptable" and regarded "the Heng Samrin regime, whose authority depends entirely on the presence of the Vietnamese occupation forces, as illegal and unrepresentative of the Khmer people." He called for the complete withdrawal of foreign forces and the free exercise by the Kampuchean people of their right to self-determination.

Representative of New Zealand H. H. Francis stated: "Kampuchea now, as then, is an occupied country. It is ruled by a regime which was imposed by foreign armed forces in violation of the basic principle of the UN Charter." He declared that his country supported efforts to bring about a comprehensive political settlement that would bring peace and relief to the people of Kampuchea.

Representative of Norway Ole Algard declared: "We urge the Government of Vietnam to withdraw their military forces, and we call upon all parties concerned to enter a negotiation process in a constructive manner, so that the troubled region of Southeast Asia could develop into a zone of peace, freedom and stability."

He stressed that "a political solution must ensure the right of all Kampucheans to determine their own future without foreign interference in accordance with the UN Charter."

Representative of Canada Gerard Pelletier noted: "Vietnam has publicly rejected the United Nations' efforts and has ignored various international appeals for it to cooperate not only with its neighbours in Southeast Asia but also with the international community as a whole. In this regard, Vietnam's position is not only unfortunate, it is tragic."

Representative of Sweden Anders Thunborg demanded a dialogue between the parties concerned for real progress toward an acceptable negotiated settlement of the Kampuchea problem. He pointed out that "the dialogue must involve not only the neighbours of Kampuchea but also others whose interests are directly concerned."

He said: "The Soviet Union and the United States should facilitate a solution by allowing their attitudes and actions to be guided by a search for lasting stability in the region rather than the pursuit of strategic advantage." He called for the withdrawal of all foreign troops from Kampuchea and the recognition of the Kampuchean people's right to determine their own destiny without coercion or interference.

UN Resolution Cited

OW212001 Beijing XINHUA in English 1855 GMT 21 Oct 81

[Text] United Nations, 21 Oct (XINHUA)--The 36th UN General Assembly today adopted a resolution on "the situation in Kampuchea" by an overwhelming majority, which again emphasizes the necessity of withdrawal of all foreign forces from Kampuchea.

The draft resolution, co-sponsored by ASEAN and 32 other nations, was endorsed by a vote of 100 to 25, 3 affirmative votes more than last year and 9 more than the year before.

Adoption of this resolution, the third one on "the situation in Kampuchea" by the General Assembly, further beefs up the momentum to press Vietnam to end its military occupation of Kampuchea.

Vietnam and the Soviet Union voted against the resolution just as they did in the previous two assembly sessions.

The present resolution reaffirms the previous two ones [as received] and calls for their full implementation.

It deplores that "foreign armed intervention continues and that foreign forces have not been withdrawn from Kampuchea, thus causing continuing hostilities in that country and seriously threatening international peace and security."

It expresses the deep concern that "the continuing deployment of foreign forces in Kampuchea near the Thai-Kampuchean border has heightened tension in the region."

It reiterates the conviction that "the withdrawal of all foreign forces from Kampuchea, the restoration and preservation of its independence, sovereignty and territorial integrity, the right of the Kampuchean people to determine their own destiny and the commitment by all states to non-interference and non-intervention in the internal affairs of Kampuchea are the principal components of any just and lasting solution to the Kampuchean problem."

It decides to reconvene the international conference on Kampuchea at an appropriate time and include in the provisional agenda of the 37th General Assembly session the item entitled "The Situation in Kampuchea".

Singapore, Other Envoys Speak

OW220744 Beijing XINHUA in English 0707 GMT 22 Oct 81

[Text] United Nations, 21 Oct (XINHUA)--Greater opposition to the Vietnamese occupation of Kampuchea and increased insistence on the withdrawal of Vietnamese troops from the country was the keynote of the UN General Assembly debate on the situation in Kampuchea which ended this morning.

Permanent representative of Singapore T.T. B. Koh said the ASEAN countries "would like the Vietnamese troops in Kampuchea to be withdrawn from that country and to restore to its people the right to determine their own future."

Refuting Vietnam's charge that the international conference on Kampuchea was "a gross interference in the internal affairs of Kampuchea," Koh said, "The very purpose of the conference is to negotiate an end to foreign interference in the internal affairs of that country."

He stated, "Vietnam has committed the most serious form of violation in the internal affairs of Kampuchea. It launched a large-scale military invasion of that country, overthrew its government and imposed a puppet regime on its people."

He stressed that the use of force by one state against another and acts of interference in the internal affairs of another country "are never justifiable." It would be a very dangerous doctrine if accepted it. [sentence as received]

On the so-called election held last May, he pointed out that it could not be considered as free and democratic because it was held under the onus of the invading army and because patriotic Kampucheans, opposed to the Vietnamese occupation of their country, were not allowed to vote.

He reitereated that the ASEAN countries rejected the proposal of Vietnam, Laos and the Heng Samrin regime for a regional dialogue with the ASEAN countries.

The representative of Bangladesh Anwarul K. Choudhury urged an immediate withdrawal of foreign forces from Kampuchea to allow the Kampuchean people to choose their government freely without outside military pressure. He said that Bangladesh rejected all forms of interference in any nation's affairs and condemned the use of force against the political independence and territorial integrity of any state.

Koffi Adjoyi, representative of Togo, said that Togo condemned any situation of conflict and supported all efforts for peace. Togo opposed any attempts to achieve hegemony, and was gravely disturbed by the invasion of Kampuchea.

He declared any solution in Kampuchea must include the withdrawal of all foreign troops and the holding of free elections under United Nations' supervision. No fait accompli could be accepted in Kampuchea.

The representative of Senegal Massamba Sarre said that the problem of Kampuchea was one of law, the principles of non-intervention, sovereignty and political independence and the question of the non-use of force in settling the problems of any state. Senegal supports the Kampuchean people in their quest for a peaceful solution, he added.

'VODK' CITES ENCOURAGEMENT BY UN RESOLUTION

OW230746 Beijing XINHUA in English 0730 GMT 23 Oct 81

[Text] Beijing, 23 Oct (XINHUA)--The adoption of a resolution for the withdrawal of foreign troops from Kampuchea by the 36th UN General Assembly with an overwhelming majority of 100 votes has greatly encouraged the Kampuchean people, the National Army and guerrillas who are fighting relentlessly against the Vietnamese aggression, Radio Democratic Kampuchea says today.

An editorial of the radio says, the UN resolution clearly demonstrates the utter isolation of Vietnam's leaders. All peace-loving and justice-upholding countries in the world have seen more clearly the danger of the precedent of aggression against Kampuchea set by the Vietnamese authorities with the backing and involvement of the Soviet international expansionists. Therefore, they are determined to unite more firmly in opposing Vietnam's acts of aggression in Kampuchea and voicing a strong demand for the withdrawal by the Hanoi authorities of all their troops from Kampuchea and letting the Kampuchean people decide their own destiny without any outside interference.

"The Kampuchean people and Democratic Kampuchea express once again deep and heartfelt gratitude to the peace-loving and justice-upholding countries," the radio declares.

The radio expresses the hope that these countries will continue to give more powerful support to the just struggle of the Kampuchean people and Democratic Kampuchea and take political, economic and diplomatic measures to force Vietnam to observe and implement the 36th UN General Assembly session's resolution until it has withdrawn all its troops from Kampuchea.

EGYPTIAN DEFENSE MINISTER ON USSR MIDEAST ACTIONS

OW211811 Beijing XINHUA in English 1548 GMT 21 Oct 81

[Text] Cairo, 21 Oct (XINHUA)--Egyptian Minister of Defense Abd al-Halim Abu Ghazala said the Soviet Union has been intensifying tension between Egypt and Libya, which is aimed to cause a confrontation that would test the United States, local newspapers reported today.

In an interview with the WALL STREET JOURNAL, an American newspaper, Ghazala said there are Soviet warships anchored near Latakia, Syria, to carry two armored brigades to Libya. It is unknown whether these forces will be stationed on the borders between Sudan and Chad or on Egypt's borders with Libya.

The defense minister said the Soviets will proceed with their plan if they think the United States is not serous about helping Egypt and the other countries. Egypt feels reassured that the United States will continue helping the nation, especially after last week's delivery of two U.S. AWACS planes to Egypt.

He also urged the Americans to speed the delivery of arms to Egypt in order to confront the new Libyan threat to the Sudan.

Ghazala also affirmed that Egypt will never attack Libya unless it is in a position of justifiable self-defense. "The same," he said, "applies to Egypt's stand toward any aggression on the Sudan. Egypt will not stand with its hands tied if al-Qadhdhafi orders an attack against its neighboring countries."

BRZEZINSKI COMMENTS ON MIDEAST PEACE PROSPECTS

OW261305 Beijing XINHUA in English 1248 GMT 26 Oct 81

[Text] Kuwait, 25 Oct (XINHUA)--Former U.S. National Security Advisor Zbigniew Brzezinski said in an interview with Kuwaiti paper AL-ANBA, published here today that he believed "the higher interests of the Middle East can best be served by gradual reconcilation between the Arabs and Israel."

He said that within this reconcilation the legitimate rights of the Palestinians can be secured and their political dignity and presence attained while the Israelis obtain full acceptance as a member of the region and real security.

Brzezinski went on to say the progress of the talks on the West Bank and Gaza will depend on the desire and the tact of the Arabs. "If the Arabs become involved in the West Bank and Gaza talks, the process will move fast. But if they refrain, nothing will change," he said.

He said he presumed that the United States would conduct a dialogue with the PLO. "The best means to surpass the existing impasse is a phase-by-phase movement, that is, from an informal level to a more official level, but that also calls for a clear signal from the PLO of its intentions on the question of peace," he added.

Brzezinski expressed his belief that the Soviet Union "is not concerned with the search for a just and peaceful solution to the Middle East conflict but is concerned with keeping the tension in the region in order to gain a foothold in some of the Arab states." "I believe Moscow is using the Palestinian case to further its own strategies" in the Middle East, he said.

IRAQ, SYRIA REJECT SAUDI PEACE PLAN

OW270844 Beijing XINHUA in English 0803 GMT 27 Oct 81

[XINHUA headline: "Iraq, Syria Withhold Support of Saudi Peace Plan"]

[Text] Beijing, 27 Oct (XINHUA)--Iraq rejects the Saudi Middle-East peace plan, outlined by Crown Prince Fahd in last August, and will explain its reasons in full at the Arab League summit in Fes, Morocco, next month, said Iraqi Deputy Premier Taha Yasin Ramadan yesterday, according to Western news agency reports.

He told a press conference in Amman, Jordan, that Iraq supported the principles and resolutions of Arab League summits in Baghdad, Tunis and Amman "that condemn any isolated Arab initiative" on the Palestinian problem.

Ramadan sounded critical of the Saudi plan for an Arab-Israeli settlement. The plan calls for Israeli withdrawal from war-conquered Arab territories and the establishment of an independent Palestinian state in exchange for Arab recognition of Israel.

Earlier, Muhammad Haydar, a member of the Inter-Arab Command of the Syrian Ba'th (Socialist) Barty and head of the party's external relations department, told the paper AL-SAFIR that the Saudi plan had been rejected by Syria's ruling Ba'th Barty.

He said that the plan "was incompatible with the strategy of the Ba'th Party" because of its "unilateral character...and the time chosen to present it".

EGYPT'S MUBARAK MEETS OPPOSITION LEADERS

OW231532 Beijing XINHUA in English 1516 GMT 23 Oct 81

[Text] Cairo, 23 Oct (XINHUA)--Newspapers here today carried frontpage reports and photographs on President Husni Mubarak's meeting yesterday with Ibrahim Shukri, leader of the Socialist Labor Party the present government's main opposition, and Mustafa Kamal Murad, leader of the Liberal Party another opposition party.

During the meeting, Mubarak exchanged views with them about national action and tasks at the current stage. The rallying of all the Egyptian people at the current stage has avoided many dangers, he said.

He also promised to meet them regularly in the future to exchange opinions on matters concerning Egypt.

Shukry told news reporters after the meeting that his party had confidence in President Mubarak and would cooperate with the government.

Speaking to news reporters after Mubarak's meeting with the opposition leader, First Deputy Prime Minister Fu'ad Muhyi al-Din said, "It is possible that the government may overlook things, and it is the opposition's duty to point these things out to the government. We expect these two parties to do so."

President Mubarak yesterday also received members of the Higher Council for Judicial Bodies. He said current circumstances necessitate the solidarity of all the people.

MUBARAK TO FOLLOW AL-SADAT'S PEACE GUIDELINES

OW221524 Beijing XINHUA in English 1513 GMT 22 Oct 81

[Text] Caior, 22 Oct (XINHUA)--Egyptian President Husni Mubarak has stated he will follow the peace guidelines set by slain President Anwar al-Sadat.

In an interview published today in the Israeli daily YEDI'OT AHARONOT, Mubarak also declared that if an agreement was reached with Israel on the issue of Palestinian autonomy on the West Bank and the Gaza Strip, it would not be remote that Palestinians would agree to join in the peace process. He also stressed that the realization of such an agreement requires maximum flexibility on the part of Israel, especially after the assassination of al-Sadat on October 6.

Mubarak also said that an agreement on the autonomy would enable other Arab countries to participate in the peace talks.

Mubarak also affirmed in the interview his determination to abstain from launching propaganda campaigns against Arab states which reject the peace process because he wants to improve relations with these countries. "However, we will do it under conditions," he said. "We are not going to put aside our peace treaty, the Camp David agreements or our relations with Israel for the sake of regaining relations with other Arabs."

He also pointed out that when a Palestinian state is established there should be strict measures taken to prevent a foreign presence there under any circumstances.

"Of course," he stressed, "we shall not agree to Russian presence in the area. Whenever we reach a conclusion about any kind of Palestinian state, we should give the Palestinians the opportunity to decide for themselves."

He said that there was no tension along the borders between Egypt and Libya, adding that according to the information he has received, "calm prevails along the Sudan-Chad borders." He emphasized that Egypt is not planning an attack on any Arab country, including Libya.

Mubarak also said that he was determined to visit Israeli leaders by the end of this year or early next year.

HAROLD BROWN VIEWS 'UNFAVORABLE' DEFENSE TRENDS

OW211252 Beijing XINHUA in English 1227 GMT 21 Oct 81

[Text] Tokyo, 21 Oct (XINHUA)--Former U.S. Defense Secretary Harold Brown yesterday urged the Western countries to pay attention to military balance and reverse the present trend unfavourable to the West.

He said that in the last 15 years, the trend of military balance between the two camps of the East and the West has been developing in a direction unfavourable to the West and in military terms the Soviet Union has got an upperhand.

Brown made these remarks at a forum sponsored by NIHON KEIZAI SHIMBUN, LTD. and the Japanese Economic Research Centre here.

He noted that in the field of strategic nuclear weapons, the Soviet Union is at a par with the West with U.S. as its centre. It is superior to the West in ground-to-ground missiles. As for the naval forces, the West is evidently superior to the Soviet Union. However, this superiority has been offset to certain degree by the West's greater dependency on sea routes for supplies as compared with the Soviet Union. Soviet ground forces are obviously superior in Europe and Asia.

Referring to growing Soviet threat, Brown said the Soviet military strength directed against Japan has exceeded that of Japan by a big margin, and the military strength in the West Pacific should therefore be strengthened in every way. The security of Northeast Asia is important to the United States, and even more to Japan. Japan should shoulder in this region a responsibility greater than that of the United States and the West European countries.

Brown said that Japan-U.S. relations cannot be called reliable in a long-term point of view if they are based only on economic competition and absolute reliance on the U.S. for unilateral security guarantee. [sentence as received] He urged the two countries to come to an agreement on how to share the responsibility for security guarantee through bilateral consultations.

PHILIPPINES MINISTER BANS POLICE CAMPUS PRESENCE

OW220930 Beijing XINHUA in English 0716 GMT 22 Oct 81

[Text] Manila, 22 Oct (XINHUA)--Philippine Defense Minister Juan Ponce Enrile ordered yesterday the withdrawal of all police detachments in school campuses as the initial stage of a "full blown" dialogue with student leaders of the country, according to press reports here today.

At the same time Enrile directed that private security guards hired by universities and colleges be prohibited from detaining students and interfering with their activities.

Enrile issued these orders as an offer at a meeting between himself and student leaders yesterday. "We must begin with a clean slate to have an ideal working atmosphere between us," he said.

In the past months the students complained about "the increasing militarization of student campuses". A rally held by some 3,000 students on October 7, demanding the lift of campus militarization, led to a clash between the students and policemen with 150 injured and 9 students arrested.

Since then Enrile has met twice with student leaders while more dialogues are expected to be held.

Enrile also ordered yesterday the dropping of charges against the nine students arrested during the October 7 rally. With regard to rallies that might be held in the future, it was reported that he "ordered the superintendents of all four police districts in metro Manlia not to use force during the student rallies and to use it only, to a certain degree, in connection with their peace-keeping duties."

NONALIGNED MOVEMENT MARKS ANNIVERSARY IN GENEVA

OW201641 Beijing XINHIA in English 1621 GMT 20 Oct 81

[Text] Geneva, 20 Oct (XINHUA)--A plenary meeting of the non-aligned countries has been held here to mark the 20th anniversary of the launching of the non-aligned movement.

The non-aligned movement, launched by the first conference of heads of state or government of non-aligned countries in Belgrade in September 1961, now comprises 95 developing countries.

Speaking at the meeting, the representatives of non-aligned countries stressed the importance of adhering to the movement's basic principles formulated by its founders.

Yugoslav delegate Marko Vrhunec said that the non-aligned and developing countries had made the greatest contribution to the creation of the concept of a new international economic order to narrow the gap between the developed and the developing countries. The non-aligned movement has become an irreplaceable global factor and partner in international relations, he noted.

Indonesian delegate Irawan Darsa, speaking on behalf of Asian countries, said that the movement had demonstrated its positive role in accelerating the process of decolonization and strengthened its influence in world affairs. But certain issues remain to be resolved and the non-aligned movement should play an active role to promote their solution, he pointed out.

The delegate of Zaire, N'kongo Dontoni Bwanda Dinzimbu, speaking on behalf of African countries, appealed for the implementation of relevent UN resolutions to resolve the problems of Afghanistan, Kampuchea, Namibia and Palestine.

'XINHUA' CITES FRENCH, U.S. VIEWS ON WORLD ECONOMY

OW210830 Beijing XINHUA in English 0733 GMT 21 Oct 81

[Text] Mexico City, 20 Oct (XINHUA)--France is ready to pursue "concrete compromise" at the Cancun summit which should not confine itself to "a mere exchange of ideas without any practical consequences", said French President Francois Mitterrand in an interview with the Mexican paper EL EXCELSIOR published yesterday.

"It would be inexcusable for a conference of this kind, unprecedented in history, to result in a mere exchange of ideas," he said.

"Our position at the meeting will be that statements of good intentions will not be enough," he said, adding that France would pose a series of "concrete questions" that "will aim at concrete compromise."

The French president arrived here yesterday for a three-day official visit and to attend the Cancun summit on North-South relations.

Speaking at a banquet given in his honour here yesterday, the French president declared that his country intends to "contribute to the development of the Third World, a development which is in our eyes not a threat but an opportunity to grasp."

He stressed "the gravity of the present gulf" between the rich and poor nations.

Mexican President Jose Lopez Portillo, who hosted the banquet, pointed out in a toast that "international economic relations must be governed by a fundamental principle: the shared responsibility of all countries for the plight of the weakest and most disadvantaged among them."

President Mitterrand arrived in Mexico after talks with U.S. President Ronald Reagan in Washington. U.S. Treasury Secretary Donald Regan told reporters at a White House briefing today that President Reagan still believed that world economic growth could be fostered better through private enterprise than government-managed economies.

PAKISTAN PRESIDENT URGES TREATY TALKS WITH INDIA

OW201241 Beijing XINHUA in English 1210 GMT 20 Oct 81

[Text] Islamabad, 19 Oct (XINHUA)--Pakistan President Ziaul Haq today urged India to respond to his proposal for holding talks on the conclusion of a non-aggression treaty between the two countries.

Speaking at a press conference in Peshawar, the president disclosed that the proposal was put forth verbally through diplomatic channels. He added if New Delhi is reluctant to respond just because the proposal is not in a written form, he would send an official message to Indian Prime Minister Indira Gandhi.

According to an announcement of the Pakistan Foreign Office last month, Pakistan has formally accepted a 3,200 million U.S. dollar package deal for economic and military sales from the United States.

On the U.S. delay in arms supply to Pakistan to strengthen its defense capability, Ziaul Haq said that Pakistan had informed the U.S. of its public opinion and the Reagan Administration was working to get Congressional approval of the package deal.

The president pointed out that Afghanistan's August 24 proposal did not reflect any particular change in its basic position. However, he added, there was some flexibility as compared with its previous rigid attitude.

Pakistan's endeavours for a political solution to the Afghan issue were as visible as daylight, he stated.

JAPAN LEADERS REVIEW NORTH-SOUTH, MIDEAST ISSUES

OW191432 Beijing XINHUA in English 1247 GMT 19 Oct 81

[Text] Tokyo, 19 Oct (XINHUA)--The Japanese Government met here this morning to consider the position it is going to take in the forthcoming summit of North-South dialogue. The meeting also discussed the world situation in general and the Middle East situation in particular following the assassination of Egyptian President al-Sadat, local news agencies reported.

The meeting decided that Japan's stand at the North-South summit is to promote the government's development aid to developing countries and contribute to solving the problems of food, agriculture and personnel training for the developing countries. Japan would consider to mediate between the North and the South.

About the fiscal 1982 budget, Prime Minister Zenko Suzuki said that in order to ensure Japan's integrated security, the Japanese Government has always worked for the integrity of its policy. Even if the financial budget for the next year does not increase, the government would give priority attention to budgetary funds for economic cooperation, energy, national defense and grain.

In his report on the international situation, Foreign Minister Sunao Sonoda said that to guarantee pleace and security in the Middle East after the passing away of the late Egyptian President al-Sadat, the most urgent task is to ensure Egypt's stability. In order to help the new Egyptian Government, Japan will safeguard and expand its close ties with Egypt in the fields of personnel exchanges and cultural and economic cooperation.

Prime Minister Zenko Suzuki will fly to Mexico tomorrow for the summit of North-South dialogue.

W. EUROPEANS CONDEMN U.S., USSR ON NORTH-SOUTH

OW191412 Beijing XINHUA in English 1226 GMT 19 Oct 81

[Text] Rome, 18 Oct (XINHUA)--A two-day international symposium on the North-South dialogue, held by a number of statesmen from the West European countries in Florence, Italy, ended yesterday. The participants agreed that West European countries should play a more active role in the North-South dialogue.

Speakers condemned the Soviet Union and the United States for creating obstacles in the way of negotiation. Gaston Thorn, chairman of the European Economic Community Commission, criticized the Soviet Union for its refusal to take part in the Cancun summit. He said that the Soviet Union claimed that the policy of cooperation could only mean a compensation for the losses brought about in the colonial period. Therefore, the Soviet Union has no need to make any effort in this field. Thorn pointed out, "Not all the Southern countries are colonies, nor all the Northern countries are colonial powers. Isn't the Soviet Union today the only colonial power both at home and abroad?"

Thorn was delighted that China would attend the Cancun meeting.

He also criticized American President Ronald Reagan for proposing to apply market principle in the relations with the developing countries. Thorn said that this would neither promote the harmonious development of the international economic system nor be helpful to a balanced development of the Third World.

Italian Foreign Minister Emilio Colombo pointed out that Europeans were more willing than other countries to establish a close relationship with the developing countries because of historical links and economic character. He said that the most advanced form of cooperation at present was the one defined by the Lome agreement. Italy has proposed a comprehensive negotiation with the participation of as many countries as possible within the United Nations in order to benefit their economic development. He also said that Italy would suggest convening an international meeting in Rome within the EEC so as to formulate a program of action to tackle starvation, malnutrition and other issues.

Some speakers pointed out that the developing countries should not copy the culture and production pattern of the developed countries since the models of capitalism and the Soviet Union have both failed.

LUNS, BROWN ADDRESS ATLANTIC INSTITUTE CONFERENCE

OW250830 Beijing XINHUA in English 0816 GMT 25 Oct 81

[Text] Brussels, 24 Oct (XINHUA)--The 20th anniversary conference of the Atlantic Institute for International Affairs closed here this afternoon with speakers calling for vigilance against the Soviet military buildup and the danger of pacifism and unilateral disarmament.

Mr J. Luns, NATO's secretary general, took in his address the harmonization of three vital elements for the overall health of NATO: military capability, political cooperation, and public commitment. He pointed out that NATO currently finds itself in an unhappy and potentially quite dangerous situation. The Soviets have concomitantly achieved superiority in long-range theatre nuclear forces and have added inexorably to their long-standing advantages in conventional military strength while dramatically closing the qualitative gap that NATO has traditionally relied upon to offset those Soviet advantages. However, he suggested that care must be taken particularly in Europe not to frighten the citizenry into a sense of impotence or despair.

Mr H. Brown, former U.S. defense secretary, expressed in his speech concern over the occasional outbursts of anti-Americanism in Europe. He stressed that it will be a much more serious matter if the U.S. Government fails to recognize arms limitation as a major component of national security, and ignores its European allies' representations on a matter so important to them politically. It will be equally serious if European governments fail to support theater nuclear force modernization which many of them urged on the United States. Mr Brown urged the West to stop quarreling among themselves and sustain cohesion and morale. In view of the West's reliance on the raw materials of the Third World countries, he suggested that the West must respond to the South with government aid, and also with more investment and more willingness to import.

Dr Manfred Woerner, chairman of the Defence Committee of Bundestag of the Federal Republic of Germany, dwelt mainly on the "peace movement" in West Europe. He emphasized that pacifism and unilateral disarmament are not a guarantee of peace. To Western Eruope, he stressed, neutralism means prophylactic capitulation. And without the United States a policy of preventing war by deterrence based upon the balance of forces is impossible either in or for Europe.

Other distinguished persons attending the conference included the EEC President Gaston Thorn, the OECD Secretary General Emile van Lennep, and leader of the British House of Commons Francis Pym.

Established in 1961 in Paris, the Atlantic Institute for International Affairs is a research organization but maintains close contacts with NATO, EEC as well as OECD.

NAMIBIA SOLIDARITY WEEK OBSERVED AT UN

OW270318 Beijing XINHUA in English 0252 GMT 27 Oct 81

[Text] United Nations, 26 Oct (XINHUA)--UN Secretary General Kurt Waldheim called for more support for the Namibian people's inalienable right to self-determination and independence when he spoke at a special meeting held here today by the United Nations Council for Namibia to mark the start of the week of solidarity with the people of Namibia and their liberation movement, the South West Africa People's Organization (SWAPO).

The week of solidarity is of special significance this year, since it commences on the fifteenth anniversary of the adoption by the UN General Assembly of the resolution (October 1966) by which the assembly terminated South Africa's mandate for Namibia and assumed direct responsibility for the territory.

Kurt Waldheim said UN Security Council resolution 435 (1978) "must remain the basis for the achievement of Namibia's independence and that it should be implemented without further delay."

He said the situation in Namibia "has reached a critical and dangerous point, and its continuation will be at the peril of peace in the region."

Ismat T. Kittani (Iraq), president of the current UN General Assembly, in his speech called for the condemnation of the policy of the Government of South Africa, which continued to frustrate the Namibian people and deny their aspirations.

Chairmen of various UN committees and representatives from many countries also denounced the continued illegal occupation of Namibia by the South African racist regime and reaffirmed their support for the Namibian people's struggle for early independence.

The programme for the observance of the week of solidarity includes commemorative statements, a photographic display and the screening of films on Namibia.

'XINHUA' ON MEXICO'S FINANCIAL, POLITICAL USE OF OIL

OW251300 Beijing XINHUA in English 1228 GMT 25 Oct 81

[Text] Beijing, 25 Oct (XINHUA correspondent)--With the oil industry leading the way, Mexico's growing economy has enabled the country to increase cooperation with other Latin American countries and play a bigger role in international affairs.

The expansion of the oil industry has brought about a fresh "take-off" of the national economy. Before 1977, Mexico's economy was in straits under the impact of the economic crisis in the world. In 1976, the country's Gross National Product rose by only 1.6 per cent, much lower than the population growth rate of 3.7 per cent that year. After coming to power, President Jose Lopez Portillo gave first priority to the development of the oil industry as a lever to vitalize the country's economy. Now, with proved deposits of 72 billion barrels of oil, Mexico ranks first in oil production in Latin America and the fourth biggest oil producer in the world. Export earnings from oil rose sharply from 3,700 million dollars in 1979 to 10,600 million dollars in 1980.

The increase in oil production and export has imporved the financial situation of the state and given an impetus to the development of the home economy. Mexico's economic growth rate has exceeded 8 per cent for four years running, with 9.2 per cent in 1979 and 8.3 per cent in 1980, a growth rate rare in both Latin America and the world. Mexico's growing economic power has also bettered its image in the international community and strengthened its position in negotiations with the developed countries.

As a rising oil power in the multitude of the Third World countries, Mexico strives to promote the joint development of the developing countries by using its oil resources. Together with Venezuela, another oil-producing country in Latin America, Mexico provided oil on favorable terms for nine Central American and Caribbean countries suffering from economic difficulties because of oil shortages. This action was praised by the international community. Not long ago, it concluded an agreement with Venezuela and Brazil to provide aid to other countries of this region for their development of energy.

Mexican Secretary of Foreign Affairs Jorge Castaneda y Alvarez de la Rosa said that Mexico would use oil as "a necessary means to pursue a more active foreign policy." In fact, Mexico has made a sustained effort to establish a new international economic order, and is making valuable contributions to the opening of the Cancun summit meeting on cooperation and development.

POLITICAL FIGURES ADDRESS LONDON ANTINUCLEAR RALLY

OW250800 Beijing XINHUA in English 0222 GMT 25 Oct 81

[Text] London, 24 Oct (XINHUA)--About 150,000 people took part in an anti-nuclear weapons march and rally in London today, probably the biggest of its kind ever organized by the campaign for nuclear disarmament in this country.

The marchers, mostly young people, came from all over the British Isles by chartered trains or coaches. There were also two huge contingents from Denmark and West Germany. The marchers waved banners and balloons, and chanted peace slogans while marching through central London under heavy police escort.

The march was led by the opposition Labour Party's leading anti-nuclear campaigner Tony Benn. He outlined the demands of what he called a "fearless campaign" against nuclear weapons: no Trident, Polaris, cruise missiles or neutron bombs on British soil; no domination of Britain by the generals of Russia or America; a nuclear-free zone in Europe; and policies of detente and disarmament.

In a rally at Hyde Park, the demonstrators heard a series of speeches by the Labour Party leader Michael Foot and other prominent figures in the British anti-nuclear movement. The Labour Party is formally committed to unilateral disarmament. Michael Foot told the rally that disarmament would have top priority with a future Labour government and called for "practical actions" to use "all the power and strength" of the anti-nuclear movement in Britain and elsewhere in the world to stop the "insanity" of nuclear weapons.

Meanwhile, many Conservative members of parliament and government ministers launched a vigorous counter-attack on the unilateral campaign. Winston Churchill told a meeting today that the path of appeasement and unilateral disarmament in the 1980s would lead to war as surely as it had in the 1930s. "Countries that weaken themselves in the face of an aggressive, expansionist totalitarian power do not forestall attack but positively invite it," he said. Nicholas Edwards, secretary of state for Wales, said yesterday that "everything in Russia's previous conduct suggests that the most hopeful way forward is through a policy based on a combination of deterrence and arms control."

NEW BRITISH PARTY WINS SEAT IN PARLIAMENT

OW231652 Beijing XINHUA in English 1612 GMT 23 Oct 81

[Text] London, 23 Oct (XINHUA)--The one-month-old Liberal-Social Democrat Alliance won its first seat in parliament today. This victory over the Conservative and Labour parties attracted the attention of the British political arena.

Last March, a number of former Labour Party cabinet ministers and MP's broke away from the party to form the SDP because of differences in policies. The Many common or similar political propositions have led the SDP and the Liberal Party to enter into an electoral alliance with a view to making a breakthrough in the two-party system.

The parliamentary by-election in Croyden Northwest, South London, was the first test of the strength of the alliance. The seat of this constituency in parliament had been held by the Conservatives since 1948. The death earlier this year of the MP elected in the last general election brought about this by-election. Among the 12 political parties taking part in the contest were mainly the Conservative and the Labour parties as well as the Liberal-Social Democrat Alliance.

The Conservative government, finding itself in a difficult situation economically and facing great pressures both at home and abroad, tried to maintain the seat to prove that its current policies were popular. The Labour Party, baffled by internal strife and split, attempted to preserve internal unity with even a small victory so that no more party members would break away. The Liberal-Social Democrat Alliance needed to raise morale in its first battle in order to lay the foundation for a possible victory in the next general election.

By-election returns show that Alliance candidate William Pitt, who had been defeated three times in the same constituency and obtained only 10.5 per cent of the votes in the last general election, won 40 per cent of the votes to be elected MP. The number of supporters of the Conservative Party decreased 47 per cent, while that of the Labour Party dropped 44.5 per cent. One of the SDP leaders, Mrs Shirley Williams, commented: "It is a fundamental challenge to a two party system and to the merits of the old parties." A senior Conservative said, "Popular feeling against the government over Prime Minister Margaret Thatcher's economic policies has been so great as to make victory all but impossible." Some voters openly declared that they "voted for change." The centrist Liberal-Social Democrat Alliance seems to be meeting this strong demand for change.

BRIEFS

MITTERRAND ON U.S. DEFENSE OF WEST--Beijing, 19 Oct (XINHUA)--According to a Western news agency report, French President Mitterrand said in his 18 October televised speech that France completely supports U.S. efforts to strengthen defense of the West as Soviet challenge is growing more serious and the USSR is deploying the SS-20 missiles directed against Western Europe. American Broadcasting Company interviewed Mitterrand on the eve of his visit to the United States and televised his speech on 18 October. Mitterrand agreed that a certain balance of force is necessary for holding genuine East-West negotiations. He said: "I think that balance of force should be the primary thing. Therefore, it is not right for the United States to remain inferior." Meanwhile, he urged the United States to take the initiative in holding disarmament talks with the Soviet Union in future. He said: Since the United States has already formulated its defense program for the next few years, it should take actions as soon as possible to resume disarmament talks with the Soviet Union. He said: If the United States doesnot take actions, the West Eunopean countries, where neutralistic trend has been developed lately, "may find themselves sinking deeper and deeper in the present serious psychological and spiritual crises." MOSCOW ON AL-SADAT'S DEATH--[Report: "Moscow Sees al-Sadat's Death as a Golden Opportunity"] On 9 October, the Soviet papers PRAVDA and IZVESTIYA separately published articles to strenuously create the impression that "al-Sadat's death has produced a real neuralgic shock in the United States" and that "Washington is now worrying about the fate of the Camp David accords." The commentators asserted that the Camp David accords had "died a natural death" long before al-Sadat's death and that "only the (Soviet) peaceful package solution is firm and secure." According to a REUTER dispatch from Moscow on 9 October, "The Soviet criticism clearly shows that the Kremlin hopes that al-Sadat's death will deal a telling blow to the (Camp David) peace accords." Western diplomats are of the opinion that "Moscow sees al-Sadat's death as a golden opportunity which will enable it to resume its former role in the Middle East. The Soviet Union has been unable to play its part in the Middle East since 1977." [Text] [HK141305 Beijing RENMIN RIBAO in Chinese 12 Oct 81 p 6]

S.KOREA CAMPUS STRUGGLE SUPPORTED--Pyongyang, 27 Oct (XINHUA)--NODONG SINMUN is a commentary today expressed support for the demonstration staged on October 23 by hundreds of students of the Seoul National University for democracy and freedom. In the three-hour clashes between the student demonstrators and the police, 17 policemen were wounded andover 40 students were arrested. The commentary said Chon Tu-hwan and his company had sent plain-clothes men to South Korean universities and set up the so-called "commissions of social purifiation" to suppress the student struggle for campus democracy. More than 6,000 students were dismissed. The South Korean students' struggle against Chon Tu-hwan clique's fascist rule and for campus freedom is a just struggle, said the commentary. It stressed that the Chon Tu-hwan clique should immediately stop its suppression of the South Korean students and release the arrested. OAU REAFFIRMS NAMIBIAN SUPPORT--Beijing, 27 Oct (XINHUA)--The International Day of Solidarity With the Peoples of South Africa and Namibia is a summons to independent Africa to come to the aid of the struggle for freedom in Namibia and South Africa, the OAU said in Addis Ababa yesterday, according to an ENA report today. The OAU said in a press release that "It is the moral duty of us all" to increase assistance and support to the peoples of Namibia and South Africa. The African National Congress, the Pan-African Congress and the South-West Africa People's Organization can be confident of certain victory, the OAU stated. USSR FAILURE IN AFGHANISTAN--Islamabad, 24 Oct (XINHUA)--The recent effort of the Soviets to crush the resistance of Afghan freedom fighters in Kandahar, second largest city of Afghanistan, has failed. To avenge their failure, the Soviet bombarded Shikarpur Bazar, Herat Darwazah and some other places, illing dozens of civilians and injuring hundreds of others, reports AGENCY AFGHAN PRESS today. Soviet tanks and troops were stationed at every crossing of the city where the people were searched. With help of local citizens, Mojahedin groups conducted a number of guerrilla operations. In an operation near the airport last week, two Soviets including a deputy air commodore, six Karmal officials and four soldiers were killed while an armoured car and two tanks were destroyed. The Mojahedin launched two major attacks on the Zarghona police station and the city police headquarters in Kandahar on October 21. In another attack on the central jail on the same day, eight enemy soldiers were killed or injured while a tank was destoryed and two towers of the jail were demolished. 'BA YI' URGES REPLACEMENT OF OLD CADRES

OW220639 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 21 Oct 81

[Text] The Sixth Plenary session of the 11th CCP Central Committee emphatically pointed out that to select more middle-aged and young cadres and promote them to leading posts at all levels is our pressing strategic task. It is also necessary to eliminate the harmful system of lifelong tenure for cadres. Those cadres who are advanced in age must give way to the young ones. Efforts must be made to promote those cadres who combine ability and political integrity and who are in the prime of life to leading posts.

However, this important task of reducing the average age of cadres has not been fulfilled at present due to the opposition from the highest central authority. Actually our nation has the capability to rapidly reduce the average age of cadres. It is known to everyone that middle-aged and young cadres account for more than 60 percent of the 20 million cadres in the country. There have been 4 to 5 million professional and technical cadres trained since nation-wide liberation. We have an abundant supply of competent people. Comrade Hu Yaobang pointed out that cadres who are in their 40's and 50's are valuable assets to the state. If they were promoted to leading positions at all levels they would greatly benefit the nation and the people.

1. In the prime of life they are able to work tirelessly for 15 to 16 hours a day.

2. Most of them received their education prior to the "Great Cultural Revolution." Thus, they are armed with better knowledge in science and technology.

3. The middle-aged cadres have accumulated rich experience in political life. Sharing weal and woe with the people, they have gone through the most difficult stage in China's history. They have witnessed the damage and suffering caused by arbitrary decisions, wrong work styles and erroneous methods of leadership. Therefore, they will not make similar mistakes. In short, only 40- and 50-year-old cadres can guide us to come out of the blind alley and follow the correct path in building the motherland. However, due to various obstacles only a limited number of 40- and 50-year-old cadres have been promoted to leading posts. According to statistics compiled by the State Council, on the average, only one middle-aged or young cadre has been promoted to the leading post in an enterprise or undertaking directly under the administration of the State Council. Even fewer middle-aged and young cadres have been promoted to leading posts in central and state organs or provincial

or municipal-level leading groups. As for the high-level leading organs, such as the Political Bureau or the Military Commission of the CCP Central Committee, not one middle-aged or young cadre has been promoted to the leading post. The overwhelming majority of members of the Political Bureau and the Military Commission of the CCP Central Committee are advanced in age. For example, Ye Jianying is 83, Comrade Deng Xiaoping is 77 and Comrades Li Xiannian and Chen Yu are 76. Peng Zhen, Nie Rongzhen and Huang Kecheng are around 80 years old. Comrade Deng Xiaoping said Hu Yaobang and Zhao Ziyang are cadres who are in the prime of life. Actually, both of them are already over 60. Other leading cadres are close to 70.

When the Sixth Plenary session of the 11th CCP Central Committee suggests that the average age of cadres be lowered it should set a good example by promoting more young or middle-aged 40- and 50-year-old cadres to the central leading posts. However, instead of setting a good example in this regard it followed Comrade Deng Xiaoping's instructions and appointed 77-year-old Yang Shangkun secretary general of the Military Commission.

If cadres in the prime of life are not extensively promoted to leading posts it will be impossible to lower the average age of leading cadres and streamline the leading groups at the central and local levels. In short, the faster the 70- and 80-year-old cadres give way to 40- and 50-year-old cadres in front-line posts of leadership, the better will it be for the state and the people.

'BA YI' RADIO: DENG ALSO RESPONSIBLE FOR PAST MISTAKES

OW201055 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 19 Oct 81

[Text] The resolution of the 6th plenary session of the 11th CCP Central Committee pointed out: "Responsibility for the errors committed in the work during this period rested with the leadership of the party Central Committee. Although Comrade Mao Zedong must be held chiefly responsible, we cannot lay the blame on him alone for all those errors."

On the basis of this guideline laid down by the resolution, those who committed errors along with Comrade Mao Zedong should frankly admit their respective errors and be held duly responsible. This is not only for the purpose of ascertaining historical facts but also of drawing lessons from history so that such historical mistakes will not be repeated again.

In this regard, Comrade Deng Xiaoping should set a good example himself. He was the one who worked at Chairman Mao's side as secretary general of the party Central Committee and implemented Chairman Mao's important instructions for many years. Therefore, he should be held partly responsible for the past errors, particularly for the following serious errors:

1. In 1954, entrusted by Chairman Mao, Comrade Deng Xiaoping was responsible for examining the case involving the so-called Gao-Rao antiparty group. In doing this work he regarded the sinister data concocted by Kang Sheng as a sacred document. Meanwhile, in the report of the fourth plenary session of the Seventh CCP Central Committee, he mistakenly labeled Gao Gang and Rao Shushi as "careerists and conspirators who are against the party and the people." This means that comrades Gao Gang and Rao Shushi, forerunners of our party and our army, were persecuted without a good reason. For this, comrades Deng Xiaoping and Mao Zedong should be held chiefly responsible.

2. In 1957 Chairman Mao Zedong personally instructed Comrade Deng Xiaoping to step up the movement against right deviation. Taking the lead in this movement, Comrade Deng Xiaoping proposed that telling blows be dealt at the rightists. As a result, "the struggle against right deviation became far too excessive and a number of intellectuals, patriotic people and party cadres were unjustifiably labeled 'rightists' with unfortunate consequences," as pointed out in the resolution of the 6th plenary session of the 11th CCP Central Committee. As a result, several million innocent people fell victim and thousands of party members and intellectuals were persecuted to death.

3. In 1959 former chief of general staff Peng Dehuai and other leading comrades resolutely and courageously resisted the erroneous line. However, instead of supporting their stand, Comrade Deng Xiaoping paid attention to his own interests, attacked Comrade Peng Dehuai and other leading comrades, and waged a ruthless "struggle against right deviation" and the so-called "antiparty group of Peng Dehuai, Huang Kecheng, Zhang Wentian and Zhou Xiaozhou." Comrade Deng Xiaoping should, to a certain extent, be held responsible for the persecution of Comrade Peng Dehuai and other comrades as well as of a large number of cadres.

4. In 1968 the 12th plenary session of the 9th CCP Central Committee, personally presided over by Mao Zedong, adopted the erroneous decision to expel Liu Shaoqi from the party and to remove him from all his posts inside and outside the party. Although Deng Xiaopind did not attend the Standing Committee meeting at the time, he expressed, in his 10,000-word statement of self-criticism which he later wrote, his resolute support for this decision. He also vilified Comrade Liu Shaoqi as being a "renegade, traitor and scab." Therefore, it is hard to say that Comrade Deng Xiaoping should not be held responsible at all for the unfortunate sacrifice of Comrade Liu Shaoqi who was a great proletarian revolutionary and Marxist.

Among the leading comrades of the central authorities, Comrade Deng Xiaoping should be held partly reponsible for many errors committed within the party. As indicated by many facts in history, not all the leading comrades of the central authorities should share responsibility for the mistakes in the past. For example, Peng Dehuai, Liu Shaoqi, He Long, Chen Yi and many other comrades laid down their lives in a valiant struggle against the erronous line. They certainly should not be included in the list of leading comrades of the central authorities who are to be held responsible for the past mistakes. As for those who committed serious errors together with Comrade Mao Zedong, they should frankly admit their respective mistakes, be held duly responsible for those mistakes, and draw their lessons so that they will not repeat those mistakes.

'BA YI' RADIO CALLS ON DENG XIAOPING TO SELF-CRITICIZE

OW241259 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 23 Oct 81

[Text] The criticism and self-criticism being carried out throughout the country is very necessary and timely. However, the principle of criticism and self-criticism should be followed by all, including the leader at the very top of the central level. After the 6th plenary session of the 11th CCP Central Committee made a preliminary assessment of Comrade Mao Zedong's merits and mistakes, it is likewise necessary to make a conscientious summing-up of the errors of the other principal central leaders according to the principle of criticism and self-criticism.

In particular, Comrade Deng Xiaoping should take the lead to examine his own mistakes during the antirightist struggle period. His self-examination on 23 October (?1966) and the wrong statements he made on several occasions after his first rehabilitation seemed to have harmful effects. In the late 1950's the three red banners [the general line for socialist construction, the great leap forward and the people's communes] threw the nation's economy into a chaos. When Comrade Peng Dehaui submitted a written statement to Comrade Mao Zedong, pointing out in detail the erroneous policy carried out at that time, the latter not only rejected the correct opinion, but instead started an antirightist movement. As the then general secretary of the CCP Central Committee, Comrade Deng Xiaoping did not support the correct opinion held by other leading comrades at the central level, but took concrete steps to lead the antirightist struggle in the party. As can be seen, the enlargement of the antirightist struggle had a direct connection with Comrade Deng Xiaoping.

In his second self-examination made on 23 October (?1966), Comrade Deng Xiaoping affirmed the so-called great significance of the Great Cultural Revolution and said assuredly that there existed in the party a floating bourgeois line and a sinister antiparty, anti-chairman Mao line. To pass the screening and protect himself, he shifted all responsibilities on to Comrade Liu Shaoqi and said that he had blindly followed the wrong line.

After the downfall of the gang of four, our party has severely criticized the bad style of claiming all the credit for oneself and placing all blame on others. Yet Deng Xiaoping himself has demonstrated this kind of style to a great extent. It is said that at the 6th plenary session of the 11th CCP Central Committee Comrade Deng Xiaoping openly criticized Comrade Hua Guofeng's mistake in advocating personality cult, but wasn't it Comrade Deng Xiaoping who once praised Comrade Hua Guofeng as the wise leader? In addressing his letter to Comrade Hua Guofeng asking for his rehabiliation, Comrade Deng Xiaoping also used the title of the wise leader. In addition, because of the issue of learning from Dazhai, as many as some 10,000 cadres at various levels in the country were punished, including Comrade Chen Yonggui. As a matter of fact, however, Comrade Deng Xiaoping himself did no less than Comrade Chen Yonggui in supporting and advocating the movement to learn from Dazhai. In his hour-long speech delivered on 2 October 1974 in the Great Hall of the People, Comrade Deng Xiaoping said: [words indistinct] as long as you keep to the line of learning from Dazhai in agriculture [words indistinct], there will be enough grain for consumption. [words indistinct] if one-fourth of the communes in the country learn from Dazhai, China will become the largest granary in the world.

Now that the plenary session of the party Central Committee has adopted a resolution on certain questions in the history of the party, the comrades who held the posts of leadership at the central level during Mao Zedong's time should also make a serious summing-up of what they did according to our party's principle of criticism and self-criticism.

BRIEFS

GUANGDONG INTERNAL ORDER SYMPOSIUM--On the morning of 22 September, the Guangdong Provincial CCP Committee held a symposium on tidying up internal order in provincial organs. Some 170 people attended the forum. At the symposium, Comrade Kou Qingyan summed up the achievements that the provincial organs had scored in tidying up internal order in provincial organs and pointed out existing problems. Comrade Kou Qingyan pointed out that the pressing task at present was to strengthen leadership and rapidly promote rectification of social order. HEBEI NATIONAL DAY CELEBRATION--On the evening of 30 September, some 2,000 representatives of the party, government, army and various circles in Shijiazhuang Municipality held a soiree in the hall of the municipal workers' cultural palace to mark the 32d anniverary of the founding of the PRC. Li Erzhong, provincial CCP committee secretary and governor, spoke at the soiree, demanding that all people throughout the municipality further implement the spirit of the 6th Plenary Session of the 11th CCP Central Committee and, in light of the actual situation, penetratingly criticize the leftist mistakes and do well in industrial and agricultural production in the last quarter of this year. A feature film was shown at the soiree. [HK260833 Shijiazhuang Hebei Provincial Service in Mandarin 0400 GMT 1 Oct 81]

XINJIANG PARTY MEMBERS' RALLY--On the morning of 30 September, the Xinjiang Regional Party Committee held a rally of party members and cadres of organs at regional level. The rally called on the cadres, particularly leading cadres at all levels, to take the lead in correcting the unhealthy trends of inviting people to dinner and giving them presents. Leading comrades of the regional party committee, including Gu Jingsheng, Ismail Amat, Song Zhihe, Tomur Dawamat, Li Jiayu and Janabil, attended. Tomur Dawamat read the decision of the regional party committee on resolutely correcting the unhealthy trends and also spoke. DENG BLAMED FOR MILITARY DISSATISFACTION

OW260531 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 25 Oct 81

[Text] Comrade Deng Xiaoping has repeatedly stressed at meetings of the Military Commission of the CCP Central Committee that "among the cadres of the middle and upper echelons in the military, one-third of them oppose my policy of reorganizing the army, one-third are totally indifferent and one-third support it. In the next 2 to 3 years, the number of cadres at the divisional levels and above should be streamlined by two-thirds." He also said: "Some leading cadres in the military look down upon me as chairman of the Military Commission. Some people have even said publicly that I am not as good as Comrade Hua Guofeng. It is by no means accidental that such erroneous remarks which sow discord between the party and the military and between the military and the government have appeared."

If one looks at the facts that certain comrades of the secretariat and organizational department of the CCP Central Committee have made a big fuss of the performance of comrades Chen Xilian, Xu Shiyou, Li Desheng and Zheng Shaoshan during the cultural revolution and during Comrade Hua Guofeng's leadership, it is not difficult to discover that certain people, in order to control the military power and make the military a docile tool which obeys only one person, has never ceased to eliminate from the military those they dislike and do not trust.

We should realize that the question that certain leading military comrades are dissatisfied with the central authorities and Comrade Deng Xiaoping should be examined from two sides, instead of just blaming certain military leaders, much less harboring resentment against those who are dissatisfied and trying to eliminate them. Why does Deng Xiaoping not set strict requirements for himself and examine what he has done to enhance the military's prestige among the masses, to improve the armymen's living standard and to modernize the defense since he has taken charge of the Military Commission?

During the 32 years since the founding of the nation, the Military Commission of the CCP Central Committee has had three different chairmen. But it has been in the last several years since Comrade Deng Xiaoping has become its actual leader that the military commanders and fighters--particularly the cadres of the middle and upper echelons--have suffered the most and have been transferred most frequently, and that the greatest number of armymen have been demobilized. It is also unprecedented in the annals of our party and army that some 10,000 armymen who performed their duties according to instructions have been found guilty in trials given by various military tribunals.

Regarding army building, although our army is numerically the largest in the world, it is at least 20 years behind the industrially advanced countries in terms of weaponry, particularly in terms of tanks, airplanes and warships. However, as chairman of the Military Commission, Comrade Deng Xiaoping regards the modernization of national defense as the least important in the four modernizations and has heavily cut the military budgets and instructed many armament industrial plants to produce civilian goods. Furthermore, the living standard of the ordinary cadres in the military has apparently dropped in recent years. Under such circumstances, how can Deng Xiaoping only complain about the dissatisfaction in the military without examining the serious mistakes that he has made regarding building the army and treating the military cadres over the past several years?

BRIEFS

GUANGDONG CULTURAL RELICS CIRCULAR--On 16 September, the Guangdong provincial people's government issued a circular regarding conducting a general survey of cultural relics. It also decided to establish a "Guangdong provincial cultural relics general survey leadership group." The circular demanded that all prefectures, counties and municipalities establish corresponding leadership organs and offices and assign suitable personnel to take charge of the local general survey of culture relics. The circular said that this province is one of the provinces where civilization developed relatively early and cultural relics and historical data remaining on and in the group are very abundant. In the Song dynasty, this province was an important source of the democratic revolution. The historical data of revolutionary struggle is spread all over the province. Since the founding of the PRC, this province has achieved some results in investigating and collecting cultural relics and revolutionary historical data. However, during the 10-year catastrophe, the investigation of cultural relics in this province was forced to discontinue. Many valuable cultural relics and much historical data were lost. To develop the socialist cultural cause, protect cultural relics and collect valuable historical data, it has been decided to conduct a general survey of cultural relics throughout the province over about 3 years and to complete the general survey before October 1983. [HK110335 Guangzhou Guangdong Provincial Service in Mandarin 1000 GMT 18 Oct 81]

HUBEI DEMOGRAPHY MEETING--On the morning of 25 September, the Hubei provincial and Wuhan municipal planned parenthood offices jointly held an academic meeting on demography. Since the CCP Central Committee concurrently issued an open letter to all party members and CYL members last year, Hubei Province has responded to the party's call and grasped planned parenthood. Up until now, 465,000 couples which accounts for 48.3 percent of households in the province, have obtained certificates for having only 1 child. In 1980, the population growth rate in the province decreased to 8.58 per 1,000 from a rate of over 20 per 1,000 in the early 1970's. However, it is still necessary to do a good job of planned parenthood work since a great number of young couples in Hubei Province are expected to get married in the coming few years. At the meeting, Professor (Tan Chengcai), deputy director of the provincial demographic association and chairman of the economics department of Wuhan University, gave a report on the situation of world population and on birth control work in our country. [HK110339 Wuhan Hubei Provincial Service in Mandarin 1100 GMT 25 Sep 81]

CONFUCIAN PHILOSOPHY SYMPOSIUM--A national symposium on Confucian philosophy of the Song and Ming dynasties opened on 15 October in Hangzhou, Zhejiang. More than 250 experts and scholars from various parts of the country attend this symposium, which is cosponsored by the Society of the History of Chinese Philosophy and the Zhejiang Provincial Institute of Social Sciences. Also attending the symposium are experts and scholars from the United States, Japan, West Germany, Canada, Switzerland, Sri Lanka and Hong Kong. Yu Guangyuan, vice president of the Chinese Academy of Social Sciences, addressed the session on 15 October. Xui Ju, deputy secretary of the Zhejiang Provincial CCP Committee, extended greetings to the symposium on behalf of the provincial CCP committee and the provincial people's government. [Hangzhou Zhejiang Provincial Service in Mandarin 1040 GMT 15 Oct 81 OW]

NANKAI UNIVERSITY PRESIDENTIAL APPOINTMENT--Beijing, 17 Oct (XINHUA)--The State Council recently appointed Prof Teng Weizao [3326 4850 5679] as the president of Nankai University in Tianjin for a 4-year tenure of office. Teng, 64, was appointed to replace Prof Yang Shixian who resigned from the presidency because of old age. Before the new appointment, Teng was a vice president of Nankai University. At the same time, the State Council appointed Prof Yang Shixian as honorary president of Nankai University and Prof Zheng Tianting as an advisor to Nankai University. Zheng, a former vice president of the university, also resigned from the post because of old age. Both Yang and Zheng are over 80. [Beijing XINHUA Domestic Service in Chinese 0720 GMT 17 Oct 81 OW]

FAMILY PLANNING PERIODICAL--The first issue of a new periodical RENSHENG [LIFE 0086 3932], jointly sponsored by the Chinese Family Planning Association and the Workers' Publishing House, was recently published and put on sale throughout China. The content of this new magazine includes questions on birth control, marriage, love and raising a family. Wang Shoudao, vice chairman of the National CPPCC Committee, and Zhou Yang, chairman of the National Federation of Literary and Art Circles, wrote congratulatory messages for the periodical. Some 160,000 copies were printed. [OW231127 Beijing Domestic Service in Mandarin 2230 GMT 21 Oct 81]

LECTURER CITES PRC DECISION ON HONG KONG FUTURE

HK260207 Hong Kong SOUTH CHINA MORNING POST in English 26 Oct 81 pp 1, 13

[Article by Julie Auyeung and Timothy Jim]

[Excerpt] China has already reached a comprehensive solution over the future of Hong Kong, according to a Hong Kong University lecturer.

He told a seminar yesterday that he believed the announcement of this might be made when the next Hong Kong governor assumes his post.

Later, Dr Victor Sit of the university's geography and geology department said he had been told this by contacts in China.

However, at another forum yesterday, a leading political commentator, Mr Hu Chu-jen, publisher of the Chinese-language peasant magazine, said he believed that there was little chance that Hong Kong's status quo could be maintained after the 1997 lease expired.

Mr Hu also expected a collapse of Hong Kong's way of life as we know it if it continued to shy away away from pronouncing on the colony's future in the next two or three years.

But to back up his statement at a seminar organised by the Hong Kong Jaycees at the Regent Hotel, Dr Sit cited examples of two huge urban planning projects, involving Hong Kong businessmen, as an indication that there should be no need to worry about the future of Hong Kong.

If these projects are finalised, they would "go well beyond 1997."

He said the belief of many local people that China is looking for ways to take back Hong Kong by setting up special economic zones "is wrong."

These incorrect views had also appeared in some well-known local magazines, he said.

The topic for discussion at the seminar was Shenzen--the impact of its development on Hong Kong.

Other speakers were the managing director of Millie's group, Mr Alan Lau, and the manager of Sun Hung Kai (China) Ltd's research and business development department, Mr Stephen Chan.

Dr Sit said "Shenzhen is one of China's special economic zones and Taiwan has been named by China as a 'special administration zone.'

"What is the position of Hong Kong? Might it be fitted in between these two terms?"

The two projects mentioned by Dr Sit as indication of Hong Kong's future are on the Chinese drawing board: One in Shumchun, across the Hong Kong border, and the other in Zhuhai, across the Macau border.

"These projects are closely associated with China's overall economic plan.

"From Hong Kong's point of view, if they are finalized we won't have to worry about the future because these projects go far beyond 1997," he said.

The Shenzhen project involves plans to change the present small town into a big city, with the population jumping from the present 30,000 to around 500,000.

Hopewell Holding Ltd, a major real estate developer in Hong Kong, is discussing details of this project, which entails investment of HK$1.1 billion.

Hopewell, moreover, will become the "master leaser" of a 33 sq km parcel of land its rights for so doing extending over 30 years.

The other project, in Zhuhai, involves investment of about HK$7.5 billion, said Dr Sit.

However, the speaker at the other forum, Mr Hu, took the opposite view. He said there was little chance of Hong Kong's status remaining as it is. He also predicted a collapse of the way of life that at present prevails in the colony...if Beijing fails, within the next two or three years, to pronounce on Hong Kong's future.

Mr Hu said that it was the wish of the governments in Beijing and London, as well as the majority of peoplehere, to see the present political status unchanged after the lease expired. But, he said, reality won't let this happen.

According to Mr Hu, the United Kingdom would eventually abandon Hong Kong if Beijing refused to officially, and openly, extend Hong Kong's lease.

Mr Hu said it was a British golden rule to administer according to the law.

If Beijing refused to extend the lease, any ruling party would be forced to retreat from Hong Kong when the time came, he said.

This was because it would be extremely difficult, then, for Whitehall to face attacks by opposition parties, anti-colonists and textile merchants in Britain, as well as international pressure groups.

Mr Hu said it was equally impossible for Beijing to sign a new treaty to extend Hong Kong's lease because, by so doing, it would be honoring other treaties previously signed by the Qing dynasty most of them extremely unfavorable to China.

However, it would be a politically wise move for China to keep Hong Kong's status unchanged in order to ease future reunification with Taiwan.

China had always placed reunification of the country as its number one objective, Mr Hu said. He said that the time had come for all Hong Kong residents to speak up about their own future.

GUANGDONG: LIANG LINGGUANG FETES 1911 ANNIVERSARY GUESTS

HK220854 Hong Kong TA-KUNG PAO in Chinese 22 Oct 81 p 3

[Special dispatch: "Guangdong and Guangzhou Officials Hold Banquet To Entertain Guests to Activities in Commemoration of the 1911 Revolution"]

[Text] Guangzhou, 21 Oct--On the evening of 21 October, Liang Lingugang, secretary of the Guangdong Provincial CCP Committee and first secretary of the Guangzhou Municipal CCP Committee; Wu Kehua, commander of the Guangzhou PLA units; Li Jianzhen, secretary of the provincial CCP Committee and chairman of the Standing Committee of the provincial people's congress; Yin Linping, secretary of the provincial CCP Committee and chairman of the provincial CPPCC, and other leaders met with a group of overseas Chinese, compatriots from Hong Kong and Macao and foreign friends who arrived in Guangdong for a visit on 19 October after being invited to attend the activities in Beijing in commemoration of the 1911 revolution. They also held a banquet to warmly entertain the guests.

More than 40 Chinese and foreign guests attended the banquet. They were: Zheng Naiyan and Gao Yuanzheng, veterans of the 1911 revolution; Lin Dawen, Sun Suifang and Sun Suifen, surviving relatives of Dr Sun Yat-sen; Huang Yizhong, Cai Boling, Cai Luolai, Quan Ruzhen, Ning Bali and his wife Noriko Suzuki, Ning Tiecheng and his wife Ning Feng, Wu Zhongying, Wu Chengxian, Li Xingxiao and his wife Tan Xichi, Ye Nan and his wife Yuan Xiaoyuan, surviving relatives of Huang Xing, Cai Yuanpei, Qin Zhen and others who made their name in the 1911 revolution; Seimin Miyazaki and his wife Chiyo Miyazaki, Sakuku Yasuda, Toshio Miyazaki and his wife Rota Miyazaki, Haruo Kunikata and his wife Chise Kunikata, and Wang Bolin, kinsfolks of foreign friends who took part in the 1911 revolution; and Wang Heng, Chen Shumu and his daughter Chen Yanling, former KMT general and surviving relatives of former KMT and senior statesmen.

BRIEFS

GUANGDONG'S ZHONGYI TO HONG KONG--Guangdong provincial CCP committee first secretary Ren Zhongyi and his party of six arrived Hong Kong by express train at noon on 21 October for a visit at the invitation of the Hong Kong branch of the XINHUA news agency. Accompanying Ren Zhongyi are: Zeng Dingyi, vice governor of Guangdong; Liang Xiang, vice governor of Guangdong and first secretary of the Zhenzhen Municipal CCP Committee; Feng Xueyan, director of the Guangdong Provincial Bureau of Foreign Trade; Zhang Yueqi, deputy director of the Guangdong Provincial CCP Committee's General Office; Cai Changjin, vice chairman of the Quangdong Provincial Committee for Economic Work With Foreign Countries; and Li Huawei, a functionary of the Guangdong provincial people's government. On their arriveal at the Kowloon station, Ren Zhongyi and party were warmly greeted by first director Wang Kuang, second director Li Jusheng and deputy director Qi Feng of the XINHUA Hong Kong branch, general manager Yan Shangmin and assistant general manager Yuan Keming of the Guangdong Enterprises Limited and others. R. Margolis, assistant political adviser to the Hong Kong Government, was among the welcoming party. [Text] [HK220850 Hong Kong WEN WEI PO in Chinese 22 Oct 81 p 1]

PROFESSOR REBUTS U.S. PAPER ON PRC, TAIWAN ECONOMY

OW200816 Beijing XINHUA in English 0717 GMT 20 Oct 81

[Text] Washington, 19 October (XINHUA)--An American professor of economics, Francis Shieh, has written to the WALL STREET JOURNAL refuting point by point its editorial of 15 October entitled "Chinese illusions." Anticipating that the journal might not publish his letter under the headline "Delusion to the Illusions," he sent a copy of his letter to XINHUA.

The letter says "the invitation to ask the Taiwan leaders to rejoin the motherland on the occasion of the 1911 revolution is a timely call for the reunification of China. This is in line with the Shanghai communique of 1972, the position of the U.S. toward one China."

As an economist, Professor Shieh analyzed the journal's fallacy in comparing the economic situation in China's mainland and Taiwan. He wrote: "Taiwan's per capita income of 3,000 U.S. dollars should not be compared with the mainland's 260 with naivety. Such a concept is misleading when used to compare the standard of living, because lifestyles are different. GNP per capita has no bearing on the basic needs of the people. Chinese mainland's remarkable achievement is officially recognized by the world development report of 1981. The physical quality of life of the Chinese people is strikingly better than in most other low-income countries. Efforts in human development are outstanding."

The letter says, "The purchasing power of the Chinese currency goes a long way for obtaining the basic necessities, i.e. lodging, utility, food, transportation, health care. Try to compare these cost of necessities in the Chinese mainland and in Taiwan and you can get a true picture of the daily expenses of the people. Moreover, perhaps crime rates should be compared in terms of order of society and the well-being of the people."

Referring to the conclusion of the editorial that the leaders in China have not shown signs that they really understand the economic problem they face, the letter says, "Do the Americans understand the economic problems we face? Perhaps they should have equal opportunity to question our own situations. What about our total debts?"

Turning to address the Taiwan authorities, the letter says "Sun Yat-sen is the Father of China. His famous dictum is public sector for China--food for thought for leaders in Taiwan if Sun is still honored in Taiwan."

PRC SOURCES REPORT TAIWAN INDUSTRIALISTS VISIT

OW200251 Tokyo Kyodo in English 0233 GMT 20 Oct 81

[Text] Fuzhou, China, 20 Oct Kyodo--Two leading Taiwanese industrialists recently visited Fuzhou in China's Fujian Province to meet with provincial political leaders, Chinese political sources revealed Monday.

The sources claimed the industrialists, described only as "topclass management" from among Taiwan's 10 largest companies, expressed support for economic cooperation to hasten the peaceful reunification of the two Chinas.

Liao Chengzhi, vice chairman of the standing committee of the national people's congress (parliament), indicated to a visiting delegation from Kyodo News Service on 9 October that there had been contact between the two countries prior to China's 30 September call for reunification. Taiwanese offocials strongly denied that claim.

Analysts say that if the new reports are true, they could signal the possibility of real progress toward reunification.

According to the Chinese sources, one industrialist visited Fuzhou in early October. He reportedly expressed a positive attitude toward the new call for reunification made by Marshal Ye Jianying, China's de facto head of state.

The industrialist reportedly said China and Taiwan should deepen mutual understanding through trade, and that Chinese rather than foreigners should reap the profits from Chinese made goods.

He was reported to have urged the exchange of information and the introduction of advanced facilities to China, indicating he could invest in China if conditions were right.

The industrialist also said it would be better to have direct trade between China and Taiwan than for current black market transactions and smuggling to continue, the sources said.

Wen Fushan, Fujian Province vice governor, Monday told Kyodo reporters he had "no comment" on the report.

Fujian Province has designated Chongwo and three other harbors as ports open to Taiwanese ships after Marshal Ye's 30 September speech.

Provincial sources said 400 Taiwanese ships and smaller craft carrying more than 1,000 crewmen have visited Chongwu Port so far this year.

Reasons for the port calls include trade talks as well as repairs and emergency treatment for sick crewmen, the sources said.

COLLEAGUES URGE TAIWAN'S SUN YUN-SUAN TO VISIT

OW161358 Beijing XINHUA in English 1255 GMT 16 Oct 81

[Text] Beijing, 16 October (XINHUA)--Experts of the ministry of power industry who are former classmates or colleagues of Mr Sun Yun-suan, Premier of Executive Yuan in Taiwan, hope Mr Sun will visit some big hydroelectric projects on the mainland.

At a meeting, Sha Yintian, a high-ranking engineer of the ministry, said: "Mr Sun Yun-suan is my former classmate and colleague. He is an expert in electric power engineering and dreamed of making use of the water resources on the Longyang Gorge on the Yellow River and the Yangtze Gorges. Big hydroelectric stations are now under construction at Longyang Gorge and Gezhouba. We would like him to come to the mainland to keep abreast of the development of the country's power industry."

Wang Pingyang, permanent member of board of directors of the electrical engineering society and chief engineer of a scientific research institute, said: "Mr Sun Yun-suan and I had worked together for many years. His idea of saving the country through science and technology remains fresh in my memory. Both of us now are in our seventies. I hope he will be back to the mainland soon."

Among the participants was Chen Zhongxi, now an adviser of electrical engineering society.

All the experts at the meeting expressed the hope that their Taiwan colleagues will get into contact with them as soon as possible, exchange visits and conduct academic exchanges with them. They hoped they would visit mainland and said they would like to visit Taiwan and hoped Mr Sun Yun-suan would facilitate such contacts between the mainland and Taiwan.

TAIWAN SNUBS TOKYO MEETING ON 1911 REVOLUTION

OW161255 Tokyo Kyodo in English 1224 GMT 16 Oct 81

[Text] Tolyo 16 Oct Kyodo--The Tokyo Office of the Association of East Asia Relations, a Taiwanese office in Japan, announced Friday that no Taiwanese scholars would take part in an international symposium to be held in Tokyo in commemoration of the 70th anniversary of the Chinese revolution.

It said the symposium was aimed at supporting Beijing's moves to unify Taiwan with the mainland.

The symposium is scheduled to be held from 21 October, with the participation of 14 experts from Japan, China, the United States, France, South Korea and other countries to discuss the historic significance of the Chinese revolution of 1911 from the scientific point of view.

The preparatory committee of the symposium had applied to Taiwan to participate.

On 15 September, Taiwan decided to send five scholars to the symposium on condition that the symposium be purely academic and politically neutral in character.

This gave rise to the expectation that the symposium would gain historic significance as the first conference at which scholars from both China and Taiwan would meet face to face.

Taiwan made it clear that it would hold an international symposium at a Yokohama hotel, separately from that in Tokyo, from 21 October.

SINO-SOVIET DISPUTE OVER PAMIRS DISCUSSED

Beijing SHIJIE ZHISHI [WORLD KNOWLEDGE] in Chinese No 17, 1 Sep 81 pp 8-9

[Article by Tan Shi [6223 1395]: "What Is the Sino-Soviet Dispute Over the Pamirs?"7

[Text] On 16 June 1981, in Kabul the Soviet Union and Afghanistan signed a treaty defining their borders between the west bank of Zuoerkuer Lake and Bower-Shveikovsky Peak (called Kekelajikaole Peak in China). This treaty affected the area of the Pamirs in dispute between the Soviet Union and China. In connection with this circumstance, on 22 July 1981 a spokesman for our Foreign Affairs Ministry's information department made a verbal statement solemnly declaring that so long as the border talks between the Chinese and Soviet Governments are not concluded and the problem of the Pamirs disputed area remains unresolved, the unilateral signing by the Soviet Union of a treaty with a third country affecting the border of the Pamirs area in dispute between China and the Soviet Union is illegal and void.

How Did the Dispute Over the Pamirs Area Between China and the Soviet Union Originate?

The Pamirs, called the Congling Mountains in ancient times, are in the southwest section of this country's Uighur Autonomous Region, Xinjiang Province, and in the northeastern part of Afghanistan. They are a mountain junction (with an average altitude of about 5,000 meters) formed by the intersection of the Tian Shan, the Karakoram, the Kunlun Mountains and the Hindu Kush and thus are also called the "ridgepole of the world." The area is divided geographically into eight regions, which are called the "eight Pamirs": They are the Heshikuzhuke (or He'erguoshi) Pamir, the Langkuli Pamir, the Alichur Pamir, the Taghdumbash Pamir, the Wakhan Pamir, the Great Pamir, the Little Pamir, and the Sarez Pamir. The word "pamir" is Kirghiz and means "high, cold level area."

Our country was the first to discover and have jurisdiction over the Pamirs. In 60 BC our country was exercising effective jurisdiction over the Pamir area. The Western Han court set up the administrative seat of the duwei for the Western Region in Wulei (present-day Luntai area) and designated Zheng Ji as administrator, to administer the extensive western regions north and south of the Tian Shan, including the area east and south of Lake Balkhash and the Pamirs.

The Eastern Han court followed the Western Han's system of administering the Western Region and also exercised effective jurisdiction over the Pamir region.

By 661 AD, the Tang court set up several administrative centers and prefectures and counties in the Western Region, which were under the jurisdiction of the Anxi administrative capital. Of these, the Zhiba and Niaofei administrative seats were set up in the state of Jumi (Da'erwasi) and in Weimi (Wakhan) at the southern extremity of the Pamirs. At the beginning of the 8th century, the Tang Dynasty also established the Congling Zhouzhuo in Zonglingzhen (present-day Tash Kurgan) and garrisoned it to protect the Pamirs and neighboring area.

During the Yuan and Ming Dynasties the Pamirs continued in a close relationship with China proper. After the establishment of the Yuan Dynasty, the Pamir district was included in the territory of Beshbalik, and the Yuan Dynasty assigned a xuanweisi to administer it. During the Ming Dynasty, Beshbalik continued to send envoys and pay tribute to the Ming court, many envoys and officials were confirmed in office by the Uing court, and the khan of Beshbalik's rule extended even south of the Pamirs. The Ming Dynasty work "Yitongzhi" includes Congling among the mountains and streams of Beshbalik.

During the Qing Dynasty the leaders of the nomadic Bulute (Kirghiz) and Tajik tribes all were invested with office by the Qing government, including the awarding of annual salaries and official titles of grades 2 through 7. During the Qing Dynasty the Pamirs region was administered by the Kashgar canzan and the Qing government repressed rebellious elements, frequently sending troops to the Pamirs.

In 1759, when the Qing government was pacifying the rebellions of the two Hezhuo, it fought and was victorious three times in Heshikuzhuke, Alichur and Yeshilekule Yixierkuernaoer). The two Hezhuo fled to Badakhshan, and the Qing army sent an emissary to bring them back, but the Badakhshan chief captured and killed the Hezhuo and sent their bodies back to the Qing army. In order to commemorate the victory in the expedition against the two Hezhuo, the Qianlong emperor wrote an inscription entitled "Inscription on Imperial Court's Pacification of the Huibule at Yixierkuernao'er" and set up an engraved stela in three languages at Yeshilekule in the Pamirs. Later, the local residents called this place Sumantashi (meaning "inscribed stone"). This inscription said "At Yixierkuernaoer, our Lieutenant general, Fu Deqiong, pursued the two Hezhuo chieftains as far as the boundary of Badakhshan," and "the reason why our forces did not penetrate into Badakhshan was that the forces punishing rebellion would not tread on blameless soil, and therefore they sent envoys." This makes clear that the Qing army was pacifying an internal rebellion, and did not enter a neighboring country, instead, it sent envoys to get back the fleeing rebels. This makes it obvious that the Pamirs were the Qing Dynasty's territory, and that the border between the Qing and Badakhshan was clearly demarcated. At that time, tsarist Russia was still far from the Pamirs. The inscription is historical testimony that the Qing Dynasty ruled the Pamirs.

In order to consolidate and strengthen its control over the Pamirs, after 1878 the Qing government set up watchtowers at Heizijiyake, Liu'erawu, Akesumuerwa, Tushiku'er, Bashigongbaizi, Yeertegongbai and Takedunbashi, and sent officials, soldiers and the Bulute of the Pamir region to patrol them.

In the second half of the 19th century, tsarist Russia subdued the Bukhara, Khiva and Haohan and compelled China to sign a northwest border survey treaty, then extended its aggressive claws toward Alailing, next to China's Pamir district. But at that time the tsars were preoccupied with wars on Russian soil, and their preparations to invade our Pamir region were not complete. Accordingly, Russia continuously sent "expeditionary forces" and "exploratory parties" to make preparations for armed incursions into our Pamirs, and in addition engaged in diplomatic blackmail and forced the Qing Dynasty to sign a new unequal treaty by which China's Pamir area was annexed.

In 1881 tsarist Russia forced the Qing government to sign the Ili Treaty (also called the Revised Treaty), after which it made use of this treaty's provisions to force the Qing Dynasty to settle the border issue with it. In 1884 China and Russia signed the Sino-Russian Supplementary Border Treaty of Kashgar. The third article of this treaty specified that starting from Uzbel Pass, "the Russian border turns southwest and the Chinese border runs directly southward." Because of this treaty, our country's Pamirs were divided into three parts: one part, the area east of the line "running directly south," still belonged to our country according to the treaty; one part, the part west of the line which "turned southwest," was annexed to Russia; and one part, that between the two lines, was to be subject to negotiations between China and Russia. Thereafter the Pamir situation became even more complex: tsarist Russia was not content with its existing interests in the Pamirs, and accordingly quickened the pace of its armed seizure of the entire Pamirs area. England too coveted the Pamirs, and when it saw that Russia had annexed the western Pamirs, it incited the Afghans to send troops and occupy the southern and southwestern portions of the Pamirs, so that they came in conflict with the Chinese Army. The Chinese forces were compelled to retreat eastward to the Suman zone. In 1889 the Qing government also set up the Suman watchtower. In 1890 the English Government proposed to the Qing government that they divide the Pamirs between them, but this proposal was rejected. In the same year, England sent troops to invade Kanjuti, after which it advanced into the southern Pamirs. Tsarist Russia was even more unwilling to be left behind, and in 1891 it illegally sent its forces across the Russian border defined by the treaty and invaded our area of the Pamirs, peremptorily proposing that China should not station troops in the Pamirs before the boundary was fixed. Even though the Qing government was compelled to give way to some extent, it firmly maintained its troops in Suman.

In 1892, imperial Russia again demanded that China completely withdraw its watchtower garrisons from the Pamir region and threatened that if the Chinese did not withdraw their forces, the Russians would advance. The Qing government did not acquiesce in this unreasonable demand by tsarist Russia. While this dispute remained unresolved, Russia brazenly sent its soldiers into the Pamirs on the pretext of blocking an English encroachment. It not only occupied the area disputed between Russia and China but also crossed over the Chinese borders as defined in the treaty, secretly demolished China's watchtowers, took the Chinese garrisons prisoner, forcibly occupied a large zone

of Chinese territory west of Sarikol Peak and forced the Chinese forces to withdraw to the Sarikol Peak line.

The Qing government resisted this piece of naked aggression on the part of tsarist Russia, and sent the ambassador in Russia, Xu Jingdeng, and the counsellor resident in France, Qing Chang, to hold repeated negotiations with the Soviet Union regarding a specific border in the Pamirs based on the 1884 border treaty. The Russians adopted such measures as trickery, blackmail and delay, and refused to draw the boundary according to the treaty. In 1894, imperial Russia took advantage of the imminent Sino-Japanese war to compel the Qing government to exchange notes with it regarding the Pamir question and to agree that prior to an ultimate resolution of the Pamir question the two countries' cognizant organizations would be ordered to maintain their respective positions and not advance beyond them. The Chinese side made an important reservation, solemnly declaring that: "The above measures do not mean that we give up China's original rights to the territory in the Pamirs other than that which the Chinese Armed Forces currently occupy. China believes that it should maintain the rights of the 1884 protocol until a satisfactory resolution is arrived at." But after the 1894 exchange of notes between China and Russia, discussion on the Pamirs borders were delayed indefinitely.

In 1895 Russia arrived at a secret agreement with England to divide the Pamirs, planning to use this to give its forcible occupation of the Pamirs a legal basis. All previous Chinese governments have refused to recognize the Anglo-Russian agreement to divide the Pamirs and accordingly the agreement is not binding on China.

In 1926 China and the Soviet Union held border talks. On 25 March of that year, China's Beiyang government clearly stated in a memorandum to the Soviet Government: "The Pamirs were originally Chinese territory, which were militarily occupied by the former imperial Russian government on pretext, and the problem remains unresolved." On 4 April the Soviet Government stated in a memorandum to China, "In the locations where a border has never been established, a new border should be established." But this important matter still remains unresolved, and today it is one of the greatest disputed areas on the Sino-Soviet border.

NEVILLE MAXWELL BOOK, 'INDIA'S CHINA WAR', REVIEWED

Biejing SHIJIE ZHISHI [WORLD KNOWLEDGE] in Chinese No 17, 1 Sep 81 pp 30-31

[Article by Ming Zhi [2494 5347]: "The Sino-Indian Border Question as Described by a Foreign Journalist"]

[Text] The Australian reporter and author, Neville Maxwell, wrote a book in 1979 on the Sino-Indian border war, entitled "India's China War." A Chinese translation of this book was published this March by Shijie Zhishi Publishers. The writer describes vividly the origins and development of the Sino-Indian border question. The book presents a wealth of materials and clearly-defined views. Currently, when many western publications are blindly influenced by the Indian viewpoint, this book has succeeded in respecting the facts and has presented relatively objective views.

Origins of the Book

Maxwell first became interested in the Sino-Indian border question in 1959 when he was stationed in New Delhi as South Asian correspondent for THE TIMES. Reporting on the Sino-Indian border question was one of his tasks. He recalls that at that time the problem was "widely misunderstood, and when it occurred I myself also misunderstood it," but after the height of the border dispute had passed, when he "read through again the voluminous Indian white paper (which contained the arguments adduced in the diplomatic exchanges between the two governments), I realized that it was necessary to make a more comprehensive, more fundamental, deeper evaluation of the situation.

It was this sense of responsibility toward the historical facts that impelled the writer to overcome various difficulties and undertake the great effort of writing this book. He read large quantities of historical documents and files and made an extensive collection of various types of reports and literature, including the memoirs and diaries of high-ranking Indian commanders who took part in the war with China, and painstakingly studied and analyzed the published statements of China and India. Even more important, the writer made many visits to "Indian politicians and officials" who were responsille for dealing with the Sino-Indian border dispute and "military men who tried to implement the government's policy in military terms and held lengthy discussions with them," in addition to which he read "documents from the Indian Government's and Indian Army's unpublished files and reports." He believes that "the reporter who has been an eyewitness to events is at an advantage over the reporter who pursues his investigation after the fact."

After he returned to London, Maxwell entered the London University School of Oriental and African Studies and studied the Sino-Indian border question, finally writing his book in 1970. He modestly calls his effort "merely an account and a clarification of a historical event," and considers his book to be "the product of a reevaluation" of the problem.

The Dispute on the Eastern and Western Sections of the Border

In order to give the reader a comprehensive understanding of the rather extensive western and eastern sections of the Sino-Indian border dispute, the writer gives a rather exhaustive introduction and survey.

The western Section. The author cites historical documents to prove that although no formal border was defined between China's Xinjiang and Xizang Provinces and India's Ladakh, there was a clear "ancient, long-standing border" along the Karakoram Range, which was the traditional and customary line referred to by China. The areas east and north of this line, including the Aksai Chin region, had always been under Chinese jurisdiction. Although in the late 19th and early 20th centuries English imperialism coveted Aksai Chin, because of its concern that tsarist Russia's power might extend to this region it concluded that its "preponderant interest in Aksai Chin was to prevent Russian entry, and it appeared that the simplest method of achieving this goal was to acknowledge that this area belonged to Tibet/China." The writer states that England had different ideas at different times, and had considered various borders, but the only one proposed to China was the line of 1899 (also called the Majiye-Dounale [phonetic] Line). This line made a certain territorial demand on China, but "almost all of the Aksai China heartland was assigned to China." The writer points out that because at the time the Chinese Government rejected this proposal, "this border was never officially drawn" and England "never actually extended its administration and jurisdiction to the area." In 1954, however, India took it upon itself to redraw the map and include Aksai Chin as a part of India. After the border dispute was made public, India made the counterclaim that China had "invaded" the Aksai Chin area, an area about 33,000 square kilometers. India even failed to make a thorough investigation of the historical facts, and claimed that the 1899 boundary "showed beyond any doubt that all of Aksai Chin was within India's borders." The writer concludes that this was "a very strange attitude" on India's part.

The Eastern Section. The author records that the boundary in this section, too, was never formally defined, but that there was also a historically-constituted traditional, customary boundary. In 1826, when England occupied Assam, the mountainous areas on the north and south sides of the Brahmaputra Valley "remained for a long time outside the English administrative and jurisdictional limits," and "all of the Dawang area, with a depth of 60mmiles, belonged to Tibet." But beginning in 1911, England took advantage of the turmoil caused by the Chinese revolution to make an active northward advance, "intending to make its own, a salient piece of the area, which has a ways been recognized as Chinese territory since the English had come to Assam about 90 years before." With this as background, England used the intermittent Himalaya Conference, held in October 1913 and April 1914, in which representatives of England, China and China's Tibet area took part, to "try to make China agree to divide Tibet into two regions, inner and outer Tibet," but this was rejected by the Chinese Government. Thereupon the English representative, McMahon, got together with the Tibetan representatives behind China's back and secretly drew the illegal "McMahon Line" which detached 90,000 square kilometers of Chinese territory.

The author also relates that in order to provide a "basis" for this illegal boundary line, the English government went so far as to falsify documents. Volume 14 of the "Collected Aiqixun [phonetic] Treaties," collected by the Foreign Minister of the Anglo-Indian Government and published in 1929, initially recorded that the Himalaya Conference had only discussed matters connected with the so-called "China-Tibet border," making clear that this conference had not discussed the question of the border between Tibet and India. But when the Anglo-Indian Government reprinted this volume,in 1938, the record of the Himalaya Conference was changed to state that the conference had discussed matters related to the Sino-Indian border, and "passed it off as the 1929 edition and ordered that all of the initial edition be recalled and destroyed." Accordingly, the illegal "McMahon Line" appears on maps published in England. Before England shed its Indian empire in 1947, it had begun to implement the "McMahon Line" on the actual territory," and in 1951 India sent troops to occupy Dawang.

Regarding the Himalaya Conference and the illegal "McMahon Line," the writer points out that "in reality China had not accepted the proposal to partition Tibet, and had not signed the treaty, but vigorously opposed this treaty and the annexed map," and "in reality Tibet had paid no attention to it." After the Sino-Indian border dispute developed, India maintained that the "McMahon Line" was "the formal embodiment of the natural, traditional, ethnic and administrative boundary of this region," and that "this line was the result of an exchange of notes between India add Tibet, which...were binding on both China and Tibet." The author concludes that in order to support this position, India "ignored the fact that in 1914 and subsequently, China had always rejected any and all such cases of agreement between Tibet and England" (p 134). The writer points out that in 1939 even the acting governor of Assam, Tehuainan [phonetic] (an Englishman), took a negative attitude toward the legality of the "McMahon Line." Tehuainan stated that "if one of the parties to a trilateral treaty does not ratify the treaty, can one of the other parties say that the treaty is binding upon himself and the third party?" (p 55).

Merits and Origins of the Border Dispute

The Indian and Chinese positions regarding the border dispute, as Maxwell summarizes them from a large number of notes, letters and discussions with leaders, were as follows: China believed that "the Sino-Indian border has never been defined, and there is a dispute between China and India," that "the problem can be resolved through friendly negotiations," and that "pending a resolution the parties should maintain the present status of the border"; on the basis of the "current actual situation and the historical background, a resolution which is reasonable and fair to both parties can be found." India believed that "the Sino-Indian border has already been decided," and "almost the entire line is confirmed by treaties and agreements in force," and "India does not agree to holding comprehensive talks to resolve the border question, but agrees only to make minor adjustments of a mile or two at a certain number of points along the border as claimed by India, and that even talks of this kind must have as a precondition Chinese withdrawal from the Aksai Chin region." After meticulous analysis the author concludes that "objectively, China's attitude sounds fair and reasonable," and "appears correct in both de facto and de jure terms."

With regard to the ultimate development of the Sino-Indian border dispute into a large-scale military conflict, the author states that the main reason was India's adoption of a so-called "forward policy" and "the result of a forward push by the Indian Army." He concludes that at that time India was determined to "have a collision" with China. He also believes that international factors in India's adoption of a "forward policy" included not only energetic U.S. and British support, but also Soviet encouragement and support which "was very important to India." In February 1960, Khrushchev visited India. After the Indian prime minister met with him, "he went directly to the Parliament, and in a speech there he again swept away all possibility of holding talks with China." "In the fall of 1960...the Soviet Union began with small-scale aid, and gradually furnished India with immense military assistance"; Soviet pilots in Ladakh piloted transports and helicopters, serving as "an inportant tool for India's implementation of the forward policy" (p 16). Because of these factors, the Indian leadership ignored frontline military commanders' opposition and decided to "chase the Chinese forces from the special northeast border area,... and to keep fighting in Ladakh to the last man and the last gun."

The author arrives at the emotional conclusion that "if before the middle of October 1962 India had changed its policy toward China and agreed to cmmprehensive talks on the border problem, or had only suspended implenentation of its forward policy, there is no reason to believe that China would have failed to respond, resulting in a relaxation of tension in Sino-Indian relations" (p 305).

"India's China War" provides full coverage, gives an enthralling account, and also presents a clear discussion; it is an excellent book, well worth reading.

PARTY RECRUITMENT OF MORE OUTSTANDING INTELLECTUALS EMPHASIZED

Beijing RENMIN RIBAO in Chinese 6 Oct 81 p 3

[Commentary by RENMIN RIBAO reporter: "'Prolonged Tests' Like That Should be Avoided"]

[Text] Since the smashing of the "gang of four" and especially since the 3rd Plenary Session of the 11th Party Central Committee, party organizations at all levels have made conscientious efforts to elminate the influence of the "leftist" ideology and have adopted positive and prudent measures to recruit party members from amoung the intellectuals. According to the incomplete statistics, in 1978, the party members recruited from among the intellectuals accounted for 8.3 percent of the total of newly recruited party members; in 1979, this figure was 12.7 percent and in 1980, 19.1 percent. The increase in the number of party members recruited from among the secondary education-level intellectuals has been greater than ever. By the end of 1980, the party members recruited from these intellectuals accounted for 32.6 percent of the total as against 24 percent in 1976. Many old experts, old professors, old engineers and middle aged and younger intellectuals have been allowed to join the ranks of the party in recognition of their long service to the party and in response to their repeated attempts to apply for party membership. This is what marks the growth and development of our party's cause thus opening up the prospect of its revitalization. This is something which elates the people.

The development of this work, however, is not well balanced. Intellectuals in some localities and units still face serious difficulties in winning the approval of "their admission into the party." Although some outstanding intellectuals already qualify for party membership, some comrades including comrades dedicated to the organization of the party have just been dragging their feet year after year under the pretext that they need to undergo "further tests." Some intellectuals who were selected by their respective party organizations as targets of training in the 1950's remained under training in the 1960's. In the 1980's, their status as the targets of training remains unchanged. Thus far, such unfortunate things have occurred: Some of them have been told to expect no more than "nonparty Bolsheviks" for the rest of their lives; some have been named Communist Party members posthumously for they were not allowed to join the party before their death. Comrade Luan Fu [2940 5397] has been praised by the people as an outstanding intellectual, boundlessly loyal to the party and the socialist cause. During the 30 years of his devotion to the party, he applied for party membership 6 times but was turned down under the pretext of the need for "further tests." When he was dying, he still cherished his lofty ideals and told his party organization tearfully: "I am running out of time. Whatever further tests I should take, I have only 2 months left." Only then, did the party branch call a meeting to discuss and approve his application for party membership. Nevertheless, it was already too late for him to stand personally before the flag of the party and be sworn in as a member. Both in a political or moral sense, we should feel deeply sorry and blame ourselves for what happened to him and learn a lesson from it.

Why do some comrades including comrades devoted to the organization of the party consistently want to emphasize the need for "further tests" and refuse to admit to the party those intellectuals qualified for party membership? The key reason stems from the fact that under the influence of the "leftist" ideology, these comrades still want to see the intellectuals with colored glass; they can see neither the historical role played by the intellectuals in the devlopment of the four modernizations nor their special characteristics and strengths. They have even gone so far as to mistake the strengths of intellectuals as weaknesses and their merits as demerits. For example, they have called knowledgeable and thoughtful intellectuals people with "sophisticated ideas disloyal to the party"; they have accused intellectuals who have upheld the scientific truth and expressed views different from others of being "arrogant, aloof from the masses and too cocky." Some localities, especially units and grassroots units where the intellectuals are a minority, have kept nagging them with the "general historical issues," settled long ago, alleging that "their historical backgrounds are complicated." In short, "they view intellectuals as eyesores, whose admission to the party will spell problems." This is why they have advocated "a longer probation period for intellectuals than for workers and peasants." In essence, they refuse to recognize the intellectuals as "people of their own." Nor do they regard most of the intellectuals as part of the working class.

As our party is embarking on a difficult mission to lead the people throughout the country on a march toward socialist modernization, we must actively and discreetly urge a large number of outstanding intellectuals to join the party in order to meet the urgent needs of the four modernizations program. In his 1956 "Report on the Problem of Intellectuals," Comrade Zhou Enlai pointed out: "During the past several years, we have done very little to recruit them as party members. This is a tendency of the closed-door doctrine. This tendency should be reversed. Of course, our party must focus attention on recruiting its members in accordance with the strict requirements set for this purpose. Nevertheless, we can trust that the percentage of the applicants for party membership able to measure up to the standards set for this purpose is impressive." With the passage of 25 years has come great changes in the composition and mental outlook of the contingent of intellectuals in our country. Since then, a contingent of politially conscious and professionally competent intellectuals of the working class has been established. Of these intellectuals, many are staunch followers of the party. Our comrades, especially comrades dedicated to the work of organizing the party, must recognize this objective fact, conscientiously eliminate the pernicious influence of the "leftist" ideology, and boldly and discreetly absorb truly qualified intellectuals into the party.

Of course, every intellectual applying for party membership should make efforts to raise their levels of Marxist ideology and political consciousness, constantly remold their world outlook, and rectify their motives for joining the party until they turn themselves into Communist Party members truly capable of meeting the standards set for this purpose.

SOCIALIST DEMOCRACY EXPLAINED

Shanghai WEN HUI BAO in Chinese 19 Sep 81 p 3

[Article by Jing Shun [2529 4163]: "Socialist Democracy in Practice"]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" adopted by the 6th Plenum of the 11th Party Central Committee pointed out: "Gradually building a socialist political system with a high degree of democracy is one of the basic tasks of a socialist revolution." In accordance with the spirit of the 6th, the socialist democracy of our nation is going to undergo further development in practice.

During 10 years of unrest, Lin Biao and the "gang of four" carried out feudal fascism and wantonly trampled upon socialist democracy. After the 3rd Plenum of the 11th Party Central Committee, one of the basic tasks in quelling chaos and restoring order which the party led the masses in undertaking was the elimination of the damage done by the Lin Biao, "gang of four" side, and the reestablishment of the practice of socialist democracy. But some persons whose vision has been confused by historical events fail to perceive the essence and superior nature of socialist democracy. Some of those reputed to be "democratic warriors" admire and attribute great beauty to capitalist democracy. They consider the so-called democracy of capitalist societies to be the ultimate in today's world, even going so far as to peddle capitalist democracy as "an excellent way to save the nation," and they view our nation's practice of democracy under the leadership of the party as mere "democratic form." Actually, the practice of socialist democracy carried out by the masses in our country is "a million times more democratic than any capitalist democracy." ("Selected Works of Lenin," vol. 3, p 634).

How then are we to view Lenin's phrase, "a million times more democratic"?

Capitalist democracy appeared as the flipside to feudal tyranny and was a great advance, but it is democracy for the few. The real nature of democracy lies in managing enterprises and managing the state. In capitalist society the means of production are held by a small number of capitalist oligarchs, and to say that the authority in enterprise management is in the hands of the workers is a myth along the lines of the Arabian Nights. In regard to managing the state, that is even more the special privilege of a small number of capitalist groups, while the broad laboring masses have no right to get involved. Bourgeois constitutions and laws do indeed have a number of high sounding regulations concerning democratic rights of the people, but the promise of widespread and real enjoyment of democracy is but a check drawn on insufficient funds. Do you want to use radio or television to make use of your freedom of speech? Can you afford the tens of thousands of dollars per minute pricetag? Do you wish to enjoy the freedom to publish a work offensive to capitalist control of will? Then who will print and market it for you? And could you withstand the capitalist revenge which would include the sanction of loss of employment? The well-known American authoress Maike'er Palundi [phonetic] was at first a staunch supporter of capitalist democracy, but after realizing the true nature of this kind of democracy she wrote: "The law in its noble sounding way stipulates that the rich and poor alike can express their political opinions, have the same to hire outside groups and Washington lawyers to lobby and pressure public officials, have the same freedom to use periodicals and television stations to manufacture public opinion, and have the right to spend upwards of a million dollars in political campaigns to select the person of their choice or to have themselves elected to public office. But this appearance of political freedom is actually nothing more than an illusion." This analysis by a bourgeois scholar should be considered honest and straightforward.

Democracy as a high-rise edifice is a product of the economic base. The scope and content of democracy are mainly determined by the nature of the means of production. After the founding of the nation, the party led the masses in the socialist reform of the private ownership of the means of production, making the laboring masses the masters of the state and its enterprises. Unlike the bourgeois parliamentary systems, the organ of authority in our nation - the People's Congress, is comprised entirely of the people and their cadres who are directly or indirectly elected to office and who represent the will of the people and are subject to supervision and recall by the people. It is the People's organ of authority and this is something that even foreign bourgeois figures must admit. The people's democratic rights which our constitution guarantees are being put into practice step by step. Today, management of enterprises and of the state by the people is no longer empty phraseology, but is living reality. In our nation there are various forms of worker management of enterprises and the Worker's Congress is gradually becoming the supreme organ of authority for enterprises. Lenin said: "In short, the difference between bourgeois democracy and parliamentary systems and Soviet or proletarian democracy lies in the fact that: the former is focused on the high sounding pronouncements of freedoms and rights, but in reality does not allow the majority of people, namely the workers and peasants, to fully enjoy to any extent these freedoms and rights, while proletarian or Soviet democracy focuses on pronouncements of the freedoms and rights of the entire pupulation and actually guarantees that the laboring masses who once suffered the oppression and exploitation of the capitalists can actually play a part in the management of the state." ("Selected Works of Lenin," vol. 3, p 745) Are we, in fact, to believe this is not so?

What sort of democracy do we mean by socialist democracy? Comrade Mao Zedong once pointed out: "Within the ranks of the people, democracy is correlative with centralism, and freedom with discipline. They are the two opposites of a single entity, contradictory as well as united." "Within the ranks of the people, we cannot do without freedom, nor can we do without discipline; we cannot do without democracy, nor can we do without centralism. This unity of democracy and centralism, of freedom and discipline, constitutes our democratic centralism. Under this system, the people enjoy extensive democracy and freedom, but at the same time they have to keep within the bounds of socialist discipline." We hope to develop just this sort of socialist democracy. Any so-called democracy which intends to shake off the guidance of Marxism or the leadership of the party is certainly not socialist democracy and can only lead to bourgeois liberalization and anarchism. It is nothing but an extremely wrong and harmful prejudice that can keep one from failing to clearly see the essential nature of bourgois democracy, and lead one to blindly worship such a democracy or to want to use it to "replenish" or "supplement" or even supplant our socialist democracy. We can only do as Lenin wrote in "State and Revolution": "Thoroughly develop democracy, seek out forms of this development and test them in practice," in order to construct a highly democratic socialist political system.

Socialist democracy possesses a greatly superior nature. Of course, this superior nature must continue to develop in the practice of socialist revolution and construction. For example, in accordance with the original demands of socialist democracy, the state and its enterprises should both be directly managed by the laboring masses. But this requires somewhat higher material and cultural conditions which at present are not fully met, and therefore, for the present, we can only "allow the proletarian vanguard to carry out management for the laboring masses." ("The Complete Works of Lenin," vol. 29, p 156) We can only continually create conditions and gradually reduce the scope of indirect management and expand that of direct management. Since the 3rd Plenum of the 11th Party Central Committee, the party has led us in making great strides in the area of democratization reform. The scope of the direct election of representatives to the People's Congress has been expanded to include the county level; methods have been popularized for having the masses elect leaders in enterprise units at the lowest levels; work has begun on reforming the cadre system, eliminating the system of lifetime tenure for cadres with leadership responsibilities, etc.; all of these have been effective steps taken by the party in leading us in developing democracy. Of course, on this foundation we must continue to progress toward even higher goals.

Ultimately, we can only let practice decide the sort of content and form of democracy that can best guarantee the rights of the people to be masters, and then institutionalize it by means of the law. Any democratic form and measures theoretically can be of benefit in expanding democracy, but in practice because of unmet material and cultural conditions or because the majority of the masses lack spiritual preparation it is very possible that things would not turn out as we wished. This makes it clear that developing democracy is a process requiring orderly and gradual progress; it also makes it clear that before extending any form of democracy we should carry out careful experimental programs, and allow practice to prove its superiority. This is beneficial to the development of democracy and to political stability.

The Central Committee of the Party is unwavering in regard to its policy of carrying out political democratization in our country and is solidly moving forward in practice. We can confirm that under the leadership of the party and along with the development of practice, socialist democracy must and can find the various forms to further its expansion, development and perfection which will allow its essential nature which is "a million times more democratic" than bourgeois democracy to be fully realized.

IMPROVEMENT OF IDEOLOGICAL LEADERSHIP CALLED FOR

Tianjin TIANJIN RIBAO in Chinese 13 Sep 81 p 1

[Commentary: "Resolutely Overcome the Weak State of Leadership on the Ideological Front"]

[Text] At the national symposium on problems on the ideological front, leading comrades on the Party Central Committee confirmed that the party had made clear strides in leadership on the ideological and literary fronts. But we cannot deny or overlook the fact that there remain certain crude and simplistic tendencies in our work. Still, the problem which most requires our attention is the existence of a situation of disorganization and weakness, in which mistaken tendencies are not criticized and any criticism is labeled a harsh attack.

The spirit of what was said by the leading comrades of the Party Central Committee corresponds completely with the actual situation in Tianjin. Since the smashing of the Lin Biao and Jiang Qing counterrevolutionary cliques, and especially since the Third Plenum of the 11th Party Central Committee, we have passed through a period of quelling chaos and restoring order, and party leadership has been improved and sterngthened in every item of work in our city. The leadership of the party on the ideological front at every organizational level has made evident strides. However, in numerous departments, especially on the ideological front, there is no criticism and no education with regard to certain mistaken tendencies which violate the four basic principles, but rather everyone keeps hands off and the party leadership wallows in a state of weakness and disorganization. This situation must be resolutely overcome. Only when this problem is properly solved can we do a better job of upholding the four basic principles, continue to complete the task of quelling chaos and restoring order in our actual work, rouse our spirits, unite as one, and wholeheartedly build a new Tianjin.

Judging from the actual situation in some units, one of the manifestations of the weakness and disorganization of leadership on the ideological front is a pervasive timidity, an inability to develop some backbone. Some comrades are not bold and forthright; they do not hold their banners high in carrying out criticism and education regarding the mistaken ideas, speech, and activities which violate the four basic principles and the evil tendencies toward disorganization, lax discipline, and extreme individualism, but rather they are unfazed by what they see, tolerate what they hear, and try to work around contradictions. In the face of mistaken tendencies, they themselves fail to struggle. Just the contrary, they tend to slight in a myriad of ways those comrades who do uphold struggle. In this sort of unit there are three kinds of people who become isolated: those who support the line of the Third Plenum of the 11th Party Central Committee; those who dare to work and who work effectively; and those who uphold fairness and struggle against mistaken speech and evil tendencies. That mistaken things are not criticized and correct comrades are isolated are evident manifestations of the weakness of ideological and political work. At present, our party and our society still have problems, still face a large number of contradictions, and still contain negative phenomena and elements. To solve these problems and overcome these negative elements we must pull together, straighten our backs, be righteously bold in offering criticism, and carry out appropriate ideological struggle. If we are very weak in our leadership, do not dare to deal with matters, and peacefully coexist with mistaken ideologies, then the correct will not be able to defeat the mistaken, and proper trends will not be able to suppress evil trends.

Another manifestation of the weakness and disorganization of leadership on the ideological front is that thinking is confused and lines are not clear. Some comrades cannot clearly distinguish right from wrong and cannot correctly handle certain new situations which have arisen in the course of quelling chaos and restoring order and [correctly deal with] certain trends and problems which have appeared in society. For example, some people engage in capitalist liberalization and put out harmful literary works without allowing others to criticize them. Any criticism is called a harsh attack. And still some of our comrades fail to distinguish what is right from what is wrong and reproach comrades who have offered correct criticism; some people obviously want only democracy and don't want centralism, want only freedom and don't want discipline. They stir up individualism and anarchism, and certain of our comrades cannot determine what is what. Some people peddle the literary and artistic theories of the capitalist classes, excusing themselves with the "double hundred" policy. They advocate absolute freedom, resist party leadership, and oppose the guidance of Marxism-Leninism. And still others of our comrades mistakenly believe this to be merely "heated debate," "literary freedom," etc. When thinking is confused and lines are not clear, leadership is inevitably weak. I hope these comrades will seriously try to comprehend the series of lines, principles, and policies adopted by the Party Central Committee since the Third Plenum, to unite reality and ideology, to deepen their understanding, and to raise their consciousness so that they can distinguish between that which upholds socialism and that which intends to depart from the socialist path; between that which upholds proletarian dictatorship and that which weakens proletarian dictatorship; between that which upholds the leadership of the party and that which intends to shake off party leadership; between that which upholds Marxism-Leninism and Mao Zedong Thought and that which departs from Marxism-Leninism and Mao Zedong Thought; and between that which correctly upholds the "double hundred" principle and that which is an expression of liberalization. Only by clearly distinguishing between these rights and wrongs can we keep clear heads and better lead the masses forward.

Still another manifestation of the weakness of leadership on the ideological front is the disorderliness of organizations which lack fighting strength. Leadership circles in some units are at odds and are not unified, with contradictions existing among themselves. They are out of touch with one another, do not exchange opinions, and do not debate ideology; each spouts his own slogans and sings his own tunes, even to the point of competing for influence and breaking into factions. Some units lack strict systems of organizational life, and political and ideological management is completely powerless. The party organization cannot fully carry out its function as a bulwark of struggle, and party members cannot do well in fulfilling their functions as models and initiators. Let me ask: How can this kind of group, this kind of party organization, and these kinds of core troops have any fighting strength?! In order to improve the fighting strength of the party, the first thing is that the party must manage the party, do well in adjusting leadership circles, do well in adjusting party organizations, and do well in grasping the education of party members. The second thing is to adhere to party discipline and to the four fundamental principles, which are the most basic discipline. The third thing is that leadership must take the lead and carry out serious criticism and self-criticism. There will be an evident turn for the better if these items are handled well.

At present, the people of the entire city are well into studying and implementing the spirit of the Third Plenum and are concentrating their energies on doing two things well: furthering the economy and constructing a socialist material civilization; and grasping ideology, culture, and education and constructing a socialist spiritual civilization. All places and units with weak and disorganized leadership on the ideological front should make a careful analysis of the reasons for it and suggest methods to overcome the problem, so as to correct the various mistaken tendencies in a timely fashion and increase unity on the foundation of the four fundamental principles. In particular, there must be serious and correct criticism of and struggle against those ideological tides in society that want to depart from the path of socialism, that want to be free of party leadership, and that want to carry out capitalist liberalization. Carrying through on this aspect of work is extremely important to the continued elimination of the leftist influence on our guiding ideology and to the further development of the excellent situation that has existed since the Third Plenum of the 11th Party Central Committee.

BUILD MATERIAL, SPIRITUAL CIVILIZATION SIMULTANEOUSLY

Fuzhou FUJIAN RIBAO in Chinese 8 Sep 81 p 3

[Article by Zheng Qingzheng [6774 1987 2398]: "Material Civilization and Spiritual Civilization"]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" points out: "Socialism must have a high-level spiritual civilization." Building a socialist spiritual civilization is a matter of prime importance to the development of the four modernizations and to the realization of the prosperity of the Chinese nation, and is a task we must face.

Marxism holds that it is man's social being that determines his thinking, and that matter is primary and consciousness secondary. The spiritual civilization of a society is usually to be built on the basis of its material civilization, a task which must take into account its material conditions. "Improvements in mental productive activities are contingent on improvements in material production." This being the case, can a high-level spiritual civilization be built in our country when productive forces remain relatively backward and material wealth is not overly abundant? Isn't it true that a high-level spiritual civilization will emerge spontaneously through efforts to develop productive forces and improve material living conditions?

Marxism also tells us that social consciousness is something that is relatively independent of, but reacts sensitively to, the economic base. "As everyone knows, as far as art is concerned, its growth for a specific period of time is absolutely not in proportion to general social development. Nor is it in keeping with the general development of the material base, which bears a striking resemblance to the backbone of social organizations. It is not true that only economic development is a positive factor, and that everything else results from negative developments." ("Selected Works of Marx and Engels," Vol 2, pp 112-113; Vol 4, p 506) Facts prove that under specific conditions, man's advanced ideas and thinking can exist in a relatively backward social reality. For example, during the early days of the Chinese revolution, the revolutionaries represented by Chinese Communist Party members struggled heroically for the realization of communist ideals and displayed a revolutionary spirit without fear of sacrifice. During the Yen'an period, regardless of the extremely difficult material living conditions, our party and the army had people in the revolutionary base areas were able to foster a healthy social climate that was praised by people at home and abroad. This is proof of the above point. Regardless of the weak base of the social productive forces at that time, our revolutionaries of the older generation were able to foster a lofty ideal symbolizing the bright future of communism. In the service of the interests of the party and the people, they advanced wave upon wave and waged heroic struggles without fear of sacrificing everything they had, until in the end they created a brandnew proletarian spiritual civilization at the cost of their lives. Today, the level of our productive forces is more advanced and our material living conditions are far better than they were then. It can be said that our endeavor to build a high-level socialist spiritual civilization on the basis of our present-day material civilization is neither empty talk nor an undertaking to build spiritual civilization without taking into account our material conditions. Of course, a high-level socialist spiritual civilization cannot be built by taking just a single step, as we have done today. But the material conditions that we have today can in every sense be a starting point in the direction of building a high-level spiritual civilization.

Facts also prove that comparatively advanced productive forces and more abundant provisions of the means of livelihood will not necessarily lead to the realization of a high-level spiritual civilization. For example, unethical practices, mental depression, and a social climate characteristic of cruelty and barbarism still exist in some developed capitalist countries, with the blessing of the higher levels of material production and better material living conditions. For this reason, it is unrealistic simply to attribute the unhealthy phenomena, unhealthy tendencies, and uncivilized behavior that have surfaced in our present society to economic difficulties and material shortages. As a matter of fact, although our economy at present is less developed, the main aspects of our social climate remain good and healthy. Violent, savage, selfish, and greedy behavior is only a breakaway trend from the mainstream. This shows that spiritual civilization may vary even under the same material conditions. In this connection, any simple attempt to put spiritual civilization on a par with material civilization won't work. The fact is that man's thinking and consciousness may come under the influence of material conditions, but at the same time they still can assert their relative independence and carry on the tradition. Those examples of savage and uncivilized behavior that exist in our society today, which symbolize the vestiges of obsolescent ideologies of a bygone era, should be attributed mainly to the ideological influence of the exploiting classes. This proves groundless the assumption that a high-level spiritual civilization will appear automatically as a result of the development of production. In the meantime, it also proves that conscientious efforts on our part to build a socialist spiritual civilization are not only necessary but also possible.

Spiritual civilization is a multifaceted entity whose various aspects owe their existence in varying degrees to the economic base. Science, culture, and education, which are closely tied to the development of productive forces, reflect human wisdom, or the essential facets of spiritual civilization. They directly reflect the degree to which material civilization has developed; they will come under the direct influence of material conditions; and they will have a direct impact on the building of material civilization. On the other hand, morality, tradition, customs, ideals, ethics, and habits make up the ideological facets of spiritual civilization, and they also will come under the direct influence of material conditions. More important, they will forge ties with the department of material production through the introduction of production relations as the medium. In view of this, the nature of production relations and of the economic base will have a decisive effect on social lifestyle and will eventually affect material production. The socialist system of public ownership that we have established will certainly prove instrumental in influencing, shaping, and transforming the moral outlook of our society. As a result of the establishment of the system of public ownership, all old and selfish ideas, ethics, beliefs, customs, and habits will become obsolescent and will gradually give way to the new communist beliefs and ideals which symbolize the progress of human society. In the end, a new epochal and splendid moral outlook will take shape. During a discussion of the possible outcome of the abolition of the system of private ownership more than a century ago, Engels pointed out: "A new generation of people is required to mobilize the entire social force to organize a joint venture in production and to expand production. Efforts will have to be made to create such a new generation of people." We have established the socialist system. Certainly we can also build a high-level socialist material civilization and a high-level socialist spiritual civilization simultaneously.

CRITICISM VITAL TO DEVELOPMENT OF SCIENCE, THEORY

Chengdu SICHUAN RIBAO in Chinese 14 Sep 81 p 3

[Article by Sima Jun [0674 7456 3182]: "Theoreticians Must Pick Up the Weapon of Criticism and Self-Criticism"]

[Text] Criticism and self-criticism constitute one of our party's three excellent styles of work, a mighty driving force for the development of socialist society, and an important method of developing science and theory. In his work "On the Correct Handling of Contradictions Among the People," Comrade Mao Zedong pointed out: "Marxism can develop only through struggle. Not only is this true of the past and the present, but it is necessarily true of the future as well. Marxists need to temper and develop themselves and win new positions in the teeth of criticism and in the storm and stress of struggle. Only by employing the method of discussion, criticism and reasoning can we really foster correct ideas and overcome wrong ones, and can we really settle issues." Science and theory will wilt, become ossified, and lose their vitality as a guide to every experiment if no effort is made to develop them through criticism and self-criticism.

As a result of the 10 years of sabotage by the Lin Biao and Jiang Qing counterrevolutionary cliques, and under the influence of the leftist guiding ideology, people on all fronts seem to be losing interest in carrying forward this excellent tradition of criticism and self-criticism. In this connection, people on the theoretical front are no exception. On the other hand, there is a tendency to deviate from, and even reject, the four basic principles. In the face of this tendency, instead of boldly and plausibly criticizing it and struggling against it, some theoreticians often feel that "this activity is none of their business and therefore should be suspended; although we are well aware that something is going wrong, we still prefer to say as little as possible." Some individuals have even gone so far as to express sympathy and support for this tendency. On the other hand, some individuals have tried by all means to prevent others from criticizing their incorrect ideas and have regarded criticism as an attempt to "wield the stick" and a violation of the "double-hundred" policy. Obviously, this state of mind will have an adverse impact on our thorough efforts to eliminate chaos and restore order on the theoretical front, to achieve true unity among theoreticians, and to develop theoretical research work. In the final analysis, it is not in the people's interests. For this reason, an important task now facing every theoretician is a swift effort to overcome this unhealthy state of mind, to revive and carry forward the party's excellent tradition and style of work, and to develop correct methods of criticism and self-criticism.

The recently held national forum on problems on the ideological front emphasized the need for the conscientious development of criticism and self-criticism as a timely measure for overcoming a variety of erroneous tendencies. The forum also called for stern and correct criticism and appropriate struggle against tendencies to deviate from the socialist orbit and to quit the leadership of the party as well as against the laissez-faire style of work. Comrade Hu Yaobang took advantage of this forum to convey the fervent hope and specific demand to the theoretical, literary and artistic, and journalistic and publication fronts in this respect. Every theoretician must consciously play a positive role in "applying correctly the weapon of criticism and self-criticism in order to eliminate various erroneous ideas which represent a departure from the party's correct principles" as called for in the "Resolution on Certain Questions of Our Party Since the Founding of the PRC." In the course of daringly, sternly, and correctly criticizing wrong statements and tendencies which reflect a departure from the four basic principles, we must dare to seek truth from facts and struggle against our own views and ideas that prove to be wrong, and take a correct attitude toward their critics. We must resolutely reject those inarticulate, ambiguous, and opportunistic statements which reflect an attempt to cover up a malady for fear of taking medicine. We must denounce the stubborn attitude of refusing to acknowledge mistakes and resisting criticism.

Apart from building up his own knowledge and consistently and regularly developing criticism and self-criticism, every theoretician will have another important role to play in conveying Marxism-Leninism and Mao Zedong Thought to the cadres and the masses. At present, as an in-depth study of the "Resolution" of the Sixth Plenum is well underway by the entire party membership and the people throughout the country, a series of theoretical questions have emerged--questions that demand accurate and clear-cut answers from theoreticians. The weapon of criticism and self-criticism is needed in answering these questions. Also useful in this regard are the Marxist stand, viewpoints and methods and the guidelines of the "Resolution." Only in this way can we interpret everything in a thoroughgoing way, clarify some muddleheaded ideas, correctly criticize some wrong points of view, and achieve the objective of disseminating and popularizing Marxism-Leninism and Mao Zedong Thought, and thus help the cadres and masses think in a way consistent with the basic conclusions contained in the "Resolution."

Criticism and self-criticism constitute a powerful weapon for overcoming a variety of wrong ideas. We Marxist theoreticians should not hesitate to pick up this weapon and apply it correctly in defense of the four basic principles as a contribution to the socialist modernization program.

IMPROVEMENT OF RELATIONS BETWEEN CADRES, MASSES URGED

Hangzhou ZHEJIANG RIBAO in Chinese 10 Sep 81 p 4

[Article by Zeng Li [2582 6849]: "Do Away With Barrier Between Cadres and Masses"]

[Text] Comrade Wang Chonglun [3769 1504 0243] suggested recently that instead of addressing each other by their official titles, a leader and his subordinates call each other comrade in order to improve relations between cadres and the masses. He added: In this way, a "barrier" of feudal vestige between cadres and the masses can be removed.

This suggestion from Comrade Wang Chonglun is really very good. Our ancients said: "The sharing of a common ideal and a meeting of minds will lead people to become comrades." In the past, Comrade Liu Shaoqi always wanted others to call him "Comrade Shaoqi" instead of "Chairman Liu." When Comrade Soong Ching Ling was seriously ill, she too wanted her visitors to call her "Comrade Ching Ling" instead of "Vice Chairman Soong." Before his death, Lu Xun said: "True, there are fellows who are faithfully dedicated to the struggle for the survival of the modern Chinese people. It is my honor to call them my comrades." This means that comrade is really a very honorable title within our revolutionary ranks.

But what surprises me is that a few comrades still cherish their official titles after they become leading cadres. If the people do not address them by their official title, they feel that "their leadership position" has been dishonored. What they do not understand is that this behavior is virtually a step toward building a "barrier" of feudal vestige between themselves and the masses. Once this is done, they will find it difficult to establish direct communication with the masses.

As a matter of fact, persuading the masses to call a leading cadre comrade, or "Mr Zhang," or "Mr Li" is a job that should be earned. If in daily life he still insists on wearing bureaucratic pretensions without keeping in touch with the masses and without communicating with them, the masses will find it extremely difficult to call him comrade. For this reason, a leading comrade should feel honored if one day he finds that the masses have stopped addressing him by his official title. My advice to those who still want to enjoy having others address them by their official title is that if you are truly interested in uniting the masses to work for the four modernizations program with one heart and one mind, you should voluntarily try to establish direct communication with the masses, as this will clear the way to the tearing down of the feudal ideological "barrier" between the cadres and the masses.

RETIRED CADRE PRAISED FOR TRAINING YOUNGER CADRES

Hangzhou ZHEJIANG RIBAO in Chinese 11 Sep 81 p 2

[Article by ZHEJIANG RIBAO correspondent Zhang Lingkai [1726 0109 0418]: "Retirement Does Not Mean Quiting the Government"]

[Text] Lu Alin [7120 7093 2651], former leader of the Haishan Brigade and a former member of its party branch in the Keyan Commune of Shaoxing Municipality, has been praised by the people as a good cadre devoted to the training of his successors without caring for his own happiness in his later years.

Comrade Lu Alin became the leader of the Haishan Brigade and a member of its party branch in the 1950's. He has spent exactly 30 years braving wind and rain and working hard to improve his brigade's outlook of poverty and backwardness. In October 1980, this nearly 60-year-old and ailing cadre retired so as to open up his leadership positions to other robust comrades at an early date and to provide them with good opportunities for training. After attending an evening farewell party for retired brigade cadres, Lu Alin was in a mood of excitement, with his mind dominated by this thought: "Without the Communist Party, there would have been no such persons as Lu Alin. Can I still do something useful for the party at this old retired age, regardless of my poor health? Certainly I can! I must do at least one thing." The thing he had in mind was the training of successors to the cause of the party. The party branch of the Haishan Brigade consists of five members who range in age from 33 to 40 or more. They are young and energetic. But the newly appointed party branch secretary and the brigade leader lack leadership experience. They will certainly encounter difficulties in their work. Lu Alin felt that although he is retired and no longer in a position of leadership, he should stop thinking that he is really retired, so that he can impart his experiences to his successors and concern himself with their training.

Jin Xinglong [6855 5281 7893] was appointed secretary of the party branch of the Haishan Brigade in 1978. During the first 2 years following that appointment, young Jin had a "tall tree" behind his back. With Lu Alin advising him, young Jin scored some success in his work. Lu Alin's retirement put an additional burden on the shoulders of young Jin, who often felt helpless in the face of "challenges." On the eve of this year's spring farming season, Jin Xinglong had originally planned to hold a mobilization meeting for commune members. This plan conceived by Jin Xinglong was scuttled as soon as it was submitted for discussion at a party branch meeting. At the meeting, some argued against this "mobilization as being worthless, because everybody knows his or her job well during the spring farming season," while others urged that instead of having a mobilization meeting, Jin Xinglong should deliver a speech at a movie theater. The party branch meeting adjourned without any agreement on this matter, a fact which upset Jin Xinglong. Realizing this, Lu Alin asked young Jin this question: "In your opinion, what preparations should be made for that proposed meeting of commune members if it does take place?" Seeing young Jin stammering for an answer, old Comrade Lu said: "As number-one man, you have to think over every problem thoroughly. In doing everything, you should clearly explain the objectives and specify your methods for achieving such objectives. Moreover, you should listen to opinions from various sources so that you can make up for your own shortcomings. The failure of your party branch meeting stems from your inability to offer any appreciable specific plan for spring farming from your position as squad leader." This advice by old Comrade Lu opened a fresh window in the mind of young Jin. After that, young Jin grasped the problem of how to put into effect the systems of awarding contracts to specialized groups and calculating payments for joint ventures in production as subjects for discussion when the second meeting was held by the party branch. In the course of the discussion, everyone asked questions and suggested solutions, thus bringing the meeting to a successful conclusion. This meeting was followed by another meeting attended by chief contractors and other cadres at higher levels to discuss matters concerning the enforcement of the system of responsibilities for the spring farming project. Realistic discussions that have a purpose in mind are what make meetings successful. This year's spring farming was completed, and the desired qualitative and quantitative standards met, on 23 May. In the past it could not be completed until the end of May. Another success is the fact that spring- and sumer-ripening crops this year outproduced those in 1979. Jin Xinglong said with appreciation: "As he did in the past, my former brigade leader now still devotes his time to training me and giving me advice at every crucial moment."

Whenever brigade caders are at odds with each other, Lu Alin still looks for opportunities to hold separate heart-to-heart talks with them, reminding them of the need to promote unity in favor of the overall interests. When comrades fail to pay attention to the method of work and are unable to get along with the masses very well, he is willing to acquaint them with the party's excellent tradition, which calls for paying attention to the well-being of the masses as well as to the method of work. If someone asks Lu Alin: "Old brigade leader, why should you be so concerned with younger cadres after your retirement," he is very happy to answer as follows: "Although I am no longer a leader of the birgade or a member of its party branch, I am still a Communist Party member who has obligations to transmit his experiences to his successors and guide them through trial periods."

PARTY AND STATE

HISTORICAL MATERIALISM APPLIED TO PARTY ISSUES

Beijing BEIJING RIBAO in Chinese 4 Sep 81 p 3

[Article by Zue Muduo [5641 2606 6995], Zheng Zhongxiang [6774 1813 4382]: "Questions in the History of the Pàrty As Analyzed with Historical Materialism--Reading Engels' letter to Joseph Bloch"]

[Text] Engels' letter to Joseph Bloch is an important document brilliantly expounding the basic principles of historical materialism. When we study the "resolution on certain questions in the history of our Party since the founding of the People's Republic of China," it is of great significance to read this important writing conscientiously and to comprehend Engels' brilliant treatise and penetratingly grasp the principle of historical materialism in deepening our understanding of the spirit and substance of the "resolution," particularly in correctly analyzing and summing up the cause and lesson of the "great cultural revolution."

I

Joseph Bloch was a Berlin University student at that time. He wrote a letter to Engels 3 September 1890, asking advice from Engels on how to understand some questions of historical materialsim. In his September 21-22 reply, Engels made a brief and allround summary of the theory of historical materialism from the angle of historical events.

Engels wrote:

> "We make our history ourselves, but, first of all, under very definite assumptions and conditions. Among these the economic ones are ultimately decisive. But the political ones, etc, "and indeed even the traditions which haunt human minds also play a part, although not the decisive one....
>
> "In the second place, however, history is made in such a way that the final result always arises from conflicts between individual wills, of which each in turn has been made what it is by a variety of particular conditions of life. Thus, there are innumerable criss-crossing forces, an

> infinite series of parallelograms of forces which give rise to one resultant--the historical event. This may again in turn be regarded as the product of a power which works as a whole unconsciously and without volition...."

The two points put forward by Engels are the salient points of historical materialism.

The first point illustrates that each historical event takes place under the premises and conditions caused and determined by historical development. These objective premises and conditions exercise their influence over historical events. Among these historical conditions are not only economic premises and conditions but also political, legal, and philosophical elements and traditional ideas. People can make their history themselves only under such premises and conditions. Discussion of history apart from these objective premises and conditions is bound to degenerate into idealism.

The second point illustrates that when examining the part played by individual wills in historical events, we should, first of all, note that the will of each individual is one of the innumerable individual wills that make themselves felt, that these innumerable individual wills that make history are full of contradictions and conflicts, and that the ending of history is the product of conflict of these wills and the combined product of the parts played by innumerable individuals and may not simply be summed up as the product of the will of a certain individual. Secondly, each individual will is not a subjective, spontaneous thing but has been made what it is by a variety of particular conditions of life. It is necessary to examine the role of individual wills in light of these conditions.

In short, each historical accident and each historical event is the result of the combined effect of particular conditions. As Engels pointed out in this letter: "There is an interaction of all these elements in which, amidst the endless number of accidents, the economic movement is finally bound to assert itself." When we study any specific historical accident and historical event, we must know how to grasp the factors playing their part in the accident and event, grasp their interactions, thereby correctly summing up due lessons and experiences. All this demands efforts and under no circumstances may it be regarded as "easier than resolving a simplest equation."

II

For a time in the past, some comrades attributed the cause of the "great cultural revolution" which took place and went on for 10 years to the mistakes by comrade Mao Zedong himself, and even to his personal character.

This view magnified the historical role played by individuals. It is untenable to attribute the occurrence and development of such a momentous historical event as the "great cultural revolution" merely to the role played by an individual. Nor is the view valid enough to explain the root of mistakes made by comrade Mao Zedong in his later years. To say the least of it, this view over-simplifies the complicated historical questions. Even if this is not so, it is a continuation, in another form, of the personality cult under new historical conditions.

Historical idealists hold that history is made by emperors, kings, generals, ministers and individual heroes. In examining the cause of historical accidents, they proceed from the motivation, will and inspiration of individual characters. Chinese bourgeois thinker Liang Qichao said, "a slight deviation in the motivation of historical figures will change history." Pragmatist Hu Shi held that individual characters "may cause the rise and fall of a country with one word" and that one idea on their mind may touch off a 10-year bloody war. In the eyes of historical idealists, the development of history is not governed by any law and history may be made by individuals at will. For this reason, when examining history they turn their eyes to the motivation, character and role of individuals and see nothing that is governed by law.

If we examine the "great cultural revolution" from the viewpoint of historical idealism, we shall find no social and historical causes and only individual roles, and we shall then be unable to sum up the lessons of the "great cultural revolution." Obviously, such a viewpoint is not desirable.

The "resolution on certain questions in the history of our party since the founding of the People's Republic of China" adheres to the Marxist viewpoint of historical materialism, rejects the viewpoint of historical idealism, and examines the social and historical causes of the "great cultural revolution" from two important angles:

First, the "resolution" examines the social and historical premises and conditions confronting our Party before the "great cultural revolution" took place, including:

We did not have much experience in building socialism which had only a short history. There was no ready-made pattern to follow and a number of problems remained to be explored. Mistakes were unavoidable.

The majority of our comrades, particularly leading cadres of our Party were brought up in an environment of protracted class struggle. They were accustomed to the idea of class struggle, the experience of class struggle and the methods of class struggle. Not fully prepared in the ideological sense for the forthcoming socialist cause, they often looked upon as problems of class struggle problems no longer falling into the category of class struggle, and carried on the old methods and experience in handling new problems. Such circumstances were likely to lead to the mistake of enlarging the scope of class struggle.

Viewed from the angle of guiding thought, certain ideas and viewpoints found in Marxist-Leninist works were misinterpreted or were turned into dogmas. This circumstance provided those advocating enlarging the scope of class struggle a theoretical basis, making it easier for them to enlarge the scope of class struggle. struggle.

The Soviet leaders provoked the polemics between China and the Soviet Union and brought strong pressure to bear on us, compelling us to wage a righteous struggle against the great-nation chauvinism of the Soviet Union. That was imperative.

But under such circumstances, we proceeded with a movement to oppose and prevent revisionism within our Party, and infatuation with enlarging the scope of class struggle was intensified in our Party. The result was that differing views within the Party were taken as "revisionist line" and the seamy side of our Party was magnified to such a degree that it was believed that a group of bourgeois representatives existed from top to bottom within our Party and that there were "capitalist roaders" within the Party.

These leftist viewpoints led to the outbreak and continuation of the "great cultural revolution."

Second, the "Resolution" comprehensively examined, from the angle of social and historical reasons, the mistakes made by comrade Mao Zedong and their effects.

Comrade Mao Zedong got gradually conceited in his later years. He divorced himself from reality, from the masses, and from the collective leadership of the party and over-concentrated the power of the party in the hand of an individual, thus breeding personal absolute control and personality cult. Such circumstances made it difficult for the Party to prevent and stop the "great cultural revolution." For this comrade Mao Zedong was of course held mainly responsible, but he himself was not able to bring about such a situation. As pointed out in the "Resolution," the Party Central Committee was also held responsible for this. Moreover, this was not the only problem. It must be realized that the serious mistakes made by comrade Mao Zedong were the product of definite historical conditions. Some serious deviations, that appeared in the history of the international communist movement and that were not resolved because of failure to solve the problem of relations between the leader and the party, exercised some negative influence over our Party. The feudal society lasted more than 2,000 years in our country, and the pernicious influence of autocracy exercised influence over the ideology and politics of our Party. We failed to place our inner-party democracy and the political and social life of our state quickly on a democratic and legal basis, thus providing the soil for breeding personal absolute control and personality cult.

The particular historical conditions and causes mentioned above interacted and affected each other, and the "combination" of these factors led to the "great cultural revolution."

By correctly interpreting the past is it possible to point out the future correctly. Once the cause is found, the correct approach is found and past mistakes may become motive force for moving forward. On the basis of summing up the positive and negative experiences since the founding of the Republic and, in particular, the lessons of the "great cultural revolution," the "Resolution" indicated the correct road to socialist modernization that is suited to the conditions of our country, and indicated the direction in which we move forward. This will certainly exercise great, far-reaching influence over our efforts to unify the thinking and understanding of the whole party, the whole army and the people of all nationalities and, with one heart and mind, strive for the new historical tasks.

JIANGSU PUBLICIZES 'RESOLUTION'

Nanjing XINHUA RIBAO in Chinese 18 Sep 81 p 1

[Commentary: "Publicize the "Resolution" Thoroughly"]

[Text] At present, party organizations at every level in our province are actively urging cadres and party members to study the "Resolution on Certain Questions in the History of Our Party since the Founding of the PRC." At the same time, well prepared propaganda work is methodically being carried out among workers, peasants, students, shopkeepers and the local populace. Attaching great importance to this task, many leading comrades took the initiative in going to the grass roots, acquired experience, and achieved good result in step-by-step propagation. The broad masses expressed whole-hearted support of the "Resolution" and regarded the "Resolution" as "appealing to the ear in hearing and appealing to the heart in learning." Confidence in the future prevailed. Judging from the present, as long as the propaganda work is well done, the result will be noteworthy. Therefore, we ask party organizations in the city and in the countryside to do a good job in grasping the propaganda work of the "Resolution" so that it will be further spread among the masses in the city and in the countryside.

The "Resolution" passed in the 6th plenary session is an important Marxist document summing up the historical experience of our party. It is a guiding document in building a strong socialist modern nation. It is valuable material for vividly and concretely teaching Marxism-Leninism and Mao Zedong Thought. Its content is broad and profound, strong both in ideology and in theory. In simple and concise language, deep meaning is found in each chapter and each section. To make the broad masses correctly understand and deeply appreciate, it is not enough'just reading and explaining [the "Resolution."] One must be prepared to exert himself and work hard at propaganda. That is to say, only through proper explanation and counseling work, providing some historical knowledge for certain questions, supplementing with factual basis, making some theoretical interpretation and engaging in education in the face of ideological reality of the masses, can the broad masses be helped to imbibe the spirit of the "Resolution." Judging the propaganda work carried out in our province in the previous time, although the units which has engaged in propaganda already had preliminary result, there is still considerable distance from this requirement. Some questions raised by the masses in the learning were solved while some were not completely solved. In the meantime, some localities and units have not yet engaged in the task. The masses are still ignorant of the content and the spirit of the "Resolution." Therefore, party organizations at every level must further strengthen their leadership in this task, further propagating the "Resolution," uniting the thinking of people in the city and in the countryside to the basic conclusion of the "Resolution" so that with consciousness raised, unity strengthened and spirit galvanized, success will be scored in production and in various tasks.

What effect the propaganda of the "Resolution" will have depends on whether the guiding spirit of the Central Committee can reach the heart of the masses and solve the problems which the masses demand to be solved. Therefore, to succeed in the propaganda, it is necessary to connect with reality, especially the thought reality of the local people. The propaganda should also be made to the point, based on the "Resolution." In the process of propaganda, different requirements are made of different people. Communist party members should be required to learn a little in advance and a little better, so that they can assume active leadership among the masses. Different opinions on the "Resolution" can be gradually channeled during the discussion to arrive at a consistent understanding.

To succeed in propaganda, we must seriously train a team of propaganda workers. This time the scope and the volume of propaganda are large. Leading cadres, in addition to going to the grass roots in person, must organize a sizeable team of propaganda workers to assist party organizations to engage in propaganda and to answer questions. To organize a good team, first of all, they must select proper propaganda workers who must think correctly, study well, are capable of propaganda work and ready to take up responsibility to assume this task. Second, to do a good job in training, they must help propaganda workers to clearly explain the great significance of the "Resolution," to instill a sense of honor and responsibility and to let them grasp the spirit, the content and the key points of the "Resolution." It is also necessary to connect with one's own thought reality and to untie the knot in one's own mind in order to educate and convince the masses in the process of propaganda. The method of training depends on the locality and the time. It can be trained in one group or in smaller units. No matter what method is employed, the leaders concerned must make careful planning and rational arrangement as well as paying close attention to inspection and supervision.

To do a good job in propaganda, it is essential to connect it with the realities of production and work and to direct the enthusiasm of the broad masses to the goal of building a strong and modernized socialist country which enjoys a high-level democracy and a high-level civilization. To succeed in this point, at present, not only is it necessary to make rational arrangement of propaganda and study time so that production is not affected, but the content of propaganda must tally with realities so as to facilitate production and work. Propaganda and study time can be found an hour before or after work in factories. In rural areas, depending on the various responsibility systems, different methods can be devised. Localities where collective production is carried out at group level, group can serve as the unit for propaganda before or after work, in the field or at the workshop. Localities where collective production is carried out at household level or individual labor, propaganda can be based on one or several households where propaganda cadres may come during break or in the evening. Depending on local experiences, propaganda should be coupled with practical actions, that is to grasp economic construction and the construction of spiritual civilization. At the same time, party members should be mobilized to rectify party discipline. Without a continuously improving party discipline, the result of propaganda of the "Resolution" will be adversely affected.

At present, comprehensive propaganda work has just been launched; many problems still await to be solved. Party committees at every level must strengthen leadership, truly take propaganda and the study of the "Resolution" as the cardinal task for the second half of the year. Thus it is essential to pay attention to the experience gained from propaganda, especially the experience of unifying thinking on the "Resolution," the spirit of the Central Committee conference on ideological front and the working conference of provincial party committee will be materialized, listlessness of leadership will be overcome, party leadership in enterprises and ideological work will be strengthened, and continuous new success in the work of every front in the city and in the countryside will be ensured.

COURAGEOUS, ADEPT CRITICISM PROMOTED

Shenyang LIAONING RIBAO in Chinese 23 Sep 81 p 3

[Article by Xiao Dong [5135 2639]: "On the Courage and the Know-How of Criticism"]

[Text] In order to strengthen Party leadership on the ideological front, improve the phenomenon of laxness and weakness and overcome the tendency of bourgeois liberalization, conscientious and proper criticism and self-criticism must be carried out. What we mean by conscientious and proper criticism is integrating the courage and the know-how of criticism for the purpose of reaching desired results. In other words, we should criticize with righteous assurance the theories and works which violate the four basic principles, wage serious struggles against liberalizing tendencies which deviate from the socialist path and leadership of the Party. At the same time, we must learn to adopt the correct approaches to such criticism and struggle without ganging up on people or carrying out campaigns.

Perhaps some people would say that the existing problem lies in whether one dares to criticize and not whether one knows how to criticize properly. It is true that the problem of daring to criticize is still not resolved among some comrades: they may be blurry in their understanding, or emotionally unfit, or passively reconciled to historical lessons, or influenced by certain theories that sound right but are in fact wrong, so that they are unwilling to carry out criticism positively, nor do they dare to criticize with righteous assurance. It is beyond doubt that the ideological problems of these comrades need to be resolved, yet, at the same time, we should notice that problems of inappropriate criticism do exist. Inadequate rationalization, improper approaches and inaccurate suggestions have, to various extents, influenced the effect of criticism. We should not overlook the problem of improper criticism. Some comrades are using this as a pretext to reject criticism, and there are some who dare not criticize for fear of it, and there are a few with ulterior motives, seizing this weakness and spreading rumors, bringing tremendous harm to criticism. Not daring to criticize goes hand in glove with not knowing how to criticize properly. In resolving the former problem one must not overlook the latter.

From the standpoint of the overall situation, we are now better equipped than ever for appropriate criticism and self criticism. History has turned over a new leaf. We have summed up correctly the history in the past 32 years since the founding of our nation. We have cleared up the mistakes misled by "left" ideologies, and we will not dog the old steps and commit stupid acts which mix up friends and enemies, confuse right and wrong, deeds which pain our dear ones and please our enemies. We have already vowed that the "principle of the three nos" be practiced without engaging in political campaigns. All these have been proved in various implementations since the Third Plenary Session. In resolving the problem of ideological front, the Central has once more reaffirmed that there will be no cross fires and no political campaigns. In criticizing erroneous ideologies, we can completely adopt the correct attitude and measures. Starting from the original form of unity, through a series of criticisms and struggles, contradictions can then be resolved, and a new unity can be built on a new foundation; this is what we call seeking truth from facts, adopting correct measures and winning support through rationalization, carrying out refined measures of reasoning instead of high-handed arbitrary measures. We have already carried out this task and will continue doing it. As for improper measures which are already in existence and will exist in the future, we should not liken them to the "Mass Criticism and Repudiation" and "bludgeoning" of the past years. It is because the tense political atmosphere has already ended; strengthening of education can rectify in time those irrational and out-of-proportion criticisms. Any rejection of criticism on the grounds that the measures adopted are inappropriate is unjustifiable.

In carrying out criticism, good results will be reaped if the courage and the know-how of criticism are integrated.

BAODING PREFECTURE DEALS WITH CRITICISM CAMPAIGNS

Shijiazhuang HEBEI RIBAO in Chinese 3 Sep 81 p 1

[News Report by Zhang Huifeng [1728 1920 1496] and Xin Yanle [6580 1750 2867]: "The CCP Baoding Prefectural Committee and Standing Committee Study the "Resolutions" in Connection with the Actual Situation. Solve the Lingering Question of the ferreting-out [campaigns] and the One Criticism and Three Attacks As Soon As Possible"]

[Text] Following the 6th plenary session of the Party's 11th central committee, the Baoding prefectural committee and standing committee, in connection with the actual situation, seriously studied the "Resolution" and had special discussions on the ferreting-out [campaigns] and on the criticism and three attacks. They summed up experiences and lessons, clarified their understanding and decided quickly and resolutely to solve the lingering question of the ferreting out and the one criticism and three attacks.

Following the smashing of the "gang of four," Baoding prefecture carried out the struggle of ferreting out, and one criticism and three attacks. In recent years there has been much discussion among the cadres and the masses, and opinions differ. Just how should they view them? How are they to be evaluated? And what questions remain, and how can they be solved? After the 6th plenary session, through studying the "Resolution" and Comrade Hu Yaobang's speech delivered on July 1, the prefectural committee and the standing committee improved their understanding, distinguished right from wrong, so that their thinking was unified in the basic conclusions of the "Resolution." The resolution of the 6th plenary session pointed out that "a great achievement has been scored in exposing and criticing the evil deeds of the Jiang-Lin counterrevolutionary groups and investigating the system of counterrevolutionary cliques. The prefectural committee believed that during the internal turmoil of a decade which was aggravated by the destruction inflicted by the counterrevolutionary groups of Lin Biao and Jaing Qing, Baoding indeed suffered grave calamities. Exposing and criticizing the evil deeds of the "gang of four" and investigating their antirevolutionary system were imperative and great results were achieved. Through exposition, criticism and investigation, the political situation of the area became more stable and social order was enhanced; industrial and agricultural production and other tasks were recovering and developing. We must affirm that the broad masses of cadres and people showed great enthusiasm, acted positively, and contributed to this struggle. However, reviewing the practice of ferreting out, and one criticism and three attacks, we also discovered many problems, some of which are very serious. Generally speaking, the major problem was over-extension, to including in our investigations those who should not have been, and treating common factionalism as if it were the same as the scheme of the "gang of four" to usurp party leadership. In rural areas, widespread campaigns of one criticism and three attacks brought even more problems. Before the problems of some comrades were clarified, they were called names or criticized in the newspaper. Thus some comrades were discriminated against in political affairs and their organizations lost confidence in them. Not only those people suffered psychological damage and economic loss which dampened their enthusiasm, but also to a certain degree stability and solidarity were affected by the antagonistic feeling among the broad comrades.

Applying the basic conclusion of the "Resolution" to look at the situation in retrospect, pooling their thoughts and summing up the ferreting-out and one criticism and three attacks, the CCP Baoding prefectural committee found four major reasons for over-extension. First is the serious leftist trend in the guiding thought of the prefectural committee. Applying the great political revolutionary thought of "one class overthrows another" to direct the ferreting out and the one criticism and three attacks was at that time quite "leftist" with respect to the actual situation. The prefectural committee even criticized some counties as "rightist and engaged in one criticism and three attacks by raising the leftist slogan of "deeply undermine the social base of the 'gang of four;'" "fight the landlord," "fight Huang Shiren [7806 0012 0088]." Second, the line was unclear and even contradictory. People's internal contradictions were confused with the external contradiction between the enemies and ourselves. Problems which did not belong to the class struggle were treated as class struggle. In the investigation, an unclear concept of the gang system led to groups of the masses to be treated as gangs. In one criticism and three attacks which continued applying the leftist content and standard of "great criticism of capitalism," the right was criticized as the wrong and the right was fought as the wrong. Third, factionalism interferred. Due to the internal turmoil over a decade and the erroneous influence of former responsible cadres in the provincial committee who insisted on "drawing the line according to the person," and "invariable correctness" as the standard for carrying out investigation, one criticism and three attacks. As a result, what should have been investigated was not, and what should have been clarified was not, whereas certain cadres who had committed serious mistakes even got promoted. Fourth, wrong methods used in former political movements, especially those used in the Great Cultural Revolution, were perpetuated. Wrong charges were made, when the problem remained unclear. Segregated investigations under the name of group study, suspension and investigation, public demonstrations and criticism took place. Especially during one criticism and three attacks, there were even forced confessions and other illegal phenomena in some localities.

In order to solve these problems, the Baoding prefectural committee, after discussion, proclaimed the following regulations.

1. Committees under the direct jurisdiction of the prefectural committee and party committees at every level must use the guiding thought of the "Resolution" to sum up past lessons and experience in the investigation, one criticism and three attacks, resolutely seek truth from fact, insist on truth and correct mistakes.

2. Clearing the influence of the "leftist" thought must be continued and negative influences must be eliminated through hard work. Solving the lingering problems must be eliminated through hard work. Solving the lingering problems demands efficient, resolute, firm and clearcut actions. A renewed investigation must be made of the cases which have been decided upon. In the spirit of the "Resolution" and in due consideration of the highly fluid situation against the background of the Great Cultural Revolution, leniency should be accorded whenever possible. Cases requiring a definite settlement must be processed with great care. As long as one does not fall into the category of external contradictions, he should be helped to find a job. Careful rehabilitation is called for those people whose case has no definite conclusion. Materials concerning individuals used in the investigation should be returned to the individuals concerned. Materials emanating from organizations should be recorded and then destroyed; individuals concerned should be notified. What needs to be clarified should be clarified under proper circumstances. People placed in the wrong position should be reassigned. Implicated family members and relatives should be cleared of charges. A list should be made of those who received punishment in one criticism and three attacks; individual cases should be investigated and a speedy resolution made.

3. Leaders at every level should personally engage in various ideological work. They must be organized to study the "Resolution." By unifying their thinking, summing up their experience, eliminating barriers, and promoting mutual understanding, they will be united to go forward.

APPROPRIATE APPROACH TO CRITICISM STRESSED

Beijing WANBAO in Chinese 19 Sep 81 p 3

[Article in "Words of a Hundred SChools" section by Fei Yi [6316 6654]: "Face and Heart"]

[Text] People often use the phrase "heart of iron and rock" to describe how a person is unmoved by feelings. The characteristics of iron and rock are hard and cold. People with such a heart give others a stern outlook that inspires awe and deters intimacy.

There is another phrase, called "face of a Bodhisattva." Bodhisattva is of many kinds and forms: Tathagata, Avalakitesvara, arhat.... What we are speaking of here is Maitreya Buddha. In temples of olden times, the appearance of Maitreya Buddha used to be a style all its own: His face is round, his smile charming, his feet bare and his bead hatless; he reveals his chest and stomach, and he never sits erect in a cultivated manner. When people enter the gate of his temple and see him they feel his affable and accessible presence.

I remember that soon after I joined the revolution, when a leading comrade discussed how to launch criticism and self-criticism, he "reversed the ordinary suggestions" by proposing these two principles: one was "face of iron and rock" and the other was "heart of a Bodhisattva." Although this happened several decades ago, because the analogy is so vivid and the argument so succinct, I still retain a profound impression of them to this day.

The so-called "face of iron and rock" means: No matter how close a comrade may have been, once he made mistakes, whatever should be criticized should be criticized. Of course, "face of iron and rock" is an analogy; an analogy may not always be all that pertinent. The real meaning of "face of iron and rock" is that one does not practice favoritism, nor emphasize "the art of personal relationship"; it does not mean that when one criticizes others, one's face should become stiff and the color of iron (people can easily invoke the image of Bao Longtu in classic opera in this connection).

The so-called "heart of a Bodhisattva" means what we often say: "Criticize others for the sake of helping them," "proceed from a desire for unity." When we criticize a comrade, we definitely do not mean to cause his downfall, to make him stink, to "make it forever impossible for him to reform," or to "persecute" him to death, but to cure his illness and save him as a patient, help him correct his mistakes.

The foregoing is ordinarily a commonplace platitude; the reason why I still insist on repeating it here is because during the 10 years of internal turmoil the Lin Biao and Jiang Qing counterrevolutionary cliques had fairly thoroughly destroyed our party's fine tradition and work style, including criticism and self-criticism. In order to revive and give scope to such fine traditions, we must mention the old says again.

Most recently, the party Central Committee has time and again stressed the need for us to launch criticism and self-criticism. At present, there still exist in this regard some simplistic and crude tendencies, namely, there is still a question of the "heart of iron and rock" to some extent. But what needs to be further noted is another tendancy: "face of a Bodhisattva." Some comrades still believe in the "art of personal relationship," according to this they would murmur tirelessly behind your back but smile blandly to your face, and in this way bring an atmosphere of vulgarity into our political life. Some comrades, on the other hand, fail to express solemn criticism in the manner of seeking truth from facts in respect to erroneous words and deeds, or they simply refrain from carrying out any criticism or education; this has resulted in the fact that a considerable number of departments have become soft and feeble in their ideological leadership.

Let people with the "face of a Bodhisattva" change into a "face of iron and work"; let people with the "heart of iron and rock" change into a "face of a Bodhisattva." Correctly developing criticism and self-criticism will enable us to sweep away various political cobwebs, resist the encroachment of various microorganisms, and forever preserve our revolutionary youth.

COMMENTARY SETS GUIDELINES FOR GOOD MEETING STYLE

Beijing RENMIN RIBAO in Chinese 3 Oct 81 p 8

[Commentary by Chen Fen [7115 1164] and Pan Chuntao [3382 2504 3447]; "Holding a Meeting Means Holding a Meeting"]

[Text] According to press reports, Comrade Yuan Baohua [5913 1405 5478] suggested at the industrial and communications work forum recently convened by the State Council that "Holding a meeting means holding a meeting; we must concentrate our energy and go all out for it; all our activities must be encompassed in the central task of doing a good job in holding that meeting, and items unrelated to it should not be brought up." In accordance with this guiding idea, the forum did not organize any sightseeing trips this time; after it was started, no cultural and recreational activities were pursued; participants all greeted one another as comrades and refrained from arranging exclusive meals or special meals; when they went out on visiting engagements, they all rode in large sedans; the forum was not provided with those commodities in short supply, and even when delegates went to visit a factory, the three bags of finely wrapped export matches prepared by the factory for each delegate were also tactfully declined.

After reading such reportage, one senses something fresh and new and feels quite encouraged; for such a fine style of meeting, one can hardly help thumping the table and shouting "bravo!" Holding a meeting means holding a meeting; This is a question of style for such an operation. When holding a meeting, we must have a good meeting style, this has always been advocated by our party. For a long time, especially because of the interference and sabotage during the 10 years internal turmoil, there was indeed an unwholesome tendency showing up in our meeting style. For instance, some would hold a meeting in the daytime but in the evening would show two or three movies in a row "for reference" which were entirely unrelated to the business of the meeting. Some would arrange plenty of time for sightseeing trips to scenic spots and sites of ancient relics during the meeting period in the name of invigoration it, but in reality they would simply roam around mountains and wander about the sites. Some would resort to pomp and extravagance in living arrangements, eat and drink to their hearts' content. Some would sell the so-called commodities for "internal consumption" and "handling," included all imaginable varieties such as tea leaves, old wine, cigarettes, etc. Some would even rush out souvenirs, briefcases, teacups, pens, thermoses....

These arrangements were unrelated to the meeting, and the upshot was that these auxiliary activities turned out to be the central ones. The theme of the meeting dissipated and an otherwise good meeting was held in a loose and incoherent manner; it became perfunctory, and it reaped little results. At times some would doze off in the meeting hall, some would attempt to purchase commodities in short supply but in great demand, and some would even play cards, drink wine, and create disturbances.

When holding a meeting, we should balance work with relaxation; it is necessary to dine leisurely and enjoy cultural and artistic programs; nor is it entirely improper to arrange some appropriate visits and sightseeing trips nearby when conditions warrant doing so. But all this must not be excessive. As for things like eating and drinking to one's heart's content and purchasing commodities which are in short supply, these things should especially not be done. Holding a meeting is intended to solve practical problems; but such unwholesome practices during the meeting are incongruous with that goal. Such practices during the meeting hurt the party's work style in the first place, also impinge on people's resources, and produce no results; they are of no benefit either to the state or to the people. Therefore, the question of how to stop these deviations in meeting style is a question awaiting urgent solution.

Insofar as the leaders in charge of organizing a meeting are concerned, it is most important to foster a good meeting style and make sure that holding a meeting means simply holding a meeting. In convening a meeting, leaders all subjectively expect to hold one that is as good as possible and which will produce results; I don't think there is any likelihood of their not wishing to hold a good meeting. But why in some meetings has a lack of consistency between subjective will and objective results appeared? Apart from some peculiar reasons, a very important component in this is that some leading comrades still lack sufficient understanding of this question of devious style, and some even view the practice of letting the participants eat well, drink well, and have plenty of fun as an important purpose of the meeting. The end result is that when they pursue the good life excessively, they are embarassed by that life. If we arrange too many of those things which have little to do with the content of the meeting, they are bound to dilute the theme, or even cause the basic to turn into the peripheral.

Meeting style is a manifestation of the party's work style. If leading comrades at various levels can provide a good leadership, set up an example, and if everyone of us comes forward to pay attention to this question, to inherit and give scope to our party's good meeting style, our various meetings are bound to function better and achieve greater results.

SHANGHAI UNITS CONVENE POLITICAL WORK CONFERENCES

Shanghai JIEFANG RIBAO in Chinese 23 Sep 81 p 1

> Editor's note: The Chinese People's Liberation Army has always attached great importance to the ideological education of its cadres and fighting men. The armed forces are known as the revolutionary crucible. The report carried by this paper today on the study made by units 83302 and 83304 on how to strengthen basic political work attests to that fact. At the present time, the influence of capitalist ideology continues to exist in society. The ashes of individualism continue to encroach on our body politic. Party organizations of various levels must strengthen their work in the field of political ideology. The large numbers of cadres and the masses on every battlefront must follow the example of the comrades in the People's Liberation Army in directing their efforts toward the remoulding of the world outlook, in overcoming individualism and in revivifying the revolutionary spirit in order to ensure the completion of their productive mission for this year and the continuance of the victorious march toward the establishment of a material and spiritual civilization.

[Text] Units 83302 and 83304 of the Chinese People's Liberation Army in Shanghai recently held separate conferences to discuss and to exchange views on ideological work among their units and to study seriously the new situation and new problems which have emerged in connection with ideological work among the basic ranks of the army in this new era. It was agreed at the conferences that, in order to improve the disorganized and feeble work being done in the area of political ideology, it is imperative to deal a blow to individualism and to direct our efforts toward altering our world outlook.

At the discussion meeting convened by unit 83304, those attending the meeting, while taking note of certain outstanding achievements in ideological work among the basic levels, also analyzed the weaknesses which continued to exist. It was pointed out that individualism continued to plague a small number of cadres and fighting men, that certain cadres were overly concerned with their health problems, family difficulties, promotions, admission to a higher school, career advancement, work assignments, where they were being reassigned and their living conditions, and were incapable of distinguishing between the self and the public, their personal welfare and the welfare of the revolution and momentary benefits and long-term interests. Certain individuals were only interested in being given special treatment by their organizations and not in observing the rules of discipline. Certain political work cadres are remiss in correcting such aberrations and do not approach their work in a fearless and forthright manner.

At the conference for the exchange of views convened by unit 83302, the comrades of the 4th company of a certain regiment and the 85th artillery company of a certain regiment discussed the lessons they had learned from their experiences, both directly and indirectly. Originally an indifferent company, the comrades of the 4th company have, since the beginning of the year, helped their comrades and fighting men, through ideological rectification, to establish a Communist point of view of the world, to eradicate the ideological influence of individualism, to greatly strengthen their ideological underpinnings and to foster the noble spirit of service, of subjugating oneself in the interest of the public, and of exerting one's utmost efforts. This company has now emerged as one of the advanced units. On the other hand, the 85th artillery company, originally an advanced unit in 1980, has lagged behind in its accomplishments because certain comrades and fighting men had become self-satisifed with their work, lax in their ideological reform, preoccupied with their personal problems and unwilling to work regardless of difficulties.

At the conference for discussions and the exchange of views convened by the two units, it was agreed that a good way to suppress individualism and to hasten the alteration of the world outlook on the part of the cadres and fighting men was to make good use of criticism and self-criticism as a weapon. Some companies have taken steps to arrange for a review of the conduct of cadres at regular intervals. Other companies have voiced their strong support of the system of making progress reports at party branch general meetings and company affairs meetings. Some companies have taken the lead in encouraging the masses to make known their views to those in leadership positions. Other companies, by organizing meetings to discuss living conditions, company affairs and to engage in heart-to-heart talks, have succeeded in promoting among the comrades a positive attitude in engaging in ideological struggles. The two conferences expressed their approval of these activities. They exhorted the units to adopt various ways to restore and to give full play to the excellent tradition of criticism and self-criticism, to eliminate the ideological debris cluttering the minds of comrades and fighting men, to remove the ideological influence exerted by liberalism and individualism espoused by the capitalist class, and to hasten the alteration of their world outlook.

Facts indicate that opposition to individualism is a continuing mission and that, while removing the influence of undesirable thoughts, it is also necessary to organize the study of Marxism-Leninism and the thoughts of Mao Zedong. The 1st company of a certain regiment and the 8th company of a certain regiment, in tackling certain ideological problems existing in the minds of certain fighting men, have made arrangements for them to study anew such writings as Chairman Mao's "To Serve the People," "In Memory of Bethune," and "The Foolish Old Man Who Moved the Mountain" in order to inculcate in them the spirit of total dedication to the service of the people, the proper way of life for revolutionary fighting men, and the distinction between personal welfare and the welfare of the revolution. Those comrades who attended the conference convened by unit 83302 for the exchange of views on their experiences in political work have come to acquire from the lessons learned by the above-mentioned companies the understanding that Marxism-Leninism and the thoughts of Mao Zedong are basic to the cultivation of men and that they serve as mighty weapons for bringing about ideological reform. It is only by using the correct ideology in helping cadres and fighting men to free themselves from the confines of individualism that we can help them to dedicate themselves to the Communist ideology, to promote the Communist morality and style and finally to bring about a change in the world outlook.

CRITICISM, SELF-CRITICISM USED TO OVERCOME LAXNESS

Nanjing XINHUA RIBAO in Chinese 5 Sep 81 p 3

[Article by Shi Qinglang [4258 2532 2597]: "Take up the Weapon of Criticism, Change the State of Laxness: A New Mood Prevails in the Militia Artillery Company of the Jiangdu Water Conservation Project Administration Offices"]

[Text] The militia artillery company of the Jiangdu Water Conservation Project Administration Offices has consciously taken up the weapon of criticism and self-criticism to carry out criticism of harmful tendencies and thus transformed an attitude of laxness and carried out militia construction.

During the last few years militia construction in this artillery company has manifested a few new problems. There has been an increase of tendencies toward "concern over money," unrestrained laxness and disobedience towards leadership. These tendencies combined with a lack of consistent understanding among the cadres to produce a weakened militia organization and an inability to grasp militia work. In order to correct this situation the militia artillery company took up the weapon of criticism and self-criticism to struggle against these harmful tendencies and have the cadres lead the way in putting things to right. During the April anti-aircraft target practice a militiaman in the Third Squad refused to perform gunner duties and this affected the squad's training. The company cadre sought out the militiaman for a heart to heart talk and criticized his error of refusing to participate in work and thus influencing the training session. This militiaman then admitted his error, took the initiative in presenting the squad leader company cadre with written self-criticism and happily took up his gunner duties.

In conducting criticism and self-criticism this company pays attention to technique and methods in order to get people to act correctly and not heighten contradictions. "Xiao Teng," a militiaman in the Fourth Squad, often left without permission during anti-aircraft gunnery training. In criticising him for this behavior the company cadre always emphasized objective reasoning. The company cadre believes that the reason "Xiao Teng" was unwilling to admit his error was because of an irrational desire to save face. He therefore repeatedly sought him out for heart-to-heart talks and pointed out why such behavior was wrong and expressed the hope that he would correct his behavior by asking permission to attend to other duties and thus cultivate an attitude of self-discipline. He also sought out "Xiao Teng's" sentry post leader to help out with ideological work. Finally, they were gradually able to convince "Xiao Teng" to admit his errors and resolve to reform. By conducting criticism and self-criticism this militia artillery company effectively overcame a tendency toward laxness, satisfactorily completed all work responsibilities and raised their fighting strength. In target practice during the first half of the year they attained outstanding results. In August they were also designated by the Yangzhou Military Subdistrict as an advanced unit in the "Three Carrying Outs" in militia work.

ARTICLE DISCUSSES PARTY CENTRAL COMMITTEE CALL FOR MILITARY MODERNIZATION

Yinchuan NINGXIA RIBAO in Chinese 6 Aug 81, p33

[Article: "Respond to the Party Central Committee's Call, Step Up Modernization of the Units"]

[Text] As the "Resolution on Certain Questions in the History of Our Party since the Founding of the People's Republic of China" passed by the Sixth Plenary Session of the Communist Party of China pointed out, the People's Liberation Army must "make progress in improving its fighting strength and gradually build itself into a powerful, modernized force." These are the grand combat orders which the Party Central issued to the broad officers and men and on the glorious duties of the people's army in the new historical period.

Why should the army be modernized? The most basic point is to have a modernized military force equipped with the most recent weapons. This is an objective requirement made by the process of historical developments and also is an assurance of victory in any future wars of anti-aggression.

Marxism has always professed that weapons are the major factor in war. In history, the birth of any new type of weapon always results in major changes in the relative strength of the two opposing forces. Engels said, "The birth of weapons is the foundation of victory in a conflict." ("Makesi-Engesi Xuanji--Selected Works of Marx and Engels" Vol 3, p 206) Lenin also pointed out, "If a military force does not plan to have all of the weapons and fighting tactics and methods which the enemy has or might have, others well view this as stupid or even criminal behavior." ("Liening Xuanji--The Selected Works of Lenin," Vol 4, p 249) After Liberation the Party Central and Comrade Mao Zedong were extremely concerned about building modernization in the armed forces. As early as 1951 there was a call for the study of modern national defense to transform backward conditions in the army and build it into a superior, modernized revolutionary force. In 1953, Comrade Mao Zedong said that in order to prevent imperialist invasion our army, air force and navy must have completely mechanized armaments and equipment. This is unavoidably connected with complex, specialized technology. What we now need is a large number of people who are capable of grasping and utilizing modern science and technology. We must also make continual progress and improvements in our technological preparations. He repeatedly emphasized that we already were stronger than in the past and that we must be even stronger in the future. We not only must have more aircraft and cannon but also must have atomic and hydrogen bombs. In the world of today if we are not to be pushed around by others we must have these things. These important statements and directives by Comrade Mao Zedong have enriched the storehouse of Marxist military theory and are our compass in carrying out modern ization.

We are now carrying out socialist modernization in the midst of a chaotic international situation. The mad plans of the socialist imperialists in the Soviet Union to wrest hegemony over the entire world involves on the one hand the all-out development of conventional weapons and on the other hand the vigorous development of nuclear weapons. They use their superior armaments and equipment to first interfere with one nation and then to invade another area, bringing much unrest to the entire world. They are determined to subjugate us and are unhappy at our implementation of the four modernizations, seeking in all ways to obstruct and prevent them. With the support and connivance of the Soviet Union hegemonists, the Vietnam hegemonists also became blinded by lust for gain and at the same time that they made an armed invasion of Kampuchea they started up an anti-China campaign which resulted in bloody border incidents. People of Chinese heritage want us to increase our modernization, and friendly nations express the same wish. Our enemies are forcing us to modernize, so under conditions such as these how could we possibly proceed slowly in this matter?

In the world of today, to be backwards is to invite attack. Modern warfare is a comparison of manpower and economic strength as well as a comparison of modern military tactics and modern military theories. In future conflicts our enemies who employ modern armaments will find the tables turned on them. If we do not undertake to strengthen ourselves and attempt to catch up it is possible that in any future war of anti-aggression we will be placed in a passive position. Therefore, to a certain extent, whether or not to modernize the army has become a question which is related to the existence of the country and the people and the success or failure of socialist modernization.

Does our emphasis on modernization and on improved armaments and equipment mean that we are no longer revolutionary? Of course not. Our people's army is an army which is equipped with Marxism-Leninism, Mao Zedong Thought and which is qualitatively different from all bourgeois armies. It will not do to be equipped only with modern weapons and equipment and to have modern military science and technology. It also must have a high level of revolutionary ideals, a patriotic spirit and an unflinching death-defying revolutionary heroism. Fighting strength is demonstrated both on the material and spiritual levels. The two are complementary. To ignore armaments and engage in empty talk about the function of spirit is to engage in "mysticism" and idealism. To carry out modernization and ignore doing things in a revolutionary way departs from materialism. Only when modern weapons are held by revolutionary people can there be full and complete military strength. Everyone is now aware of the superior politics of our army, yet we must accept the fact that our armaments are less than superior. We must both improve our armaments and carry out modernization to the extent of national potential and must at all times be prepared to use our armaments to confront our enemies. This requires that we make progress in strenthening our ideological work, give vent to our army tradition of defeating forces having superior equipment and implanting the concept of invincibility. This is the basic stance and viewpoint of our military preparations to prevent invasion by major and minor hegemonists. The modernization of weapons is a process of continual development from small to large, few to many, and low level to high level. Modernization must therefore develop from the current foundation. Each and every cadre and soldier must unleash his knowledge, talents and intellect to think of ways, make plans and be creative to transform our current equipment and provide modernization with wings to fly. If we have the spirit of the old man who moved mountains, take a firm stance with our current equipment, make step by step changes and make innumerable changes and partial reforms we certainly will achieve a leap in our level of quality.

Military modernizations depends on the development of modernization throughout the whole country. Our national economy is now going through a stage of development which is beset with difficulties and fraught with dangers. Because of this, military modernization cannot be accomplished in one fell swoop. We must make a general, overall approach, make allowances for our national problems and correctly understand the relationship between national defense construction and economic construction. However, we cannot be impatient, castigate god or man or lose faith in ourselves. We can only be concerned with and supportive of socialist construction on the local level and make contributions toward transforming our backward national condition of being poor and blank. If national economic construction is properly carried out our military construction can then make relatively rapid developments. At the same time we also must continue to support the policy of working long and hard at military construction, make careful and detailed plans to give full vent to our current economic resources with the most possible efficiency and strive in all ways to save on and reduce military expenditures.

Implementing military modernization means that we must make even higher demands for scientific and technological skills of our officers. The modernization of weapons is the crystallization of modern science and technology and is impossible without a certain level of knowledge in science and technology. Therefore, before we have modern weapons to use we ought to value our time, grasp study, strive to acquire modern military technology and scientific knowledge. There is an old saying, "Repair the house before the rainy season, dig wells before you suffer from thirst." Units which sit and wait for the arrival of new weapons before starting to study their use will find themselves hopelessly behind. A look at the present level of science and culture among the units shows that there are many cadres and soldiers who have middle school and lower middle school educations. But because of the ten years of chaos the actual educational level of some is rather low and far from being adequate for the demands of modernized warfare. We must be aware of such conditions.

The way ahead is dangerous and we bear a heavy burden. The officers and men in our units have the resolve and the faith to follow the leadership of the Party Central Committee in reaching new levels in the construction tion of revolution and modernization and in making even greater contributions in protecting the socialist homeland.

NANJING UNIT STUDIES CRITICISM, SELF-CRITICISM ISSUE

Nanjing XINHUA RIBAO in Chinese 7 Sep 81, p 1

[Article by Jian Wei [1696 0251], Hong Shui [3163 3055] and Dong Geng [2639 5087]: "Firmly Grasp Party Principles to Overcome Vulgar "Relationships"; Secretaries of Party Organizations on All Levels Do Research on Taking the Lead in the Criticism and Self-Criticism Issue"]

[Text] "We must enthusiastically conduct criticism and self-criticism. Secretaries of party organizations must take the lead in overcoming the influence of vulgar 'relationships,' and uphold clear-cut party principles." This quote is found in a document from a recent conference convened by party organization secretaries on all levels in a Nanjing unit and is an important issue which they energetically studied and solved.

"What are the factors which now prevent us from grasping party principles and which make us fearful of criticism of self-criticism?" The secretaries participating in this study felt that one major reason was the interference of vulgar "relationships." Those comrades afflicted with this problem dare not criticize the upper levels. They are afraid of offending the leadership, afraid of "wearing small shoes," and agree to everything in order to curry favor. They dare not criticize the lower levels for fear of losing votes, fear of losing their "foundation in the masses," so they are accomodating and permissive. They are unwilling to criticize on their own level for fear of creating an unpleasant atmosphere and being unable to conduct their duties so there is a mutual disinclination to interfere. This great variety of "relationships" was like a corrosive which severely damaged party principles and prevented criticism and self-criticism. Accordingly, the secretaries took up the weapon of criticism and self-criticism to make a severe self-analysis and truthfully discover to what extent "relationships" were current in their own thinking. They believe that first of all the weapon of criticism was misused during the ten years of chaos so that some comrades now take criticism, which originally was an expression of true concern for comrades, as a weapon to direct against comrades with whom they cannot get along, so that any mention of criticism elicits feelings of fear. Therefore, the use of "relationships" in place of party principle has replaced the weapon of criticism. The second factor is the interference from selfish motivations. During the discussions some comrades said with a guilty conscience that in the past they had only considered individual gain or loss, did not concern themselves with party interests, feared "standing out" and vexing other people, and took the bureaucratic road that criticism was obstructive. Although they were aware that this was incorrect they adopted the position that the less said the better. In addition, because of a bad atmosphere in some units "uncontentious people" who could derive benefit from any situation always received preference while those comrades who were strong principled and dared engage in criticism suffered injustice and were made unwelcome. After this went on for quite some time many people became accustomed to this and even felt that "relationships" formed the correct basis for doing things. Not only did some people become accustomed to it they also began to use these standards to evaluate and employ the lower levels, which aided in the development of "relationships" within the party.

After defining the main issue and discovering related factors the comrades attending the study session repeatedly carried out discussions and arrived at four actions to overcome these vulgar "relationships" and take the lead in grasping party principles. One action was for secretaries on all levels of party organizations to constantly take the lead in carrying out criticism and self-criticism. The second action was to grasp criticism and self-criticism in the organizational life of the party. When carrying out criticism one should not fear "wearing small shoes," should not fear losing votes, and should fear offending people. Of course one must be concerned with methods and pay attention to results. When receiving criticism one should not haggle over the setting, the attitude or the method. The third action was to consciously accept mass observation and calmly listen to mass criticism. All party committees and party branches should restore the "suggestion boxes" and seek mass views on a regular basis. The fourth action was to firmly carry out the line of having both morals and talent, appointing people on their merits and being fair and above board in praising and blaming cadres. The ability to firmly grasp party principles and bravely carry out criticism and self-criticism should be made into a major criterion for evaluation of cadres.

YINCHUAN TIGHTENS PUBLIC SECURITY

Yinchuan NINGXIA RIBAO in Chinese 28 Jul 81 p 1

["Yinchuan Area's Broad Numbers of Militiamen Coordinate with the Public Security Organ to Maintain Social Order"]

[Text] The broad numbers of militiamen in the Yinchaun area are actively coordinating with the public security organs to maintain social order under the leadership of each level of the party organization to forcefully strike at the various criminal activities.

Coordinating with the public security organs to maintain social order is one of the three major duties of the militia. After the national working conference on public order in cities, the party committees of the localities of each level and the party organizations of the street units and enterprises all emphasized the organization of the militia to coordinate with the public security organs to maintain social order. The Food Grains Bureau of Yinchuan City was victimized by frequent pilferage several years ago. The party organ of the bureau summarized the lessons, organized militiamen to perform guard duty, and the situation visibly improved and this promoted production and work. A deputy secretary of the party committee of the housing construction company of the ward personally grasped the militia work, he coordinated with the public security organs to maintain social order and was awarded by the Public Security Department. The southern suburbs of Yinchuan City is a region where the city and the countryside are combined. The situation is more complicated. Since the beginning of this year, 34 neighboring units led by the public security organ organized the militiamen to participate in joint defense groups and insisted on night time patrols, this has served actively in making the social order in this area better.

The broad number of militiamen in the Yinchuan area acted strictly according to legal procedures in coordinating with the public security organs to maintain social order. The party organizations and the cadres of people's armed forces of the units that organized the militiamen to participate in the maintenance of social order also strengthened patrolling and disciplinary education of militiamen on duty and strengthened the legal and disciplinary concepts of militiamen.

GUANGDONG TAKES MEASURES AGAINST DRUGS, PROSTITUTION

Guangzhou NANFANG RIBAO in Chinese 18 Aug 81 pp 1-2

["Standing Committee of the Provincial People's Congress Approves the Regulations Established by the People's Government to Prohibit the Sale and the Use of Narcotics and Outlawing Prostitution"]

[Text] The Standing Committee of the Guangdong Provincial People's Congress passed a resolution on August 7, approving the "temporary regulation prohibiting the sale and use of narcotics" and "the temporary regulation outlawing prostitution" of the Guangdong Provincial People's Government. The two "regulations" were promulgated today by the Provincial People's Government (For the full text of the regulations, see page 2). The full text of the resolution is as follows:

Resolution by the Standing Committee of the Guangdong Provincial People's Congress Approving the "Temporary Regulation Prohibiting the Sale and Use of Narcotics" and "Temporary Regulation Outlawing Prostitution"
(Passed on August 7, 1981)

Be it resolved by the 11th meeting of the Standing Committee of the Fifth People's Representatives Congress of the Province of Guangdong that the "Temporary Regulation Concerning the Prohibition of the Sale and Use of Narcotics" and the "Temporary Regulation Concerning the Outlawing of Prostitution" of the People's Government of Guangdong Province are approved and are to be promulgated by the Provincial People's Government.

Temporary Regulation Concerning the Prohibition of the Sale and Use of Narcotics of the Guangdong Provincial People's Government

Article 1. To maintain social order, protect the people's physical health, the sale and use of narcotics must be firmly prohibited. This regulation has been specifically written according to related regulations of the "Criminal Code of the People's Republic of China," "Notice by the State Council Concerning the Strict Prohibition of Opium Narcotics," the "Statutes for Punishment, Public Security and Control in the People's Republic of China" combined with the actual situation in our province.

Article 2. Persons manufacturing, selling, transporting opium, heroin, morphin or other narcotics shall be punished according to stipulation in related articles of the "Criminal Code of the People's Republic of China," leading elements of narcotics sales organizations shall be more severely punished.

Article 3. Persons illegally purchasing or stowing small amounts of narcotics shall be subjected to administrative detention and shall be subjected to a fine of 100 yuan to 3,000 yuan and the narcotics shall be confiscated. Where the offence is serious, such persons shall be sent to perform labor and to be educated and may also be fined.

Article 4. Persons using narcotics shall be subjected to administrative detention and may also be fined 100 yuan to 1,000 yuan and the narcotics and the paraphernalia for taking of narcotics shall be confiscated. Persons who continue against warning or who induce or order other persons to use narcotics shall be sent to perform labor and to be educated and may also be subjected to fine.

Article 5. Persons who inform, expose, help arrest elements who violate the law by selling and using narcotics illegally shall be commended and awarded.

Article 6. Persons subjected to administrative detention and fined shall be handled according to procedures stipulated in the "Statutes for Punishment, Public Security, Control in the People's Republic of China" to be adjudicated by the public security organs above the county. Persons sent to perform labor and to be educated shall be handled according to the "Supplementary Regulations Concerning Labor and Education Issued by the State Council." Where criminal responsibility is to be pursued, the matter shall be handled according to procedures stipulated in the "Criminal Litigation Law of the People's Republic of China."

Article 7. This regulation shall be promulgated on August 18, 1981.

Temporary Regulation Outlawing Prostitution of the Guangdong Provincial People's Government

Article 1. To maintain social order, good social morality and practice, it is necessary to outlaw activities of prostitution. This regulation is specifically written according to related regulations stipulated in the "Criminal Code of the People's Republic of China" and the "Statutes for Punishment, Public Security and Control in the People's Republic of China" combined with the actual situation in our province.

Article 2. Persons forcing and ordering women to engage in prostitution, or persons luring or allowing and keeping women for engaging in prostitution for profit shall be punished by regulations stipulated in related articles of the "Criminal Code of the People's Republic of China."

Article 3. Persons found to solicit the service of prostitutes shall be subjected to administrative detention and may be fined 100 to 3,000 yuan, reprimanded, and the units where they reside or their relatives shall be notified to claim them, and they shall be educated. Serious offenders shall be sent to perform labor and educated and may also be fined.

Persons found to solicit the service of prostitutes and found to be infected by syphilis and such malicious infectious diseases shall be severely punished.

Article 4. Women engaging in activities of prostitution shall be subjected to administrative detention, reprimanded, their relatives or the units where they reside shall be notified to claim them for strict discipline. Those who continue against many warnings shall be sent to perform labor and to be educated. Those who have already reformed shall not be discriminated against.

Article 5. Persons informing and exposing activities of soliciting the service of prostitutes and prostitution should be commended and awarded.

Persons obstructing public security and judiciary personnel investigating and arresting activities of soliciting the services of prostitutes and prostitution, or persons harboring elements who violate the law and commit the crime of soliciting the service of prostitutes and prostitution shall be subjected to criticism and education or shall be given warning. Serious offenders shall be subjected to administrative detention or be sent to perform labor and to be educated and a fine of 50 yuan to 300 yuan may be imposed.

Article 6. Persons subjected to administrative detention and fined shall be handled according to the procedures stipulated in the "Statutes for Punishment, Public Security and Control in the People's Republic of China" to be adjudicated by the public security organs above the county. Persons subjected to labor and education shall be handled according to "Supplementary Regulations Concerning Labor and Education Issued by the State Council." Where criminal responsibility are to be pursued, the matter shall be handled according to procedures stipulated in the "Criminal Litigation Law of the People's Republic of China."

Article 7. This regulation shall be promulgated on August 18, 1981.

FORUM ON HOW TO MAINTAIN SECURITY ALONG RAILWAY TRACKS

Beijing GUANGMING RIBAO in Chinese 10 Jul 81 p 3

["Ministry of Public Security and Ministry of Railways Hold Joint Discussion Meeting, They Decide to Take Firm Measures to Reorganize Public Order and Security on the Railways, Strike at Criminal Elements Who Seriously Damage Public Order on Railways"]

[Text] The Ministry of Public Security and the Ministry of Railways held a joint discussion meeting during the last ten days of July to discuss the problem of public order on the railroads. It was decided to take firm measures to reorganize public order and security on the railroads to strike at criminal elements who seriously damage public order on railways.

Vice Premiers of the State Council Wan Li and Yang Jingren attended the discussion meeting. Wan Li pointed out in his talk that, at present, public order and security on the railways are very poor, and they cannot adapt to the demands of political and economic trends and economic readjustment of the present time. Cadres of each level of leadership, primarily the leading cadres of the ministry and the province must heighten their understanding of this problem, unify ideology, and take decisive measures to solve the problem of security on the railways well.

The discussion meeting suggested that the party committee and the government of each province, city, autonomous region grasp the reorganization of railroad security and public order at the present time as an important task, implement unified leadership, unified planning, and comprehensive crime solving. The current criminals who seriously damage public security on the railroads must be decisively attacked to expose the "lurking tigers" that are hidden inside the railroad establishment and along the railroad lines and that steal specifically from the railroad, and robbery and hoodlum gangs.

Participating in the discussion meeting were the public security departments of the ten provinces and autonomous regions of Guangdong, Hunan, Hubei, Henan, Shaanxi, Gansu, Nei Monggol, Sichuan, Guizhou, Heilongjiang, the ten railroad bureaus of Guangzhou, Wuhan, Zhengzhou, Xian, Lanzhou, Huhehot, Qiqi, Harbin, Beijing and Chengdu, and responsible cadres of the four railroad branch bureaus of Changsha, Hengyang, Huaihua, and Guiyang.

BRIEFS

MINORITY LANGUAGE LITERARY JOURNALS--Beijing, 20 Oct (XINHUA)--Three literary journals in minority languages are coming out in the Xinjiang Uygur autonomous region and Yunnan Province. The first issue of "Xinjiang Kirgiz literature" carries 60 works in the Kirgiz language. It was produced in Urumqi, capital of the region, in September. The 100,000 people of Kirgiz nationality live in the Xinjiang Pamirs, at the foot of Tianshan Mountains and in the Ili River Valley. The famous Kirgiz EPIC portraying their national hero "Manass," consisting of peoms, lyrics, legends, songs and provergs, is considered one of China's literary treasures. In the Dehong autonomous prefecture inhabited by people of Dai and Jingpo nationalities in Yunnan Province, two literary quarterlies, "yonghan" meaning the "golden peacock" in Dai and "wenbang" meaning the "crystallization of culture" in Jingpo, started publication this month. [OW201225 Beijing XINHUA in English 0711 GMT 20 Oct 81]

BOOK ON PRC HISTORY--Beijing, 9 Oct (XINHUA)--Part one of the "History of the Republic of China" was recently published by the Zhonghua Book Company to commemorate the 70th anniversary of the 1911 revolution. The history covers the period from 1894, when the Xing Zhong Hui (Society for the Revival of China) was founded, up to the proclamation of the provisional government in Nanjing in 1912 with Dr Sun Yat-sen as provisional president. The history pays tribute to the revolutionary leaders Sun Yat-sen and Huang Xing and many others for their sacrifices and contributions to the success of the 1911 revolution that overthrew the Qing dynasty (1644-1911) monarchy. The "History of the Republic of China" is being compiled by the Institute of Modern Chinese History of the Chinese Academy of Social Sciences. It will have three parts in twelve volumes. [Text] [OW151111 Beijing XINHUA in English 0132 GMT 9 Oct 81]

MINORITY NATIONALITY ART SYMPOSIUM--Beijing, 12 Oct (XINHUA)--China has trained 15,000 artists of minority nationalities, 43 percent of whom have had formal training in art at institutes of higher learning. This was disclosed at a national symposium on minority nationality art education now in session in Beijing. Art institutes have been set up in five autonomous regions and provinces populated largely by minority nationalities. In recent years, film studios were set up in Xinjiang, inner Mongolia and Guangxi, all regions with large minority nationality populations. The Beijing film academy has trained people of the Uygur, Kazakh, Mongolian, Miao, Tibetan, Korean, Hui, Bai, Manchu and Sibo nationalities. The current national symposium, running from 7 to 14 October, is attended by officials of provincial or municipal bureaus and art institutes. HONG KONG JOURNALIST URGES PEACEFUL REUNIFICATION OF CHINA

Beijing RENMIN RIBAO in Chinese 8 Oct 81 p 4

[Article by staff reporters Zhou Yizhi [0719 3015 0037] and Liang Ping [2733 1627]: "The Motherland's Mainland and Taiwan Can Both Be and Not Be Linked Together"]

[Text] We had gone to see Fei Yimin, director of the Hong Kong newspaper TA KUNG PAO, to ask him to discuss his ideas on the peaceful unification of the motherland. Mr Fei is a 74-year-old veteran journalist and political activist. He said that the 9-point plan put forward by [NPC Standing] Committee Chairman Ye [Jianying] for the peaceful reunification of the motherland not only concerns the fundamental interests of the state but also touches upon the personal advantages and disadvantages of every person on Taiwan. Therefore, he said, I think that: After the motherland is peacefully reunited, the mainland and Taiwan "will both be and not be linked together," which can bring very many advantages. This is an important question worth studying.

Mr Fei said that there are many aspects to "both being and not being linked together." For example, Taiwan has only 360,000 square kilometers of land and is short of fuel resources, but the mainland is 9.6 million square kilometers in size, a big country abounding in natural wealth, and it can supply Taiwan with the petroleum, coal, foodgrain, and resources it requires, thereby benefiting Taiwan's economic development and also changing the situation of its dependence on foreign countries. Conversely, China's construction of the four modernizations requires many talented specialists and Taiwan over the years has trained many specialists. Owing to the fact that the space is too small, many people are "heroes with no scope to exercise their abilities," to the extent that some Ph.D's have been forced to go abroad and open up restaurants, which is a great pity. If these intellectuals could go to the mainland and take part in the construction of the four modernizations, they would have ample scope for their abilities. At the same time, Taiwan has many manufactured goods that can be sent to the mainland to satisfy the urgent requirements of the markets there and also can be exchanged for large amounts of goods and materials, thereby further developing Taiwan's economy. Wouldn't this be advantageous for the entire Chinese nation?

With regard to welcoming the return of talented persons from the Taiwan side, Fei Yimin put forward another tentative idea. He said that Chairman Ye has welcomed the Taiwan side's participation in the central government structure, offering its ideas and discussing together with us what was right for the country. The Kuomintang has many senior statesmen, and we welcome their advice and ideas about the building up of the country and also welcome the contribution of their strength to their ancestral home provinces, municipalities, and prefectures, together with the local people building up their native home towns. I believe that the central government would make the proper arrangements so that their position and treatment would not be changed, and would guarantee their freedom to come and go, and it would also be possible for them to go abroad or to Hong Kong or Macao. At the same time, the two sides could exchange experience in academic learning, culture, and construction. For example, Taiwan's export goods processing zones were set up comparatively early and the mainland's special economic zones were set up somewhat late comparatively. The mainland can ask Taiwan's economic specialists to come over and pass on their experience, and Taiwan's industrialists and businessmen can also invest in the mainland's special economic zones. An experiment can be carried out, and what is good retained and what is not feasible taken back. In brief, it will be good for you, good for me, and good for everybody, and what is good will become first-quality--this is my hope.

Recently Mr Fei, because he holds the post of chairman of the preparatory committee for the commemoration by all walks of life in Hong Kong and Macao of the 70th anniversary of the 1911 Revolution, once again carefully pored over Sun Yat-sen's "Plan for Industry and Commerce." He said that over the past 30 years, with regard to economic construction, although the mainland had taken a roundabout course, the actual economic achievements of new China have already far surpassed Sun Yat-sen's "Plan for Industry and Commerce." In some respects, e.g., in science, the achievements we have made--the successful exploding of a hydrogen bomb, the putting up of artificial earth satellites, etc--are things Mr Sun never thought of in his day. But we still must remember Mr Sun's dying words: "The revolution has not yet succeeded, and the comrades must still make great efforts." An urgent task now faces us, viz, to realize Mr Sun Yat-sen's ideal of a "world of universal brotherhood."

Mr Fei Yimin said that the significance of China's peaceful unification would not be confined inside the country but would have a major effect on the world. A united, strong, and prosperous China of 1 billion people, which would never seek hegemony and which would firmly oppose any aggressive power, would be an important force for safeguarding world peace.

Finally, he changed the subject to that of China's traditional ethic of "reciprocity." Of one peruses China's history, one finds some tales of "burying the hatchet" and "enemies becoming friends." Why can't the modern Chinese people, for the interests of the state and nation and for world peace, learn from the magnanimity of the ancients and thus benefit future generations?

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

USSR APOLOGIZES FOR INTRUSION INTO SWEDISH WATERS

OW011849 Beijing XINHUA in English 1836 GMT 81 [as printed]

[Text] Stockholm, 31 Oct (XINHUA)--The Soviet Union expressed regrets to Sweden Friday because of the intrusion of a Soviet submarine into Swedish territorial waters near a Swedish naval base, Foreign Minister Rold Ullsten said today.

In an interview with the American ABC News program "Nightline," the Swedish foreign minister said it was "rather unique in the history of Russian diplomacy." The incident was remarkable, he noted, because "in this case we have proof of it."

"However, Ullsten said the apology was "not enough." "We have to complete the interrogation to find out what has happened and at least to find out what kind of explanation they will give us," Ullsten said, "and then we have to decide what should be done next."

"There is no opportunity for me to speculate about using violence," he said. "But it is our intention to demonstrate that this is not tolerable to the Swedish Government."

Ullsten said Sweden wants a satisfactory solution to the incident.

Soviet ambassador to Sweden Mikhail Yakovlev met Swedish assistant foreign minister (Leif Leifland) Friday and expressed "regrets for the submarine incident," Western news reports have stated.

Since the grounding of the submarine, Sweden has strengthened its defense near the Karlskrona Naval Base. The Swedish navy positioned 12 Swedish ships, including a frigate and torpedo boats, in the restricted area to keep surveillance of the stranded submarine.

HAIG SPEAKS ON POLAND, U.S.-SOVIET DIALOGUE

OW301208 Beijing XINHUA in English 1200 GMT 30 Oct 81

[Text] Washington, 29 Oct (XINHUA)—The United States and its Western partners have been very expressive "about the unacceptability of direct or indirect Soviet interventionism" in Poland. "It has been our position and remains our position," Secretary of State Alexander Haig said here today.

"This is an issue which must be decided by the Polish people and Polish authorities," he said, adding that the United States is watching the situation in Poland "very, very carefully."

Haig was addressing a national foreign policy conference of editors and broadcasters at the State Department.

On East-West relations Haig described his meetings in September with Soviet Foreign Minister Andrey Gromyko as "frank, far-reaching, substantively complete and devoid of polemic and diatribe," "if the dialogue continues with the same level of give and take," he said, "I think we have some hope for progress in setting aside the vexing differences that have characterized the American-Soviet relationship in recent years."

U.S. SPOKESMAN CITED ON USSR MISSILES

OW291616 Beijing XINHUA in English 1559 GMT 29 Oct 81

[Text] Beijing, 29 Oct (XINHUA)--The Soviet SS-20 missiles deployed against West European targets should be "dismantled and destroyed" for their mere withdrawal would not significantly decrease the threat they pose to the West, said U.S. State Department spokesman Dean Fischer Tuesday, according to reports from Washington.

Fischer's comments came in response to a West German press interview with the Romanian President Nicolae Ceausescu. The Romanian leader called for "decisive actions" to stop the nuclear arms race and the danger it poses for Europe. He told the FRANKFURTER RUNDSCHAU that "This applies just as much to stopping the stationing of rockets produced by the United States as to withdrawing the Soviet rockets."

Fischer noted that "Romania has traditionally called for arms reductions in Europe, so we welcome his apparent acknowledgement of the grave threat posed to Europe by Soviet missiles, a threat which the December 1979 NATO decision on theater nuclear force modernization and arms control addresses."

"I would also point out that given the mobility and the long range of Soviet missile systems such as the multiple warhead SS-20, the mere withdrawal of these systems from Europe will not significantly decrease the threat that they pose to the West," he said.

Asked if he meant the SS-20's should be destroyed, Fischer responded: "They ought to be removed and dismantled or destroyed."

But he emphasized that he was "not suggesting that this was to be a policy position of the United States at the start of the theater nuclear force negotiations" with the Soviet Union in Geneva on November 30.

He said, however, that the dismantling and destruction of the Soviet SS-20 missiles coupled with the non-development of planned new Pershing II and ground-launched cruise missiles in the NATO TNF modernization program amounted to the so-called "zero option."

"This is fully consistent with our objective of seeking equal and verifiable limitations at the lowest possible level," he said.

Under the 1979 decision, NATO is scheduled to begin deploying in late 1983 a total of 108 U.S. Pershing II missiles and 464 ground-launched cruise missiles in West Germany, Britain, Italy, Belgium and the Netherlands in direct response to the Soviet deployment of at least 250 SS-20's targeted at Western Europe.

SAUDI MINISTER HAILS SENATE VOTE ON AWACS

OW300736 Beijing XINHUA in English 0720 GMT 30 Oct 81

[Text] Kuwait, 29 Oct (XINHUA)--Saudi Defence Minister Prince Sultan Ibn 'Abd al-Aziz Thursday paid warm tribute to the U.S. Senate approval to sell AWACS planes to Riyadh and said it would boost the kingdom's defence capacity, according to Radio Riyadh monitored here.

Prince Sultan said in a statement that the 8.5-billion-dollar arms deal is "a victory for Saudi Arabia's policy of wisdom and moderation as well as a victory for the American national interest."

He said the U.S. Senate approval shows "the independence of U.S. political decisions against strong pressure that tried to put the foreign policy of the United States at the service of expansionist aims of a foreign state."

Saudi Arabia will continue to buy sophisticated weapons from Europe or the United States, he said. "We will never use these weapons for aggression. We will use them only when we are invaded or when we have to defend our Islamic and Arab rights."

Prince Sultan said Saudi Arabia's Middle East peace plan "provides the international community with a historical opportunity to advance the peace process and end the 30-year-long misery in the region."

Meanwhile, the Saudi paper AL-JAZIRAH said in today's editorial that the U.S. Senate action is a "turning point" in the U.S. relations with Saudi Arabia, the Arabs and Israel. "It is not only a great political victory for the Saudi Government but also a victory for the Arab people," it added.

Another Saudi paper AL-NADWA said that the AWACS sale is part of the process of rebalancing the strategic military balance between the Arabs and Israel.

MIXED REACTION IN MIDEAST TO U.S. AWACS SALE

OW300250 Beijing XINHUA in English 0228 GMT 30 Oct 81

[Text] Damascus, 29 Oct (XINHUA)--Saudi Arabia today hailed the U.S. Senate's approval of the sale of AWAC planes to Riyadh as a victory for both the Kingdom and the U.S. President. It is a clear defeat for Israel and world Zionism, a broadcast of the Saudi Radio monitored here said.

The U.S. Senate's vote shows that the United States has begun to realise its "international responsibilities in a way completely free of influence of the Zionist lobby," the Saudi Radio added.

But the U.S. AWACS sale caused angry reactions from the Israeli Government, according to Israeli Radio monitored here. Israeli Prime Minister Begin today expressed regret over the U.S. decision, saying after a special cabinet meeting that Israel now faces a new and serious danger so that it will do its best to cope with "the new danger."

A Cairo report quoted Egyptian Foreign Minister Kamal Hasan 'Ali as saying today that the U.S. Senate's approval would boost the prospects of the Middle East peace effort. He saw in the sale a turning point in the relations between the U.S. and the Arab states.

In Damascus, official Syrian newspapers made no mention of the U.S. Senate's decision to sell AWACS to Saudi Arabia, but continued to attack Washington's Middle East policy.

U.S., UK AFFIRM COMMITMENT TO NUCLEAR DEPLOYMENT

OW281700 Beijing XINHUA in English 1535 GMT 28 Oct 81

[Text] Beijing, 28 Oct (XINHUA)--The United States and Britain, despite anti-nuclear demonstrations in Western Europe last weekend, have reaffirmed commitment to NATO plans for deployment of modern nuclear weapons in that continent to cope with the Soviet nuclear threat, according to foreign news agency reports.

Talking to a group of European and American investors at the White House Monday, U.S. Vice President George Bush said the danger to peace is the Soviet buildup, not U.S. nuclear weapons in Europe.

Referring to last weekend's anti-nuclear protests in London, Rome, Paris and Brussels, Bush said, "I don't question the idealism of the people who have been protesting the deployment of medium-range nuclear missiles in Western Europe, but I do question their sense of perspectives."

He contended that the anti-nuclear movement in Europe does not represent the majority view.

He affirmed that the administration of President Reagan remains committed to NATO plans for deployment of 572 Pershing II and cruise missiles in Europe.

However, he said that the Reagan administration also intends "to work for a meaningful, verifiable reduction of nuclear forces throughout the world."

White House deputy press secretary Larry Speakes in a prepared statement disclosed that President Reagan discussed the weekend anti-nuclear demonstrations in Europe with his top advisers Monday and said "We will continue to work closely with our allies to deter potential Soviet aggression and believe strongly that is the best way to assure the peace."

Meanwhile, British Foreign Secretary Lord Carrington Tuesday also defended NATO's 1979 plan to deploy new medium-range nuclear missiles in Europe and criticized the proposals in the West for a unilateral disarmament.

Western Europe would be subject to political blackmail and a military attack from Moscow if NATO didn't meet Soviet military power, Carrington noted in an address to Luxembourg's Winston Churchill Foundation.

He said the Soviet Union's deployment to date of 250 triple-warheaded SS-20 missiles that can strike anywhere in Europe requires NATO to respond with deployment of 572 cruise and Pershing II missiles starting in 1983.

Referring to the recent anti-nuclear protests, Carrington said, "The many honest people in Europe who oppose nuclear weapons, and those in my country who advocate unilateral disarmament, are mistaken because of one fundamental fact--what they are suggesting would make war more likely." The mere fear of war would not be enough to prevent it, he added.

On a nuclear-free zone from Portugal to Poland, he said, this is "unfortunately a delusion" because "the Soviet Union has far stronger conventional forces, their use would more readily be contemplated if there were no nuclear deterrent." Moreover, he added, Soviet nuclear weapons can reach Western Europe from beyond Poland, indeed from beyond the Urals.

OPEC ACHIEVES UNIFICATION OF OIL PRICES

OW300356 Beijing XINHUA in English 0242 GMT 30 Oct 81

[Text] Geneva, 28 Oct (XINHUA)--The oil ministers of the 13 OPEC member countries agreed here today on the unification of their oil prices by setting the official price of the marker crude (Arabian light crude oil) at 34 U.S. dollars per barrel.

An official press communique of the OPEC, read out by the Indonesian Minister of Mines and Energy Subroto, the current president of the organization at a press conference held at the end of the one-day extraordinary ministerial conference, says that the OPEC's 34 dollars official price will come into effect not later than November 1, 1981 and will remain until the end of 1982. "The conference has also agreed to a set of value differentials for the pricing of all other OPEC crudes in accordance with their respective qualities and geographical locations," the communique notes.

It stresses that the decision taken by the OPEC "will have an evident positive effect over the economy of the world through an organization of the oil market which, in turn, will contribute also to the consolidation of OPEC as the main hydrocarbon supplier to the international market."

According to the agreement, Saudi Arabia, the biggest oil exporter in the world, will raise its oil price from the present 32 dollars per barrel to 34, while the rest of the OPEC members will decrease their prices by one to three dollars respectively. Libya and Algeria will be allowed to set their oil prices at 38 dollars a barrel, four dollars higher than OPEC's official price as the differentials for their high-quality light oil, while Nigeria, another high-quality oil producer, will have its differentials of three dollars higher than the official price to set its price at 37 dollars. [as received] Some OPEC countries, which produce heavy oil, will be permitted to set their prices at one or two dollars lower than the official price. The Kuwaiti oil minister told a press conference tonight that his country will set its oil price at 33 dollars.

The achievement of the unification of oil price by OPEC will possibly put an end to the confusion at the world oil market which has lasted for more than one year. This confusion was partly due to the oil glut at the world market and partly due to the OPEC countries' differences in pricing policies. The contradictions between the "moderates" and the "hard-liners" became obvious when Saudi Arabia produced more than 10 million barrels a day to generate the oil glut at the world market and sold its oil at the lowest price of 32 dollars, and the three North-African producers set their oil prices above 40 dollars, the highest among the OPEC members. Today's agreement shows the unity among the OPEC countries since they, the "moderates" and "hard-liners" in particular, all made compromises in order to achieve a consensus on the price unification. The stabilization of oil market will be beneficial to both oil-producing and oil-consuming countries.

PZPR RESHUFFLES POLITBURO, SECRETARIAT

OW291042 Beijing XINHUA in English 0722 GMT 29 Oct 81

[Text] Warsaw, 28 Oct (XINHUA)—The Polish United Workers' Party Central Committee held its fifth plenum today with a minor reshuffle of the Politburo and the secretariat, according to reports received here.

General Wojciech Jaruzelski, who replaced Stanislaw Kania as the party's first secretary at the fourth plenum ten days ago, delivered a speech to the Central Committee.

He denounced the one-hour nationwide strike organized by Solidarity, which ended just two hours before the opening of the party plenum.

He said that the strike had backfired on its Solidarity Trade Union organizers by exposing their destructive designs.

He said, "I think that this strike, no matter how many people took part in it and no matter how voluntary it was, served for millions of Poles as a warning, an emergency signal."

Jaruzelski noted, "In the name of the highest God, in the name of saving the nation, the party calls on Solidarity to adopt a constructive approach to discontinue strikes and give up unending negation."

He said, "The enemies of socialism are showing their hand completely."

"All dangers are accumulating," he said. "The collapsing economy, disruption of the functioning of the socialist state and anti-Soviet provocations constitute a great threat. The people's power cannot tolerate this."

At the same time, he stressed "the necessity of cooperation between all patriotic forces that recognize the reality of socialism."

During the plenum, alternate Politburo member Wlodzimierz Mokrzyszczak and Professor Marian Orzechowski of Wroclaw University were elected to the Central Committee secretariat, bringing the number of secretaries to nine.

The plenum also elected army chief of general staff Florian Siwicki an alternate member of the Politburo.

Stefan Olszowski, Politburo member, said that the Politburo had discussed the question of Jaruzelski's multiple officeholding and had decided that in the current political and economic situation it was desirable for Gen. Jaruzelski to maintain his posts (as party secretary, prime minister and defence minister).

On behalf of the Politburo and the secretariat of the party Central Committee, Olszowski assured Jaruzelski of their greatest help under all circumstances.

REPORT ON POLAND'S SOLIDARITY STRIKES

OW281750 Beijing XINHUA in English 1551 GMT 28 Oct 81

[Text] Beijing, 28 Oct (XINHUA)--Poland's Independent Solidarity Union staged its second nationwide strike for one hour at noon today in defiance of government warnings and appeals to call off the stoppage, according to reports received here.

The first took place on March 27 in protest against reported manhandling of some unionists in the town of Bydoszcz.

Workers walked off their jobs today wearing red and white armbands and hoisted Polish flags and banners over the factories and some other buildings. But the essential services such as hospitals, power stations, schools and food industries were exempted.

The United Workers' Party newspaper, TRYBUNA LUDU, splashed a headline saying, "Let Us Spare Our Motherland From Strikes. They Do Not Reflect the Interests of the Worker."

Today's strike was called to protest against the increasing shortage of food and to press the government to accept solidarity's demand for a "social council" in which both the government and solidarity take part to manage the country's ailing economy. The demand had been rejected earlier.

Strikes not connected with the nationwide walkout are continuing in Zyrardow, Tarnobrzeg and Zielona Gora regions. Coal miners in Sosnowiec went on an indefinite strike today to protest against an incident last night in which dozens of miners were injured by poison gas in milk bottles thrown from a running car.

JARUZELSKI PROPOSES 'EXTRAORDINARY MEASURES'

OW310814 Beijing XINHUA in English 0806 GMT 31 Oct 81

[Text] Warsaw, 30 Oct (XINHUA)--Polish Prime Minister Wojceicj Jaruzelski today submitted to the parliament a draft law on extraordinary measures to protect the interests of citizens and the state.

He also proposed that a national consultation council be formed of political parties, trade unions and other mass organizations, and scientists, writers and artists.

Speaking to the parliament (SEJM) he deplored that "unbridled strike actions have become a way of life," he said. "It is known at today's session, the convent of seniors will present to the chamber a draft resolution which calls firmly for an immediate end to strike action and to all actions violating the social order."

The prime minister also proposed the creation of a committee for social consultation under the Council of Ministers.

He explained that he had to hold the offices of party's first secretary, chairman of the Council of Ministers and defence minister in the current extraordinary situation.

He announced a government reshuffle appointing the Democratic Party's chairman, Edward Kowalczyk, to replace Deputy Prime Minister Stanislaw Mach.

Kowalczyk becomes the third non-communist party deputy prime minister along with the Catholic, Jerzy Ozdowski, and Roman Malinowski of the United Peasants' Party.

Five ministers were appointed, including Zenon Komender, vice-president of the PAX Catholic Association as minister of internal trade and service.

POLAND'S SEJM CALLS FOR SUSPENSION OF STRIKES

OW010230 Beijing XINHUA in English 0217 GMT 1 Nov 81

[Text] Warsaw, 31 Oct (XINHUA)--Poland's National Assembly (SEJM) today unanimously adopted a government-backed resolution calling for the immediate suspension of all strikes.

The resolution said, "In the face of danger to the nation's existence and in order to protect citizens' basic needs, the SEJM calls on all trade union chapters to abandon immediately strike actions which are ruining the country."

It said, "It is not the time for work stoppages and demonstrations when the country is in direct need."

The resolution said, "The SEJM simultaneously notes with approval the call by the Presidium of solidarity's national commission to suspend current strikes, as well as earlier similar appeals by other trade unions and social organizations."

"If the call of the SEJM should prove ineffective and a state of higher emergency for the nation's existence arises, the SEJM will consider a proposal to equip the government with such legal means as are required by the situation," it added.

During the two-day session, the SEJM reaffirmed its support to Prime Minister Wojciech Jaruzelski and his government.

The SEJM instructed the government to make every effort to bring about swift amelioration of the present situation and appealed to the whole society to give full support and assistance to the measures taken by the government.

The resolution expressed concern about the unbridled actions of the extremists in the trade unions, pointing out that their tendency and activities "run counter to the social accords and the basic interest of the people and the state."

POLISH GROUPS DEMAND STRIKE CALL OFF

OW300645 Beijing XINHUA Domestic Service in Chinese 1526 GMT 28 Oct 81

[Text] Warsaw, 28 Oct (XINHUA)--In the wake of the joint meeting of the PZPR, the United Peasant Alliance and the Democratic Alliance, condemning the stand taken by the "Solidarity" Union against the government's efforts to solve social difficulties. Various trade union and social organizations and the media in Poland have recently issued statements and published articles opposing the "Solidarity" Union's decision to stage an 1-hour national strike on 28 October.

The national cooperative committee of the Polish Professional Trade Union issued a statement on 27 October calling on its members not to participate in the 28 October strike. In its statement, the second largest Polish trade union organization, with nearly 4 million members, stressed that we "should not take blind adventurist action to destroy ourselves, we should negotiate and consult," and that "only by working conscientiously can we overcome the crisis."

In its statement issued on 27 October, the work group of the Polish Federation of Autonomous Trade Unions "opposes the strike which will cause unwanted social tension." The statement said that every call for a strike under the current social and economic situation is "detrimental to, and threatens the existence of, Polish society."

The General Council of the Polish Teachers Association pointed out on 27 October in its open letter to the national committee of the "Solidarity" Union that the scheduled "national strike cannot win our sympathy or support."

The Presidium of the General Council of the Polish Socialist Youth Federation pointed out in its 27 October statement that the strike is "a most incorrect form of protest" under the catastrophic economic situation facing the nation. It urged the "Solidarity" union to call off the national strike scheduled for 28 October.

The continuous strikes have further aggravated Poland's economic problems and prolonged the turbulent political situation. People from all walks of life are tired of the strike and oppose it. Even within the "Solidarity" Union itself, especially numerous grassroots trade union organizations and ordinary members, have begun to oppose the strike. According to PAP, when the Koszalin chapter of the "Solidarity" Union decided that the whole province should be prepared to stage a strike, most of the factories in that province, including numerous "Solidarity" factory committees, opposed such a decision.

The 27 October Polish ZOLNIERZ WOLNOSCI pointed out in its commentary that the 1-hour strike would cost the state 1 billion zloty (equivalent to $30 million) and that the strike "will cause tremendous losses," not only to the economy, but also to "national defense potential and national security."

According to PAP, a spokesman of the national committee of the "Solidarity" Union issues a communique upholding the national strike on 28 October.

JARUZELSKI ADDRESSES POLISH SEJM MEETING

OW312105 Beijing XINHUA Domestic Service in Chinese 1150 GMT 31 Oct 81

[Text] Warsaw, 30 Oct (XINHUA)--The 8th Polish Sejm held its 17th meeting in Warsaw today. At the meeting, Wojciech Jaruzelski, first secretary of the Polish United Workers Party Central Committee and Polish prime minister, submitted to the Sejm a "draft law on extraordinary measures to protect the interests of citizens and the state" and proposed the establishment of a national consultation council. Jaruzelski delivered a lengthy speech at the meeting. He pointed out: At present, the sociopolitical situation in Poland has further intensified. Tension, clashes and strike actions have swept Poland. The shortage of supplies on the market has worried many people in society.

He said: The government has adopted and will continue to adopt measures to improve the ration system on food and certain industrial products and the coupon system. He proposed the immediate setting up of a committee to supervise the market and carry out social consultation so as to expand society's role in supervising the supplies and functions of the market.

In his speech, Jaruzelski accused the extremists of the "Solidarity" Trade Union of "creating a de facto opposite government" and of "undermining the unity of the country and bringing the economy to a standstill." He denounced the nationwide warning strike recently organized by the trade union. He said: "Unbridled strike actions have become a way of life." "This situation must not continue." He went on, saying: In view of the existing dangerous situation, the government has submitted a draft law on extraordinary measures to the Sejm Presidium to protect the interests of citizens and the state. The convent of seniors will present to the chamber a draft resolution which firmly calls for an immediate end to strike action and to all actions violating the social order. He emphatically pointed out: "If this resolution is not observed, the prime minister will have to fulfill, on an emergency basis, the legislative procedure for enacting the draft law proposed by the government." "Efforts must be made to protect the interests of the state and maintain stability in the country."

Jaruzelski also proposed the formation of a national consultation council of political parties, trade unions and other mass organizations, and scientists, writers and artists, as well as the creation of a committee for social consultation under the Council of Ministers. The former will carry out its activities according to the program of the people's united front. The latter's task is to express its opinion and offer suggestions to the government on how to solve social and economic problems.

Jaruzelski explained that he must hold the offices of the first secretary of the Polish United Workers Party Central Committee and the government prime minister in the current extraordinary situation. He said: "This is conducive to obtaining the necessary effects for action." He also said: For the same reason, "I intend to retain the office of defense minister."

After that, he proposed to the Sejm a government reshuffle to meet the current situation.

CSO: 4005/156

POLISH SEJM URGES SUSPENSION OF STRIKES

OW011001 Beijing XINHUA Domestic Service in Chinese 0753 GMT 1 Nov 81

[Text] Warsaw, 31 Oct (XINHUA)--The 17th session of the 8th National Assembly of Poland closed today after 2 days in session. The session unanimously adopted a resolution calling on the "Solidarity" Trade Union to immediately suspend all strikes. The resolution stressed: "If the call of the National Assembly should prove ineffective and a state of emergency for the nation's existence arises, the National Assembly will consider a proposal to equip the government with such legal means as are required by the situation."

The resolution expressed "deep concern" about the deteriorating sociopolitical situation and the incessant waves of strikes and protest activities. At the same time, it expressed "understanding and sympathy for the social dissatisfaction caused by hardships in life." The resolution instructed the government to "make every effort to bring about swift amelioration of the present situation" and appealed to "the whole society to give full support and assistance to the measures taken by the government."

The resolution called on the "Solidarity" Trade Union to "make constructive contributions" to overcoming the crisis in Poland, respect the constitutional principles and state organs and abide by the laws of the land. The resolution expressed "deep concern" about the actions of the extremists in the "Solidarity" Trade Union, pointing out that their tendency and activities run counter to the vital interests of the people and the state.

The resolution also instructed state administrative organs, public security and judicial departments to "effectively maintain public order and adopt measures according to law."

The session finally approved proposals by Premier Jaruzelski on government personnel matters and decided to remove Stanislaw Mach from his post as vice premier and to replace him by (?Edward Kowalczyk), chairman of the Democratic Alliance. In addition, the ministers of communications, domestic trade and services, foreign trade, materials management and veterans' affairs were replaced.

BELGIUM, LUXEMBOURG MINISTERS VIEW PACIFISTS

OW271748 Beijing XINHUA in English 1651 GMT 27 Oct 81

[Text] Brussels, 26 Oct (XINHUA)--The Soviet superiority of nuclear weapons in Europe has upset the balance of nuclear missiles deployed there and is threatening peace and security in Europe, according to the foreign ministers from Belgium and Luxembourg.

Belgian Foreign Minister Charles-Ferdinand Nothomb and Luxembourg Deputy Prime Minister and Foreign Minister Colette Flesch reached these conclusions after studying the increase in European pacifism.

"To better meet the desire of the Belgian people and the government for peace, we must emphasize the withdrawal of Soviet SS-20 missiles which have upset the balance in Europe. This is the only way we can call off the deployment of corresponding U.S. missiles," the Belgian foreign minister said.

The Soviet Union has continued to station SS-20's in Europe, and its nuclear warheads now total 750.

"These nuclear warheads will not strengthen our security," he said. "On the contrary, they cause menace and disequilibrium."

Speaking on foreign policies, Luxembourg Deputy Prime Minister Flesch said, "In fact, the pacifists' aspirations are being turned to oppose the deployment of battlefield nuclear forces in Europe. The result is that the pacifist movement will allow the West to be reduced to an inferior position in face of the increasing Soviet military superiority." The result is extremely dangerous, he added.

Talking about detente, Flesch said it should be viewed only as an inseparable whole, that Soviet occupation of Afghanistan has shaken the system of mutual cooperation and understanding and that the Soviet Union is playing a risky game that could jeopardize world peace.

Recently, some Belgian political parties and the news media have also commented on the current pacifist movement.

The Belgian Labor Party pointed out in an article that the Soviet Union shared great responsibility in the new arms race.

Withdrawal of the SS-20's is inevitable to safeguard European peace, it said. The article also demanded that no new-type American nuclear weapons should be deployed in Europe.

LA LIBRE BELGIQUE stressed in an article yesterday that the goodwill of most pacifist movement participants is undoubted, but the people must guard against those who might take advantage of the fear of a nuclear conflict.

JAPAN DISTURBED BY USSR MINISTER'S VISIT CANCELLATION

OW281425 Beijing XINHUA in English 1310 GMT 28 Oct 81

[Text] Tokyo, 28 Oct (XINHUA)--The Japanese side expressed dissatisfaction with the Soviet Education Minister Mikhail Prokofyev's cancellation of visit to Japan. The Soviet minister was to visit Japan at the invitation of the Japanese-Soviet Friendship League of Dietmen.

Prokofyev cancelled the trip because the Japanese Foreign Ministry had issued a "special visa" for him instead of a diplomatic visa as requested, Soviet Ambassador to Japan Dmitriy Polyanskiy said.

Since the Soviet military invasion of Afghanistan, the Japanese Government has imposed sanctions on the Soviet Union including the freezing of exchange of visits between high-level officials of the two countries.

The Japanese Foreign Ministry sources called Prokofyev's cancellation of the visit on the pretext of the visa problem "a matter beyond understanding."

Japanese Prime Minister Zenko Suzuki told newsmen today that "the Japanese side had done nothing wrong on the matter of dealing with the Soviet education minister's visit as it handled the matter in good faith." He added, "Diplomatic visas are issued when negotiations are to be held between government officials. In the present case, it is a matter involving the League of Dietmen, therefore, it is not a matter for political talks."

The Japanese press holds that by demanding a diplomatic visa for the Soviet minister, the Soviet Government attempted to make a breach in the Japanese sanctions. The Soviet cancellation will cast a shadow on the relations between the Soviet Union and Japan to come, the NIHON KEIZAI SHIMBUN said.

FRG'S APEL REJECTS UNILATERAL DISARMAMENT

OW291808 Beijing XINHUA in English 1644 GMT 29 Oct 81

[Text] Bonn, October 28 (XINHUA)—West German Defense Minister Hans Apel said yesterday that he is opposed to one-sided disarmament by the West and called for an increase of the federal defense force's attacking power.

Addressing the 25th conference of Bundeswehr commanders, which concluded in Ingolstadt today, Apel also pointed out that one-sided disarmament will increase the probability of war and that the future of West Germany could be guaranteed only with a Western alliance.

The majority of public opinion in West Germany, Apel said, is behind the NATO dual tract decision. He said it must be made clear to those who are critical of the country's defense policy that one-sided arms limitations and controls are not acceptable. He also called for a halt to Soviet armaments.

Dealing with the importance of soldiers, Apel said that their role only can be conducive to the maintenance of peace when armed forces possess an attacking power. It is not enough to have only the will of peace today, he said. "People must see that the security of West Germany can in no way be defended without the use of nuclear weapons," he explained.

The three-day annual commanders conference was attended by 375 generals and high-ranking officers from Bundeswehr's three services.

'XINHUA' REVIEWS TENSION BETWEEN SUDAN, LIBYA

OW291552 Beijing XINHUA in English 1522 GMT 29 Oct 81

[Text] Beijing, 29 Oct (XINHUA)--Border tension between Sudan and Chad has been growing since the rupture of diplomatic relations between Sudan and Libya last June.

The Sudanese News Agency reported that Libyan airplanes had raided towns and villages in the western border areas of Sudan on 26 occasions.

In a press interview in Cairo in the middle of this month, President Ja'afar Numayri accused Libya's leader al-Qadhdhdafi of planning to mount a large-scale invasion of Sudan from the West. Meanwhile, Egyptian President Husni Mubarak has assured Numayri that Egypt will come to the help of Sudan if it is invaded by Libya. Thus, a tense situation prevailed over the border.

Later on, Libya declared that it would withdraw its troops from the border areas and Sudan welcomed Libya's announcement. Numayri pledged that Sudan would not attack Libya first, and so did Mubarak. This resulted in an easing of the explosive situation.

Since last December, Libya has stepped up its intervention in Chad. Taking advantage of the internal strife in Chad, it has sent 6,000 mechanized troops equipped with Soviet-supplied arms to that country. A part of the Chadian guerrillas were driven to the areas bordering on Sudan and over 20,000 Chadian refugees have made their way to the Sudanese town of Junaina and many more to other cities of Sudan.

Since mid-September this year, Libya has intensified its bombing of towns and villages near the Sudanese side of the border under the pretext of attacking Chadian guerrillas.

In response to Sudan's request for military aid and in defence of its own traditional interests in the area, the United States has promised to supply Sudan with M-60 tanks, 102mm howitzers and F-15 airplanes and increase its military aid to Sudan in the current fiscal year from 30 million to 100 million U.S. dollars and economic aid to 115 million dollars.

The Sudan News Agency reported that in order to ensure security in the capital and prevent Libya from using the same bad elements who had infiltrated with the refugees to carry out subversive activities, the Sudan public security authorities had detained some 19,000 refugees. They were soon released with the exception of anti-government fundamentalists, lawless soldiers, profiteering merchants and the saboteurs in the guise of refugees.

President Numayri disclosed recently that some of the arrested had confessed that they were sent to Sudan by Libya to sabotage Sudanese economy and overthrow the government.

Diplomats in Khartoum were reported to have pointed out that the danger that foreign forces may take advantage of Sudan's bad harvest this year and the spiralling prices to stir up trouble in collaboration with internal opposition in the country.

AL-QADHDHAFI SENDS MESSAGE TO OAU ON CHAD

OW291331 Beijing XINHUA in English 1256 GMT 29 Oct 81

[Text] Nairobi, 28 Oct (XINHUA)--Chairman of the Organization of African Unity and Kenyan President Daniel Arap Moi said that he may very soon send an envoy to Libya and Chad and he himself may visit Libya afterwards to discuss the implementation of the OAU resolutions on Chad, according to local press reports today.

Moi made the remarks after receiving a special message from Libyan leader al-Qadhdhdafi yesterday. He said that the message was "very important" in relation to the problems in Africa including Chad.

It was reported that Libya's message was sent soon after French President Francois Mitterrand appealed to the OAU chairman for sending an African peace-keeping force to Chad to replace the Libyan troops there and after Chadian President Goukouni issued a communique demanding that Libya keep out of the factional fighting in Chad.

The Kenyan paper DAILY STANDARD stressee editorially today that Libya has not abandoned its plan for merger with Chad and instead it has increased its troops in Chad from 4,000 to some 15,000 strong, intending to use Chad as a "base in the heart of Africa for infiltrating, subverting and destabilizing other African countries."

The Kenyan paper DAILY NATION disclosed editorially on October 26 that France and the United States have started sending small arms to Chad to support President Goukouni and pledged logistic support for an African peace-keeping force in Chad.

OAU CHAIRMAN CONCERNED OVER UN DEBATE ON WESTERN SAHARA

OW300148 Beijing XINHUA in English 0125 GMT 30 Oct 81

[Text] Nairobi, 29 Oct (XINHUA)--The current chairman of the Organization of African Unity, Daniel Arap Moi of Kenya, has expressed his concern over the unfortunate developments surrounding the Western Sahara debate at the current session of the United Nations.

Moi made the expression in a message today to King Hassan II of Morocco and President Chadli Bendjedid of Algeria.

In his message, President Moi said, "It has been brought to my attention that your representative at the U.N. has introduced a separate resolution on Western Sahara. Such action is not conducive to progress in the implementation of the decisions of the OAU implementation committee on the question of Sahara, and should not be encouraged. It is absolutely essential that we should be united in our search for a peaceful settlement of the question of Western Sahara."

Moi said, "Under the circumstances, I am appealing to you in accordance with the mandate of the implementation committee to allow the OAU implementation committee on Western Sahara to execute its mandate on Western Sahara accordingly."

"Africa demands that the question of Western Sahara be settled in accordance with the 18th OAU summit resolution and consequent recommendations and decisions of the implementation committee on Western Sahara," he said.

ITALIAN LEADERS DISCUSS MISSILE BALANCE IN EUROPE

OW291248 Beijing XINHUA in English 1238 GMT 29 Oct 81

[Text] Rome, 28 Oct (XINHUA)--About 200 Soviet SS-20 missiles were directed at Italy and can destroy 600 Italian cities, Italian Defence Minister Lelio Lagorio told newsmen at a radio interview today.

An AVANTI report today says that Lagorio said at a meeting in Prato on October 26: "The government line is to maintain a just balance among various forces in the world. The establishment of a force which can prevent any adventurous actions is necessary for opening the door to detente. This is the only starting point for reaching final agreement on disarmament."

He said: "A balance of force should be viewed from the fact that the Soviet Union has begun deploying missiles since 1977. As a reply, the West should also begin pursuing the same plan."

Italy is in favour of a "zero formula," namely, the Soviet Union should dismantle its missiles and the West would stop deploying theirs, he said.

According to another report, Italian Foreign Minister Emilio Colombo said at a recent meeting of the Christian Democratic Party: "Because of the existence of imbalance, it is necessary to reestablish balance with new weapons which are not offensive, but dissuasive."

Political secretary of the Christian Democratic Party Flaminio Piccoli said at the same meeting that peace could not be sought by demonstrations alone. Neutrality cannot guarantee security without a balance of force. He reminded the people they must not forget that an imperialist power has invaded Afghanistan and is threatening the security of Poland.

MRS GANDHI SPEAKS ON MILITARY ALLIANCES

OW311215 Beijing XINHUA in English 1204 GMT 31 Oct 81

[Text] New Delhi, 31 Oct (XINHUA)--Indian Prime Minister Indira Gandhi yesterday said that many countries are now realising that military alliances entail obligations that might not be entirely consistent with a nation's concerns.

Inaugurating the silver jubilee celebrations of the school of international studies, Nehru University, Mrs Gandhi spoke of the restiveness and apprehension about bases and stationing of missiles that many countries involved in alliances feel.

India had no desire to get entangled in rivalries and conflicts of power blocs and their war preparations, she added.

Mrs Gandhi said: "Had we built our defence forces at the behest of others or through gifts of armaments, the centre of decision and policy-making would have moved out of our hands."

Talking of India, Mrs. Gandhi said that non-alignment was not an objective but a policy--a policy that had helped India to become technologically more self-reliant.

Mrs Gandhi said that self-reliance and development are not mere desires but essential and the "only possible way."

A two-hour battle between students and police happened when Mrs. Gandhi came to the university. The students were protesting against the anti-democratic policies of the government and her presence.

AFRICANS URGE REAPPRAISAL OF SALIM UN CANDIDACY

OW310244 Beijing XINHUA in English 0208 GMT 31 Oct 81

[Text] United Nations, 30 Oct (XINHUA)--The African group of states to the United Nations today called on the permanent member of the security council, who kept vetoing Tanzanian Foreign Minister Salim A. Salim in the election of a new U.N. secretary-general, to reconsider its position and support Salim.

This appeal was contained in a communique released this afternoon following the meeting of ambassadors of the African group.

The communique says: "The African group expressed its deep concern that a permanent member of the council had consistently opposed the OAU's candidate. The African group appeals to this permanent member to reconsider its position and thus support minister Salim."

It adds, "The group also expressed its concern for the attitude of the two permanent members who have consistently abstained and appeals to them to reconsider their position."

"The African group also urges all members of the council to support Africa's candidate," it concludes.

It is understood that the United States vetoed Salim while the Soviet Union abstained all along in the council's six rounds of balloting last Tuesday and Wednesday to choose a new U.N. secretary-general.

Facing the deadlock, according to council sources, the council has canceled its scheduled meeting today and decided to continue its consultations next Tuesday with regard to considering the recommendation for appointing a new U.N. secretary-general.

RAW MATERIALS DISPUTE STRAINS NORTH-SOUTH RELATIONS

Beijing SHIJIE ZHISHI [WORLD KNOWLEDGE] in Chinese No 17, 1 Sep 81 pp 2-4

[Article by Hu Jie [5170 2638]: "The Raw Materials Question in the North-South Relationship"]

[Text] On 22 and 23 October this year, a summit conference for a North-South dialogue will be held in Cancun, Mexico. In this connection, a preparatory meeting at the foreign minister level was held in Cancun at the beginning of August. The communique issued by the meeting pointed out that the objective of the summit conference would be to create conditions for holding global negotiations on eliminating the economic disparities between industrial countries and developing countries. People know that the contradictions between the South and the North (i.e., the contradictions between the developing countries and the industrially developed countries) are longstanding, the countries involved are widespread, and there are many piled-up problems which have become increasingly sharper in recent years. Among them the problem of new materials is one of the most outstanding. Raw materials are the important material foundation for North-South interdependence and are also the outstanding important reason for this interdependence. The raw materials problem affects the North-South relationship now and in the future. This article is intended to provide some materials and views on this problem.

Raw Materials Cause North-South Interdependence

In North-South economic contacts, raw materials always flow from the South to the North, i.e., from the developing countries to the developed countries. The economies of industrially developed countries depend on the raw materials of the developing countries. With regard to energy raw materials, the Western industrial countries import 4/5 of the total amount of petroleum imported in the world, and of this figure 3/4 of the petroleum comes from Third World oil-producing countries. With regard to mining industry raw materials, America depends on outside supplies for 15 percent of its consumption, Western Europe 75 percent, and Japan 90 percent, and 2/3 of these supplies come from developing countries. Although America's proportion of imported mining raw materials is fairly small, in terms of absolute quantity it is the world's largest importing country, with it heavily dependent on foreign supplies for 20 kinds of strategic ores. With regard to agricultural raw materials, the Western industrial countries account for 70-75 percent of the world's consumption of cocoa, coffee, and rubber, and almost all this amount is supplied by developing countries. One can see that if the South did not apply raw materials, the North could not have its material civilization.

With regard to the developing countries, raw materials are their major source of funds. Because the great majority of the developing countries have still not extricated themselves from the unbalanced economic structure created by colonialism, as of now primary products still account for 2/3 of their exports, and for many of these countries foreign exchange income depends on the export of one or two agricultural or mining products. Twenty-eight countries in Africa export only one to three kinds of raw materials. For example, Zambia's income from its export of copper accounts for 50 percent of its total output value; Zaire's income from its export of copper accounts for 50 percent of its foreign exchange income and over 30 percent of its total output value; Maritius' income from its export of sugar accounts for 90 percent of its total export income; and Mauritania's income from its export of iron ore accounts for 60 percent of its total export income. Therefore, the amount of raw materials imported by the industrial countries, and the prices paid for these raw materials, have a very great economic effect on the developing countries. In this connection, the developing countries also depend on the raw materials markets and prices of the developed countries. Moreover, since the end of the war [World War II], the developing countries' increase in foodgrain production has been slow, and in over 60 countries the output per capita has dropped. Many developing countries that were foodgrain-exporting countries before the war have become foodgrain-exporting countries, and because of this have become increasingly dependent on foodgrain supplies from the developed countries.

One can see that raw materials supply and demand form the economically interdependent relationship between the North and the South. This relationship of dependency was established on the basis of unequal price exchanges, and it follows the old international economic order and is filled with layer upon layer of contradictions.

The Raw Materials Problem Sharpens North-South Contradictions

After the 1970's began, the developing countries launched a struggle in the raw materials field to strive for their economic liberation. However, except for the signal victories won by the oil-producing countries, the struggle of the other countries that export agricultural and mining raw materials was restricted by all sorts of contradictions. America and certain other developed countries did their utmost to protect their vested interests and the old international economic order, which made it impossible to reach a just and reasonable solution to the raw materials problem, thereby causing outstanding aggravation between the North and the South. The unreasonable phenomena in the raw materials problem are as follows:

1. The excessively low price of raw materials. At the beginning of the 1970's, the developing raw materials-producing countries universally raised the prices of their raw materials, but in the middle of the 1970's the prices of raw materials universally jumped back, even to below the actual price in 1971. The main developed countries manipulated and suppressed the prices of raw materials by such methods as buying up and stockpiling raw materials in large quantities or

having transnational corporations in raw materials-producing countries sell raw materials directly to their parent corporations or controlling the international centers that fix the prices of raw materials. With the exception of the organization of aluminum-producing countries' raising of the price of alumina, none of the other 20 organizations of raw materials-producing countries of the developing countries could prevent the prices of raw materials from dropping.

2. The enlargement of the scissors movement of the prices of raw materials and finished industrial products. The prices developing countries get for exported raw materials are dropping, and the prices they pay for finished industrial products and foodgrain are rising. Because of this, in the 1960's the developing countries lost $50 billion. In the 1970's, the situation worsened: from 1974 to 1978. The scissors price movement expanded by 15 percent, and in 1978 alone the developing countries lost $30 billion. Actually this was a shifting by the main developed countries of the consequences of their economic crises and inflation onto the developing countries.

3. The industrial countries' monopoly of raw materials processing and their profit on the circulation of commodities. The developing countries produce raw materials, but they do not control the links of processing, transporting, selling, and distributing the raw materials of their own countries, and the profit these links bring are very big. For example, the price of alumina after being smelted into aluiminium is 9 times higher than it was originally, and the selling price of bananas is 8 times higher than the production price. The cost of transporting raw materials from the place of production to the place of selling is often much higher than the original price of the raw materials. These portions of the price increase limit the earnings of developing countries and are basically the earnings of the industrial countries.

4. Raw materials export markets are not properly protected. The industrial countries constantly employ adminitrative measures such as excessively high hygenic and safety standards, quantitative limits, and import licenses, as well as protective measures such as tariff barriers or subsidies on their own countries' products, and thus the raw materials of the developing countries cannot equally and freely enter their markets, and this situation is especially prominent with regard to agricultural products.

5. The sales of raw materials are subject to increasingly intense competition from the industrial countries. For example, the raw materials produced by the industrial countries of Australia and Canada compete with those of the developing countries in the mining raw materials selling markets: some industrial countries use South Africa's mining raw materials to hold down the prices of the developing countries' raw materials; America has taken away Africa's peanut market; and Western Europe's sugar beets are flooding the cane sugar markets. Besides this, the synthetic materials and substitute raw materials developed by the industrial countries are threatening the developing countries' markets for natural raw materials. For example, there are the technologies for replacing natural rubber with synthetic rubber, cocoa with soybeans, copper with aluminum, etc.

6. The sovereignty of raw materials countries over their natural resources is still being impaired. After the 1970's began, the developing countries took

measures such as nationalizing or regulating by law foreign capital enterprises in order to protect their sovereignty over their natural resources and their economic interests and to prevent the artificial lowering of raw material prices. However, the transnational corporations and the major industrial countries took some countermeasures. For example, after the first part of the 1970's, the industrial countries switched their mining investments to Australia, Canada, South Africa and other countries and regions. Eighty percent of mining investment does not go into the developing countries. These countermeasures seriously affected the developing countries, halting nationalization and even causing it to retreat.

With regard to seabed resources, the rights and interests of the Third World countries are also being impaired. Last year although the Law of the Sea Conference in Geneva reached an agreement (still not in effect) on the exploitation of seabed resources, and ruled that the exploitation of seabed resources must be approved by a special organization formed by the 36 developing countries, in actuality the developed industrial countries already monopolize the exploitation of seabed resources.

Raw Materials Pose an Important Problem in Harmonizing North-South Relations

With the raw materials problem having such a great effect on North-South relations, naturally it is one of the principal topics at all sorts of meetings designed to harmonize North-South relations. The United Nations has held many special meetings and trade development meetings, and has also adopted some resolutions of principle favorable to the developing countries. But some of these resolutions cannot yet be truly put into effect and some of them are basically not put into effect, so that up to today there is still not a path being taken toward a just and rational solution of the North-South raw materials problem. At present, there exist in North-South negotiations on the raw materials problem the following major issues.

1. The issue of stabilizing the prices of raw materials. In 1976, a UN trade development meeting adopted a "comprehensive plan for commodities" with the aim of stabilizing the prices of raw materials. The core of this plan was the setting up of some "international stockpiles" of raw materials, currently set at 10 kinds of raw materials (the developing countries had proposed that 18 kinds be stockpiled). When the international market price of any of the 10 kind of raw materials drops or rises beyond a prescribed standard, the international stockpiling mechanism should sell or buy this raw material in order to stabilize its price. Three years after adoption of the "comprehensive plan for commodities," the North and the South reached agreement on setting up a "joint fund" for "international stockpiling." However, the "comprehensive plan for commodities" has up to now still not truly been put into effect, first of all because the fund is inadequate, now being only $750 million, far from the originally set figure of $6 billion. Next, according to the agreement, the joint fund cannot be used until after the new materials-producing countries and the raw materials-consuming countries reach a specific agreement; and owing to the procrastination and obstruction on the part of the industrially developed countries, it is very hard to reach this specific agreement.

2. The issue of compensation for the drop in real income from raw materials export. Besides the price fluctuations in raw materials, the reduction of output created by natural disasters also affects the income stability of raw materials-exporting countries. There are now only two international accords under which compensatory grants and loans are provided to developing countries whose export income drops: one is the regional "Lome Accord" and the other is the supplementary accord of the "comprehensive plan for commodities." But the "Lome Accord's" compensatory fund is only 820 million European currency units (about $1 billion). The compensatory fund of the "comprehensive plan for commodities" every year does not reach $40 million now. Compared with the developing countries' trade deficit of $300 billion, it is truly a drop in the bucket and of no avail.

3. The issue of the indexed price readjustment on raw materials. The developing countries have proposed that the prices of raw materials be periodically indexed to the prices of industrial products and be correspondingly readjusted. This principle, called "price indexization," can prevent the developed countries from shifting their inflation onto the developing countries and also can break the manipulation by monopoly capital of international markets. The principle of price indexization was affirmed at the 6th and 7th special sessions of the UN General Assembly. However, during dialogues and relevant negotiations between the North and the South, almost all the industrially developed countries have opposed this principle. America even proposed: Owing to the fact that the developing countries suffer losses brought about by the enlargement of the price scissors on raw materials and industrially finished products, it is up to the developing countries to make up these losses themselves by increasing the volume of export.

4. The issue of reforming the world economic structure. In order to fundamentally change the irrational phenomena with regard to the raw materials problem, the developing countries have demanded: a country should process its own raw materials so that it makes its natural resources a foundation for industrialization; should take part in the international transport, circulation, sale, and distribution of its own export commodities; should in due time have full and effective control over foreign policy making with regard to its own natural resources; and should retain its international markets for raw materials, and trade discrimination should be abolished. These demands involve a profound reform of the international economic structure, and thus are even more difficult topics in the North-South dialouge.

The dispute over raw materials has increasingly strained North-South relations. North-South negotiations up to now have not been able to solve this problem. Especially in recent years, when the developed industrialized countries have insisted on their original position and order, there has been a tendency to aggravate the North-South conflict. This situation has detrimental consequences for the world economy, the economic growth of industrial countries, and the development of developing countries. The Western industrial countries should respond to the legitimate demands of the developing countries and justly and rationally resolve the raw materials dispute so that the development of North-South relations will lead to a new situation.

SOUTH KOREAN STUDENTS CONTINUE TO DEMONSTRATE

OW310832 Beijing XINHUA in English 0319 GMT 31 Oct 81

[Text] Pyongyang, 31 Oct (XINHUA)--Three hundred students of Koryo University in Seoul demonstrated on October 29 and scattered leaflets denouncing the rule of the Chon Tu-hwan regime, according to a KCNA report today.

About 8 students were arrested by the police.

At Seoul University, the report said, a fierce clash took place recently between students who took part in campus activities and plainclothes men watching them. The police arrested several students.

Students of Rihwa Women's University in Seoul on October 27 scattered about 500 leaflets and appealed to fellow students to rise against the Chon Tu-hwan regime. One student was arrested.

Students of many other universities and colleges in Seoul, Kwangju and other places also rose in struggle recently.

Despite intensified control over universities by the Chon Tu-hwan regime, the South Korean students' struggle, quiet for sometime, has become active again.

DPRK PAPER CRITICIZES ROK CONCURRENT UN ENTRY CALL

OW291726 Beijing XINHUA in English 1624 GMT 29 Oct 81

[Text] Pyongyang, 29 Oct (XINHUA)--South Korea's call for "simultaneous entry into the United Nations" is a dangerous political trap and crafty trick to keep the Korean nation divided forever, NODONG SINMUN notes today in a commentary.

Commenting on the South Korean authorities renewed claim for the simultaneous entry of both sides of Korea into the United Nations, the newspaper states that the formula was worked out by the United States and presented by Pak Chong-hui. The formula already has been rejected by world people, it says.

The commentary also says that Chon Tu-hwan has been clamouring for anti-communism and confrontation, pursuing a line of split and war and intensifying tension on the Korean peninsula. The distrust and hostility between the North and the South have increased day by day. In such circumstances, the paper goes on to say, the simultaneous entry into the U.N. will only deepen the hostility and confrontation between the two sides, and aggravate the situation on the peninsula. What is more, it will serve to legalize the splittists' "two Koreas" policy, thus laying a greater obstacle to the reunification of Korea, the paper adds.

It states that the independent and peaceful reunification of the nation is the urgent desire of the Korean people. The claim for the simultaneous entry into the U.N. runs counter to the nation's aspirations for reunification and to the current of the times.

Korea can enter the United Nations and other international organizations only if it achieves its reunification, the paper stresses, adding that people who worry about the future of the Korean nation should strive for the establishment of the Democratic Confederal Republic of Koryo.

BRIEFS

ROK PROVOCATIONS AGAINST DPRK--Pyongyang, 1 Nov (XINHUA)--The South Korean puppet army fired tens of thousands of machinegun bullets into the D.P.R.K. side of the demilitarized zone, southeast of Kamsubong, in the central sector of the military demarcation line from 16:35 to 18:30 hours yesterday, according to a KCNA report. The action, the report said, constitutes a grave military provocation against the northern half of the republic and the South Korean Chon Tu-hwan clique should bear full responsibility for it. If the South Korean puppet army continues to act recklessly, the northern half of the republic will have to take proper countermeasures in self-defence, the report said. [Text] [OW010716 Beijing XINHUA in English 0711 GMT 1 Nov 81]

OMAN SUPPORTS AWACS DEAL--Muscat, 1 Nov (XINHUA)--Oman has declared her support for the American AWACS deal with Saudi Arabia, according to OP (Oman Press) today. A Foreign Ministry spokesman said Saudi Arabia's acquisition of AWACS planes would bolster stability in the Arab peninsula in particular, and the Middle East in general. Saudi Arabia's strengthening of her air defence system with sophisticated military equipment would benefit the six member states of the Arab Gulf Cooperation Council, the spokesman added. Oman was fully satisfied with the United States government's approval of the sale, he said. The AWACS deal would also strengthen the existing friendly relations between the region and the United States. [Text] [OW011934 Beijing XINHUA in English 1857 GMT 1 Nov 81]

XIZANG PILGRIMS RECEPTION CENTER--The Ngari Prefecture pilgrims reception center in Xizang region was recently established in Burang County. This center has begun receiving Indian and Nepalese pilgrims. In the wake of the constant improvement and the development of the relations between the PRC and India and between the PRC and Nepal, more and more Indian and Nepalese pilgrims have gone on a pilgrimage to this county. To improve the friendship between the Chinese and Nepalese peoples and between the Chinese and Indian peoples, the Foreign Affairs Department of the Ngari Prefectural Administrative Commissioner's office formally established the pilgrims reception center at the beginning of September. This center has interpreters and reception personnel and tour vehicles. On 18 September, the center received the first group of 18 pilgrims since 1962. The majority of these pilgrims were Indian officials. The second and third groups of Indian pilgrims will arrive in Burang County at the end of September and at the beginning of October. Before the establishment of this center, Nepalese pilgrims were received by the Burang County People's Government. Since the beginning of this year, the county has received some 800 Nepalese pilgrims. [HK231334 Lhasa Xizang Regional Service in Mandarin 1130 GMT 1 Oct 81 HK]

REN ZHONGYI INTERVIEWED ON 'LEFTIST INFLUENCE'

Beijing LIAOWANG [OBSERVATION POST] in Chinese No 5, 20 Aug 81 pp 28-29

[Report on interview with Ren Zhongyi [0117 0112 1138], first secretary of the Guangdong provincial party committee, by Niu Zhengwu [3662 2973 2976]: "Removal of 'Leftist' Influence Mainly Depends on Studying"]

[Text] In the month of May in Guangzhou, the pomegranate flowers were fiery red and the fragrant yulan magnolia blossoms filled the trees. I made a special trip to this famous city in the south to interview Comrade Ren Zhongyi.

Things are not always opportune, however, because Comrade Ren Zhongyi was just then attending and conducting an important meeting--a study discussion of the leading cadres of Guangdong Province, and for the moment he could not make time to grant an interview. This slight "hitch," however, made me think earnestly about the subject of this interview: What should I discuss with Comrade Ren Zhongyi?

People are not unfamiliar with Comrade Ren Zhongyi. After the smashing of the "gang of four," he was transferred from Heilongjiang to Liaoning to take up the onerous task of bringing order out of chaos in this "major disaster area" which had been seriously damaged by Lin Biao and the "gang of four." In Liaoning he led the cadres and the masses to launch a vigorous discussion on the question of the criteria of truth, how to earnestly implement various party policies, boldly redress and exonerate the martyr Zhang Zhixin [1728 1807 2450], firmly open and develop country fair trade, and enthusiastically support writers and artists in creating and performing the play "spring-heralding flowers" as well as other fine works. All of this profoundly impressed people.

Comrade Ren Zhongyi has not been in Guangdong long and he would not consent to talk about his work since coming to the province. I thought I might as well first understand the substance of this study discussion of the leading cadres, so that I could perhaps find a topic for our conversation. From indirect sources I found out that this study discussion gathered together the members of the Standing Committee of the provincial party committee, the deputy provincial governor, and those were in charge of departments directly subordinate to the province in order to compare the spirit of the documents of the Central Committee Committee's work conference, to apply it to their work practices, to sum up the lessons learned, and to launch criticism and self-criticism. Relatively good results have been obtained in removing "leftist" influence. In connection with this study discussion I recalled the ideological tendency of the society in the past period. Many people believe that we still need to continue criticizing the "left" now and in the future, but some also believe that a "rightist tendency is on the rise" and that we need to be "anti-rightist." How would Comrade Ren Zhongyi view these problems? The reader might also hope to understand this. So, after the conclusion of this cadre study discussion, this correspondent requested an interview with Comrade Ren Zhongyi, and he willingly agreed.

Comrade Ren Zhongyi welcomed this correspondent in his office. The furnishing of the office was simple and unadorned: a desk, a file cabinet, a woven bamboo sofa, and several rattan chairs. Comrade Ren let this correspondent sit on the sofa and he himself sat on a rattan chair, and our conversation began.

Comrade Ren Zhongyi said that the purpose of the study discussion was to further deepen understanding of the documents of the Central Committee's work conference, remove "leftist" influence from the guiding ideology, enhance our understanding, and remove interference in order that we might better implement the correct line, principles and policies formulated by the party since the Third Plenary Session of the Party Central Committee. He expressed the belief that there is no longer a leftist opportunist line against which we need to struggle. By and large, what exists is the influence left behind in the minds of people by "leftist" material. However, the influence of this kind of "leftist" mentality is long-standing, very deepseated and widespread, and should never be overlooked or underestimated! The influence of the "leftist" mentality is sharply and diametrically opposed to the party's line, principles and policies. If it is not removed vigorously, we will be unable to consciously implement the party's line, principles and policies or to realize the four modernizations.

Comrade Ren Zhongyi next analyzed the characteristics of the influence of "leftist" mentality. He said that one prominent characteristic is its extensiveness. It can be said that in every place and every front there has been influence by the "left." For example, in the countryside there is fear of "wealth," which is considered revisionist; it is feared that wealth will cause polarization and that wealth means capitalism. In industry there is fear of "profit"; any mention of it is considered "putting profit in command" and capitalistic; political accounting is considered "revolution" and economic accounting is considered "revisionism." In finance and trade there is fear of "flexibility"; rigid control alone is considered socialism; flexibility is considered disorder, and a big fuss is raised at the slightest flexibility. In education there is fear of "wisdom"; the idea that "intellectual education comes first" has been criticized for a long time; knowledge is overlooked and no respect is given to intellectuals. In culture and art there is fear of "blooming." The policy of cultural confinement was enforced for so many years that some people have evolved a mentality. The word "bloom" in "let a hundred flowers bloom" seems very dangerous, for to "bloom" is to "liberalize." In factories and enterprises there is a desire to implement the system of work responsibility, but some people fear "contracts." When Guangdong and Fujian decided to set up special economic zones, some people became fearful of anything "special."

He said that "leftist" material also possesses a false revolutionary character which can therefore mislead people. Some always believe that "left" is better than right, and like to view everything from the "leftist" point of view and to judge everything according to "leftist" standards. They always suspect a "rightist" tendency in the many policies and measures adopted in the effort to bring order out of chaos as well as in the general policies and lines formulated since the Third Plenary Session of the Party Central Committee. A cripple watching a show, as the saying goes, will see everything slanted.

Comrade Ren Zhongyi expressed the view that the influence of the "leftist" mentality is the greatest obstacle to our progress. In the implementation of various policies, in carrying out reform in various areas, and in the course of revitalizing the economy, we feel the existence of such an obstacle. Of course, one cannot ascribe all problems to the "left." For instance, opposition to the four basic principles comes from two sources. One is opposition by the "left," which has attacked the party's line, principles and policies since the Third Plenary Session of the Party Central Committee as "rightist" and "revisionist." The other is opposition by the "right," by which, under the pretense of a "demand for democracy" and a "demand for human rights," a very small minority of people conspire to form illegal organizations, print and distribute illegal publications, craving nothing short of nationwide chaos. The tendency to violate the four basic principles must never be treated lightly. In addition, an absolute minority of people also worship things foreign and are not patriotic; they even give up their national and personal character in front of foreigners. Some cadres disregard party discipline and state law. They are corrupt, accept bribes, and take part in smuggling activities. Some people secure private gain at public expense, benefit themselves by doing harm to others, and engage in unhealthy tendencies. These problems must be concretely analyzed and resolved as they are, and we should not freely label them left or right.

At this point in the conversation, this correspondent recalled having heard the talk among some people about Guangdong being a so-called "window of the south wind," which holds that the special economic zones have "brought many problems." In discussing this problem with Comrade Ren Zhongyi, he said: Guangdong is close to Hong Kong and Macao, and in carrying out the special economic policy and establishing special economic zones, it is necessary to be a little more open toward the foreign powers. At the same time, when foreign capital and advanced technology and equipment are introduced, they unavoidably bring in some "fragrant" wind and bad odor. We must pay sufficient attention to this. In implementing the special economic policy we can never tolerate party members and cadres who do not adhere to party discipline and state law. The more open we are externally, the more strict we must make our discipline and demands internally. However, when economic policy is relaxed a little, when literature and propoganda are a bit more flexible, and when there is a little more variety in people's dress, we should not treat this as a problem and make a fuss.

Comrade Ren Zhongyi then said that ideologically we should maintain the struggle in two areas: opposing the "left" and also guarding against the right. But in terms of the guiding ideology, the emphasis should be on removing the influence of "leftist" mentality. We should never equate and treat opposition to the "left" and guarding against the right in the same way. We should not resist or slacken the removal of the influence of "leftist" ideology on the pretext of guarding against the right.

How, then, can the influence of "leftist" mentality be removed? Comrade Ren Zongyi extressed the view that the removal of the influence of "leftist" mentality differs from the historical struggle against leftist opportunism. We cannot adopt the form of struggle used in the past, but should mainly rely on studying and on carrying forward the fine learning style of combining theory and reality. He said that for many years many of our comrades were easily influenced by the "left" and often mistook "leftist" material for Marxist-Leninism, chiefly due to a shallow theoretical basis and insufficient training in the fundamental theory of Marxism-Leninism. Quite a number of comrades studied a little in the past, but for a long time there was a bad tendency in theoretical studies, of "superior-mindedness," and this could not even be regarded as "bookishness." In addition, for many years numerous matters of right and wrong in fundamental theory were confused, and some erroneous theoretical viewpoints became deep-seated in the minds of a lot of people. Therefore, it is not possible to remove the influence of "leftist" mentality now without studying anew.

Comrade Ren Zhongyi expressed the view that the main characteristics of the confusion regarding basic theoretical problems are: First, confusing the relationship between the material and the spiritual. This has had a very bad influence on people's mentality. Disregarding objective facts, proceeding from concepts and dogmas rather than reality, and even engaging in the two "whatevers" are all related to this influence. Second, confusing the relationship between productive forces and production relations, on one hand, and the economic foundation and superstructure on the other. Resistance to economic reforms and admonition against establishing diverse forms of work responsibility systems in agricultural production are related to this influence. These theoretical errors extend many "leftist" points of view and "leftist" policies. This analysis by Comrade Ren Zhongyi clearly shows how important it is to make up missed lessons on basic theoretical problems.

Comrade Ren Zhongyi told this correspondent that the party committee at all levels in Guangdong Province must continue to hold study discussions and remove the influence of "leftist" ideology through the deep-going study of theory. Apart from studying the documents of the party Central Committee, they should study a little of the writings of Marx, Lenin, and Chairman Mao. In the course of this, they must earnestly sum up the many years of both positive and negative experience, launch criticism and self-criticism. Of course, criticism and self-criticism must be carried out on a conscientious basis, never engaging in any movement or letting people just get by.

This correspondent wrote this article on the interview after returning from the south. Before it was published, the Sixth Plenary Session of the 11th Party Central Committee was convened. In Beijing, this correspondent again met Comrade Ren Zhongyi. He said elatedly that the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" passed by the Sixth Plenary Session was both a summary of historical experience and the guiding principle for bringing order out of chaos, for carrying forward the revolutionary cause and forging ahead into the future. We must study the "Resolution" in earnest and use this ideological weapon to further remove the "leftist" influence and to unify ideological understanding. In this way we will even more consciously unite around the party Central Committee, work together with one heart, and open up new prospects on the path of the four modernizations.

IMPROVING PARTY STYLE FOR GREATER DEMOCRACY

Beijing XIN SHIQI [NEW ERA] in Chinese No 8, Aug 81 pp 8-11

[Article by Wang Ruoshui [3769 5387 3055]: "Party Style and Democracy"]

[Text] The "Resolution on the Party's Historical Issues since the Founding of the Nation" points out: "The issue of the style of the party in power is linked with its life or death." These are weighty words which call for our conscientious understanding.

I remember when we first entered the city of Beijing in 1949, the democratic figures and high level intellectuals, during their studies, asked a question: Is it possible for the Communist Party to degenerate? They felt that the Chinese Communist Party was good, but wondered whether it would always remain so. At that time, a responsible comrade answered: The Communist Party will not degenerate, because it practices self-criticism. Many people were satisfied with the answer, but some remained doubtful. A professor of Beijing University said to me: Then, is it possible for the Communist Party not to criticize itself one day?

The question has always stayed in my mind. Subsequent facts showed that the professor's question was well put. If self-criticism will keep the party forever safe from degeration, then what will guarantee that it will always follow the practice of self-criticism? If this problem is not solved, the party still runs the risk of degeneration. Actually, in the history of the international communist movement, it was not rare for the parties in power to run into problems. We must admit the existence of the possibility before we can make up our mind to find the means of prevention.

I once read a pamphlet by Huang Yanpei [7806 3508 1014] entitled "Return from Yanan." He visited Yanan in 1945, saw Chairman Mao and discussed his thoughts. He said to Chairman Mao: In my life of 60 plus years, I have seen many who indeed "rose suddenly" and "perished suddenly." An individual, a family, an organization, an area, and even a country--many cannot escape the control of this cycle. Most of them find themselves in hardships and difficulties at the beginning and have to fight for survival. Therefore, they concentrate their attention, using extreme care in everything they do, with everyone exerting himself. When the circumstances improve, they gradually slacken their concentration. As time passes, inertia sets in, spreading from a few to the majority. Once it becomes a trend, it is impossible to reverse it even with a vigorous effort. In history, there were instances of "slack government and successful officials," "people perishing and government ceasing," and "seeking honor and gaining disgrace." Therefore, I hope that the Chinese Communist Party will find a new way to escape the control of this cycle.

According to Huang Yanpei's record, Chairman Mao answered: We have already found a new way, and we will escape this cycle. The new way is democracy. Only by letting the people supervise the government will the government be afraid to slacken. Only when everyone takes the responsibility will the situation of "people perishing and government ceasing" be avoided.

The answer is a solution to the problem. While self-criticism is a good medicine for degeneration, a person may sometimes "hide his illness for fear of treatment" and refuse to take the medicine. Thus, it requires the people to see that he takes it. In other words, we must use democracy to guarantee that the party follow the practice of self-criticism. Self-criticism is a democratic practice. However, the democracy mentioned by Chairman Mao above refers to a state system. It is democracy in its original meaning. Criticism and self-criticism, as a sort of party practice, may possibly be preserved or discarded. However, once the people truly become the masters, once we have a sound socialist democratic system, then, the people will be able to supervise the party, prevent it from degeneration and help it preserve its superior traditional style, including self-criticism. The people will not relinquish their democratic rights. Therefore, a sound socialist democratic system is a guarantee against the degeneration of the party. To prevent a drop of water from drying up, the method is to place it in the ocean; to prevent the party and the leaders from degeneration, the method is to place them in the masses.

Actually, the problem had long occurred to Marx and Engels. When summarizing the experience of the Paris Commune, they declared that the situation where the public servants of society turned into its masters must be prevented. They also proposed the method of solution, which was the general election and the low salary systems. Following its spirit today, one may say that it is to introduce a socialist democracy and abolish prerogatives.

On the eve of the founding of the nation, Chairman Mao foresaw the problems accompanying victory. Guo Moruo's [6753 3106 5387] "300-Year Memorial Ceremony of Jiashen" was printed and distributed in 1944; the 2d Plenary Session of the 7th Party Central Committee sounded the warning bell to the entire party in 1949. In the early days after the founding of the nation, besides launching the movement against the "three evils," we continuously rectified the party and its style. The party of those days indeed maintained its superior traditions and won universal acclaim from the people. As the party style was good, the mood of the entire society also became good.

Until the party's "Eighth Congress," the issue remained in an important position. The resolution of the "Eighth Congress" declared that, as the Chinese Communist Party had become the party in power, it must pay special attention to modesty and prudence, guard against conceit and haste and combat bureaucraticism. It also stated that, in view of the party's leadership position, it became even more necessary to carry out criticisms and self-criticisms. In his "Report on Revising the Party Constitution," Comrade Deng Xiaoping said: "The position of the party in power is a new test confronting us," because "it can easily make our comrades become contaminated with bureaucratic habits," severed from reality and the masses; therefore, "we need to practice the internal supervision of the party, and also the supervision of the party organizations and party members by the masses and figures outside the party." His words were correct.

The problem first occurred in 1957. In that year, Comrade Mao Zedong published his famous article entitled "on Correctly Handling the Internal Contradictions within the People," stressing the use of democratic methods for their solution. Not long thereafter, a rectification movement was launched in the entire party, and the masses were activated to make criticisms and suggestions. However, in the later stage of the movement, the struggle against a very small number of rightists who attacked the party was expanded, and many who expressed critical opinions to the party with good intentions were condemned as rightists. Thereafter, many people no longer dared to tell the truth and express their critical opinions. Thus, the rashness of 1958 was able to spread without restraint. However, there were still some in the party who dared to speak out, but they were knocked down in the "anti-rightwing" movement of 1959. As a result, criticisms and suggestions inside and outside the party were stifled.

At a mass meeting of 7,000 people in early 1962, Comrade Mao Zedong again emphasized the importance of democratic centralism. The present "Resolution" states that the meeting "preliminarily summarized the experiential lessons of the 'great leap forward' and launched criticisms and self-criticisms. Before and after the meeting, most of the comrades erroneously criticized in the 'anti-rightwing' movement were reexamined and rehabilitated. In addition, the labels were removed from the majority of those classified as 'rightists.'" However, by the 10th Plenary Session of the 8th Party Central Committee in September of that year, the climate again changed, and the erroneous leftwing theme again raised its head. Thereafter, it developed all the way to the "Great Cultural Revolution."

During the "Great Cultural Revolution," the party's leading cadres were classified into two kinds of people: One kind included those of the "bourgeois command post," who could be criticized in whatever way, and who had no right to defend themselves. The moment they offered an argument, they were accused of "furious counterattack" and became doubly guilty. The other kind consisted of those of the "proletarian command post," who enjoyed the prerogative of freedom from criticism. No one could touch a hair on their heads. They could only be praised, not criticized; otherwise, it would be "smashing the villain." The fact was that the problem was precisely with the "proletarian command post." As a result, the party style was greatly undermined, and its degeneration greatly aggravated.

Until today there are still people who feel that the "Great Cultural Revolution" was ultra-democracy or large democracy; that it was excessive democracy. Therefore, they want to learn a lesson: Democracy is a dangerous thing; now is not the time to stress democracy. Where was any democracy in the "Great Cultural Revolution?" It was only feudal fascist dictatorship plus anarchism. One must not mistake anarchism for democracy. It was claimed that there were "four great" freedoms, but just try to post a large-letter poster criticizing the "gang of four!" Did not the Tiananmen incident make it very clear? Was not Zhang Zhixin's [1728 1807 2450] sacrifice a lesson? Actually, the "Great Cultural Revolution" was the greatest undemocracy; it was imposed by a minority on the 800 million people. Had our country had a truly sound socialist democracy and legal system, it would have been basically impossible for the "Great Cultural Revolution" to have occurred.

The "Resolution" points out: "For a number of reasons, we did not systematize and legalize inner-party democracy and the democracy of state, political and social life. Or, though laws were formulated, they lacked the proper authority. Thus, a condition was created: When the party's power was overconcentrated in individuals and when the phenomenon of arbitrary decision by individuals and personality cult in the party developed, it was difficult for the party and the state to prevent and restrain the start and development of the 'Great Cultural Revolution.'" It was a very important experiential lesson.

Reviewing the history since the founding of the nation, we will see that our party originally possessed the superior style of criticism and self-criticism, but styles could be discarded. At the mass meeting celebrating the 60th anniversary of the party, Comrade Hu Yaobang said: Our party's good tradition of criticism and self-criticism suffered a serious damage in a period in the past. Today, it is being restored and developed, and some good new experiences have been amassed." This thesis is compatible with the practical conditions.

The "good new experiences" naturally are not limited to only one. According to my personal understanding, one important experience is that democracy must be interpreted not only as a style, but also as a state system.

For a period in the past, the moment "democracy" was mentioned, people thought of criticism and self-criticism, humbly heeding the opinions of the masses and permitting others to speak, including derogatory remarks of oneself. These are naturally all very important, but they are not enough.

Whether "permitting others to speak," "developing democracy" or "collecting the opinions of the masses," the subject is omitted. Who "permit" others to speak? Who "develop" democracy? Who "collect" the opinions of the masses? It is the leading organs and cadres. Since they may "permit others to speak," naturally they may also prohibit them from doing so. Even if people are permitted to speak, there is still the question of whether they will be heeded. If one runs into a diehard bureaucrat who "ignores the taunts and derisions and follows his own bureaucratic ways," what can one do?

In fact, if it is only "permitting others to speak," "carefully listening to opinions" and making self-criticisms, then, certain feudal monarchs were able to do so. The First Emperor of Tang, for instance, "followed advices gladly," and Emperor Chongzhen twice issued "edicts blaming himself." Is it conceivable for us to restrict the concept of "democracy" to such method and style?

The county magistrate in the operatic film "Sesame Official of the Seventh Grade" said: "If an official does not make decisions for the people, it is better to go home and sell potatoes." These words won much acclaim. In the feudal era, it was very good when the officials were willing to "make decisions for the people" and they deserved praises. However, that the common people begged the county magistrate to "make decisions for the people" was precisely because they could not make their own decisions. They were not their own masters and had no control of their own destiny. They could only pray to Heaven for a wise monarch or an honest official who was willing to do some good for the common people, and they would find themselves fortunate. If Heaven sent down a tyrant or a corrupt official, the common people deserved to be out of luck.

Talking about democracy today, we must never be guided by such thinking, but by historical materialism, recognizing the masses as the creators of history, the liberators of themselves, and the masters of their own destiny. What we need now is not "making decisions for the people," but "the people making decisions." The difference of one word reveals the essential difference of two kinds of political ideals.

"People making decisions" denotes the people's position in the state and the kind of state system. Democracy in this sense is different not only from "making decisions for the people" of the bureaucratic lords of old, but also from "developing democracy" and "permitting others to speak" of today.

Where is the difference? The word "people" changes from the object to the subject. The word "others" in "permitting others to speak," for instance, is the object. However, the people's right to speak and right to criticize are provided in the constitution and form part of our system, and they may not be prohibited from speaking. Do they only have the right to speak? No. The people also have the power to decide on state affairs and to manage the state. According to the constitution, all powers of the People's Republic of China belong to the people. The people may not only criticize the leading organs and cadres, but also select the public servants preferred by them and dismiss those who are not satisfactory. They may not only express their views on state affairs, but also legislate, make decisions and supervise the work of the government. In short, the people are the subject; the people rise up and take the responsibility; the people exercise the authority of the masters. Only thus will the degeneration of the party in power and leading cadres be prevented. Only thus will we escape the control of the cycle of several thousand years.

As aptly stated by Comrade Hu Yaobang in his "Speech," "after the revolutionary victory, the people have become the masters of the state and society. The most essential substance of the party's leadership of state life is to organize and support the people as the masters and build a socialist new life." The "Resolution" also points out the necessity to guarantee that the activities of the leading figures "remain under the supervision of the party and the people." In recent years, under the leadership of the Party Central Committee, we are further systematizing and legalizing the socialist democracy. It is an excellent thing, supported by the broad party members and masses.

Naturally, just to have a system is not equivalent to all's well with the world; we must still struggle for democratic centralism. This also is our historical experience.

INTEGRATION OF CREATIVITY WITH DISCIPLINE STRESSED

Chengdu SICHUAN RIBAO in Chinese 12 Sep 81 p 3

[Ideological review by Zhai Wen [5049 3080]: "Insist on Integration of Initiative and Creativity with Organization-Consciousness and Discipline"]

[Text] In our inner-party life at present the following situation often exists: when inattention to giving scope to a party member's initiative and creativity is being corrected, some comrades often tend to overlook organization and discipline and manifest certain tendencies of extreme individualism, liberalism, anarchism, and bourgeois liberalization; when emphasis is being placed on making the party's organization and discipline more strict, they somehow become inhibited here and there and lack the proper spirit of initiative in their work. Although situations such as these are reflected only among a small part of our comrades, we can by no means ignore the influence they bring with them. We should insist that attention be given to this matter and that it be analyzed in order to find a way to solve this problem.

First of all, we should integrate the development of initiative and creativity with organization-consciousness and discipline on the basis of correctly understanding and implementing the party's principles and policies. The initiative and creativity which our party requires each party member to develop to the maximum in general mean the spirit of initiative, the spirit of down-to-earth work, and the spirit of innovation with which they adhere to, and carry out, the party's principles and policies. The organization-consciousness and discipline which our party requires each party member to continuously strengthen in general mean conscious maintenance of consistency with the party Central Committee in their implementation of the party's principles and policies. Therefore, when a communist is able to unite the party Central Committee's line, principles and policies with actual situations, exert all his intelligence and talent, and creatively realize the party's propositions, then we should affirm that this comrade has both given considerable scope to initiative and creativity and manifested a high degree of organization-consciousness and discipline. In the past few years, whether in terms of taking the responsibility to implement cadre policies, rectify unjust, false and erroneous cases of litigation, or carrying out principles of economic readjustment, improving the management of enterprises, promoting the responsibility system in agricultural production, developing diversification, adhering to the four basic principles, ameliorating our ideological and political work, etc, many comrades within the party have given an outstanding performance; the basic reason for this is that they accepted the party's principles and policies, their thinking was relatively liberated, they were able to seriously study new situations and new problems, they consciously cleansed the influence of leftist or other erroneous ideas, and they dared to proceed and were good at proceeding from the actualities of their own units in developing their own work independently and responsibly. They did not consider that maintaining consistency with the party Central Committee in politics restricted their own initiative or creativity in any way; on the contrary, they always gained wisdom and strength in starting out on their phase of work through the study and implementation of the party's principles and policies. If one is satisfied only with copying and transmitting the party's principles and policies, if when he encounters obstacles he immediately becomes negative and resorts to sabotage or does whatever he pleases, and acts reklessly and blindly, then it will be very difficult for him to integrate the development of initiative and creativity with the observation of organization-consciousness and discipline.

Second, we should integrate the development of initiative and creativity with the observation of organization-consciousness and discipline under the principle of consciously carrying out democratic centralism. Highly developing democracy is the foundation for carrying out correct centralism. It requires party members, in their inner-party life, to have the courage and the dexterity to propose questions, express opinions, amplify achievements, criticize defects, and actively exercise the democratic rights conferred upon them by the party constitution. This is just as Comrade Mao Zedong said: "The so-called development of enthusiasm must be reflected concretely in the creative capability, the responsible spirit, and the energetic outlook at work on the part of the leading organs, cadres and party members, in the courage and dexterity with which they propose questions, express opinions, and criticize defects, as well as in the role of supervision exercised over such leading organs and leading cadres from the caring and protective point of view." At the same time, we cannot do without a high degree of centralism based on a high degree of democracy, we cannot but oppose the conduct of those who openly propagate propositions different from those of the party Central Committee and those who place themselves as individuals above the party organization. In doing so, we do not mean to, nor will we, suppress democracy or constrain the party members' initiative and creativity, but we will make it possible precisely for every party member to exert his initiative and creativity even better in our normal democratic life, and effectively organize such initiative and creativity in a direction consistent with that of the party, so that they can engender an influence several times greater than that which is possible under a dissipated condition. In a word, as long as we adhere to the principle of democratic centralism, avoid partiality and absolutization in our thinking, and achieve an integration of the development of our initiative and creativity with our organization-consciousness and discipline, things will not be very difficult.

Since the Third Plenary Session of the 11th party Central Committee, the party Central Committee has led us to insist on returning to order from disorder, rectify the guiding ideology, establish correct principles and policies, and revive and strengthen inner-party life. The Sixth Plenary Session of the 11th party Central Committee passed the "Resolution," reelected and elected additonal principal leading members of the party Central Committee. The results of these endeavors have already provided good objective conditions for the vast ranks of the party members to integrate their initiative and creativity with their organization-consciousness and sense of discipline. Today, how to guide those party mambers who have not yet been able to integrate their initiative and creativity with the organization-consciousness and sense of discipline very well to overcome certain deviations in their thinking and their conduct in time to prevent them from advancing from one kind of partiality to another kind of partiality is a question very much worthy of our attention. For example: 1) when a certain deviation occurs, we must calmly analyze the situation and appropriately judge its manifestation, its extent, and its degree; either underestimation or overestimation would result in misjudgment in providing guidance for work. 2) When someone at a superior level criticizes a certain aspect of a certain deviation in a certain locality, other localities should carefully analyze the actual situation in their own respective area; any problem that exists in you locality is your specific problem, and how much of that problem exists is then the extent or degree of that problem. What is to be earnestly avoided most is to blindly "stir up a wind." The existence of both [leftist and rightist] kinds of deviation at the same time is found quite often; while attempting to grasp the main deviation in a given period and solve it, we must at the same time pay attention to peripheral and temporarily inconspicuous deviations. 3). Once a certain deviation occurs and the mistakes of a certain group of individual are subject to criticism, we must carry out concrete analysis and provide active guidance. Foregoing principle or condoning and placating mistakes is wrong; exaggerating at random or easily "raising questions to the higher plane of principle and line" is also wrong. We must strictly distinguish the improper use of words from mistakes in the political point of view, and questions in ideaological perception from questions of fundamental political stand. We must especially not take the expression of different opinions within the party in accordance with organizational principles as willful resistance or confrontation, or take someone's attitude of reservation maintained because he cannot think through certain questions for the time being as insistence on his mistakes.

Leading organs and leading cadres at various levels must take teh process of overcoming the deviations which occur in the development of our initiative and creativity and the strengthening of our organization-consciousness and discipline as the very process through which the party, under the guidance of correct principles and policies, protects and supports the vast ranks of the party members so that they dare to think, dare to act, dare to shoulder responsibilities independently, and dare to work without inhibitions. All methods which contribute toward the attainment of this goal must be promoted; all methods which hinder the attainment of this goal must be changed or improved upon.

STRENGTHENING PARTY LEADERSHIP OVER IDEOLOGICAL WORK URGED

Fuzhou FUJIAN RIBAO in Chinese 23 Sep 81 p 1

[Dispatch from the office of the Propaganda Department, provincial party committee: "Meeting of Heads of Regional, Municipal and County Party Committee Propaganda Departments Asks Various Localities To Seriously Change the State of Laxity and Feebleness, Earnestly Strengthen Party Leadership Over Ideological Work"]

[Text] Strengthen party leadership over ideological work, change the state of laxity and feebleness, overcome the tendency toward bourgeois liberalization, and adhere to the four basic principles: these were the themes discussed at the recently convened meeting of heads of regional, municipal and country party committee propagands departments throughout the province.

Participating in the meeting, which was held 9-16 September, were heads of regional, municipal and county party committee propaganda departments throughout the province and responsible comrades in charge of the ideological and political work of provincial departments, commissions, offices and trade unions, and youth and women's organizations, numbering altogether 125.

Leading comrades of the provincial party committee were present at the meeting to speak on several questions concerning the ideological front; the participating comrades seriously discussed these questions and unanimously supported their views.

The meeting held that an important question on the ideological front at present is to change the state of laxity and feebleness in the leadership ranks. We are determined to uphold the Central Committee's directives on the solution of this question. We must launch criticism against the already emergent tendency of bourgeois liberalization, which deviates from party leadership and from the course of socialism. In Fujian, for example, multiple manifestations of leadership laxity and feebleness have been exibited: not only has criticism against bourgeois liberalization not been sufficiently expressed, but there has also been a lack of sufficiently vigorous struggle against devious trends and unorthodox practices within the party ranks and a lack of sufficiently severe crackdown on the criminal elements who resort to overseas smuggling, speculation and double-dealing as well as sabotaging of social order. The meeting agreed with the opinions expressed by the leading comrades of the provincial party committee: laxity and feebleness constitute a problem in our leadership, and the responsibility lies with the provincial party committee. In respect to those below, the main question is one of education; there is no need to resort to inspection and examination at each level. It is necessary to affirm that, since the Third Plenary Session of the 11th Party Central Committee, the results achieved on the propaganda, education, science, literary, information, publication, and theoretical fronts in our Fujian Province are the main thing. The ideological state is on the whole healthy. Such a good situation has been rare for many years. But at the same time we must also see that among some of the people there still exists the tendency toward wishing to cast off party leadership and the erroneous tendency toward "looking at money," looking at the bourgeois style of life, as well as the bad habit of being intolerant of commendation and intolerant of criticism, as once a person is commended he also becomes isolated, and once a person is criticized he also becomes opposed to the critic. In some localities religious activities have begun to prevail and feudal superstitions have become rampant. Struggling against such devious trends and practices and such pernicious tendencies has especially great significance to our Fujian Province, which is implementing special policies and flexible measures.

The meeting stressed the importance of correctly carrying out criticism and self-criticism and also put forward tasks and requirements on the ideological front. The meeting pointed out: we must believe that on the ideological front the overwhelming majority of comrades support the party leadership and wish to follow the socialist path, and even if they have exhibited some defects or made some mistakes, they are still willing to correct them. With respect to the tendency toward bourgeois liberalization that has already emerged in some literary circles and in circles of intellectuals and youths and students, we must adopt the method of criticism and self-criticism; we must adopt the dredging approach in the manner of the gentle breeze and the drizzling rain; we must take the attitude of wishing to render warm help and to achieve unity. We cannot afford to be simplistic and crude, or to resort to sophistry or to wield the big stick, much less to start some movement. In order to solve the ideological problem among the masses of the people at present, along with strengthening our ideological and political work, we must at the same time make up our minds to make a success of our industrial and agricultural production, make a success of our economic work; we must also energetically rectify our party workstyle and dare to launch resolute struggles against bad people and bad things; with respect to smuggling rings and elements sabotaging social order and committing criminal offenses, we must execute a swift and severe crackdown on them most rigorously. Under the premise of adhering to the four basic principles, our entire ideological front must continue to emancipate people's thinking, give scope to socialist democracy, strengthen the socialist legal system, cleanse the influence of leftist ideas, unswervingly implement the "double-hundred" principle and the major decisions of opening to the outside world, delegating power downward, and liberalizing our policies in order to invigorate our economy and enliven our thinking.

The meeting analyzed the question of the relationship between correctly solving the cleansing of the influence of leftist ideas and the criticizing of the tendency toward bourgeois liberalization. From the point of view of the leadership, it is necessary both to solve the state of laxity and feebleness and continue to cleanse the left erroneous tendencies that have been dominant for along time. The provincial party committee has repeatedly stressed the emancipation of our thinking, giving scope to democracy, and cleansing the left erroneous tendencies in our guiding ideology: all this has been correct. But this task is not yet accomplished. At the meeting, many comrades sharply asked: Have we done enough to emancipate our thinking? Have we done enough to give scope to democracy? Have we done enough to criticize leftist things? Have we done too much, or not enough? Everybody was of the opinion that it is not that we have done too much, but not enough. There was never any question of having done too much. Without cleansing the leftist matters, it is impossible to solve the question of bourgeois liberalization. The reason such a tendency as liberalization has appeared is first of all because of the influence of the bourgeois ideology and in the second place because of a reaction on the part of the long standing leftist ideas. Hence, cleansing the influence of leftist ideas and critizing liberalization are consistent with each other, and the spirit of hte Sixth Plenary Session and the national forum on questions on the ideological front are also consistent with each other; we should not put the two in opposition to each other but should correctly launch our struggles on the two fronts.

The meeting held that the whole party must pay attention to questions on the ideological front and to strengthening our ideological and political work. Questions on the ideological front cannot be understood as being the concern only of the propaganda departments; they are the work of the whole party, the basic work of the party. The party's basic work has to do with no other than ideological construction and organizational construction. At present, we must do a good job in propagating the "Resolution;" we must unify the understanding of the whole party under the conclusions of the "Resolution." We must promote further political stability and unity through penetrating study and extensive propagation of the "Resolution" in order to maintain even greater political consistency with the party Central Committee.

We must also do a good job in carrying out our economic propaganda work; we must promote various forms of the responsibility system in agriculture, in industry, in commerce, in communications and in various enterprises and trades in general; we must likewise maintain our stability in our policy decisions. We must propagate market adjustment under the guidance of state plans and dare to let some people "stand out," let some people get rich first, and not feel apprehensive about the appearance of "outstanding households." But we must also educate people to obey state laws, follow state plans, correctly handle the relationship between the state, the collective and themselves, so that all can consciously and actively help accomplish the state's purchasing tasks.

Our newspaper and journals, radio broadcasts, and movie propaganda must, along with criticizing the tendency toward liberalization, at the same time encourage writers to emancipate their thinking, enliven their creations, and produce more good works for socialism.

With regard to the question of religion, we must pay attention to the implementation of our religious policies and respect the religious beliefs of followers of religions, but permission should not be given to those who wish to take advantage of religious activities in order to resort to illegal activities, still less to those who attempt to carry our illicit communication with foreign countries and resort to activities of infiltration and subversion.

Fujian Province is one which opens to the outside world. We must actively develop our external economic activities, expand our foreign trade, adopt even more favorable and more protective policies in respect to investment by foreign businessmen, and at the same time pay great attention to erosion by bourgeois ideology and resolutely resist the influence of bourgeois ideology.

SOCIOLOGICAL, EDUCATION AND CULTURE

BRIEFS

LITERARY JOURNAL--Beijing, 27 Oct (XINHUA)--Literary and art works should keep to the socialist road and to the orientation of serving the worker-peasant-soldier masses and should portray socialist new people and things emerging from among the workers and peasants. This was the consensus of opinion of commune members, rural cadres, teachers and factory workers at two recent meetings sponsored by the editorial department of the journal ZHONGGUO TONGSU WENYI [0022 0948 6639 0198 2429 5669 CHINESE POPULAR LITERATURE AND ART], a literary monthly published in April this year, read mainly by worker-peasant-soldier masses, primary and secondary school teachers and educated youths. They were opposed to going after bourgeois liberalism and digressing from the socialist road in publishing magazines or books and making films. [OW311105 Beijing XINHUA Domestic Service in Chinese 1155 GMT 27 Oct 81 OW]

XIZANG LITERARY, ART CONGRESS--The first Xizang regional congress of literary and artistic workers opened in Lhasa on 5 October. The congress established the Xizang Regional Federation of Literary and Art Circles. The congress also held the first festivals of the regional association of writers and folk literary workers, the regional association of dramatists and folk artists, the regional association of musicians and dancers and the regional association of artists and photographers. The congress also established the organization of all the federations. The tasks of this congress are to sum up the positive and negative experiences of this region in literary and artistic work, continue to eliminate leftist ideology, criticize the tendency of bourgeois liberalization and promote the healthy development of this region's socialist minority literature and art. The congress elected the leading positions in the regional federation of literary and art circles. Literary and artistic workers of regional subordinate organs, all prefectures and municipalities and PLA units stationed in the region elected approximately 300 delegates who were organized into the 9 delegations who attended the congress. A delegation which was sent by the China Federation of Literary and Art Circles and was comprised of responsible persons of the China Federation of Literary and Art Circles, famous writers and artists also attended the congress. [HK231334 Lhasa Xizang Regional Service in Mandarin 1130 GMT 1 Oct 81 HK]

YUNNAN SOCIALIST SPIRITUAL CIVILIZATION--According to a YUNNAN RIBAO report, the Kunming inspection group of the Yunnan Provincial People's Congress Standing Committee inspected certain units of the Kunming municipal commercial and educational systems from 31 March this year onwards and has thus put forth three suggestions in relation to how to grasp well building of socialist spiritual civilization: 1) all units must stress ideological and political work. All schools must implement, in an overall way, the party's educational policies, and service catering trades must educate the workers and staff to correctly deal with the related interests of the state, the collective and the individual; 2) all leaders must take the lead in giving play to the spirit of arduous struggle and make known the difficulties to the people enabling them to understand the country's situation; 3) schools, shops and organs must all promote work style; they must work in coordination with each other and learn from each other. On the afternoon of 17 September, the Kunming inspection group talked with the leaders of the Kunming Municipal People's Government at a forum and exchanged opinions on the building of socialist spiritual civilization. [HK110330 Kunming Yunnan Provincial Service in Mandarin 1100 GMT 22 Sep 81 HK]

SYMPOSIUM ON NOVEL--Jinan, 30 Oct (XINHUA)--The literary artistry of the classical Chinese novel "A Dream of Red Mansions" was the major topic of discussion at the 1981 national symposium on this novel held recently in Jinan, capital of Shandong Province. One hundred and fifty scholars attended the 6-day symposium. Zhou Ruchang, one of China's best-known researchers on the novel, said that the 18th century author, Cao Xueqin, was an original writer of high artistic merit. Zhang Bilai, vice-president of the Chinese Society for the study of the novel "A Dream of Red Mansions," welcomed scholars from Taiwan to come to the mainland and visit the places of historic interest linked with the novel. He urged that the scholars in Taiwan and mainland should exchange books, journals and data and should cooperate in preparing the meeting in commemoration of the 220th anniversary of Cao Xueqin's death and the international symposium on the novel, both expected to be held in Beijing in 1984. U.S RESPONSIBILITY FOR TAIWAN PROBLEM DISCUSSED

HK270947 Hong Kong WEN WEI PO in Chinese 26 Oct 81 p 1

[Article by Kuan Chien-tzu [4619 6015 1311]: "The U.S. Has a Share of Responsibility for the Taiwan Problem"]

[Text] Our Kuomintang friends have paid close attention to the international influences of Beijing's peace talk proposals. They time and again pointed out that the peace talk proposal put forth by the Chinese Communist Party is "aimed at confusing world opinion." They repeatedly urged international personages not to be "fooled by the Chinese Communist Party."

This is a strange and interesting thing. The peace talk proposal is issued to the Kuomintang authorities in Taiwan and the party invited to the peace talks is Kuomintang rather than "international personages." Since the Kuomintang authorities reject the proposal, why should they worry about the possibility that "international personages" would be taken in? Could these "international personages" participate in the peace talks on behalf of the Kuomintang or order the Kuomintang to attend the peace talks?

The "international personages" who can make the Kuomintang feel perplexed and alarmed should be those who are pursuing the "Taiwan relation act" and straddling the "unsinkable aircraft carrier." Are they not the Americans?

Recently when the Chinese Premier Zhou Ziyang was attending the North-South meeting held in Mexico, the U.S. President Reagan invited him to a working lunch. They talked about the Taiwan problem. According to the reports by foreign news agencies, after the talks the United States would adopt a more cautious attitude toward the problem of selling weapons to Taiwan.

Those who cherished "a gleam of hope" feel perplexed and alarmed again, saying that the Chinese Communist Party has pulled the United States over to its side to interfere in China's internal affairs.

The fact that China and the United States talked about the problem of Taiwan means that China has taken the stand to defend its independence and sovereignty. Apart from internal factors, the U.S. policy is also a reason why Taiwan has become a "problem." In the early 1950's, the U.S. President Truman sent the Seventh Fleet to the Taiwan Straits to invade and occupy Taiwan and implement the "policy of two Chinas." In so doing, the United States hampered the peaceful reunification of our country. We still remember that in 1958 the Chinese Defense Ministry issued an open letter to our compatriots in Taiwan, Penghu, Jinmen and Mazu, saying: "We are all Chinese. Peace is the best of the 36 stratagems." This statement was made by Chairman Mao. He also urged the Kuomintang troops not to withdraw from Jinmen and Mazu. However, the U.S. Secretary of State Dulles went to Taiwan personally to force the Kuomintang "late President the revered Mr Chiang" to withdraw his troops from Jinmen and Mazu. He intended to take the Taiwan Straits as a boundary between "big China" and "small China." Therefore, Beijing's peace proposals were always without results. Luckily the Kuomintang did not succumb to the pressure of the United States to withdraw its troops from the above-mentioned islands.

Now the United States and China have established diplomatic relations. However, the United States is still concocting the so-called "Taiwan relations act." The lotus root snaps but its fibers stay joined. Last year, on the eve or shortly after Reagan assumed power, the United States spread the news that it would resume "official relations" with Taiwan and that it would sell fighter planes to Taiwan. If the United States does so, this will mean interfering in China's internal affairs and giving Taiwan verbal or actual support so that it will refuse peace talks.

China held talks with the United States on the Taiwan problem. China never tries to draw the United States to its side, but urges the United States to stop interfering in China's internal affairs. This is entirely different from what Taiwan is doing. Taiwan hopes that the United States will not be taken in and that it will not abandon the "Taiwan relations act."

The United States has a share of responsibility for [illegible] Taiwan problem, because it is still interfering in this matter. It should stop the interference immediately.

HU YAOBANG MEETS XIZANG DRAMA TROUPE

HK191510 Hong Kong MING PAO in Chinese 18 Oct 81 p 7

[Report: "Hu Yaobang's Recent Conversation With Xizang Artists"]

[Text] Not long ago, Hu Yaobang and Wan Li met the Xizang modern drama troupe in Zhongnanhai, Beijing and talked with its members. Hu Yaobang uttered a number of "actor's lines," such as "I am 66 years old and will probably die someday" and so forth.

His conversation has neither been published by newspapers and magazines in foreign countries nor by Beijing's RENMIN RIBAO nor HONGQI. However, it is published by XIJU YISHU [DRAMATIC ART] a Beijing magazine which receives little attention. The following are some excerpts of Hu Yaobang's conversation:

Hu Yaobang: Who is the head of this troupe?

Shu Kun: He hasn't come. She is the deputy head of the troupe.

Hu Yaobang: (Turns to Zhuo Ma) Are you of Xizang nationality? (Some people said that Zhuo Ma and Ren Wang play the parts of a man and the prince and Duo Bu Ji and De Yang play the parts of Romeo and Juliet.) Instead of "Romeo and Juliet," why don't you perform your own Xizang plays? Some people told me that a Xizang play, based on a fairy tale, called "Jie Shi Da Shen" is being staged.

Wan Li: (Explaining to Comrade Hu Yaobang) It is a Xizang fairy tale. (to all the members of the troupe) We should perform Xizang dances and plays. Xizang nationality is a nationality with culture.

Hu Yaobang: Xizang nationality is a nationality with culture. Excellent songs and dances of this nationality are a component part of the outstanding culture of the Chinese nation. Is there anyone who wants to dance now? Is there anyone who wants to speak. If you don't speak, I will speak. Do you need interpreters?

Members of the troupe: No, we don't need interpreters.

Wan Li: Your Hunan dialect is more understandable than my Mandarin with a Shando ng accent.

Hu Yaobang: It will be too bad if you learn from me. Nobody understands what I say. I was told that, mandated by comrades in Xizang, you want to extend greetings to me and Comrade Wan Li and say hello to us. We really do not deserve this and it is really too much for us! Instead, we would like to convey our greetings to comrades in Xizang and our gratitude for their concern shown to us (applause). It has been more than 1 year since Comrade Wan Li and I visited Xizang. Although Comrade Wan Li and I only visited Xizang once, we cherish a deep affection for it. I do not know why.

Wan Li: Comrade Yaobang gave us a good speech. His Mandarin is more understandable than mine. My Mandarin has a strong Shandong accent. It is not easy for you to understand it (laughter). Last year, we went to Xizang....

Hu Yaobang: He carried out a lot of investigations....

Wan Li: I talked a lot. I was not familiar with the situation, so I talked with cadres of counties and prefectures. I was afraid that I would issue incorrect statements which harm you. Facts eventually proved that what I said was correct. I hope that you will unite more closely, struggle hard and enrich yourselves as soon as possible. I will repeat what I said. You have good conditions to do so. You have vast territory and abundant resources, but your population is sparse. The only defects are poor communications and low scientific and technical standards. The central authorities will support you so that you will do well. The central authorities intend to help you more but how should we help you correctly? Please don't hesitate to raise your opinions. For example, instead of supplying you with barley, we gave you wheat. You raised your objection and we corrected our mistakes (laughter). How should the State Council help you and avoid harming your interests? Please convey our message: If the State Council or the central authorities have done anything which harms your interests, please point them out. We will correct our mistakes. Please convey our message.

Hu Yaobang: It is time for you to speak. Cadres of the Han nationality were able to select two representatives to speak. Now it is time for you to speak (laughter).

Suo Nan: My Mandarin is not good enough.

Wan Li: You can speak much better than I do.

Suo Nan: Today, we feel happy because we can meet with leaders of the central authorities.... The present situation in Xizang is favorable. Peasants and herdsmen have become rich and cities have become prosperous.

Wan Li: We cannot say that the situation is excellent. We can only say that it is better than before....

Wan Li: I want to add a few words. I once convened a meeting to discuss the commodity supply for minority nationalities because their supply of knives, shoes and so forth was insufficient....

Suo Nan: Peasants need wool brushes to weave woolen fabrics. They can only buy these wool brushes in Tianjin and Beijing.

Wan Li: Let your girls be colorfully dressed.

Cao Zhengfang: People have money now, but the supply of goods is insufficient. They can buy earrings and bracelets only in Shanghai.

Wan Li: People in Xizang like top hats, but they are not available.

Luo Dan: The people of Xizang welcome Comrade Hu Yaobang and Comrade Wan Li to visit Xizang again.

Hu Yaobang: I am 66 years old now and will probably die someday. (laughter)

Wan Li: I will go to Xizang again.

Hu Yaobang: Comrade Zhao Zhiyang will visit Xizang.

Cao Zhengfang: The supply of scientific, technical, literary and other books to Xizang is insufficient.

Wan Li: Has the minister of culture come? (Zhou Weizhi: I am here.)

Hu Yaobang: Beijing, Tianjin and Shanghai should each send 1 million books to Xizang. In this way, Xizang will get 3 million books. Please call on the masses to contribute books.

Wan Li: We should publish books in Xizang and Uighur languages. Since we translate foreign books, why should we not publish books in these languages?

Hu Yaobang: Xizang should develop solar energy within a few years.

Wan Li: Don't burn cow dung anymore. It is an eyesore to stick cow dung on the wall... "A strange thing in Lhasa is that cow dung is packed in bags and sold by the jin."

Hu Yaobang: I burnt cow dung for a long time. I started burning cow dung in 1935. Are there any other people who want to speak? We have talked for about 45 minutes.

'BA YI RADIO' VOICES OPPOSITION TO CCP-KMT TALKS

OW311415 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 28 Oct 81

[Text] Facts show that the proposal made public by Marshal Ye [Ye Shuai 0673 1596] that talks be held between the Chinese Communist Party and the Kuomintang on a reciprocal basis so that the two parties will cooperate for the third time has caused serious disagreement within the party Central Committee. The proposal is imposed on the whole party by a certain person on the party Central Committee, proceeding from personal fame and gain, abandoning the party's principles and class stand and despite objection by the vast majority. It is an unforgivable political mistake.

The proposal is contrary to our party's avowed purpose that it is determined to liberate Taiwan. The liberation of Taiwan has always been an important task of our party and army for the reunification of the motherland. It is also the wish of every patriot of the Chinese nation.

However, in the past 20 years or so, because our party has made a series of major mistakes, particularly mistakes in army-building and foreign-affairs lines, [words indistinct].

Not long ago, central leading comrades headed by Deng Xiaoping put forward a so-called new principle for peaceful reunification of the motherland. In early 1979, at the working conference of the party Central Committee after Comrade Deng Xiaoping returned from a visit to the United States, he optimistically stressed the assurances made by the U.S. Government. He also stated that the United States will give up all support and aid to Taiwan. Because of this, in the past few years our country has sided with the West in foreign affairs, allied with the West militarily [jun shi shang tong xi fang lian he 6511 0057 0006 0681 6007 2455 5114 0678] and identified itself with the West politically.

However, imperialism (?has failed to fulfill the promises it made). The recent supply of modern military equipment to the Kuomintang authorities by the U.S. Government is an ironclad proof. Isn't this enough to cause us to think deeply?

It is regrettable that Deng Xiaoping and other leading comrades, ignoring and forgetting the interests of the country and nation, think only about their personal prestige--how to crown themselves with the laurel for reunifying the motherland so that their names will go down in history.

Past cooperations between the Kuomintang and the CCP were all necessitated by circumstances. The first Kuomintang-CCP cooperation was for the purpose of launching the punitive expedition against the northern warlords and abolishing the feudal (?rule). The second Kuomintang-CCP cooperation took place at the crucial juncture when the Chinese nation was in peril, and it was for the purpose of resisting Japanese imperialist aggression. Today, under circumstances of peaceful construction, what reason is there for cooperation between the CCP and the Kuomintang?

Let us not mention the results of past Kuomintang-CCP cooperation. Let us take a look at the essence of the present cooperation proposal. The proposal says: "After the country is reunified, Taiwan can enjoy a high degree of autonomy as a special administrative region and it can retain its armed forces. The central government will not interfere with local affairs on Taiwan." Moreover, the proposal guarantees that Taiwan's current socioeconomic system and its economic and cultural relations with foreign countries will remain unchanged, and that there will be no encroachment on the proprietary rights over private property, houses, land and enterprises. Isn't this clearly coming to terms with and capitulating to the capitalist system? Is this the goal for which the whole party, the whole army and the people of the whole country have shed their blood, laid down their lives and struggled hard for the better part of this century? Even more infuriating is the proposal that the present Taiwan authorities may take up posts of leadership in national political bodies and participate in running the state. To run the state together with the Kuomintang authorities who have slaughtered communists and stamped out the lives of millions of fine sons and daughters of the Chinese nation--this means not only association with the reactionaries, but an act of blasphemy against the revolutionary martyrs, who must be turning in their graves.

The initiators of the above-mentioned proposal must think thrice before they act. Don't forfeit the fruits of revolution won by our people over the past half century and move for narrow personal fame and gain. The cooperation proposal which is a gross deception can only bring consequences that will also be gross deceptions.

EXPLOITS OF CREW OF GUIDED MISSILE DESTROYER RECOUNTED

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 8, 1981 pp 8-11

[Report by Zhang Hanting [4545 3352 0080] and Lin Tingsong [2651 1656 2646]: "Youth Sparkles on the High Seas"]

[Text] Youth is the most precious time of human life. How should one spend one's beloved youth! By his actions, everyone provides a different answer.

On the eve of Army Day, we came to a guided missile destroyer, designed and built by our country, on a news-gathering assignment and saw many cadres and fighters in the prime of life spending their happy youth on the crests and troughs of waves in order to defend the motherland.

Captain Li Changming [2621 2490 2494], an intelligent and capable commander of swarthy complexion, has tempered himself on stormy waves for 28 years as a fighter and a cadre. On a long escort mission in the Pacific Ocean, he led the entire ship's crew to unite and work without letup so that they completed the mission in splendid fashion and for which they were collectively cited for meritorious service, second class.

On the ship there are many fighters who, like Li Changming, contribute their youth to the sea. During a combined formation training exercise, engine crew chief Dai Jinkun [2071 6855 0981] contracted a digestive ailment but still continued to work, not leaving his battle station for 12 hours. Storekeeper Qian Yunhua [6929 0061 5478], when rush-repairing a boiler, made his way into a pipe in which the temperature was over 50 degrees centigrade to do a soldering job. The hot and suffocating boiler and the scorching pipe toasted the hair on his head but he persevered in his soldering for 7 hours and finally made the repair. During a voyage, radar-sonar chief Meng Xiangfu [1322 4382 4395], despite danger to himself, repaired an oil pipe connection. Antiaircraft gun crew chief Li Shuiming [2621 3055 2494] led his crew, while the warship was on a voyage, to diligently aim the crew's guns at flying birds in order to try to find out the patterns of hitting moving targets.... In this way these men provided their respective answers to the question of how to spend one's youth.

Not long ago, the warship conducted guided missile firing in which, from loading, adjusting and firing, it achieved the desired results. It is precisely these beloved fighters who display absolute sincerity in loyalty to the party and to the motherland, who use their intelligence and strength to build an unbreakable "great wall" for the motherland's naval defense. Their youth sparkles on the high seas.

JINAN AIRMEN IMPROVE FLIGHT TRAINING

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 8, 1981 pp 12-13

[Report by Wang Hongen [3769 3163 1869], Liu Wei [0491 3555] and Wu Shouzhung [0702 1108 8369]: "Fighting Eagles Soar in the Blue Sky"]

[Text] From the airfield, one by one the fighting eagles, like arrows released from a bowstring, thrust straight up into the blue sky. This was a difficult tactical training exercise carried out by a certain attack plane unit of the Jinan Air Force.

Last year in every test, this unit obtained the best results since it was formed and set its highest record in total flying time. After the new annual training began, the officers and men gave themselves a new topic: How to keep on "climbing slopes" and set new standards in flying? They conscientiously analyzed the weak links in past training, and concluded that in the past the tactical background provided had been insufficiently complex and that in diving attacks the method of making several dives had been adopted. Although good results were obtained by training in this manner, it was still far removed from the demands of actual combat. In order to train so as to have a perfect mastery of combat skills, they decided to change the former training method by training in hitting the target with the first round on the first dive.

The key to hitting the target with the first round on the first dive are the two links of selecting the diving angle and of grasping the opportune moment to begin firing. In order to solve the difficult problem posed by these two links, deputy group commander Sun Zhongyuan [1327 1813 0337] looked over relevant written materials and linked them to his own flying practice, and wrote down many of his experiences. He also made a light-ring model on which he drew small targets. Using bits of time, he repeatedly practiced--training, experimenting, and calculating--and finally found the ideal data for selecting the correct diving angle and the opportune moment to open fire. At a military training competition organized by the division, he took first place in rocket firing.

GUIDED MISSILE BATTALION CARRIES OUT TRAINING

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 8, 1981 pp 14-15

[Article by Zhang Jucheng [1728 1565 2052] et al.: "We Are Constantly Ready"]

[Text] "We are constantly ready" and "will strike at wherever the party points to!" is the solemn pledge heard at the training ground of the 4th battalion of an unidentified unit [bu] of a guided missile unit.

Recently, the 4th Battalion received orders to undergo training. The testing detachment [fendui] had to check out the closely packed circuits and intricate precision instruments inside the missile fuselage, which required a fairly high level of scientific and technical know-how. At the beginning of the year, because some key technicians had been transferred out for training, the training of new technicians [hao shou [5714 2087]] ran into difficulties. The detachment's chief technician Chen Xiang [7115 3276] confronted the problem and took the initiative to act as an instructor. He purchased such scientific and technical books as "Lessons on Transistors" and "Electrical Engineering," studied diligently and wrote over 130 pages of lesson plans. After the new technicians attended more than 50 hours of classes, they achieved marked improvement in their knowledge of basic theories and specialized fields, which enabled the test work to be carried out successfully.

The launching detachment [fendui] is in charge of numerous specialized tasks and each technician not only has to be proficient in his own work but also has to know other specialized work as well. They have to be expert in one thing and good in many. In order to meet this requirement, they launched activities to work with fuel, electrical and air lines. The cadres and fighters studied hard and quickly mastered the skill of drawing charts of the "three lines" from memory. They also can skillfully handle the work of actual assembling operations. Controller Wang Mingchao [3769 2494 2600] is a typical example. He joined the unit over a year ago, and through rigorous training, is not only able to use the instruments and recite from memory their code names, proper positionings and prescribed values, but also able to perform the operations accurately and swiftly. As a result, the training task was successfully carried out.

PHOTO CAPTIONS

1. Chief technician Chen Xiang [7115 3276] (left) and technician Wang Chunxi [3769 2504 0823], standing fast at their post, check out the missile fuselage's air bottle nipple [connection].

2. Carefully checking out the guided missile to make sure it is in good combat condition.

3. Number 7 technician Han Yunliang [7281 6663 5328] carefully checks out the guided missile for air leaks.

4. Cadres engage themselves in work to attain high quality.

5. Controller Wang Mingchao [3769 2494 2600] conducts vertical tests.

6. The instrumentation squad is conscientiously doing its work to effectively prepare for the launching.

7. Moving on to a new position.

GUANGXI BORDER TROOPS REPULSE VIETNAMESE ATTACKS ON FAKASHAN

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 8, 1981
pp 38-39

[Report from the China-Vietnam border front by Wu Shibin [0702 0013 2430] and Zhao Keming [6392 0668 6900]: "Heroic Fakashan Stands Towering Like a Giant"]

[Text] "The great motherland is not to be bullied, its territory is sacred and inviolable"--this is the pledge taken by the border defense fighters holding their ground at Fakashan in Ningming County, Guangxi. Since 5 May this year, the Vietnamese intruders have fired over 10,000 artillery rounds at our Fakashan area and, under cover of artillery and tank fire, have launched attacks in turn by military forces, ranging in size from company to battalion to regiment, on our position. Our border defense fighters have risen up to counterattack and the intruding Vietnamese soldiers have been duly punished. The position at Fakashan has been held steadfastly.

On 5 May, when the Vietnamese army mounted a fierce intrusion against us, the cadres and fighters defending here, driven beyond the limits of their forbearance, rose up and counterattacked. Deputy company commander Huang Zhaorong [7806 0340 2837] and platoon leader Zhou Kunsheng [0719 0981 516B] led the fighters of the 1st Platoon in fiercely beating back the enemy soldiers charging at their front. Deputy squad leader Li Huaijing [2621 2037 3878] singlehandedly thrust himself into the enemy position and, fiercely firing his submachinegun to the right and left, covered his comrades-in-arms as they completely annihilated the remnants of the enemy forces. Ni Shengdin [0242 516B 7307], leader of the 2d Squad, although deafened by the enemy's artillery fire, still resolutely directed the counterattack by the fighters of his squad, which repulsed several enemy attacks. The 5th Company held fast to its position for 7 days and nights. On 10 May alone, it routed three attacks by a strong company and did not let the enemy advance one step. The company has received a merit citation, first class.

The intruding Vietnamese army, like a beaten, infuriated gambler, before dawn on 16 May launched five successive attacks in regimental strength on Fakashan. One company commander at our position was wounded. At this critical juncture, Liang Tianhui [4731 1131 1920], the commander of another company, stood up and led the cadres and fighters of his company in a rush to the firing line, where he formed a fighting collective with the fraternal unit. With the fire support of our artillery detachment, they fought a fierce battle with the intruding Vietnamese soldiers for 2 hours, during which they routed one enemy attack after another and firmly held their position. In front of our position, the aggressors left behind over 150 corpses.

The idea that the motherland is above everything else shines brilliantly among our border defense fighters. In the face of their victory, they are highly vigilant and are prepared at any time to smash intrusions by the Vietnamese aggressors.

PHOTO CAPTIONS

1. On 10 May, the officers and men of the 4th Company of a certain unit of the Guangxi border defense units beat back several attacks by the Vietnamese army and stood fast at Fakashan.

2. Since the beginning of this year, the Vietnamese army has made many incursions into our Fakashan area, firing rifles and cannons, destroying our villages, and killing the inhabitants of our border area. These are houses of our border inhabitants destroyed by artillery fire, and cattle killed by the Vietnamese army.

3. During the 5 May battle, deputy company commander Huang Zhaorong (right) directed his forces flexibly and decisively, for which he received a merit citation, first class.

4. Mu Jinhua [5459 6855 5478], a fighter of a sapper platoon, bravely and resourcefully removed 51 land mines, thereby opening a passage for our counterattacking forces, for which he received a merit citation, first class.

5. On 16 May, our artillery detachment with fierce fire dealt relentless blows to the Vietnamese aggressors intruding into Fakashan.

6. A certain unit of the Guangxi border defense unit invited heroes of the counterattack battle of Fakashan to deliver reports. On the rostrum from the right: single-handed hero and fighter Yuan Huangao [5913 3562 7559], recipient of a merit citation, first class; deputy squad leader Li Huaijing, recipient of a merit citation, second class; and political instructor Deng Mingzhi [6772 2594 1807].

7. A fighter of the 4th Company during a lull in the battle writes in his diary, recording the new crimes of the enemy and expressing his steel-like determination.

8. Fighter of the mess squad preparing food at Fakashan to insure that their comrades-in-arms at the forward position have plenty of good food to eat.

YUNNAN BORDER TROOPS WIPE OUT VIETNAMESE INTRUDERS AT KOULIN

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 8, 1981 pp 40-41

[Report from the China-Vietnam border front by Zheng Jian [6774 0256] and Bing Xin [0393 2450]: "Koulin Relentlessly Annihilates Intruders"]

[Text] During the battle of defensive counterattack against the intruding Vietnamese army at the Koulin area of Malipo County in Yunnan, the border defense units fought a fine battle of annihilation.

On the morning of 7 May, a company of the Vietnamese army intruded into our Koulin area and frenziedly plundered and destroyed, actions which aroused the furious indignation of our border defense fighters. When attacking enemy-occupied Hill No 15, artillery squad leader Zhang Yushai [1728 6460 3189] grabbed a submachinegun from a comrade-in-arms and, charging while firing, was the first to fight his way up the hill. Platoon leader Luo Zhiqiang [5012 1807 1730] led a combat team to go around the enemy firing point and swiftly and suddenly rush up to a commanding height in the enemy's rear, from where it engaged the enemy at close quarters.

"For the honor of the motherland"--this was the lofty belief of the warriors of Koulin during the battle and was also the source of the strength of the officers and men in vanquishing the enemy. New fighter Luo Dongcheng [5012 2639 2052], just turned 17, inserted himself alone into the rear of the enemy position and was immediately surrounded by three Vietnamese soldiers. Without the slightest trace of fear, he met the enemy attack calmly and, agilely and cleverly making use of terrain features, shot dead the three enemy soldiers. Deputy company commander Wang Guangjun [3769 0342 0193], in the battle in which the Vietnamese soldiers occupying a certain hill of ours were attacked, was approaching the enemy's forward position when a land mine exploded. Turning, he pushed fighter Su Fachen [5685 4099 3791], who was behind him, down to the ground and protected the comrade-in-arms with his own body. When he charged the position he clutched his submachinegun and threw hand grenades and fired the gun in alternation, firing at point-blank range on the first charge. The fighters, following the route opened up by deputy company commander Wang, with one vigorous effort charged up the hill. In the 1979 war of self-defensive counterattack against Vietnam, Wang had taken captive six enemy soldiers, for which he received a merit citation, second class. He has now again distinguished himself in action.

With the support of people of all nationalities in the border region, the fighters have obtained one victory after another. In this battle the aggressor received due punishment: over 100 corpses of Vietnamese soldiers were left behind on our side of the border, and a batch of the Vietnamese army's weapons and equipment were captured by our army.

PHOTO CAPTIONS

1. On 7 May, in the battle of counterattack in the Koulin area of Malipo County, our border defense fighters swiftly leap forward.
2. People of all nationalities in the Koulin area transport goods and materials to a border defense company.
3. On the morning of 7 May, our artillery detachment bombards the intruding Vietnamese soldiers.
4. Officers and men of the 1st Company day and night hold fast to their position on Koulin Mountain.
5. Fighter Wu Liangbao [0702 5328 0202], who singlehandedly circled around the enemy's rear and shot dead four enemy soldiers and blew up an enemy firing point, for which he received a merit citation, first class.
6. Border defense unit of the Koulin area search for dead enemy troops on the ground it recaptured.

POLICY TOWARD THIRD WORLD SAID TO BE UNCHANGED

Beijing LIAOWANG [OBSERVATION POST] in Chinese No 8, 20 Aug 81 p 37

[Article by Shen Yi [3088 0044]: "China Belongs to the Third World Forever"]

[Text] The leader of an African country recently visited China. He frankly said that he had heard that China was "blaming" Chairman Mao (the West propagated the idea that China was carrying out "de-Maoization") and had changed its foreign policy. This worried him very much. His apprehension had its cause. If Chairman Mao were being denigrated in a comprehensive manner, then the correct foreign policy he formulated would also be denigrated. Chairman Mao resolutely opposed hegemonism, resolutely supported the anti-imperialist and anticolonialist struggles of the people of various Third World countries; this had already deeply struck roots in the hearts of the people in the Third World. After Chairman Mao's death, was China going to continue to stand with the people of the Third World?

Chairman Mao's strategy of differentiating the three worlds was correct. China will never become a hegemonistic power; China belongs to the Third World forever. We want to continue to adhere to the foreign policy Chairman Mao formulated in his late years. Therefore, clarification of this point is very important to the people of Third World countries, and also very important to the people of China.

China's Policy Toward the Third World Has Not Changed

One of the questions about which the people of the Third World are concerned is the following: Since China is developing relations with the United States and other developed countries, does it oppose only Soviet hegemonism but no longer imperialism and colonialism?

The fact that China is opposing hegemonism jointly with some Western countries does not imply that it no longer supports the struggles of the people of the Third World or that it now ignores the interests of the oppressed nations. Conditions in Third World countries vary: some are suffering from Soviet hegemonistic expansionism, some regard the United States or other countries as their main threat, and some are still struggling against racist rule or Israeli expansionism and for national independence and liberation. As in the past, China will firmly stand on the side of the oppressed nations and peoples, oppose aggression and interference in Third World countries by external forces, firmly support their struggles to maintain their national independence and develop their national economies, and firmly support their struggles to oppose imperialism, colonialism and hegemonism.

China's development of relations with the United States is not the same as supporting certain of the latter's erroneous policies toward Third World countries. The United States shows partiality in siding with Israeli and South African racism, supports South Korea in hindering Korea's reunification, and interferes with the internal affairs of certain countries, including China. All this is opposed by China. China maintains an independent and self-reliant foreign policy; this is not equivocal by any means.

China carries out economic exchanges with certain developed countries and absorbs certain advanced technology and capital from foreign countries. This benefits the construction of our socialist modernization; but China remains an underdeveloped country and is in the same situation as those developing countries which import foreign technology and take out foreign loans; it encounters many problems similar to theirs in the development of its national economy. China wishes to struggle together with other Third World countries for the establishment of a new international economic order.

China is still very poor today; its ability is often unequal to its ambition in wishing to render support to certain Third World countries. When China has made a success of its economy and when its national capabilities become stronger in the future, it will be able to take on more obligations toward certain countries of the Third World which are in difficulty and also to increase its contribution to the forces in defense of world peace. We have always been of the opinion that the construction of China's four modernizations constitutes not only a patriotic cause but also an internationalist cause.

Strengthen the Unity of the Third World

There are also some who are afraid of the unity between China and the Third World and who have therefore been manufacturing rumors and attempting to incite them to contention and drive a wedge between them.

The Soviet Union and Vietnam, for instance, are the ones that have fabricated the theory of the "China threat," alleging that China "threatens" its neighbors and the countries in Southeast Asia. Actually, China does not have a single soldier abroad, but it faces the Soviet Union, which deploys 1 million soldiers in the north, and Vietnam, which continues to fire its guns in the south; the one being threatened is China. Vietnam has sent its soldiers into Kampuchea and it controls Laos; the countries being threatened are indeed those of Southeast Asia. These are all facts for everybody to see, and the charges are unworthy of any refutation. The Soviet and Vietnamese big and small hegemonisms, in creating rumors to frighten others, are banking on nothing except driving a wedge in the relations between China and the Southeast Asian countries and thereby weakening the antihegemonist forces. This simply cannot be done. But from this we can well see, on the other hand, that the Soviet hegemonists are very much afraid of the unity between China and the Third World countries; this reminds us that we must treasure this unity very much.

There are also some who frighten others with the Chinese Communist Party. This is a replay of Dulles' old tune. That the Chinese believe in communism is China's internal affair. The Chinese revolution was not imported from abroad, nor will it be exported to foreign countries. The path a country selects is that country's own affair, and has nothing to do with China. As for China, precisely because of the leadership provided by the Communist Party, it was able to achieve independence and liberation, it was able to oppose powerful countries and advocate fairness in international struggles. The China led by the CCP is the enemy of hegemonism; only hegemonism encroaches upon other countries' sovereignty and territories and endangers world peace.

China has always taken the Five Principles of Peaceful Coexistence as the norm in handling international relations; China is determined not to interfere with other countries' internal affairs; it advocates equality between big and small countries alike, opposes the manhandling of the weak by the strong, and never imposes anything on others. China has a very outstanding reputation in international intercourse.

Another leader of an African country gave a talk in Beijing on his country's experience. He said: We believe China entirely, because China provides aid only according to other countries' needs and never interferes with other countries' internal affairs; but the Soviet Union single-mindedly concentrates on its ambitions, its hegemony and its world strategy. The country that first recognized this fact was China. You have reminded many countries, so that they are now prepared. We are China's old friend, and sometimes we have also received "aid" from the Soviet Union, but the "aid" from the Soviet Union somehow is always accompanied by interference.

From this we can see that it is completely useless for anyone to frighten others with the China "threat" or "Communist China." As for the question of whether when China becomes rich and strong it will also commit aggression against others, China has already declared that it will never become a hegemonic power. One who adheres to Marxism is not prone to doing things beneficial to himself and detrimental to others.

USE CARE IN COMPARING ACHIEVEMENTS OF CHINA, WEST

Beijing BANYUETAN [SEMIMONTHLY TALKS] in Chinese No 16, 25 Aug 81 pp 14-15

[Article by Zhou Zhixing [0719 1807 5281]: "Horizontal Comparisons and Vertical Comparisons"]

[Text] Some persons say that when young people survey China's economy, they like to make horizontal comparisons; comparing China with the economically developed capitalist nations, they feel that the accomplishments have not been all that great and that the socialist system is not all that superior. The older generation, however, likes to make vertical comparisons; comparing China with the historically older China, they feel that the accomplishments have been great and that the socialist system is much superior.

I think that they exaggerate the difference between the ways the "two generations" look at issues. In fact, although there are some among the older generation who only "make vertical comparisons," they are few in number, and although there are some among the young people who only "make horizontal comparisons," they are not numerous. What is worth noting is that there are actually a few people who use the pretext of "making horizontal comparisons" with present-day society to deny the superiority of the socialist system, and this view can readily deceive young people.

In analyzing anything, one should look at its relationship to other things as well as look at the changes within the thing itself. In talking about a nation's socialist system, one should both make horizontal comparisons and vertical comparisons and combine the "horizontal comparison" and the "vertical comparison."

First of all, one should consider that a long period of feudal control and imperialist aggression made China's social production backward and the people's standard of living impoverished. China's socialist system was built on this foundation. If you take this as the point of departure for making comparisons, you can see that the achievements in construction in new China in the 32 years since its founding have been enormous, and that the position of the people's government and the improvements in the standard of living are unprecedented. If you depart from this historical fact and just use China's present condition to make a so-called "horizontal" comparison with the developed capitalist countries, then you cannot come to a correct conclusion. This comparison is as unreasonble as ridiculing a man recently cured of a long illness for not being as strong as an athlete.

Secondly, when making "horizontal comparisons" you should note that comparability of facts and things in common are preconditions for comparing the two facts. When comparing nations, you should look at the national situations. If the national situations are different, then there is no way they can be compared. Some people compare China with such economically developed countries as the United States and Western Europe and [nations], as a result they become very dejected. The population of these countries is small, the average amount of arable land per person is large, and they began early to develop industrially. If you were to set aside these factors, how could you explain the problems in comparing steel output, scientific and technical levels, and standards of living? If you compare our national situation with that of similar countries (such as India), then you can see that China's level of productive forces and standard of living is superior to theirs. Of course, this is not to say that you cannot compare production levels and living standards with those of developed countries. But in the comparison, you should not forget China's situation or underestimate its capabilities, but should look at the difference and further intensify the urgency of the "four modernizations."

Thirdly, in carrying out "horizontal comparisons" you should mainly compare the rate of economic and cultural development. In the 32 years since the founding of the PRC, although we have suffered destruction from imperialism, hegemonism, and the counterrevolutionary cliques of Lin Biao and Jiang Qing, we ourselves have committed many errors and now must carry out an economic readjustment. Nevertheless, in the past 32 years the rate of China's economic and cultural develpment has still exceeded that of the majority of capitalist countries. This is a demonstration of the superiority of the socialist system.

Fourthly, in comparing the weaknesses of the socialist system, you cannot look just at material things, but you must also look at spirit. Some people are dazzled by the gaudy material life and colorful high-quality goods of capitalism and do not make a conscientious study, so they come to a ready conclusion and say that "capitalism is better than socialism." They do not see that the capitalist system creates its own maladies which it cannot overcome, and that these maladies become more outstanding daily. Take the United States for example. The United States can send rocketships to the moon and have every family possess a car and an electric refrigerator, but it cannot resolve the daily more serious social problems of robbery, murder, drugs, and suicide. Although such a society has a high standard of living materially, can the people have many blessings to speak of? Of course, China's productive forces are not developed and the people's standard of living is not high, but the lives of the people are protected, their spirit is full of vitality, and society is stable. In the long view, it has even brighter prospects ahead.

As long as you pursue "horizontal comparisons" and "vertical comparisons" in seeking truth from facts, you can come to the correct conclusions: 1. Although we have had several setbacks, our accomplishments since the founding of the PRC have still been enormous and are proof that the socialist system is vigorous and superor. 2. Compared with the developed capitalist countries, China's present economic and cultural level still is pretty far behind, and we must struggle to catch up. 3. There is only one way to revive China, and that is, under the leadership of the CCP, to summarize the lessons of historical experience, uphold the socialist road, and fully develop the superiority of the socialist system.

Parochial arrogance is ridiculous; loss of confidence is tragic.

MEANING OF SPIRITUAL CIVILIZATION DISCUSSED

Guangzhou NANFANG RIBAO in Chinese 7 Sep 81 p 4

[Article by Ji Buwu [0679 1580 2976]: "An Elementary Talk on the Content and Characteristics of Spiritual Civilization"]

[Text] It is pointed out in the "Resolution on Certain Questions in the History of Our Party Since the Founding of Our State": "Socialism must have an advanced spiritual civilization." This is a scientific conclusion derived by our party according to the fundamental principles of Marxism-Leninism and the practical experience of socialist construction. For many years in the past, because we were subject to the influence of leftist mistakes in our work, and especially because of sabotage by the Lin Biao and Jiang Qing counterrevolutionary cliques, the building of our socialist spiritual civilization encountered considerable interference. Our study of socialist spiritual civilization was also inadequate theoretically. Today, the people of our country face the great task not only of building an advanced material civilization but also of building an advanced spiritual civilization. Therefore, theoretically strengthening our study of socialist spiritual civilization will doubtless be of great significance to the promotion of the construction of our modernization.

In the general sense, the so-called spiritual civilization means the state of progress concerning man's intelligence (education, science, culture, etc) and ethics (ideals, beliefs, sentiments, customs, etc). Man's social development has had its own intellectual and ethical content in each period of civilization. Then what is the "advanced spiritual civilization" we are talking about? In his speech in celebration of the 30th anniversary of the founding of the People's Republic of China, Comrade Ye Jiangying said: "Along with the building of an advanced material civilization, we must at the same time improve the educational, scientific and cultural level and the health level of the whole nation, establish lofty revolutionary ideals and revolutionary moral customs, develop a noble, rich and colorful cultural life, and build an advanced spiritual civilization." At the central work conference at the end of 1980, Comrade Deng Xiaoping pointed out: "The so-called spiritual civilization does not just mean education, science and culture (these are entirely necessary), but also communist ideas, ideals, beliefs, morality, discipline, a revolutionary stand and principles, comradely relations between men, etc." This means that the socialist spiritual civilization mainly includes: a highly developed educational, scientific and cultural level, a Marxist worldview, lofty revolutionary ideals and communist moral customs, strict organizational discipline, a firm revolutionary stand and principles, comradely relations between men, a patriotic spirit and the spirit of building an enterprise through arduous effort.

In the past, a certain point of view held that socialist spiritual civilization mainly meant communist morality; this was incomplete. Because, if we take the term "civilization" alone, its content already includes material civilization and spiritual civilization, both of which indicate the state of progress of human society in contrast to "barbarity"; both of them encompass their respective highly rich content and are relatively independent of each other. Hence, insofar as spiritual civilization is concerned, it falls far too short to take morality as its main content and to have it reflect human society's state of progress in the aspect of its spiritual civilization. Spiritual civilization should include such important content as education, science and culture.

Another point of view held that education and science constituted productive forces and that it would be inappropriate to place them in the realm of spiritual civilization. Actually, education and science may well be placed in the realm of spiritual civilization. Education includes both the education of man in reproduction through labor power, which itself belongs to the category of productive force, and the education of man in his thinking, art, etc, which properly belongs to the realm of spiritual civilization. Marx said: "In order to change man's original nature, to enable it to acquire techniques and skills of a given labor unit and develop into a proficient and specialized labor force, we must have definite education or training" ("Complete Works of Marx and Engels," Vol 23, p 195). This shows that when Marx spoke of education he meant something very specific, he spoke of it in conjunction with the factor of productive force in terms of "labor force." Hence, we cannot negate education because of this; in a sense, education may also be included in the realm of spiritual civilization.

From the dialectical-materialist point of view, spiritual civilization came into being only along with the development of man's productive forces up to a certain degree, and it also develops along with the development of such productive forces. Engels divided the development of human society into three periods: the unenlightened period, the barbaric period, and the civilized period. He said: "The civilized period is one in which man learns about further processing of natural products and one in which real industry and art come into existence" ("Selected Works of Marx and Engels," Vol 4, p 73). The various forms of human society are bound to have a spiritual civilization corresponding to their respective characteristics. What we have mentioned as "advanced spiritual civilization" is precisely the inevitable result of human society developing to the socialist stage and also the result of the forward development of man's spiritual civilization. What are the characteristics of socialist "advanced spiritual civilization"? I think there are mainly two:

First, "advanced spiritual civilization" is the term for the advanced development of socialist spiritual civilization. That is to say, in terms of the prescription of its quality, it is of a socialist nature; this is fundamentally different from that of spiritual civilizations of all social forms prior to the capitalist society. In terms of the prescription of its quantity, it is not a low spiritual civilization but a highly developed socialist spiritual civilization.

Second, "advanced spiritual civilization" has Marxism as its own guiding ideology. Building an "advanced spiritual civilization," in the final analysis, is to foster and train socialist new men, and the formation of such new men's communist ideology and the cultivation of their communist morality also cannot depart from the guidance of Marxist theory. If it were separated from Marxism, socialist spiritual civilization would lose its own scientific foundation and people would lose their direction of advancement and destination. Hence, we can see that Marxism is the ideological foundation for building an advanced spiritual civilization.

'CULTURAL REVOLUTION' DEEMED NOT ALL MAO'S FAULT

Harbin XUE LI LUN [STUDY THEORY] in Chinese No 8, 1981 p 14

[Article: "How Should We Understand the Complex Social Historical Factors Leading to the Outbreak and Continuation of the 'Great Cultural Revolution'?"]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" points out that aside from being the direct result of Comrade Mao Zedong's errors in leadership, the "Great Cultural Revolution" was also the result of complex social historical factors which gave rise to it and allowed it to last as long as 10 years. The "Resolution" has made a penetrating and comprehensive exposition and analysis of these social historical factors.

To earnestly study these discourses in the "Resolution" is absolutely necessary. Some of our comrades are prone to see only the direct cause--Comrade Mao Zedong's mistakes--and fail to see the complex social historical factors. Therefore, they attribute the mistakes to an individual, or even try to search for roots from the quality of the leader himself. An understanding like this is obviously erroneous.

Lenin pointed out that the reason why the theory of historical materialism is correct is "precisely because of its approach, which stipulates in a most precise and affirmative way that an individual factor is in the end of social origins." Historical figures might have played an important role in social development, but it does not mean that history can be created by a certain individual. It is a mistake to attribute all historical achievements to the "historical heroism" of an individual. Similarly, it is also erroneous to attribute the causes of historical setbacks to him because it runs counter to historical materialism. We must always go beyond the individual factor to analyze the underlying complex social historical factors.

The general trend of the history of human society is to move forward in accordance with its own intrinsic laws, and the rise of every particular historical event is the result of actions of many factors. Consequently, the course of history is a complex and lively one. Engels firmly felt that the development of history will under no circumstances be motivated by a certain kind of "sole decisive factor." Even if we are talking about the economic factor, which is the most important social factor, it is not permissible to regard it as the "sole decisive factor." He told us that history is manifested as the interaction of many factors, which are economic, political, legal, philosophical, or religious, etc., is expressed in the conflicts of many different wills, and is moving forward under such complex interactions. "As a result, there are innumerable interrelated forces and parallelograms which will give rise to a general historical outcome and that is called a historical event."

Judging from this, when we analyze such an important historical event as the "Great Cultural Revolution" or evaluate such a great historical figure as Comrade Mao Zedong, we can no longer attempt to search for a certain kind of "sole decisive factor" and thereby regard Comrade Mao Zedong's mistakes as the sole cause, but rather we must notice a great many of the "interrelated actions" of social historical factors and analyze social historical causes.

Just as it has been pointed out in the "Resolution," social historical causes comprise various aspects such as: that the history of our socialist movement is not a long one and many more laws remain to be formulated; that our party has long been influenced by the historical conditions in our country; that certain conceptions and arguments of Marx and Lenin have been misinterpreted or dogmatized; that we are also influenced by some international factors; and that some people as Lin Biao, Jiang Qing and Kang Sheng, harboring ulterior motives, made use of the errors of our party and inflated them, and so forth. As Engels said: "even the traditions which exist in our minds may produce certain effects on us, although they may not necessarily be decisive." Because of the effects exercised by the feudal traditions which have been shaped over a long period of time, it also is impossible for us to prevent the phenomenon of personality cult from arising or to have it checked. "The interaction among all these factors" has constituted the complex social historical cause which gave rise to the "Great Cultural Revolution." Only by getting a clear understanding of these complex factors can we correctly evaluate the historical role of Comrade Mao Zedong and Mao Zedong Thought in order to clearly understand that Mao Zedong's mistake was, after all, the error of a great proletarian revolutionary, and realistically sum up the historical experiences and lessons so as to avoid recurrence of the tragedy of the "Great Cultural Revolution" and to ensure that the cause of socialism will move forward smoothly.

INCORRECT ATTITUDES TOWARD MAO ZEDONG THOUGHT DECRIED

Harbin XUE LI LUN [STUDY THEORY] in Chinese No 8, 1981 p 21

[Article: "Why We Are Opposed to the Two Incorrect Attitudes Toward Mao Zedong Thought?"]

[Text] On the question of how to treat Mao Zedong Thought, two incorrect attitudes have been pointed out in the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China."

One is the attempt to negate the scientific value of Mao Zedong Thought and its guiding role in the revolution and construction of our country just because Comrade Mao Zedong made mistakes in his later years.

The other is the practice of adopting the attitude of turning the words of Comrade Mao Zedong into dogma, thereby regarding whatever Comrade Mao Zedong said to be unalterable truth only to be repeated and copied blindly as is, or even the unwillingness to realistically admit the fact that Comrade Mao Zedong made mistakes in his later years, attempting instead to uphold these mistakes in new practices.

Why we are opposed to these two attitudes? The reasons are:

First, both these attitudes fail to distinguish Mao Zedong Thought, a scientific theory shaped through protracted historical trials, from the mistakes made by Comrade Mao Zedong in his later years, yet a distinction here is absolutely necessary. Mao Zedong Thought, coming into being and developing in the course of the Chinese revolution, is the crystallization of the collective wisdom of our party and a summing-up of the victories in the gigantic struggles of the Chinese people.

Of course, Comrade Mao Zedong made mistakes in his later years, however, we must distinguish these mistakes from Mao Zedong Thought. To question or negate Mao Zedong Thought just because of these mistakes would be, in fact, to question or negate the glorious image of the party, and that would lead to a gross historical error. On the contrary, it is not correct either if it is assumed that the mistakes of Comrade Mao Zedong also belong to the realm of Mao Zedong Thought and should not be redressed.

Second, both of these two erroneous attitudes are the results of metaphysical, subjective and one-sided mistakes made from different angles. According to these two erroneous attitudes, it seems that "a great leader will never make mistakes," or "once he makes mistakes, he is no longer a great leader." Using these attitudes as a basis to study problems "is to use isolated, static and one-sided viewpoints to look at the world." It denies the motion, change and development of things and looks upon everything in the world as isolated from each other and never changing. Even though they are different in forms of expression, they are essentially the same, that is to say, metaphysical and one-sided. In order to correctly evaluate the historical role of Comrade Mao Zedong and Mao Zedong Thought, the scientific attitude of dialectical materialism and historical materialism must be adopted. His mistakes cannot be concealed because of his immense contributions and, similarly, his immense contributions cannot be obliterated nor can Mao Zedong Thought be denied because of his mistakes. Only by seeking truth from facts to affirm the historical role of Comrade Mao Zedong and Mao Zedong Thought can the cause of socialism in our country go forward smoothly.

RETURN OF TAIWAN SAID TO BE INEVITABLE TREND

Guangzhou NANFANG RIBAO in Chinese 1 Oct 81 p 1

[Report: "Return of Taiwan to the Motherland Is the Trend of the General Situation and the Direction of People's Expectations--Provincial CPPCC Convened a Forum of Personalities of Various Circles Yesterday To Express Support for Chairman Ye's Talk and Indicate Readiness to Make Contributions to the Unification of the Motherland"]

[Text] Yesterday afternoon, the provincial Chinese People's Political Consultative Conference convened a forum of personalities of various circles to hold discussions on Chairman Ye Jaingying's talk on a further explanation of the return of Taiwan to the motherland and the principles and policies for realizing peaceful reunification.

The forum was presided over by Zhang Boquan [1728 3124 3123], head of the united front department of the Guangdong Provincial CCP Committee and deputy chairman of the provincial CPPCC.

Participating in the forum were responsible persons of the provincial CPPCC, the provincial office of councilors, the province's various democratic parties and groups, and the industry and commerce association, plus the original KMT uprising generals.

Speaking at the forum at various times were: Chen Yilin [7115 0122 2651], Cheng Yiming [4453 0001 7686], Zeng Tianjie [2582 1131 4634], Li Jizhi [2621 3381 0037], Wu Zhongxi [0702 0112 4406], He Baosong [0149 1405 2646], Zheng Jingying [6774 2533 3853], Zhang Bochuan [1728 0130 2938], Wu Juetian [0124 6030 1131], Chen Zupei [7115 4371 3099], Yur Han [7189 3352], Zhang Zianqi [1728 7359 1477], Chen Zibin [7115 1311 1755], and Hu Weifu [5170 0251 1133]. They said that Chairman Ye's talk further explained the principles and policies on Taiwan's return to the motherland and the realization of peaceful reunification; these are now even more clear and more concrete than the great policy principle on achieving the peaceful reunification of the motherland pronounced in the 1977 New Year's Day NPC Standing Committee "Message to Compatriots in Taiwan." They not only reflect the wishes of the mainland brothers but also the wishes of the Taiwan brothers, the Hong Kong and Macao brothers and the overseas brothers. The speakers said they completely uphold and firmly support these principles and policies.

They held that Taiwan's return to the motherland and accomplishment of the great cause of the motherland's reunification are the trend of the general situation and the direction of people's expectations, constituting an irresistible historical tide. Chairman Ye's talk is bound to promote the development of this tide even more forcefully. They expressed the belief that after the Taiwan brothers listened to the broadcast of this talk, they are bound to promote the great cause of the motherland's reunification with even greater enthusiasm and greater courage. They hope that the Kuomintang authorities will put national interests above everything else, forget previous ill will, and join hands with us in accomplishing the great cause of national reunification for the benefit of our posterity and the glory for our nation.

Those comrades who made these statements also indicated that they definitely will make contributions toward the return of Taiwan to the motherland and the accomplishment of the great cause of the motherland's reunification.

EXERCISE OF LITERARY CRITICISM STRESSED

Shenyang YALUJIANG WENXUEYUEKAN [YALUJIANG LITERARY MONTHLY] in Chinese No 6, 1981 pp 71-72

[Article by Liu Xiaoyan [0491 2400 3508]: "Literary Criticism and the 'Double-Hundred' Principle"]

[Text] "Literature and art must have criticism." This statement made by Lu Xun 46 years ago is fully true today.

Literary criticism is one of the principal methods of struggle used in literary circles; it is an important means by which the prosperity and healthy development of literary creation is guided and promoted. Literary criticism and literary creation are two mutually supplementary and complementary aspects in the literary realm, neither of which can be dispensed with. In order to insure that literature does not deviate from the direction of serving the people and serving socialism, and in order to help readers and audiences improve the level of their appreciation so as to better demonstrate the social functions of literature and art, we must regularly exercise literary and artistic criticism.

Some comrades put literary and artistic criticism in opposition to the "double-hundred" principle. They can accommodate little critical opinion, as they will only permit people to say good things about their works but not bad things, and when they hear someone say something bad, they immediately allege that that person is swinging the stick. Such a viewpoint and attitude are very wrong.

In implementing the principle of "letting a hundred flowers bloom and letting a hundred schools of thought contend," we must of course guarantee for literary and artistic workers a wide world of individual creativity and individual taste to the maximum, a wide world of ideas and fancies, form and content in their works; but implementation of this "double-hundred" principle means, at the same time, not abandoning the necessary ideological and artistic struggle, not dismissing the theoretical foundation of Marxism, and not dismissing the four basic principles. No one can understand the "double-hundred" principle to mean lacking in all scruples and doing whatever one pleases or to mean bourgeois liberalization. When we implement the "double-hundred" principle, we must allow both a hundred flowers to bloom and a hundred schools of thought to contend; we must allow both free development and free discussion. In order to discuss and contend, we must allow the expression of different opinions; we must allow readers, audiences and critics to criticize the product. This shows that launching literary and artistic criticism is an intrinsic part of implementing the "double-hundred" principle. It is entirely wrong to oppose literary and artistic criticism under the pretext of implementing the "double-hundred" principle. At present, in particular, it appears to be especially necessary to carry out appropriate criticism against a certain leftist trend and liberalization tendency in literary and artistic creation. Only when literary and artistic criticism is developed can literary and artistic thinking become lively and literary and artistic creation advance along a healthy course. "If people's mouths are shut in all cases and then it is said that the literary circles are now clean, the results will be contrary to what is attempted" (Lu Xun: "Decorative Literature: Occasional Notes from Reading (3)"). With regard to problems which appear in literary and artistic creation, especially tendentious problems, if they are not pointed out in time and subjected to discussion and solution, the direction of literature and art serving the people and serving socialism is liable to be affected. In a word, repulsing and tending to resist the exercise of literary and artistic criticism is altogether unwholesome.

On the other hand, we should also see that there really are some comrades who forget all about the "double-hundred" principle when they talk about launching literary and artistic criticism. They take a single point as the whole front, and replace the whole with a part, talking as if the literary and artistic situation in the 4 years since the smashing of the "gang of four" has been all bad; they have developed a special sensitivity toward "the stick" and they easily turn a literary and artistic issue into a political issue involving whether or not the work should be denigrated. Such an attitude is also unwholesome.

Comrades with this kind of attitude do not understand that our literary and artistic criticism is conducted under the guidance of the "double-hundred" principle. This kind of literary and artistic criticism follows literary and artistic laws, observes literary and artistic democracy, stresses the scientific attitude, and adheres to the principle of seeking truth from facts. It should be fully based on persuasion and not on simplification and crudeness, arbitrariness and tyranny; it should follow the democratic mode of discussion and not resort to administrative orders by using power to suppress others; it should criticize in order to help others and not resort to sarcasm and ridicule, abuse and attack. In particular, literature and art in these few years have basically followed and implemented the principles and line of the Third Plenary Session of the 11th Party Central Committee and in general have maintained the four basic principles. In the face of such a basic fact, our literary and artistic criticism should further recognize that along with the identification of problems, it must at the same time not deny the good situation on the literary and artistic front. The literary and artistic history of the more than 30 years since the founding of our state has suffered enough from the subjective and arbitrary, simplistic and crude type of literary and artistic criticism; we must seriously remember this lesson and never tread the fallen track again. The "double-hundred" principle is a long-term, fundamental principle; even when some works exhibit defects and faults or get into serious problems, we should still not doubt, shake or violate this principle. At present, when we are proceeding to solve certain problems in literature and art, we must likewise not forget this principle. The tasks of literary and artistic criticism under the guidance of the "double-hundred" principle include criticism of what is bad and also affirmation of what is good; they include pointing out existing problems and also summing up results already achieved. As Lu Xun said: "The duties of a critic are not just to eliminate bad weeds but also to water good flowers" ("The Huagai Collection: Not Just Idle Talk (3)"). In fulfilling his duties, a critic should not emphasize one at the expense of the other.

Comrade Mao Zedong pointed out in his "Talk at the Yan'an Forum on Literature and Art": "Literary and artistic criticism is a complicated question; it requires many specialized studies." Today, some comrades who like to dally with criticism not only lack specialized studies in respect to literature and art but also lack basic cultivation in literary and artistic theories. Their literary and artistic criticisms often do not proceed from the works themselves or from life but from their own likes and dislikes, from political concepts. This kind of literary and artistic criticism tends easily to deviate from the "double-hundred" principle. Similarly, certain comrades who are engaged in creation only like to talk about "relaxation" and do not like to hear criticism; they, too, are liable to deviate from the course of the four basic principles. Whether they are comrades who dally with criticism or comrades who are engaged in creation, all should seriously learn some Marxist fundamental theories in literature and art, seriously learn something about the party's series of principles and policies concerning literature and art, so as to improve the level of their literary and artistic criticism or their literary and artistic creation.

People's authors and critics, make your positive contributions for literary and artistic prosperity and development in the new era of socialism!

CRITICISM OF BOURGEOIS LIBERALIZATION ADVOCATED

Nanjing XINHUA RIBAO in Chinese 16 Sep 81 p 3

[Commentary by Ling Feng [0407 1496]: "We Should Solemnly Criticize the Tendency of Bourgeois Liberalization"]

[Text] Li: Since the Sixth Plenary Session of the 11th Party Central Committee, the whole party has been studying the "Resolution on Certain Questions in the History of Our Party Since the Founding of Our State" in order to further unify our thinking and unite ourselves together with the "Resolution"and look forward. Today, the national forum on problems on the ideological front suggests that we must change the state of laxity and feebleness that prevails in our ideological and political leadership and dare to criticize and overcome various erroneous tendencies, especially the tendency of bourgeois liberalization. Is this consistent with our study and implementation of the spirit of the document of the Sixth Plenary Session?

Wang: It is consistent, and the two are not in contradiction to each other. Because the "Resolution" passed by the Sixth Plenary Session points out: "The fundamental purpose of our summing up of the 32 years of historical experience since the founding of our state is to proceed on the basis of the four basic principles of adhering to the socialist path; adhering to the people's democratic dictatorship, that is, the proletarian dictatorship; adhering to Communist Party leadership, and adhering to Marxism-Leninism and Mao Zedong Thought to further concentrate the will and strength of the whole party, the whole army and the people of various nationalities of the country under the great goal of building a socialist modern power." For this reason, the "Resolution" also points out: "We must correctly use the weapon of criticism and self-criticism to overcome the various erroneous ideas which deviate from the party's correct principles." We should say that since the smashing of the "gang of four," and especially since the Third Plenary Session of the 11th Party Central Committee, conspicuous results have been achieved on the ideological front, including such aspects as literature and art, theory, news and publications. But we cannot but see that there have also appeared tendentious problems worthy of our attention, of which the more salient at present is the tendency of bourgeois liberalization. We still recall that after the Third Plenary Session, the party Central Committee immediately pointed out: Along with the continued emancipation of our thinking and the cleansing of leftist influence in our guiding ideology, we must at the same time prevent and overcome the tendency of liberalization deviating from the four basic principles. Since that time, some comrades continue to violate the four basic principles. At present, in certain departments and certain localities, leadership on the ideological front still exhibits certain tendencies of simplification and crudeness; this cannot be overlooked or denied. But what calls for our greater attention is the fact that a state of laxity and feebleness prevails in the ranks of such leadership, which have not forthrightly carried out correct criticism and the necessary appropriate struggle with respect to the tendency of liberalization with regard to the four basic principles. This has to do not just with individual departments or localities, but constitutes a rather general problem. The national forum on problems on the ideological front convened by the party Central Committee was designed precisely on the basis of the spirit of the "Resolution" to proceed from the actualities on the ideological front at present, emphasize the need to strengthen the party's leadership on the ideological front, and use the weapon of criticism and self-criticism to overcome the erroneous tendency of deviating from the four basic principles. It is an important means to implement the spirit of the Sixth Plenary Session and an inevitable continuation of the spirit of the Sixth Plenary Session; it is entirely consistent with implementing the spirit of the "Resolution."

Li: Please explain what is meant by bourgeois liberalization, and what are the outstanding manifestations in this regard?

Wang: Bourgeois liberalization is an erroneous trend of thinking in violation of, and in opposition to, the four basic principles; its concentrated manifestation is a tendency to deviate from the socialist course and from party leadership, and its core is opposition to party leadership. In ideological circles, some put emancipation of our thinking and the double-hundred principle in opposition to the four basic principles; they take the four basic principles as "four restrictions" or "four sticks"; they take all instances of leadership and guidance as "fetters," and hold that expression and the press must be "absolutely free." For quite a while now, some people have been slandering party leadership, smearing socialism, and disparaging Mao Zedong Thought through writing articles and giving speeches to youths and similar forms' they talk as if our party and socialist system are devoid of any merit, and they even openly propose to "break through the four basic principles." Some trumpet the idea that the New China is not as good as the old China and socialism is not as good as capitalism, disseminating the strange theory that "you love your motherland, but your motherland does not love you." Some entirely deny the results achieved during the 32 years since the founding of our state, alleging that what we have been working on is not scientific socialism but agricultural socialism or even feudal socialism; or they take words and phrases out of the context of Marxist-Leninist works and select only some of them to prove that the so-called three great transformations "were handled erroneously" and that socialism "was initiated too early"; and they also want to "institute makeup lessons in capitalism." Some interpret Mao Zedong Thought as "historical idealism coupled with narrow empiricism" and a "small producer's worldview as reflected among the peasants"; they slander the party Central Committee represented by Comrade Mao Zedong as "an antiscientific, antidemocratic and antiprogressive faction with Marxism as its signboard, agricultural socialism as its core, and feudalism as its destination," and seditiously suggest that "the large-scale industry of modern China is bound to train revolutionary warriors who will carry out arduous and devoted struggles against that faction." There are also some who, as communists themselves, call the party leadership "official circles," while professing to be "people's circles" on their own part; they want the party to "rule by doing nothing" or even openly trumpet the idea that writers must "grow a few rebellious bones," advocating that they sing a tune opposite to that of the party. Hence, once an opinion is expressed, they immediately interpret it as "tyrannical interference" or "swinging the stick," whether it is correct or not. In reality, this is no different from doing whatever they please or whatever they are used to an disregarding party leadership and casting off party leadership altogether. Can we look but not see, neither hear nor ask about such a trend of bourgeois liberalization which violates the four basic principles and let it spread unhindered?

Li: But some people think that this tendency of bourgeois liberalization is merely a question among a few people and really nothing serious to warrant our making a fuss about. I think this view is incorrect.

Wang: You are right. Although only a few people exhibit this erroneous tendency, its harm cannot be underestimated. Such an erroneous tendency will dissipate people's fighting will, as it has already produced a centrifugal tendency among some people in respect to the party; among the vast ranks of youths and children, in particular, it is producing a very harmful erosive effect, and it is also being used by those who crave nothing short of nationwide chaos to destroy the hard-won good political situation of stability and unity.

Of course, the appearance of this trend and tendency of bourgeois liberalization has had its social causes, among which the principal ones are the afternath of the 10 years of internal disturbance and at the same time the erosion by the bourgeois ideology from abroad. Therefore, this is neither strange nor something to be afraid of. The problem lies in whether we dare to handle such an erroneous tendency, whether we dare to grasp it, whether we dare to forthrightly carry out the solemn criticism and necessary struggle against it. If we dare not handle it, grasp it, criticize it, and struggle against it, but let it follow its own course, then it will create very great harm to our socialist cause. The core of bourgeois liberalization is opposition to our party leadership, and our party leadership is in turn the core of the four basic principles and the fundamental guarantee for the realization of the four modernizations and the successful building of a socialist modern power. Without party leadership there can be no socialist system; without party leadership the country will fall apart and become bogged down in turmoil. Are not the serious consequences created by the practice of "kicking away the party committee to make revolution" during the 10 years of our internal disturbance still fresh in our memory?

Li: Some comrades are afraid that such criticism of the tendency of liberalization might perhaps once again lead to the initiation of some movement and the persecution of people, and hence they worry that it might affect the good situation of stability and unity. Does this kind of worry have any foundation?

Wang: The party Central Committee has already decided that no political movements will be initiated from now on. The practice since the Third Plenary Session of the 11th Party Central Committee has proved this point. The forum on problems on the ideological front once again stresses first of all that we are not going to resort to any movement, and second, we are not going to resort to any siege. Therefore, any worry in this regard can be entirely dismissed.

The purpose of using the weapon of criticism and self-criticism to overcome the erroneous tendency of liberalization is to cure the sickness and save the patient, and to enable comrades who have made mistakes to distinguish right from wrong, sum up their experience, elevate their thinking, and once again return to the correct path. This is fundamentally different from the evil conduct of Lin Biao and the "gang of four" in persecuting people under the pretext of criticism; the two should not be confused. Of course, we must accept the lessons of history, and when we launch a criticism we must seek truth from facts; a mistake must be taken precisely as it is, with neither exaggeration nor understatement, much less any simplification or crudeness, or raising it to the level of principle at random. When we proceed with criticism, we must pay attention to methods, we must observe pertinence and precision; but we cannot thereby stop criticizing altogether, or criticize only in a feeble and innocuous way. That would only result in damaging the people's interests and it would also not benefit the mistaken comrades in the speedy correction of their mistakes.

We intend to strengthen unity within and outside the party ranks. But our unity is not the unprincipled kind, nor the kind that deviates from the party's leadership; it is a unity based on the four basic principles. The four basic principles are the political foundation for the unity of the whole party and the people of the whole country. Today there are some people who only allow themselves to express opinions which weaken or deny the four basic principles but do not let others criticize their mistakes. When one criticizes them a little, they immediately say that one is swinging the stick; and there are also some people who sympathize with and support them because of this; this is a rather abnormal phenomenon. If not corrected, this phenomenon will not only impede the strengthening of unity on the basis of the four basic principles, but will also hurt such comrades by allowing their mistakes to develop in a more serious direction. It is our hope that comrades with the tendency of bourgeois liberalization will rectify their attitude, consciously apply the weapon of criticism and self-criticism in order to be able to insist on truth, modify their mistakes, implement the spirit of the "resolution" with one heart and one mind, and thereby make new contributions toward the building of a socialist modern power.

CRITICISM OF BOURGEOIS LIBERALIZATION EMPHASIZED

Shenyang LIAONING RIBAO in Chinese 23 Sep 81 p 3

[Article by Li Li Yanko [2621 1484 2688] "Will Criticism of Bourgeois Liberalization Hinder Stability and Unity?"]

[Text] When we mention criticism of bourgeois liberalization, some comrades immediately manifest certain uneasiness; they are afraid that this will hinder stability and unity. The sentiment of such comrades in treasuring stability and unity is understandable, but their skepticism is groundless.

The situation of stability and unity has not been brought about easily, and therefore we must treasure it and protect it: this is beyond doubt. But we should see that the tendency of bourgeois liberalization precisely constitutes a factor of instability. Why do we say this? Because the four basic principles are the common political foundation for the unity of the whole party and the unity of all the people, and the tendency of bourgeois liberalization is inclined precisely to shake and cast off this foundation. The core of the four basic principles is to adhere to party leadership. It is pointed out in the "Resolution on Certain Question in the History of Our Party Since the Founding of Our State": "Without the Communist Party of China there would be no new China; similarly, without the Communist Party of China there would be also no modern socialist China." This is a scientific conclusion tested by history. The Communist Party of China is the core of unity of our people of various nationalities. Without this powerful core force, our stage would bog down in a condition of disunity and incoherence like a patch of sand. The painful history of old China during the past 100 years has long proved this point. During the 10-year period of the "cultural revolution," because Lin Biao and the "gang of four" trumpeted "kicking away the party committee in order to make revolution," the party leadership was considerably weakened; consequently an overall civil war resulted and the whole country became shaky and unstable. This lesson is indeed still fresh in our minds to all of us. And yet those who are doing their best to cast off party leadership and resort to bourgeois liberalization completely ignore or forget these historical facts. If things were run according to their propositions, the authority of party leadership would no longer exist, the socialist path would no longer be followed, and then the core and foundation of unity of all people of the country would vanish in thin air. What unity could we still speak of! For this reason, our forthright criticism of the tendency of bourgeois liberalization in our resolute effort to eliminate such a negative factor is precisely what we need to protect our stability and unity.

The reason why some comrades are afraid of the possibility that criticism of the tendency of liberalization will hinder our stability and unity is because they have kept in their minds only the historical experience of when our party erroneously launched such criticism, but they forget that our party also has the historical experience of launching such criticism correctly. Such incidents of our party erroneously launching criticism and thereby hindering the unity of the party and the unity of the people have indeed occurred in the history of our party. But apart from such historical experience in mistakes, there has existed in the 60 years of our party history also a great deal of historical experience in launching correct criticism; this should also not be forgotten. Such correct criticism and self-criticism campaigns implemented the principle of "learning from past mistakes to avoid future ones and curing the sickness to save the patient" and achieved the goals of both clarifying our thinking and uniting our comrades. The Zunyi conference practiced this kind of criticism and self-criticism; the Yan'an rectification movement also practiced this kind of criticism and self-criticism; in the end, they both resulted in smoothly overcoming leftist and rightist mistakes, considerably promoting the unity and integrity of the whole party politically, ideologically, and organizationally, and creating the indispensable requisite conditions for the victory of the revolutionary wars. It was also precisely because they launched such correct criticism and self-criticism, too, that the Third Plenary Session and the Sixth Plenary Session of the 11th Party Central Committee achieved very great successes, strongly promoted the unity of the party and the unity of the people, and established the foundation for the good situation of stability and unity. Today, our party and our people are becoming mature and wise precisely through summing up such positive and negative aspects of our historical experience. When we criticize the erroneous tendency of bourgeois liberalization at present, we must never allow the kind of historical experience in mistakes to be repeated, but we must inherit the correct historical experience and enrich it, develop it. This means that in launching criticism we must pay attention to methods, put emphasis on results, help the criticized, lay out the facts, and reason in the manner of the gentle breeze and drizzling rain, with meticulous pertinence and propriety, and definitely refrain from crudeness and rashness in such operations, from unrestrained criticism and unrestrained struggle, from staging any seige, or launching any movement. We can rest assured that, under the guidance of such correct principles, our criticism of the erroneous tendency of bourgeois liberalization is bound to achieve the goals of enabling the people of the whole country to distinguish right from wrong, to elevate their thinking, to promote stability and unity, and do a better job in carrying out the construction of the four modernizations.

Some comrades interpret stability and unity as "your being nice to me, my being nice to you, so that everybody is nice" and so that, in the absence of criticism or debate, an atmosphere of affability is forever maintained in a situation like that of a pool of still water: this is biased and also it cannot be achieved in reality. In the process of engaging ourselves in great revolutionary practice, especially at the moment of a historical turning point, people's perception for a while cannot catch up with actual developments and hence they commit this or that mistake: this is unavoidable. Today, after a period of tortuous development in our socialist construction, along with the promotion of the emancipation of our thinking and the implementation of the policy of opening to the outside world, it is neither surprising nor alarming that some who lack a high socialist consciousness and a strong revolutionary will, especially certain young people who lack political experience, should exhibit the tendency of bourgeois liberalization and other errors. The question is what attitude we should adopt toward such a development. If we insist on temporary, superficial calm and cover up such errors and do nothing about them, then, in their further development they are bound to gradually radicalize our contradictions, turn small mistakes into big mistakes, and ultimately fail to avoid an explosion and hence destroy the situation of stability and unity. Only by exposing erroneous things in time, constantly launching criticism and self-criticism, nipping mistakes in the bud, and preventing the radicalization of contradictions can we really maintain the uniformity of revolutionary ranks politically and ideologically. This is a fundamental platform for long-term order and stability. Engels said: "Unity by no means precludes mutual criticism, without which unity cannot be attained, without which there would be no mutual understanding, and hence there would also be no unity to speak of" ("Complete Works of Marx and Engels," Vol 4, p 423). Only by genuinely, and not perfunctorily, launching criticism can we forge the strong cord which strengthens the unity of our revolutionary ranks and continue to inject fresh vitality into the situation of stability and unity. Stability and unity and the launching of criticism are not mutually exclusive or contradictory to each other, but mutually promotive and complementary to each other. At present, by way of correct criticism and self-criticism and overcoming of bourgeois liberalization and similar erroneous tendencies, we are bound to achieve the further consolidation and development of the good situation of stability and unity.

PARTY AND STATE

THEORIES ON RELATIONSHIP BETWEEN PRACTICE, KNOWLEDGE

Beijing RENMIN RIBAO in Chinese 17 Sep 81 p 5

[Article by Cui Wenyu [1508 2429 3768]: "Discussions on the Question of the Source of Knowledge"]

[Text] Discussions on the question of the source of knowledge began in 1980 when Ze Ming [0463 7686], in his article "Refute 'Practice Is the Sole Source of Knowledge'," [published] in the Shanghai journal SHEHUI KEXUE [SOCIAL SCIENCE], No 2, 1980, rejected the viewpoint that practice is the sole source of knowledge. He alleged that by advocating this viewpoint in discussions on the criterion of truth, we would deny that practice is the sole criterion for testing truth. Then, issue No 5 of the same journal published articles for discussion with Ze Ming which expressed different views on the question of the source of knowledge. Afterward, Shanghai WEN HUI BAO also published a succession of article with different ideas. In ZHEXUE YANJIU [PHILOSOPHICAL STUDIES], No 9, 1980, an article by Liu Ben [0491 1149]. "The Source of Knowledge and the Criterion of Truth," refuted the viewpoints presented by Ze Ming and upheld the standpoint that practice is the sole source of knowledge. Discussions on the question of the source of knowledge have attracted serious attention throughout the country. Some newspapers and magazines have published a number of opposing articles. Herewith, these arguments are summarized as follows:

The first argument holds that taking practice as the sole source of knowledge is a scientific proposition of the dialectical-materialist theory of knowledge.

First, according to this argument, we must make clear what practice is. In SHEHUI KEXUE No 6, 1980, articles by Yuan Guiren [5913 6311 0088] and Li Jin [2621 6651] held that, as a motivated, physical activity of man, practice is a complete system of action--that is, people who have a motive use certain material means to bring about a premeditated change in an objective target, and thus achieve objective reality in conformity with their "demand." Practice is such a process of activity. Evidently, practice in the dialectical-materialist sense embodies in its activity all its motives, means, targets, and results. Thus, the meaning of practice as the source of knowledge is twofold: one is the source brought about by knowledge, that is, practical activities playing alternate subjective and objective roles; the other is the origin of the substance of knowledge, being an objective reality as the target of practice. However, both the practical activity and the practical target are the basic factors of practice. Therefore, practice is the sole source of knowledge.

Next, judged by the process of knowledge, only from practice can knowledge emerge. Liu Ben's article [in ZHEXUE YANJIU] held that knowledge is the active reflection of the subject on the object. The establishment of the relationship of knowledge between subject and object is the prerequisite to the emergence of knowledge. However, the relationship between the subject and the objective target is first not a relationship of knowledge but a relationship of practice. The latter is the basis of the former. To achieve knowledge, it is necessary to have an object of knowledge, and this is provided only by practice. Anything that exists objectively cannot directly become the source of knowledge. Only when people take it, in social practice, as the target of practice and bring it into the process of practice can it become an object of knowledge in its direct and practical sense. Furthermore, Liu Ben's article stated that knowledge originates in practice, develops in the process of practice, and finally changes itself physically into the result of practice. At the starting point of knowledge, practice manifests itself as the origin of knowledge; in the process of knowledge, practice manifests itself as the motive force and source of the development of knowledge; and in the end-result of knowledge, practice manifests itself as the criterion for testing truth.

Third, although Marx and Engels never stated clearly that "practice is the sole source of knowledge," many of their writings very definitely embody the idea that practice is the sole source of knowledge. For instance, taking science as an exmaple, Marx and Engels pointed out: "The emergence and the development of science were determined by production right from the beginning," and: "Natural sciences attain their goal and obtain data only due to commerce and industry and due to people's perceptual activities." In WEN HUI BAO on 25 July 1980, articles by Zhang Huajin [1728 5478 6855] and Ma Jihua [7456 4480 5478] held that the "science" mentioned here by the revolutionary teachers--this correct knowledge of mankind--is the crystallization of such practice as mankind's activities in production and commerce, and that social practice (chiefly the practice of production) is the sole source of the emergence and development of science. Comrade Mao Zedong also said that mankind's "correct ideas come from social practice, and from it alone." and that whoever wants to know a thing has no way of doing so except by coming into contact with it--that is, by living (practicing) in its environment." These statements also clearly and unmistakably explain the fact that practice is the sole source of knowledge.

The second argument holds that practice is not the sole source of knowledge.

First of all, whether in the second article of "On Feuerbach's Outline" by Marx, or in Lenin's remarks that both Marx and Engles "took the criterion of practice as the basis of the materialist theory of knowledge," or in Mao Zedong's statement that "only social practice can be the criterion of truth, and the standpoint of practice is the primary and basic standpoint in the dialectical-materialist theory of knowledge," should Ze Ming concur, there is no basis to the claim that "practice is the sole criterion of knowledge." From Marx to Lenin, the standpoint of practice always remained in the realm of the theory of knowledge, and practice was taken as the criterion for testing truth and as the basis of the theory of knowledge, but basically they never lumped practice and the "sole source" of knowledge together.

Next, taking practice as the sole source of knowledge means, in fact, eliminating matter from the realm of the theory of knowledge, or epistemology. In WEN HUI BAO 13 June 1980, an article by Wang Zhizhang [3769 0037 3864] held that the primary character of matter is the basic premise of epistemology, they are inseparable, as the former is the basis of the latter; matter is the origin of the world as well as of epistemology. While criticizing (Machists), Lenin said: "They deny matter. This also means that they deny the external, objective source which we perceive, and deny the objective reality which conforms to our perception. This is their answer to the question of epistemology, which everybody knew well long ago." Taking practice as the sole source of knowledge, and believing that the primary character of matter does not come within the scope of the study of epistemology, in fact means eliminating matter from the realm of epistemology.

Third, judging from the mutual relationship between knowledge and practice, practice is not the sole source of knowledge. The article by Ze Ming held that, first, what knowledge depends on is objective reality beyond man's consciousness; second, knowledge depends on practice to test its conformity to objectivity; and third, knowledge depends on practice as a "channel" and a "crossing point" to approach and attain objective reality. Besides these three meanings, describing practice as the sole source of knowledge means using practice to confuse and substitute for objective reality, which is outside of man's consciousness, and thus to sever the relationship of dependence, which is of absolute meaning, between knowledge and objective reality. Ze Ming stated that both knowledge and practice must "turn in the direction of the objective world." This indeed is the true basis on which knowledge and practice are closely integrated and dialectically unified. Only on this basis can we say that knowledge directs practice, and that practice tests knowledge and promotes the development of knowledge. It is wrong to exaggerate the objective aspect of practice as being the entire objective world, or to exaggerate the material aspect of practice as being matter in general.

Among the views which oppose the assertion that "practice is the sole source of knowledge," there are three different views on the question of what the source of knowledge is:

The first view is that matter is the sole source of knowledge. Because man's knowledge is the reflection of the objective external world in the human brain, objective matter, as the target of knowledge, constitutes the sole source of the content of knowledge. The role of practice is to tap the source of knowledge, to promote the development of knowledge, to test the correctness or incorrectness of knowledge, and to achieve correct knowledge.

The second view is that practice is the origin of knowledge, and that matter is the final source of knowledge. The article by Wang Zhizhang stated that the meaning of "final source" is twofold: one admits that knowledge depends on practice, that knowledge originates directly from practice, and that practice is the origin and the motive force of knowledge; and the other is that the root of knowledge, or the essence of knowledge, is not practice but matter, which is the motive force of knowledge's motive force. Some people have approved this wording not only because it distinguishes between the two different roles played by matter and practice toward knowledge, but also because it avoids any confusion in conception.

The third view holds that the objective world revealed by practice is the source of knowledge. The journal SHEHUI KEXUE in its issue No 5, 1980, carried an article by Zhang Lingyun [1728 3249 0061] stating that practice as a subjective material activity with a definite objective in view is not the origin of knowledge but the means of and

and way to knowledge. However, the objective world alone cannot become the origin of knowledge; only as the target of practice can the objective world become the source of knowledge. Some people believe that this view shows not only that the content of knowledge comes from matter, but also that the target of knowledge is not matter in general but matter being re-formed by practice; at the same time, it also demonstrates the role of practice as the source [of knowledge].

DEVELOPMENT, IMPORTANCE OF SEEKING TRUTH FROM FACTS

Shanghai SHEHUI KEXUE [SOCIAL SCIENCES] in Chinese No 4, 1981 pp 1-5

[Article by Lan Ying [5663 3841]: "The New Development in the Ideological Line of Seeking the Truth from the Facts"]

[Text] After following a fighting course of a full 60 years, today our party has begun a new and more arduous long march to build our country into a modern, highly democratic and highly civilized socialist power.

In the 60 years, one basic experience gained by our party is to uphold the ideological line of seeking the truth from the facts. When it is upheld, the party's cause prospers and develops; otherwise, it suffers setbacks. It is a basic experience which our party has gained at a tremendous cost.

The Formation of the Ideological Line

At the Army-wide Political Work Conference on 2 June 1978, Comrade Deng Xiaoping pointed out: "Seeking the truth from the facts is the starting point of Mao Zedong Thought--the fundamental point." His words incisively explained the important position of seeking the truth from the facts in Mao Zedong Thought.

"Seeking the truth from the facts" was an old saying in our country. First seen in "Biography of Prince Xian of Hejian, History of Han," it was subsequently passed on as a proverb. Its original meaning was to search for knowledge, find the facts and seek the truth. According to the record in the book, Liu De, the third son of Emperor Jing of Han, who was made the Prince of Hejian, with the posthumous title of Xian, read widely and studied diligently. He constantly collected books and checked the authenticity of the material read by him. He always made a complete copy of the rare editions and genuine scripts collected among the people, rewarded the original owners generously, and carefully studied them. Therefore, Ban Gu, in his historical records, praised him for "learning eagerly from the ancients and seeking the truth from the facts." Taking over the phrase, our party gave it a new meaning. Comrade Mao Zedong said: "Facts" are all things which exist objectively; "truth" is the internal links of the objective things, viz., the laws; "seek" is when we study, analyze and master the laws of the objective things. The "Resolution on the Party's Historical Issues since the Founding of the Nation" passed at the 6th Plenary Session of the 11th Party Central Committee made an even clearer summary of its meaning: "Seeking the truth from the facts is to start from reality and link theory with reality; it is to integrate the universal truths of Marxism-Leninism with the concrete practice of China's revolution." It is our party's ideological line.

However, the formation and development of the ideological line underwent a tortuous and complex process. The manifestation of the essence of the long struggles against leftwing and rightwing opportunist errors waged by our party from its creation until the Zunyi Meeting was whether to uphold this ideological line. Meanwhile, it was after the lessons of failures and setbacks time and time again that our party gradually formed the ideological line of seeking the truth from the facts. What possessed a decisive significance was the Yanan rectification movement begun in 1942 when rectification of the three styles, i.e., academic, party and writing styles, was proposed, in order to combat dogmatism, sectarianism and stereotyped party writing. Its core was to summarize the errors of Wang Ming's leftwing adventurism and the bitter lesson of its serious damage to the party, to criticize the subjectivism of severing theory from practice, and to form the ideological line of seeking the truth from the facts. Twice Comrade Mao Zedong wrote the inscription "seeking the truth from the facts" for the Yanan Central Party School, which were hung in its new auditorium. Subsequently, the phrase was included in the party constitution of the "Seventh Congress" and formally made the party's ideological line. It was a great achievement of the Yanan rectification movement and the "Seventh Congress."

Considering himself a "hundred percent Bolshevik," Wang Ming placed himself above the party and displayed his arrogance for a time. He held two "talismans" in his hands: Foreign dogmas to intimidate people; a club to promote "cruel struggles and ruthless attacks" in the party and create a patriarchy. Forcefully promoting leftwing opportunism, he once pushed China's revolution to a hopeless situation, reducing the party members in the country from 300,000 to 30,000 and the Red Army from 300,000 men to close to 30,000 and losing all revolutionary bases beyond the Shaanxi-Gansu-Ningxia Border Region. Beginning with the Zunyi Meeting called in January 1935, the party first concentrated on correcting Wang Ming's military errors, established Comrade Mao Zedong's leadership position in the Party Central Committee, and saved the party and the revolution at a most critical moment. The further criticism of Wang Ming's leftwing errors in ideology and theory was not completed until the Yanan rectification movement. In 1936 and 1937, Comrade Mao Zedong, in the caves of Yanan, wrote such brilliant articles as "the Strategic Issue of China's revolutionary War," "on Practice," "on Contradiction" and "the Strategic Issue of Guerrilla Warfare against Japan." In 1941, he produced "a Study of Our Reform," "Rectify the Party Style" and "Combat Stereotyped Party Writing." These articles summarized theoretically the experiences of China's revolution and the fight against the erroneous tendencies in the party, scientifically analyzed all leftwing and rightwing opportunist ideas and their theoretical roots, and laid the theoretical foundation for the ideological line of seeking the truth from the facts. Spreading from Yanan to all base areas, the rectification movement launched in 1942 was a great Marxist ideological educational movement. In the movement, the party further summarized the experiences of success of the Chinese people's revolutionary struggles led by Comrades Mao Zedong, Zhou Enlai, Liu Shaoqi and Zhu De and made a thorough study of the bitter lessons of Wang Ming's dogmatist errors, thereby enabling the entire party to intensify its understanding of integrating the universal truths of Marxism-Leninism with the concrete practice of China's revolution, learn to start from reality in everything, interpret and reform the world according to its true features, and greatly raise its consciousness in upholding the ideological line of seeking the truth from the facts. On the foundation of forming this ideological line throughout the party, our party's lines and policies and all items of its work got onto the Marxist-Leninist revolutionary track of integrating theory with reality. In the course of the 28 years of our democratic revolution, the progress in the 14 years prior to the Zunyi Meeting was made in the midst of continuous setbacks. In the 10 years beginning with the Zunyi Meeting, especially after the Yanan rectification movement, from the "7th Congress" to the "8th Congress," a new period of prosperity and development emerged in our party. We won the victory of the new democratic revolution and smoothly accomplished the transition to socialism. One may say that these victories were the victories of the ideological line of seeking the truth from the facts.

The Development of the Ideological Line

After entering the socialist period, our party again underwent the severe tests of successes and failures, and the experiential lessons again manifested concentratively in whether the ideological line of seeking the truth from the facts was upheld. This ideological line was followed in the 7 years of socialist reform. After the start of the general building of socialism and simultaneous with the successes in the first 10 years, such errors of impetuosity and rashness as the "communist wind" and "boastfulness" had already appeared. In the last 10 years, they developed to the severe disaster of the "Great Cultural Revolution." In the first 2 years after smashing the "gang of four," the error of the "two whatevers" occurred. Not until the 3d Plenary Session of the 11th Party Central Committee was the ideological line of seeking the truth from the facts restored, basically rectifying the leftwing errors in the guiding ideology, bringing order out of chaos, and carrying forward the cause and forging ahead into the future. The Third Plenary Session was another great turning point in our party's history; it was the restoration and development of the ideological line of seeking the truth from the facts under new historical conditions. The substance in this aspect is extremely rich. We have a relatively deep understanding of the following points:

1. Upholding practice as the only criterion to test truth is an important development of the ideological line of seeking the truth from the facts under the new historical conditions.

Utilizing the "Great Cultural Revolution" erroneously launched and led by Comrade Mao Zedong, the Lin and Jiang counterrevolutionary cliques usurped the party and seized power, spread idealism and metaphysics, wantonly emasculated the fundamental truths of Marxism-Leninism and Mao Zedong Thought, and turned upside down the dialectic relations between the subjective and the objective and between theory and practice. After smashing the "gang of four," Comrade Hua Guofeng followed the long unchanged erroneous policy of the "two whatevers" and seriously blocked the progress of the four modernizations. The nation-wide discussion of the criterion of truth broke down the fetters of the "two whatevers," and a lively atmosphere of diligently studying the new conditions and solving the new problems emerged. The Third Plenary Session made a high appraisal of the discussion of the criterion of truth and established anew the ideological line of seeking the truth from the facts.

Practice as the criterion to test truth was not a new issue, for it had long been brilliantly expounded by the proletarian revolutionary teachers. Comrade Mao Zedong pointed out clearly: "The criterion of truth can only be social practice." "Truth is discovered by means of practice, and verified and developed by means of practice." "Practice, understanding, practice again, and understanding again." It is the epistemology of dialectic materialism and the theoretical foundation of the party's ideological line. Theory develops alongside the development of social practice. Under the historical conditions after the downfall of the "gang of four," launching the discussion on the criterion of truth, criticizing the error of the "two whatevers," and proposing anew the ideological line of seeking the truth from the facts took on new characteristics and new contents. From the Third to the Sixth Plenary Session, it was under the guidance of this ideological line that our party formulated and implemented a series of correct policies and we won worldwide attention with the achievements in the various items of our work. Seeking the truth from the facts, the Party Central Committee proposed the political line of shifting the emphasis of work to the socialist modernization construction, solved the major historical issues and the right and wrong of the party leaders, refuted the erroneous theory of the "continuous revolution" and the political slogan of "taking the class struggle as the key link," factually analyzed the class situation, and proposed new tasks and new policies on political, economic and cultural constructions. On a nationwide scale, it launched the work of redressing the unjust, false and wrong cases and of implementing the party policies, especially the complete rehabilitation of Comrade Liu Shaoqi, the greatest unjust case in our party history, at the Fifth Plenary Session. Had we failed to take practice as the criterion and start from the objective reality, had we departed from the ideological line of seeking the truth from the facts, it would have been impossible to rectify all the unjust, false and wrong cases. With a profound significance, the discussion on the criterion of truth armed the entire party and the entire people with the epistemology of dialectic materialism, inspecting work, summarizing experiences, distinguishing the right and wrong, upholding truth and correcting mistakes by means of practice. The discussion laid the foundation for the lines and policies formulated since the Third Plenary Session, opened the way for emancipating thinking, overcoming mental ossification and correcting the erroneous policy of the "two whatevers," and provided an objective criterion to bringing order out of chaos and making a complete overhaul.

2. Upholding ideological emancipation and upholding the four basic principles constitute another important development of the ideological line of seeking the truth from the facts under the new historical conditions.

Looking through history, we find that ideological emancipation always occurred in periods of momentous turns of history, such as the one hundred schools of thought contending during China's Warring States and the "4 May" Movement in its modern history, the "Renaissance" in Europe, etc. All the ideological emancipation movements occurred when history posed brand-new issues while the traditional old concepts fettered man's ideological development and blocked the study and solution of the new issues with new concepts and new ideas. There were two ideological emancipation movements in our party history, viz., the Yanan rectification movement of 1942 and the ideological emancipation proposed by the Third Plenary Session. The point in common of the two movements is to establish the ideological line of seeking the truth from the facts, unifying theory with practice and the subjective with the objective. The distinction is that the former dealt with emancipation from the ideological fetters of Wang Ming's dogmatic errors and solution of the issue of integrating Marxism-Leninism with China's revolution, while the latter is for the purpose of emancipating our mind from the erroneous ideology of the "two whatevers," purging the influence of the long-standing leftwing guiding ideology and personality cult in the socialist construction, restoring the true features of Marxism-Leninism and Mao Zedong Thought, and completely and accurately mastering and applying the scientific system of Marxism-Leninism and Mao Zedong Thought to the study and solution of the new conditions and new issues emerging in the course of the four modernizations.

To emancipate the mind, we must break down superstition, respect science, understand things according to their true features, and find the guiding principle to reform the world. Its foundation rests on seeking the truth from the facts. To emancipate the mind, we must combat mental ossification. There were all kinds and all types of mental ossification in history. For a decade or more, the mental ossification in our party also had its special characteristics, such as turning theories into dogmas, idolizing the leaders, "obeying literally" each word and each phrase, etc. Such decadent matters were in fact reflections of the feudal, bourgeois and small production ideologies in our party, resulting in the personality cult, life tenure of the leading cadres and arbitrary decision making by the leaders. They deeply fettered people's thinking, making it impossible to seek the truth from the facts. The Third Plenary Session broke through the layers of "forbidden areas" installed by the "two whatevers," proposed the policy of ideological emancipation, asking us to face reality and understand and solve the issues according to the objective reality, and pushed our party's cause forward.

Emancipating the mind and upholding the four basic principles are consistent with each other. The four basic principles are the starting point and the end-result of ideological emancipation and the common political foundation for the unity of the party and all nationalities in the country. Therefore, apart from them, it will be impossible to correctly implement the policy of ideological emancipation. Ideological emancipation is to free ourselves from the personality cult of the "two whatevers" and from ignorance and superstition. Only thus will we be able to learn, study and realize the four basic principles by seeking the truth from the facts. Therefore, apart from ideological emancipation, we cannot begin to talk about the scientific Marxist-Leninist attitude, and nor will we truly uphold the four basic principles. Today there are two kinds of misunderstandings, placing the four basic principles and ideological emancipation on opposite sides. One misunderstanding is that the four basic principles fetter people's mind and block ideological emancipation. The other is the feeling of apprehension and misgiving about ideological emancipation, even to the extent of fearing that it may become excessive, turning a blind eye to the new conditions, new issues and new things. Misinterpretations of the four basic principles and ideological emancipation, both misunderstandings are extremely harmful.

3. Starting from the national conditions to pursue the socialist modernization construction is yet another important development of the ideological line of seeking the truth from the facts under the new historical conditions.

When summarizing China's revolutionary experiences, Comrade Mao Zedong pointed out: The course of China's revolution was that of the growing integration of the universal truths of Marxism with the concrete practice of China's revolution. As proved by historical experiences, whether in the period of the democratic revolution or in that of the socialist construction, we must give serious attention to the study of our national conditions, and whether we act accordingly is the key to the success or failure of our cause. To correctly understand the national conditions, we must practice repeatedly. In the democratic revolution period, only after many setbacks did we clarify our national conditions and find the way by surrounding the cities with the villages and armed seizure of political power. In the socialist construction period, we likewise followed a winding path. The main reason for the long existence of the leftwing errors was that we departed from the ideological line of seeking the truth from the facts and made subjective deviations in our understanding of the national conditions.

Comrade Chen Yun [7115 0061] pointed out: "Ours is a country of 1 billion population with 800 million peasants; it is in such a country that we are carrying out construction." These words clearly show that we have a large population, a weak foundation and a low production level, and that we entered socialism from a semi-feudal and semi-colonial state without passing through the stage of the high development of capitalism. Under this situation, when pursuing the socialist construction, we must not sever ourselves from reality and be impatient for success, but must act according to our capabilities, plant our feet on solid ground and advance steadily. As pointed out by Comrade Chen Yun, we must "feel the rocks when fording the river." After the Third Plenary Session, the Party Central Committee, in accordance with the ideological line of seeking the truth from the facts, repeatedly stressed the study of our national conditions and, starting from the national conditions, proposed the policy of "readjusting, restructuring, reorganizing and improving" on the national economy, firmly rectifying the long-standing leftwing errors in economic work. At the same time, it formulated the important policy of "further readjusting the economy and further stabilizing the political situation," preliminarily reversed the stagnant and confused state of the national economy caused by the 10-year calamity, and began to solve the problems of proportionate maladjustment and irrational structure of the national economy left down through many years. However, we are still faced with many problems and difficulties in economic work. To follow a path of the socialist modernization construction adjusted to our national conditions, we must continuously summarize and develop our experiences by means of practice. To start out from our national conditions, while we must recognize the basic fact that the economy and culture of our country are still relatively backward, we must also realize that we have made achievements in our economic and cultural constructions and gained favorable conditions at home and abroad; while guarding against impatience, we must also combat pessimism; we must raise our consciousness and overcome blindness in action. We deeply believe that, under the leadership of the Party Central Committee, we will gradually build our country into a modern, highly democratic and highly civilized socialist power.

The Immortal Ideological Line

Seeking the truth from the facts is a political quality required of each and every Communist Party member and cadre as well as the ideological line of our party.

Our party shoulders the historical mission of leading the one billion people in the socialist modernization construction. As stated by Comrade Hu Yaobang, "the key for the completion of this task rests with our party." "Today, the people of all nationalities in the country place their hopes on our party, and the people of the whole world are looking attentively at us." How to improve and build our party properly according to the ideological line of seeking the truth from the facts reestablished by the Third Plenary Session is a momentous issue linked with the success or failure of our party's cause.

Looking at the party's ideological conditions today, we find that, as the leftwing ideology exercised a deep influence for decades, its elimination will require a tremendous effort. For a long time, some comrades, in particular, have formed such ideas as left is better than right; left is safer than right; rather left than right; left is a question of method and right is a question of standpoint; left is to revolutionize and right is not to revolutionize; left is the petit bourgeois ideology and right is the bourgeois ideology; etc. These erroneous ideas seriously block the implementation of the ideological line of seeking the truth from the facts. In our inner-party struggles, we must adopt the scientific attitude of seeking the truth from the facts on the erroneous ideological tendencies, combating the right when there is right, combating the left when there is left, combating the right while guarding against the left, and combating the left while guarding against the right. However, over a long time, an erroneous guiding ideology has formed in our party: It seems that only rightism is found in a socialist period, not leftism; that we can only combat rightism, not leftism. This ideology has seriously damaged our party's superior tradition of seeking the truth from the facts. Reviewing our party's historical lessons, we find that, in the democratic revolution period, we made leftwing errors three times, each time more serious than the previous one. Why was it so? Here we have a particularly important lesson: What was obviously leftwing was called rightwing, combating the leftwing with the leftwing and becoming ever more leftwing. Wang Ming's leftwing dogmatism called Comrade Li Lisan's leftwing error rightwing and complained that it was not leftwing enough. As a result, Wang Ming's leftwing error developed to the peak. In the late fifties after liberation, there was already the magnification of the class struggle and such leftwing errors as "issuing arbitrary orders," "communist wind" and "boastfulness" which should have been corrected, yet the Lushan Meeting combated the so-called rightwing error and attacked Comrade Peng Dehuai and a large group of good comrades who had the courage to speak the truth and uphold the principle of seeking the truth from the facts. The situation reached the peak by the time of the "Great Cultural Revolution." Utilizing the so-called "anti-rightism" and "anti-revisionism," Lin Biao and the "gang of four" vigorously attempted to usurp the party and seize power. We must never forget such bitter lessons of history repeated over and over again. As leftwing errors are more deceptive and misleading, it is more difficult to rectify them. We must continue to purge the leftwing poison of long-standing, for only thus will we unify the thinking of the entire party to the lines and policies formulated since the Third Plenary Session and to the "Resolution" of the Sixth Plenary Session.

To uphold the ideological line of seeking the truth from the facts, we must further strengthen the democratic life of the entire party, follow democratic centralism and reinforce collective leadership. Our party created an entire set of principles on handling inner-party relations in the Yanan rectification period. Such principles include, for instance, "say all you know and say it without reserve," "blame not the speaker, but be warned by his words" and "correct the mistakes if you have made any and guard against them if you have not;" in regard to those making mistakes, there must be no "finishing off with one blow," but "observe and help" and "learn from past mistakes to avoid future ones, and cure the illness to save the patient;" there must be no "cruel struggle and ruthless attack," but the formula of "unity--criticism--unity." The "Guiding Principles for Inner-Party Political Life" passed at the Fifth Plenary Session contain many clear and important provisions on developing inner-party democracy and strengthening the party's democratic system, in order to protect the democratic rights of each and every party member. Meanwhile, they also provide that the party organizations of all levels must uphold the collective leadership and oppose arbitrary decision making by individuals, absolutely banning "one man's words" and patriarchy. All these are important principles to assure organizationally the implementation of the ideological line of seeking the truth from the facts.

To uphold the ideological line of seeking the truth from the facts, it is, in terms of the party members, a test of the political quality, which is not easily attained. Though wishing to act according to the principle of seeking the truth from the facts, some people are unable to do so because of the lack of vision and the failure to distinguish the true and the false. Others, while able to recognize the actual state of affairs, are afraid to uphold the principle because of selfish considerations, the desire to play safe and the fear for their own interest. A small number of people tells lies to deceive others and protect themselves, while some few evil individuals benefit themselves at the expense of others, unscrupulously distorting the facts, turning the black and white around, creating rumors to hurt others, hitting a person when he is down and attacking the good people, caring nothing about the truth. Except the individual evildoers, the problems of the overwhelming majority of the comrades should be solved by ideological education. Each and every party member must vigorously study theories, strengthen the cultivation of their ideology and moral character, and raise their communist ideological awareness of serving the people. The party organizations must enforce discipline and mete out rewards and punishments strictly and fairly. Those who have no fear of attack and retaliation, who have the courage to uphold the principle of seeking the truth from the facts and who tell the truth in defense of the interests of the party and the people should be commended. Those who falsify and misrepresent, who rely on lies to gain honor and position, or who cause serious losses by conniving with, inducing or coercing their subordinates to tell lies must be handled according to party discipline.

At any time and under any circumstance, we must firmly implement the ideological line of seeking the truth from the facts, strengthen and improve the party's leadership, raise its fighting power, build it into a firm core more mature in politics, more unanimous in ideology, more consolidated in organization, and able to rally and lead the people of all nationalities in the country in the socialist modernization construction and, with one heart and one mind, undaunted by repeated setbacks, struggle vigorously to make our country into a highly democratic and highly civilized modern socialist power!

Let our party's ideological line of seeking the truth from the facts shine forever!

HUBEI VICE GOVERNOR ADDRESSES PEOPLE'S CONGRESS ON PUBLIC SECURITY

Wuhan HUBEI RIBAO in Chinese 25 Sep 81 p 2

[Excerpts of Hubei Vice Governor Li Jun's [2621 0193] report to the 10th Session of the Standing Committee of the Fifth Hubei Provincial People's Congress: "Further Strengthen Public Order and Public Security Work"]

[Text] On 24 September, Vice Governor Li Jun delivered a report on further strengthening the social order and public security work to the 10th Session of the Standing Committee of the Fifth Hubei Provincial People's Congress. Excerpts of the report follow:

Since the Ninth Session of the Standing Committee of the Fifth Hubei Provincial People's Congress, under the unified leadership of the provincial party committee, we have made conscientious efforts to implement the guidelines of the five-metropolitan-city forum and the Hubei provincewide forum on public security. Strong measures have been taken to consolidate the social order in a way that takes into account reality, with initial success. Today, the masses have been further mobilized to deal blows to the arrogant criminals. The result is a reduction in the number of heinous crimes such as murder, robbery, and rape, along with initial improvements in the outlcok of public order in such public places as railway stations, wharves, shopping centers and bustling city streets. But what we have achieved is merely a start; problems still exist in our work. Further measures and efforts will have to be made in order to achieve a complete turnaround in our public security work. At present, specific regulations should be enacted in accordance with the party's policies and the laws of the state in order to solve problems and meet the needs of the struggle.

--Good services in the form of detention and investigation will continue. Services provided in the form of detention and investigation of criminals at large and major suspects of crime will have an important effect on the curbing of crime and the maintenance of social order and public security. Detention and investigation centers should be established in prefectures and municipalities. At the same time, district public security organs in various counties and cities should be delegated temporary authority to track down and investigate crimes. The targets of detention and investigation will include: suspects of misdemeanors, suspects of crimes committed by individuals who have no fixed address, and suspects of repeated and organized crimes who need to be detained and investigated; suspects of misdemeanors who have refused to tell the truth about their names, addresses, and where they come from; suspected criminals caught and sent by the masses and captured by the night patrols who must be detained for interrogation. Upon the completion of investigations, we will deal with each case on its own merits. Except for pending cases awaiting criminal proceedings, those who have committed misdemeanors and who do not have to face criminal charges or other charges levelled by public security organs should be released immediately or sent to the places of their domicile for settlement through the detention and repatriation centers of relevant prefectural and municipal civic affairs departments. Responsible units will have to suggest alternatives in the cases of criminals who need to be rehabilitated through labor and who come from other provinces and cities outside Hubei Province. In principle, public security organs in the places of their domicile should take over such cases. If they cannot be sent back there, labor rehabilitation units in Hubei Province should be responsible for their rehabilitation. As soon as they are rehabilitated, they should be sent to the places of their domicile for settlement. Fugitives from the countryside of this province who need to be rehabilitated through labor should undergo rehabilitation at the local labor rehabilitation units in accordance with the approved regulations. As soon as they are rehabilitated, they should be sent to the places of their domicile for settlement.

--Prostitution should be resolutely banned. During past years, whores and prostitutes have been active in cities and towns of this province. Their appearance has had a serious harmful impact on our social morality and social order, and therefore should be resolutely banned. The major targets of attack are those elements who force, instigate and lure women to engage in prostitution and whorehouse owners who profit from encouraging women to engage in such business. All of them should be severely punished in accordance with the law. Patronizers of whorehouses are punishable by administrative detention, fine and condemnation. They are usually ordered to produce a written agreement not to repeat the same wrongdoing again in the form of an apology. If they are identified as staff members and workers of the state, disciplinary action should be taken against them. Cases of a serious nature, those who refuse to correct their mistakes after repeated education, should be committed to labor rehabilitation institutions. Women engaged in prostitution should be dealt with on a case-by-case basis. Women without decent jobs who are found guilty of engaging in prostitution and who refuse to correct their wrongdoings regardless of repeated education should be detained and rehabilitated through labor. Women with decent jobs who engage in prostitution and who fail to transform themselves through education should be treated in much the same way. Rural women who engage in prostitution in cities should be sent back to their homes in the countryside, where they should be placed under the strict surveillance of production teams or their families after undergoing rehabilitation. Rural women who refuse to correct their wrongdoings through repeated education and who return to the cities to continue to engage in prostitution should be detained and rehabilitated through labor by authorities in the localities where they commit such crime. Individual education should be made available to those women who engage in prostitution occasionally and sporadically in order to help them correct their wrongdoings and prevent them from sinking deeper into the quagmire of sin.

--Gambling and feudal superstitious practices should be resolutely banned. Gambling and feudal superstitious practices are bad habits left by the old society and should be resolutely banned because of their negative effect on the people's productive activities and daily life as well as on social order and public security. We must educate the cadres and the masses in the socialist legal system and expose the harmful effect of gambling and feudal superstitious practices. The broad masses of cadres and people must be mobilized to help the government resolutely stop the gambling and feudal superstitious practices. Counties and municipalities should be authorized to issue circulars and decrees to this effect, while communes and townships should be authorized to round up currently active gamblers and their sponsors as well as fortunetellers and their followers, give them education in the legal system and insist that they sign a written pledge to abide by law in exchange for lenient treatment. If they relapse, they may be imprisoned, fined and condemned in accordance with an executive order as called for in the "PRC Statute Governing the Administration of Public Security and the Companion Penal Code." Furthermore, their gambling money and equipment used in feudal superstitious practices may be confiscated. For gamblers and their sponsors and fortunetellers and their followers who refuse to correct their wrongdoings regardless of repeated education and who commit crimes of a serious nature, punishment may be meted out in accordance with the law. Severe punishment may be meted out to those identified as state cadres.

--Measures should be taken to safeguard the railways, shipping lines, highways, and communication lines as well as radio, television, postal and telecommunications installations. Public order in some railway stations, bus stops, harbors, wharves and some sections of railways, highways, shipping and communications lines has been disrupted; cargo has been stolen or carried away by cheating. Even worse is the sabotage of the technical installations of radio and television stations, postal and telecommunications offices. We must conscientiously and thoroughly implement the decrees and regulations governing their safe operation issued by the Central Committee, the State Council and the departments concerned. Various localities and units should teach the masses to love the property of the state, while the militia and public security organizations are urged to effectively safeguard the communications and telecommunication installations as a matter of importance. The departments concerned must commend and give cash awards to units and individuals for doing an excellent job in this field. Units and individuals found guilty of stealing and looting cargo and sabotaging various installations should be dealt with in accordance with the law on a case-by-case basis. Cases of serious nature are liable for prosecution in accordance with the provisions of the criminal law. Resolute measures must be taken to retrieve the stolen cargo or loot or to obtain compensation for the economic loss.

--Active efforts must be made to enforce covenants entered into by villagers or civilians. The covenants formulated and enforced by the villagers or civilians are good measures for the masses to exercise self-control. This form of covenants should be adopted and enforced by all villages and cities throughout the province. Brigades in the countryside and the residential committees in cities and townships should be authorized to enact such covenants. The mass line should be followed in developing the covenants, which should take into account actual local conditions and should be couched in simple, clear-cut and easily comprehensible language. The contents of the covenants should in no way conflict with the state laws now in force.

MAO CONTRIBUTES TO THE ADVANCEMENT OF MARXISM

Beijing BEIJING RIBAO in Chinese 9 Sep 81 p 3

/Article by Chen Ruisheng /7115 3843 3932/: "Comrade Mao Zedong Advanced Marxism Through Practice"/

/Text/ "The Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" which was passed by the 6th Plenary Session of the 11th CCP Central Committee, realistically appraised Comrade Mao Zedong's contribution to Marxism. "The Resolution" noted: "His philosophical writings and his many other highly philosophical works provide a penetrating discussion and elaboration of the Marxist theory of knowledge and dialectics by summing up the experience and lessons of the Chinese revolution. He helped philosophy to truly become a powerful weapon of the proletariat and the masses for understanding and transforming the world. In particular his important writings on the problems of the Chinese revolutionary war provide a shining example of applying and developing the Marxist theory of knowledge and dialectics." "The Resolution" correctly interprets and evaluates Comrade Mao Zedong's philosophical thinking, it upholds the correct ideological line set forth by Comrade Mao Zedong and clarifies his important guiding ideology.

1. Comrade Mao Zedong was a great Marxist, he was also a great proletarian revolutionary, military strategist and thorist. In just over half a century he led the people of China as they embarked on the cause of revolution and construction; he applied dialectal materialism and historical materialism to all aspects of the work of the political party of the proletariat. Furthermore, he scientifically summed up the practical experiences of revolution and construction, he brought together the collective wisdom of the whole party and all the people throughout the nation and he gradually formed the standards, viewpoints and methods that make up the distinctive characteristics of the CCP thereby enriching the developing Marxism.

Mao Zedong's philosophical thought is not a dogmatic armchair philosophy, rather it is a vital philosophy that stems from summarizing practice and is used to guide practice. The linking of philosophical principles with social practice and applying them with flexibility are the remarkable characteristics of Mao Zedong's philosophy. During the process of using Marxism to solve the practical problems of the Chinese revolution, he made Marxist philosophy more concrete and more Chinese. He formed a much admired philosophy that incorporated the Chinese style and the essence of practice.

Comrade Mao Zedong's philosophical works are the generalization and summation of theories on a number of original experiences concerning long-term practice in China. His brilliant philosophical treatises, "On Practice" and "On Contradiction," were written to expose the subjective mistakes of dogmatism and empiricism within the party, particularly dogmatism, from the viewpoint of the Marxist theory of knowledge and dialectics. The publication of these two philosophical works which, from an international perspective, systematically summed up the experiences drawn from inner-party and international communist movements and put into practice the dialectal materialistic theory of knowledge and materialist dialectics, served to eliminate the errors of leftist and rightist opportunism, especially the mistake of leftist dogmatism. It dug up the ideological roots of these two mistaken trends, sought unity of ideology within the party and gave impetus to the cause of the liberation of the Chinese people. The philosophical works "On Practice" and "On Contradiction" which systematically, concisely and comprehensively set forth and expand on the Marxist theory of knowledge and dialectics are classics unique in the history of Marxism. Without doubt, these two philosophical works provide new riches to the storehouse of Marxist philosophy.

2. The philosophical thought of Comrade Mao Zedong is not only brought into focus in his philosophical treatises, it also appears throughout his scientific works and it is displayed in his revolutionary activities carried out in leading Chinese communists. In particular, his major works dealing with the problems of the Chinese revolutionary war such as "Problems of Strategy in China's Revolutionary War," "Strategic Problems in the Anti-Japanese Guerrilla War," "On the Protracted War," "Problems of War and Strategy" and other military works all contain much vital Marxist philosophical thought. In these military writings, he provided the best model on practically applying and developing the Marxist theory of knowledge, dialectics and historical materialism. These Marxist military works are without equal in Marxist literature.

Comrade Mao Zedong applied Marxism with skill and great proficiency in analyzing and discussing military matters. For example, in the brilliant work "On the Protracted War," Comrade Mao Zedong skillfully applied the Marxist theory of knowledge, specifically the principle of the law of the unity of opposites. He made an exhaustive and penetrating analysis of the contradiction between China and Japan. He revealed the objective laws governing the development of the War of Resistance Against Japan and he introduced the correct line of persisting in the protracted war and striving for final victory while denouncing the "theory of national subjugation" and the "theory of a quick victory." He also scientifically predicted the three strategic stages in the protracted was against Japan, based on the development of the four fundamental characteristics of the contradiction between China and Japan. The entire course of the history of the War of Resistance Against Japan convincingly proved the correctness of the laws governing the development of this war as revealed by Comrade Mao Zedong. "On the Protracted War" is a brilliant example of how Comrade Mao Zedong made use of materialist dialectics to analyze and solve military problems; he creatively enriched and advanced Marxism. This work is not only of great historical significance, it is also of great immediate significance. Although we are already in a period of socialist construction and the work in which we are engaged differs from that of the War of Resistance Against Japan, nevertheless, the significant philosophical thought contained in "On the Protracted War" is timeless. To renew study of this work would be of great immediate significance for mastering scientific methods of thinking, for learning to put Marxist principles into practice and for refuting the attitude of being impatient for quick results in the establishment of the "four modernizations" and the view of passive pessimism.

3. Comrade Mao Zedong's characteristic of advancing Marxism through application is further expressed in the way he flexibly adapted Marxist philosophy to our party's methods of leadership and work. He summarized the work experiences of vast numbers of cadres and the masses, he applied principles of Marxism and formulated a list of leadership methods and work methods such as investigation and study, the mass line and so forth. Investigation and study are the main ways of understanding the world as well as the basic methods of leadership and work needed to do good work. From an epistemological standpoint, investigation consists of becoming acquainted with the conditions of objective reality, listening attentively to the views of the masses, collecting firsthand data and acquiring perceptual knowledge. Study consists of the material that is investigated, the connecting of thoughts and the acquisition of rational knowledge. Investigation is the premise and foundation of study; study is the continuation and distillation of investigation. The two form a coherent and integrated process. Comrade Mao Zedong stressed the importance of investigation and study and he repeatedly stated: "no investigation, no right to speak." He also came up with many fine methods for investigation and study such as "looking at flowers while riding on horseback," "getting off one's horse to examine flowers," "dissecting a sparrow," staying at selected basic units" as well as how to conduct good investigation meetings etc. In addition, he himself did much investigation and study; he wrote "Investigation into Peasant Movements in Hunan," "Rural Survey," "Oppose Book Worship," "Preface and Postscript to 'Rural Survey'" and other investigative reports and articles. Comrade Mao Zedong also made use of the principles of dialectal materialism and historical materialism to formulate a complete methodology for leadership and work on the mass line. He noted that when leading the masses to carry on every kind of practical work, it is necessary to have correct guiding ideology; to follow the principle of from the masses, to the masses; to bring together the leadership and the masses; and to combine general directives with specific guidance. That is, to sum up the views of the masses, systematize them and then seek the firm support of the masses and test the correctness of these views through the actions of the masses. This sort of cyclical repetition causes the understanding of the leadership to become even more correct, more vivid and more meaningful. In this way Comrade Mao Zedong united the Marxist theory of knowledge with the mass line. His major contribution to Marxism was to adapt the principles of the Marxist theory of knowledge and the principle that the people are the creators of history to the mass line in addition to using the mass line to enrich and develop epistemology and historical materialism, "Concerning Certain Problems in Methods of Leadership" and other works summed up Comrade Mao Zedong's views on the mass line. The popularization and application of the methods of leadership and methods of work as formulated by Comrade Mao Zedong, signify the ceaseless penetration of Marxism into the realities of life and have become a powerful weapon in the hands of vast numbers of cadres and masses. This will inevitably bring about the enrichment and advancement of philosophy itself.

In summary, the striking characteristic and distinctive symbol of Comrade Mao Zedong's enrichment and advancement of Marxism consists of the linking of the actual practice of China's revolution and construction, applying Marxist philosophy with flexibility and uniting theory and practice. This is the living spirit of Mao Zedong Thought. As far as we Chinese communists and the broad masses are concerned, it has long-term guiding significance.

At present, we continue to strive to study and apply Mao Zedong Thought. It is of tremendous use in establishing ideological theory within the party, in the cadres' growth to maturity, in synthesizing experience, in avoiding mistakes, in inspiring revolutionary enthusiasm and in carrying out the "four modernizations." Experience has borne out that once we have studied Mao Zedong Thought there is bound to be a qualitative leap in ideology. Therefore, it is essential to encourage the cadres to further study Mao Zedong Thought.

PARTY AND STATE

NUCLEUS OF MAO ZEDONG THOUGHT ANALYZED

Shanghai WEN HUI BAO in Chinese 10 Sep 81, p 3

[Article by Chen Yi [7115 3085]: " The Nucleus of Mao Zedong Thought: A Combination of the Universal Truths of Marxism-Leninism and the Concrete Experiences of the Chinese Revolution"]

[Text] The "Resolution on Certain Historical Questions in the History of the Party Since the Founding of the People's Republic of China" adopted by the Sixth Plenary Session of the Eleventh CCP Central Committee is an important document which concerns the political life of the whole party, the whole army and the people of all nationalities. The "Resolution" uses the Marxist theories of dialectical materialism and historical materialism to make a correct summation of the major historical events in the 32 years since the founding of the party, makes a realistic evaluation of the historical position of Comrade Mao Zedong in the Chinese revolution and thoroughly states the great importance of Mao Zedong Thought as the guiding ideology for the party. The most central and primary concern of the "Resolution" is to realistically explain the historical significance of Comrade Mao Zedong and the leadership role of Mao Zedong Thought in party work. The entire "Resolution" is imbued with this spirit. In studying the "Resolution" it is therefore necessary to first study this point.

The "Resolution" points out that Mao Zedong Thought has been, is and will be the guiding ideology of our party. To correctly understand Mao Zedong Thought and to comprehend its formation, development and abundant structure, its great significance and central issues is to realize that Mao Zedong Thought is an integration of the universal truths of Marxism-Leninism with the concrete practices of the Chinese revolution. This will continue and there also will be further developments under the new historical conditions found today. Since the Third Plenum, order has been brought out of chaos and the scientific aspects of Mao Zedong Thought have been restored. The application of the scientific theories of Mao Zedong Thought in leading construction of modernization is a fundamental guarantee of success in our efforts. Lenin has said that without revolutionary theory there can be no revolutionary movement. Chairman Mao has said that when the universal truths of Marxism-Leninism reflected in the experiences of the worldwide proletarian struggle were integrated with the concrete practices of the revolutionary struggle of the Chinese proletariat and the broad peoples they then became an invincible weapon of the Chinese people. This great accomplishment we are now discussing, this invincible weapon of the Chinese people is none other than the guiding ideology of the party--Mao Zedong Thought.

Is Mao Zedong Thought then without foundation? No, it is not. The "Resolution" clearly points out that in the latter 1920s and the early 1930s when the international communist movement and our party were following the mistaken tendency of making dogma out of Marxism and deifying both the resolutions of the Communist International and the experiences of the Soviet Union the Chinese revolution very nearly fell into a hopeless situation. Mao Zedong Thought struggled against the mistaken tendency and moreover slowly took shape and developed by making profound summations of the process of these historical developments. Mao Zedong Thought is product of the integration of the universal truths of Marxism-Leninism with the experiences of the Chinese revolution. Its philosophical foundations are dialectical materialism and historical materialism. These are powerful weapons for observing, analyzing and solving social contradictions. We are now in this same fashion applying the Marxist world view and methodology to analyze the task and sum up historical experiences. Comrade Mao Zedong always advocated and firmly grasped the principle of linking theory with practice and integrated the universal truths of Marxism-leninism with the concrete experiences of the Chinese revolution. If we pay attention only to the aspect of theory and do not integrate it with practice then we are guilty of the dogmatic error of quoting Marxist theories out of context and copying them mechanically in disregard of specific conditions. For example, Marx said that the era of social revolution could come about only when production relationships had changed from a stimulus of production into fetters on production and he moreover said that social revolution must take place in advanced capitalist nations. Some people then believed that because China had not undergone the capitalist stage capitalism should therefore be permitted to develop for a period and socialism should not be practiced. This is an obvious error. Actually, before Lenin rose to power he once engaged in struggle against the Second International. Lenin did not go by the book and smashed the obstructions placed by the theoreticians of the Second International in pointing out that a proletarian revolution could first win victory in a country and then establish socialism. The reason why Lenin was able to reach this conclusion was because he integrated the universal truths of Marxism with the concrete realities existing in Russia and analyzed the various contradictions found throughout the world to realize that Russia was the weakest link of the world's imperialist system. He then bravely led the Russian October Revolution. Chairman Mao and the older generation of proletarian revolutionaries also studied China's national situation and integrated the universal truths of Marxism-Leninism with the concrete practice of the Chinese revolution and formulated correct lines, directions and policies in order to win victory in the Chinese revolution. The Seventh Party Congress unanimously agreed that Mao Zedong Thought was the unified ideology of Marxism-Leninism and China's revolutionary practices and moreover decreed it to be the direction for all party work. It is only because the party took Mao Zedong Thought as its guiding ideology that we won the great victories in the democratic revolution and the socialist transformation and have obtained such great success in socialist construction.

The reason why we want to emphasize the point that Mao Zedong Thought is an integration of the universal principles of Marxism with the concrete practice of the Chinese revolution is because this is the central issue of Mao Zedong Thought. A look back at the Chinese revolution will verify this point. During the first period of national revolutionary struggle, although the party was still in its early stages, it nonetheless adoped correct policies and was able to unite with the Nationalist Party of Sun Zhongshan to succeed in the Northern Expedition. But because the party was still young, after the success of the Northern Expedition Chen Duxiu then promoted rightist capitulationism in the belief that China should allow the bourgeoisie to assume power and wait until the development of capitalism to implement socialism. The result was the defeat of the first national revolution. Later, the party led the Nanchang Uprising and held the August 7 Conference and decided to carry out armed uprisings. The Nanchang Uprising was the first shot to sound the bell of armed resistance against the Nationalist reactionaries and was the beginning of the party's independent leadership of armed revolution. Because the party then lacked deep understanding of the principles of Marxism and of China's national situation the Nanchang Uprising was finally defeated. At this time Comrade Mao Zedong applied the universal truths of Marxism-Leninism to study China's problems and then proceeded according to China's actual conditions to lead the Autumn Harvest Uprising, ascended Jinggangshan and founded the revolutionary base. Though these were small acts the consequences were great and they resolved the question of the ability of communist governments to exist and the question of the countryside encircling the cities. These are the great contributions of Comrade Mao Zedong. These contributions were possible because Comrade Mao Zedong grasped the integration of the universal truths of Marxism-Leninism with the concrete practice of the Chinese revolution. Therefore, in our study of the "Resolution" when we look back on the 28 years prior to Liberation we must concentrate on studying and researching the fundamental question of the integration of the universal truths of Marxism-Leninism with the concrete practice of the Chinese revolution.

After the founding of the People's Republic of China and the implementation of socialist construction it was also necessary to apply the universal truths of Marxism-Leninism to study the new conditions in China's socialist construction. The Second Plenum of the Seventh Congress decided upon the series of directions and policies which were to shift the work emphasis from the countryside to the cities. We quickly established ourselves in the cities. We confiscated bureaucrat capital, completed land reform in the new areas, repressed counter-revolution, conducted the Three-Anti and Five-Anti campaigns, carried out the Resist America Aid Korea Campaign, restored the national economy and victorously completed the Three Great Transformations. In accordance with the new conditions of the founding of the nation, Mao Zedong Thought also underwent new developments. After 1957, however, Chairman Mao in certain areas began to depart from the path of the integration of the universal truths of Marxism-Leninism with the concrete practice of the Chinese revolution, eventually leading to such errors as the "Great Cultural Revolution." At this time Lin Biao and the "gang of four" made serious distortions of Mao Zedong Thought by exaggerating the errors of his later years into the so-called "theory of continual revolution under the dictatorship of the proletariat," saying that "each and every word is the absolute truth," and that "one sentence refutes 10,000 sentences." Mao Zedong Thought was not taken as a direction but was made into dogma. It basically is a type of scientific theory and must not be approached with anti-scientific attitudes, which naturally would be counterproductive. We are now summing up the lessons of our experiences and still must integrate the universal truths of Marxism-Leninism with the concrete practice of the Chinese revolution in order to make a theoretical distinction between right and wrong.

With regard to this fundamental issue, the Third Plenum brought order out of chaos, criticized the "two whatevers" and advocated ideological liberation through correctly and scientifically grasping Mao Zedong Thought in order to eliminate the chaos brought to this topic by Lin Biao and the "gang of four." In terms of our ideology, no matter whether we discuss standards of truth or take supplemental courses, even though we have solved the questions of right and wrong in the deification of the individual and in evaluating major historical events, we still have not solved the problem of truly and profoundly understanding Mao Zedong Thought. This is what we must henceforth study and resolve. Mao Zedong Thought was developed in the process of the Chinese revolution and construction and future practice will continue to apply and develop it. We must now correct and prevent two tendencies. One is the error of rejecting the leadership role of Mao Zedong Thought in the Chinese revolution. The other error is to continue to hold the "whatever" viewpoint. Although we must grasp Mao Zedong Thought as the guiding ideology of our party we must also make a distinction between Mao Zedong Thought and the mistakes which Comrade Mao Zedong made in his later years, and we must also apply and develop Mao Zedong Thought in our new practice.

How can we completely and correctly grasp Mao Zedong Thought? How can we improve our understanding in integrating the universal truths of Marxism-Leninism with the concrete practice of the Chinese revolution? I believe that the following two points should be considered:

1. While we are comprehending the explanations of the formation and development of Mao Zedong Thought, we must integrate in this creative process a true distinction between the role of collective leadership in the party and the individual role of Comrade Mao Zedong in the party. The "Resolution" on the one hand emphasizes that Mao Zedong Thought is the crystallization of the collective wisdom of the Chinese communist party and that many outstanding party leaders made important contributions to its formation and development. At the same time, the "Resolution" points out that Comrade Mao Zedong is the major representative in the process of the creation and summation of these theories. The scientific writings of Comrade Mao Zedong made concentrated generalizations of these theories. If we do not see the efforts

made by the whole party in integrating Marxism-Leninism with the concrete practice of the Chinese revolution, ignore or deny the contributions made by these outstanding party leaders and say that Mao Zedong Thought is the product of the individual genius of Comrade Mao Zedong we will be in error. However, to reduce or even deny the major role of Comrade Mao Zedong in creating these experiences, especially in generalizing about the theories, would also be in error.

2. The explanation of Mao Zedong Thought must scientifically embody the integration of the universal truths of Marxism-Leninism with the concrete practice of the Chinese revolution. Mao Zedong Thought is both the application of Marxism-Leninism in China and further develops it. The is because any correct application necessarily includes developments. Each and every scientific theory and scientific concept of Mao Zedong Thought is both Marxist and Chinese as well. It is based on the world view and general principles of Marxism and is firmly fixed on a Marxist foundation. It moreover has the special creations made by members of the Chinese Communist Party and distinctly Chinese characteristics. This has been the case ever since the Third Plenum. It is wrong to believe that Mao Zedong Thought is a narrow theory which stands outside Marxism and it is also wrong, considering the Chinese characteristics of these experiences, to make inappropriate claims that these are universal truths which can be applied outside of China.

3. A distinction must be made between the scientific theories of Mao Zedong Thought and the mistakes of Comrade Mao Zedong which were made in his later years. The "Resolution" says that the mistaken views of Comrade Mao Zedong's later years departed from the path of unifying the universal truths of Marxism-Leninism with the concrete practice of the Chinese revolution and departed from the party's collective experiences and collective wisdom.

To sum up, Mao Zedong Thought is a scientific generalization which expresses the complete and revolutionary theories of our party and which expresses a series of already proven correct theoretical principles and summations of experience regarding the Chinese revolution. We must evaluate the creative contributions of Comrade Mao Zedong to Marxism and must also evaluate the real and long-term leadership significance of Mao Zedong Thought as the guiding ideology of the entire party. At the same time, we certainly must not implement the policy of the "two whatevers," by which we mean that we cannot take a dogmatic attitude with regard to the scientific theories of Mao Zedong Thought. In this way, the theoretical level of the party and the party's guiding ideology will and must continue to follow the path of Marxism-Leninism-Mao Zedong Thought in continuing to develop.

PARTY AND STATE

ARTICLE VIEWS OBSTACLES IN CRITICISM, SELF-CRITICISM

Fuzhou FUJIAN RIBAO in Chinese 28 Sep 81 p 1

/Article by Li Lun /7812 0243/: "The Reasons Behind the Obstacles in the Campaign for Criticism and Self-Criticism"/

/Text/ The practice of criticism and self-criticism is our finest tradition, it is one of the remarkable features that distinguishes our party from all other political parties. However, during the past decade of internal unrest it was seriously misrepresented and became a tool for disciplining and hurting the people. The weapon of correct criticism and self-criticism was by and large discarded. At present it is very difficult to carry out criticism, the obstacles are great. The principle reasons behind this are: (1) Party style and social practices have not improved at all. Those who dare to adhere to the correct line, policies and principles of the Third Plenary Session and those who dare to uphold principles and dare to speak the truth receive no support thereby giving rise to the unsound practice of cultivating more flowers and fewer thorns. (2) The ruthless struggle and merciless blows of the decade of internal unrest have left the people with a scarred spirit, therefore, as soon as party and nonparty members hear that criticism and ideological struggle will be carried out, they become extremely concerned and have lingering fears. The inability to launch sound criticism and self-criticism is the major reason for disorganized and slipshod work on the ideological front. If we want to overcome disorganization and laxity and become strong and vigorous then we must seek unity of ideology and march in step. In order to accomplish this we must launch a campaign of criticism and self-criticism. In a country as large as ours that has undergone a decade of civil strife and has faced all kinds of problems, if we did not carry out criticism and self-criticism, how could we unify our ideology, correct our work style and ensure the healthy development of our cause? We must recognize the extreme importance of launching criticism and self-criticism in terms of the future and destiny of our party and nation.

As for the matter of carrying out criticism, there are some problems at present in ideological understanding that need to be resolved. Some comrades have noted that there are many contradictions and problems in our country, wouldn't criticism serve to intensify these contradictions? They advocate that under the present conditions, it would be best to decrease or eliminate the use of the weapon of criticism. This view is incorrect. The prevailing liberal trends have to do with problems of political principle such as whether we accept party leadership or whether we want a socialist orientation. On the contrary, the contradictions will become more acute if we fail to give instruction or to criticize these mistaken tendencies or if we ignore them, letting them go unchecked. Engaging in active ideological struggle and correct criticism is, in effect, a way of controlling minor disorders so as to avert a major upheaval. Thus, if we want to prevent the intensification of contradictions, we cannot evade them, we should take up the weapon of criticism. Of course, if the methods of criticism are unjust such as engaging in organizational crossfire or criticizing and attacking arbitrarily, this too will create disorder. Just as Comrade Hu Yaobang said concerning the present tendencies: "If we fail to give instruction and to criticize and refuse to deal with them there will be disorder; if criticism is unjust, instruction inappropriate, this too will lead to disorder."

Some comrades resent criticism, they make mistakes yet they will not accept criticism. As soon as they are criticized they say you are beating them with a bludgeon. Lately, there have been some comrades in literary and art circles who have not been able to comprehend the matter of launching criticism and self-criticism as proposed by the Central Committee. They say that each movement always makes literary and art circles the first target of attack, there are so many problems on other fronts, why aren't they criticized? The existence of this sort of ideological sentiment is understandable. For, in the past 20 years there actually were many movements that began with the "5 circles." Moreover, the literary and art circles frequently were the first to be affected. However, to maintain this viewpoint today is a mistake. It is not in keeping with the spirit of the forum on problems of the national ideological front nor does it conform to the present reality. This forum, convened by the Central Committee, proposed strengthening the party's leadership, launching criticism and self-criticism, correcting the state of disorganization and laxity and overcoming all erroneous trends. This is not only necessary in literary and art circles, it is also needed on the whole ideological front. Comrade Hu Yaobang pointed out in his speech that a disorganized and lax leadership is a common problem of the whole party. He emphasized that the whole party must learn to make use of the weapon of criticism and self-criticism in order to strengthen unity and improve work. In actual life do we not constantly carry out earnest criticism against mistakes in all aspects of work, against seeking privileges, against engaging in incorrect practices and other phenomena? Therefore that argument of "once more making literary and art circles the first target of attack" is invalid. Comrade Mao Zedong pointed out that criticism and self-criticism are "the only methods for preventing all kinds of political dirt and germs from contaminating our ideology and the body of our party." Thus we must welcome criticism, promote criticism and encourage criticism. To reject criticism is to assume an attitude of concealing one's faults for fear of criticism. This attitude is detrimental to the development of the cause of literature, the arts, to theory and to other ideological fronts. It must be overcome.

Of course, when engaging in criticism we must pay attention to methodology; we must be fair and just. We must accept the nature of the problem for what it is and not arbitrarily inflate it to a higher plane of principle and partyline. Ideological problems and political problems are frequently intermingled, as are academic viewpoints and political viewpoints. We must be particularly careful and make sure to differentiate between them. We must not arbitrarily exaggerate problems in ideological understanding or erroneous academic and artistic views to a political level so that we may criticize them. Engaging in unlimited exaggeration does not help in solving problems, it may even create new confusion. We certainly must criticize the views, speeches and writings that violate the four basic principles. However, as long as the problems still have to do with the internal contradictions among the people, the manner of criticism must be both earnest and sincere. It must start from the desire for unity, it must be for the good of others and it must be well-reasoned so that those who are criticized feel that our party is truly concerned about them and trying to help them reach a common unity and arrive at unity on the basis of the four basic principles. It should be taken into consideration that literary and artistic creations involve complicated mental activity. Because of this we must use two standards, political and artistic, to make fair analyses. Good works should be commended, inadequate works should be given assistance and poor works should be criticized. Under no circumstances should we make subjective decisions, exaggerate at will or reject them out of hand. This would not be favorable to the implementation of the "double-hundred" policy or to the success of the cause of literature and art. In summary, we must attach great importance to the effectiveness of criticism and pay attention to attitude and methodology. To not criticize mistakes is to forsake one's principles; criticizing mistakes with no regard for methodology and mixing up the two different types of contradiction is also a problem of principle.

When engaging in criticism, we must continue to believe that the majority of people, including those with liberal tendencies, will do as the party says and heed the voice of truth and that they are capable of being remolded. We must combine criticism and praise, education by positive example and enlightenment.

Let us take up the weapon of criticism and self-criticism and, in good time, surmount all erroneous tendencies in order to ensure the success of the cause of socialist construction.

IMPORTANCE OF CORRECT CRITICISM STRESSED

Harbin HEILONGJIANG RIBAO in Chinese 23 Sep 81 p 3

[Article by Wei Li [7614 4009]: "A Prerequisite for Carrying Out Criticism Correctly"]

[Text] On the issue of criticism and self-criticism, our Party has rich experiences of success as well as profound lessons of failure. These experiences and lessons have made clear to us that in order to carry out criticism and self-criticism correctly, we must take a firm and clear-cut stand, adopt proper measures, be able to distinguish right from wrong; that is, to seek truth from facts. Not daring to criticize, or not criticizing at all, of course, is far away from carrying out criticism correctly; on the other hand, will random and irresponsible criticism and attacks lead to good criticism? To confuse right and wrong, even to the extent of reversing them not only cannot unify ideologies and unite the comrades, but will even bring harm to the revolution. To be revolutionary, we should maintain a firm and clear-cut stand; to be scientific, we must adopt correct measures and be able to distinguish right from wrong. In order to carry out criticism correctly, we must achieve unity of the revolutionary and the scientific aspects in our work. To be revolutionary without being scientific is, at best, mere wishful thinking. Hence, to distinguish right from wrong accurately is a core question in carrying out criticism correctly.

To distinguish right from wrong accurately is the basic requirement of our Party's dialectical materialistic ideological line on the issue of criticism; and the embodiment of party nature in our Communist Party on all principles. The term right refers to the correct recognition of objective matters and their laws, the term wrong refers to the distorted reflection of objective matters and their laws. Discrimination of right and wrong means a sound knowledge of objective laws, and to handle affairs in accordance with it. This is precisely the basic reason of correct criticism and self-criticism being a great driving force behind all our improvements. Summing up the 60 years of historical lessons of our Party, there are two phenomena worthy of our notice on the subject of political discrimination of right and wrong. One is regarding "rightist" as right, the other regarding "leftist" as right, both of which have confused right and wrong and have caused grave loss to the revolutionary cause. In the era of the New Democratic Revolution, Chen Duxiu [7115 3747 4423] upheld Right-capitulationism as right, resulting in forfeiting the triumph of the Northern Expedition; Wang Ming [3769 2494], who upheld Left Opportunism as right, almost brought the Chinese Revolution to ruin. During the era of socialism since 1957, there have been increasing cases where "leftist" was upheld as right, and even developed to such an extent as becoming the highest standard measure for right and wrong during the Cultural Revolution. It was only after the Third Plenary Session of the CCP that the topsy-turvied right and wrong were again basically straightened out and that criticism and self-criticism began to return to their original forms and got on the right track. The Party's Third Plenary Session, the Central Work Committee of December last year and the Sixth Plenary Session are all successful examples of correct distinction between right and wrong and correct launching of criticism and self-criticism.

At present, although the Central has achieved the historical task of restoring order out of chaos on guiding ideologies, the phenomenon still exists where some comrades in some units are still regarding "leftist" or "rightist" as right on certain matters, and it is rather serious in some cases. Those who uphold "rightist" as right are making use of the mistakes that are already rectified or in the process of being rectified by our Party to oppose to the four basic principles. Hoisting the banner of "liberalizing ideology" and "reform," they are very deceptive. To them, the four basic principles are wrong and bourgeois liberalization is right. That is the substance of the problem. Failure to see this substance clearly is an important reason for the laxness and weakness on the ideological front and leadership. Of course, there are extremely few people with such erroneous tendencies, yet their influence should not be underestimated. If we let these erroneous tendencies overflow, they will seriously undermine our efforts to purge the "left" mistakes, even to the extent of losing the great achievement of bringing order out of chaos since the Third Plenary Session, causing serious damage to the great undertaking of the four modernizations.

The situation in which "leftist" is upheld as right is still more complicated. There are fewer and fewer people who openly support the "cultural revolution" and the "continuation of the revolutionary theory under proletarian dictatorship." However, we should pay special attention to those who still hold the line, principles and policies expounded by the Third Plenary Session responsible for the hardships, problems and shortcomings encountered in our advancement, reform and our work. On the one hand, they do not find our policies agreeable, and on the other hand, they dare not openly voice their opposition because of the circumstances. Moreover, due to the widespread influence of "leftist" thinking over such a long period of time, those comrades who detested "left" mistakes before, and even those who were victimized cannot help consciously or unconsciously regard issues with "leftist" bias. Hence, eradicating left tendencies and distinguishing right from wrong in our criticism and self-criticism is a tremendous task.

Confusion of right and wrong during the course of criticism is caused by many and varied reasons: some are subjective, such as low standard of criticism and weakness in distinction between right and wrong, poor reform of the world outlook and wrong motives for criticism; some are objective, such as misguidance from the upper levels, and obscure understanding of the situation. Among these reasons, there are two which merit our special attention. One is mistakes caused by misguided ideologies. To use "left" or right as the correct guideline will inevitably render results in which "left" or right is seen as correct. After several years' efforts, the Party central committee has resumed the scientific system of Mao Zedong Thought, pointing to us a correct line of work. However, "leftist" tendencies are still not completely eradicated, and therefore it is necessary to further eradicate the influences caused by the "continuation of revolutionary theory under proletarian dictatorship" in order to carry out criticism and self-criticism correctly. Another method is to proceed from reality, seeking truth from facts instead of following blindly the prevalent trend. In the past, whenever we criticized an erroneous tendency, we only pursued one demand, followed one pattern, and dealt with it in one blow, regardless of the local circumstances. The result is that rightist elements were arrested and fought against on all levels, representatives were also sought on all levels, bringing harm to many innocent people. Now the Central Committee has conducted criticisms of wrong tendencies without engaging in sieges or campaigns, making sure that various regions criticize according to their own situations and resolving problems according to their particular nature. This is a scientific summation of several decades of experience and the guidance of Marxism. However, some comrades still tend to reverse this guiding principle, i.e., "I've got whatever you are opposed to," just to prove that they have a firm and clear-cut stand. There are still other comrades who do not understand that both "left" and "right" refer to the political issue; the right side and the wrong side. They tend to attach labels of "right" or "left" to whatever is wrong. To them, things are either "left" or right, and there are no other categories of right and wrong. They bring about the inevitable result of exaggerated criticism which confuse right and wrong. The adverse consequences brought about by this in the past 20 years are not completely rectified. This profound lesson should be remembered well by all of us.

In order to distinguish right from wrong correctly, the scientific standard should be insisted upon. This standard is the revolutionary practice of hundreds and thousands of the masses under the guidance of Marxism. This standard of practice in the present historical era is the substantiation of the line, principles and policies expounded by the Third Plenary Session. Those measuring to it are right, and those falling short of it are wrong. Upholding the line, principles and policies of the Third Plenary Session is the same as upholding the four basic principles. The four basic principles are concrete and not abstract. The line, principles and policies are the substantiation and manifestation of the four basic principles in the present historical era. Once we grasp tight the line, principles and policies of the Third Plenary Session, we can then distinguish right from wrong, thereby carrying out correct criticism in the effort of uniting all comrades, the whole Party and accelerate our aim of a high standard of socialist material civilization as well as spiritual civilization.

Criticism and self-criticism is the splendid tradition and workstyle of our Party, and a great driving force in our advancement. We have relied on this weapon to insist on truth and in rectifying errors, bringing forth great victory to the Chinese Revolution. Since the Third Plenary Session, we have relied on this measure to restore order out of chaos, to sum up experiences, rectifying the "left" mistakes in the Party's guiding ideology. At present, it is this measure that we are relying on to overcome erroneous tendencies which deviate from the line, principles and policies of the Third Plenary Session, particularly those erroneous tendencies which deviate from the socialist road and Party leadership and engage in liberalization, thus promoting stability and achieving victories in readjustment of the economy and construction of the four modernizations.

SUN YATSEN'S EFFORTS TO REUNIFY CHINA LAUDED

Beijing RENMIN RIBAO in Chinese 7 Oct 81 p 3

[Article by Liu Fei [0491 2431]: "Emulate Sun Yatsen's Spirit to Struggle to the End for the Reunification of the Fatherland"]

[Text] The 10th of this October will be the 70th anniversary of the 1911 Revolution. Seventy years ago, the great vanguard of the Chinese Revolution, Mr Sun Yatsen, led the entire nation to achieve victory in the 1911 Revolution, overthrowing the feudalist imperialist system which had been in effect for thousands of years. He established a democratic republic for the first time in our country and paved a broad road toward the realization of a thorough democratic revolution and socialist revolution for the Chinese people. This is a great achievement which can never be obliterated from the history of China.

Mr Sun Yatsen founded the Three People's Principles which expressed the revolutionary demands of the sincere advocator of democracy. He was a great revolutionary who devoted his entire life to struggle for national independence and national prosperity. He embodied high patriotic thoughts, unflinching determination to sacrifice and struggle to the end, and the undaunted revolutionary spirit to continue to forge ahead in step with the prevalent trend. He will forever be a model for us to emulate.

During my youth, I saw with my own eyes the corruption of the Qing government which led to the invasions by major powers, causing China to fall increasingly into a half-colonial situation. "When the nation was in a crisis and we lived precariously in fear, many with ideals began to have thoughts of saving the nation; from thence sprouted the seed of revolutionary unrest." ("Where There Is a Will There Is a Way." It was right at the beginning of this revolutionary unrest that Mr Sun Yatsen devoted himself to the revolution, as he claimed, "It was not until the year of defeat during the Yiyou Sino-French War that I decided to overturn the Qing government and establish a Republic." ("Psychological Reconstruction") From then on, he devoted 40 years of work to the Chinese Revolution, spending his entire life's energy and concentrating all his attention on the reform of China. Truly he bent his back to the task until his dying day. What was especially imprinted on the hearts of our older generation of Chinese people was his spirit to struggle to the end for the reunification of the fatherland which led him to go north while he was ill and afflicted with an incurable disease.

On 11 March 1925, Sun signed his will and instructed comrades at his side, saying, "I'm going north to seek for a peaceful reunification and I will advocate the convening of a national conference." "It is my very wish that all of you comrades continue to struggle so that a national conference can soon convene." Even on his deathbed, he was still crying, "Peace, Struggle, Save China." This "Peace, Struggle, Save China" is the summary of Sun's 40 years of revolutionary experience; it is also the valuable experience for people of all colonial and semi-colonial countries who wish to rid themselves of imperialist oppression in order to seek for democratic liberation and national independence.

In his "Speech on Calling a National Conference" written for a press conference at Moli'ai Road in Shanghai, Sun said, "Gentlemen, I have always been an advocate of peace." Not only this, he also said, "If our people want peaceful reunification, we must all be of one heart. All groups in the country should send delegates to the national conference to study the flaws in the present situation and discuss remedies." These knowledged opinions are worthy of our study.

Mr Sun Yatsen "adapted to the trend of the world and met the needs of the masses"; he was always at the head of the trend of the times and progressed along with history, making outstanding contributions to the revolution of the Chinese people. He never considered the 1911 Revolution to be the final goal--he said, "When the revolutionary ideal is not yet in force and the revolutionary goal not yet achieved, we are only a republic in name and not in reality." Because of this, he always encouraged revolution with the fact that the revolution had not been completed; he was always able to confront and carry on a keen battle with the royalists and other reactionary groups on a clear-cut revolutionary democratic stand to protect the banner of democratic revolution. Sun's revolutionary thoughts continued to develop as the Chinese Democratic Revolution progressed further--he developed the new Three People's Principles from the old Three People's Principles. He accepted the help of the Communist International and the Chinese Communist Party and resolutely decided to reorganize the KMT, presenting the three policies of Soviet alliance, Communist alliance and support of agriculture and industry which realized the first cooperation between the KMT and the Chinese Communist Party, formed the foundation for the victory of the Northern Expedition and enabled China to enter the great new era of new democratic revolution.

After many circuitous roads, Sun finally found the correct revolutionary path of cooperation with the CCP. Sun is the experimenter who most understood why the old Three People's Principles could not work in China. He, therefore, took strides forward and firmly started on the new road to revolution. After Sun's death, the KMT broke off and during the critical moment in the Northern Expedition, the KMT controlling authorities betrayed the revolution, became anticommunist and antipeople, discarded Sun's revolutionary banner of the Three People's Principles, and in the end lost their footing on the Chinese mainland. From this, I came to understand Sun's spirit to struggle to the end for the reunification of the fatherland. On 1 April 1949, I along with Zhang Zhizhong, Shao Lizi, Zhang Shizhao, Huang Shaoxiaong, and Li Zheng went as representatives of the KMT to Beiping and agreed after consultation on a "National Peace Agreement" with the CCP. But because the KMT government at Nanjing then refused to sign the agreement, the reunification of the fatherland is as yet unrealized.

Thousands upon thousands of kinfolks are separated by the sea with homes they cannot return to and unable to communicate with one another--how can we not be grieved? At present, the authorities on Taiwan, with no regard for the nation's people, including the wishes of those on Taiwan, refused to have postal communication, trade relations and sea and air services. They refuse to realize reunification through peaceful negotiations and yet cry out for a "reunification of China through the Three People's Principles." The refusal for peace based on anti-communist feelings and the continuation of separation to obtain momentary ease through desperate means are fundamentally against Sun Yatsen's revolutionary work. I was reminded of the new year in 1923 when Sun Yatsen pointed out in his speech during the welcoming banquet of the Dian Gui army, "Yuan Shikai declared himself emperor, Zhang Xun restored the dethroned monarch, the supervising army groups rebelled and claimed autonomy on provinces they occupied--these people are tearing the country into pieces, so that the Chinese republic cannot be reunified. This disunity means that the revolution was not a success." His words are still relevant today and should be a useful lesson for the authorities on Taiwan.

The Chinese Communist Party continued and developed the spirit of the 1911 revolution and led the Chinese people, after a long period of revolutionary struggle, to finally overthrow the three huge mountains of imperialism, feudalism and bureaucratic capitalism which were placed on the head of the Chinese people, and established a People's Republic of China. The party completed the mission of Chinese democratic revolution and furthermore pushed it forward into the socialist revolutionary stage, and developed grand scale socialist reconstruction, thus completing the great revolutionary work which Sun Yatsen could not finish during his life time. Recently, from the point of the good of the people on Taiwan and the actuality of the Taiwan authorities, a third cooperation for reunification between the CCP and the KMT was suggested. As early as the new year's 1979, the Standing Committee of the People's Congress had published a "Letter to Compatriots on Taiwan." During the past 2 years, there has been increasingly strong reactions from Chinese overseas and compatriots on Taiwan. Recently, on the eve of the 32nd anniversary of the establishment of the PRC, the Chairman of the Standing Committee of the People's Congress, Ye Jianying, made nine proposals on the subject of Taiwan returning to the fatherland and the realization of peaceful reunification. The goal is to achieve a glorious chapter in the history of the Chinese people endorsed by all the people, including compatriots on Taiwan, a chapter which all would strive with one heart and mind to write so as to gain glory for all the ancestors and to provide prosperity for all posterity. These nine proposals are in tune with heaven and mankind and the terms are extremely generous. They are in keeping with the wishes of the people and have great relevancy and fully express the sincerity of the CCP. The proposals are reasonable and have the backing of the people. In my opinion, reciprocal negotiation and the realization of a third cooperation between the CCP and the KMT is the best road open to the authorities on Taiwan. It is time for a third cooperation now, the reunification of the fatherland can be delayed no longer. It is my greatest hope that the Taiwan authorities will be able to value the objective reality and all the efforts of the CCP in the continuation and development of the 1911 Revolutionary spirit and, based on the good of the people and of the nation, make up their minds soon to forget former grudges. Furthermore, after weighing the pros and cons, I hope they will change their course and come up with an appropriate policy. Of the representatives who went to Beiping for the peace consultations, I am the only one surviving. During these past 32 years, I have always cooperated with the CCP and devoted myself to the great task of reunification. I deeply believe that those with vision on Taiwan can make the correct choice between cooperation and separation and furthermore can struggle together with us in the promotion of a third CCP-KMT cooperation for the completion of the reunification of the fatherland and the grand plan for the strengthening of China. "Harmony Is Precious"--we are all sons and daughters of China, the posterity of Yan Huang, why can we not sit down and through peaceful negotiations realize the reunification of the fatherland?

PARTY AND STATE

ARTICLE DIFFERENTIATES MAO'S MISTAKES, MAO ZEDONG THOUGHT

Beijing BEIJING RIBAO in Chinese 3 Aug 81 p 3

[Article by Zhang Bizhong [1728 1801 1813]: "Mao Zedong Thought and the Mistakes of Comrade Mao Zedong During His Later Years Are Different in Nature--Realizations in Studying 'The Resolution on Certain Questions in the History of Our Party Since the Founding of the Nation'"]

[Text] To continue to uphold Mao Zedong Thought, we must strictly distinguish the mistakes of Comrade Mao Zedong during his later years from the scientific system of Mao Zedong Thought. As pointed out by the <<Resolution on Certain Questions in the History of Our Party Since the Founding of the Nation>>: "This distinction is very necessary." In order to make the distinction, we must clearly understand what are the differences between the nature of the mistakes of Comrade Mao Zedong during his later years and Mao Zedong Thought.

I. Mao Zedong Thought is the utilization and the development of Marxism-Leninism in China. It is the correct theoretical principle proven by practice and the summary of experience of the Chinese revolution. It is the result of the collective wisdom of the Chinese Communist Party. Comrade Mao Zedong made the most outstanding contribution to this. The introduction of Marxism into our nation opened up a new situation in Chinese history. But Marxism is only the fundamental rule that shows historical development and the general principle of revolution; it cannot provide a ready formula for China's revolution. Because of the ignorance of our party at the time of inception, regarding the question of how to treat Marxism, mistakes were made through dogmatism and through regarding foreign experience as sacred, leading the revolution into a hopeless situation. It was Comrade Mao Zedong who successfully combined the general principles of Marxism-Leninism with the actual practice of the Chinese revolution, made a theoretical generalization of the series of creative experiences in the practice of the Chinese revolution, and formed the scientific guiding ideology suited to China's national character--Mao Zedong Thought. Therefore, the emergence and formation of Mao Zedong Thought, as the guiding ideology of the Chinese Communist Party to lead the revolution from victory to new victories, does not rely on objective facts of change in any personal will. Using the name of Comrade Mao Zedong for this scientific system of ideological theory is appropriate. At the same time, during the course of the formation of Mao Zedong Thought, many outstanding leaders of our party, such as Comrades Zhou Enlai, Liu Shaoqi, and Zhu De, also made outstanding theoretical contributions that enriched the treasurechest of the theory of Mao Zedong Thought.

It can be seen that Mao Zedong Thought as a scientific term has its own specific content. In May 1945, at the seventh national delegates conference of the party, Comrade Liu Shaoqi described the outstanding contributions of Comrade Mao Zedong in his report on revising the party charter, officially proposed the concept of "Mao Zedong Thought," and included it in the party charter of the "Seventh Congress." The general principles of the party charter state: "The Chinese Communist Party takes the ideology that unifies the theory of Marxism-Leninism with the practice of the Chinese revolution--Mao Zedong Thought--as the guideline of all our work, and opposes any dogmatic or empirical tendencies." It was also at this time that Comrade Mao Zedong himself mentioned that he was not always right in the <<working guideline of the 'seventh congress'>>, and that not all of his views were Marxist; he said: "As a person, I have also made mistakes. In 1927 I wrote an article that contained Marxist views but in economic problems it lacked the Marxist viewpoint; therefore the part on economic problems was wrong. In addition, during the more than 20 years of work, whether in military and political affairs or in party work, I have made many mistakes. These things were not written down, but not writing them down is not negation. According to real history and the real situation, I have been mistaken." This shows that when the party first proposed this scientific concept of Mao Zedong Thought, the personal mistakes of Comrade Mao Zedong were not confused with Mao Zedong Thought. Comrade Mao Zedong never said that his personal mistakes belonged to Mao Zedong Thought. Therefore, although Comrade Mao Zedong and Mao Zedong Thought are so closely linked, there is a strict distinction between the two. This is because Comrade Mao Zedong contributed the most to the formation of Mao Zedong Thought, but this does not mean that Comrade Mao Zedong is equal to Mao Zedong Thought. We cannot say that his every work, his every piece of writing and even his personal mistakes all belong to Mao Zedong Thought. Mao Zedong Thought refers to the correct theoretical principles and the summary of the experience of the Chinese revolution; it does not mean the totality of the personal views and thoughts of Comrade Mao Zedong. Mao Zedong Thought is the result of collective wisdom, not the result of his personal struggle.

II. Comrade Mao Zedong made serious mistakes in his later years. These mistakes were mainly manifested by the leftist tendencies in the ideology that guided work and the launching and the leading of the "cultural revolution."

Seeking truth from facts is the living soul of Mao Zedong Thought. But Comrade Mao Zedong often violated this principle in his later years. For example, in socialist construction, he sometimes did not have a sufficient understanding of the objective economic patterns and China's national situation: he wanted to produce achievements in a hurry, he wanted to use the methods of "blitzkrieg" and "great leap forward" to change China's backward situation within a relatively short time. Comrade Mao Zedong also erred in his estimate of the political situation in China during his later years: he engaged in "taking class struggle as the key link," insisted that there was a capitalist class headquarters within the party, and insisted that the leading authority of a fairly large number of units was not in the hands of the people. These errors in estimating the actual objective situation caused the tragedy of the "cultural revolution." The other living soul of Mao Zedong Thought is the mass line, coming from the masses and going to the masses. But, the "cultural revolution" went contrary to this correct line, which had been formed over a long period by our party and which had always been advocated by Comrade Mao Zedong himself. As the movement developed, the society became more and more chaotic, the people were extremely disgusted with the situation and symbolically called this "mass movement" the "movement of the masses," and they hoped it would soon end so that there would be a stable environment to carry out socialist construction. This fully demonstrates that the "cultural revolution" and the theory of continuous revolution under the dictatorship of the proletariat are contrary in nature to the people's wishes and do not have any mass foundation.

The mistakes of Comrade Mao Zedong in his later years also directly violated his own correct theories of the past. Comrade Mao Zedong proposed the scientific conclusion that conflicts of two different natures must be correctly handled. He pointed out that large-scale, torrential and stormy types of mass class struggle had basically ended. But in his later years, he strongly advocated large-scale class struggle of a mass nature; he even advocated that major chaos such as the "cultural revolution" be launched every few years. Within the party, democratic centralism must be practiced to let people talk and let people criticize, one should not hide one's shortcomings; these have always been the ideas of Comrade Mao Zedong. But during his later years, he engaged in personal dictatorship and would not accept criticism.

Great men, including many great proletarian revolutionaries, unavoidably make some mistakes and have this or that shortcoming. The mistakes of Comrade Mao Zedong during his later years are the mistakes by a great Marxist; compared to the ever living achievements of his life, they are only secondary. Therefore, we cannot negate the mistakes of his later years because of his achievements, nor can we negate his whole life because of the mistakes of his later years and negate the scientific value of Mao Zedong Thought. The mistakes of Comrade Mao Zedong during his later years are different from Mao Zedong Thought in nature. The differences are: the mistakes are wrong, the other is correct; the mistakes brought about losses to the party and the people, the other guided the revolution to victory; the mistakes were caused by personal dictatorship, the other is the result of collective wisdom. They must be strictly distinguished.

III. Distinguishing Mao Zedong Thought from the mistakes of the later years of Comrade Mao Zedong is a scientific distinction. In the history of the development of Marxism, Marxism and Leninism have always been scientific terms with a definite meaning. Is Marxism completely equal to Marx? No. Marx made outstanding contributions to the formation and development of Marxism, but Marxism is not the achievement of Marx alone: it is also the result of collective wisdom. Engels made outstanding contributions. Regarding this point, Marx himself also agreed totally. In history, people do not call Marxism Marx-Engels-ism, but use the name of Marx to name this scientific ideological system, but this does not wipe out the great contributions of Engels. During the course of leading the struggle of the proletariat, Marx also made some mistakes and errors. Marx also severely criticized himself for his own mistakes. Today, as we talk about Marxism, we mean the scientific ideology created together by Marx and Engels, not the complete writings of Marx, and furthermore, not his mistakes. We must never mix together the leader's mistakes with the scientific ideological system named after him, and include the mistakes as part of the scientific system. If we did not make the differentiation and insisted that Marxism also includes his mistakes, then that would be a joke and incomprehensible.

The reason that the viewpoint of "two everythings" is mistaken is that it insists on regarding every statement by Comrade Mao Zedong and even his mistakes as Mao Zedong Thought. This is a mistaken attitude. Conversely, if we see that Comrade Mao Zedong made serious mistakes during his later years and attempt to negate the scientific value of Mao Zedong Thought, negate the guidance of Mao Zedong Thought in our nation's revolution and construction, and dare not insist on Mao Zedong Thought with justice on our side, this is also mixing the personal mistakes of Comrade Mao Zedong with Mao Zedong Thought, this is also a mistaken attitude. These two mistaken attitudes are not helpful in our endeavors and are not helpful in developing the truth of Marxism.

Marx once ridiculed some people as superficial, saying that they looked only at the surface of problems. Some of our comrades look at problems exactly in this way. They only look at the phenomenon but do not look at the nature and they do not understand the scientific and dialectic method of analysis; they mix together the mistakes of Comrade Mao Zedong during his later years with the Mao Zedong Thought named after him, and they do not distinguish the natures between them. Only by distinguishing the mistakes of Comrade Mao Zedong during his later years from Mao Zedong Thought can truth be sought from facts, and only such a distinction can be called historical materialism; not making the distinction is mistaken and harmful.

MILITARY AND PUBLIC SECURITY

SHANDONG CALLS FOR WEAPONS REGISTRATION, AIR GUN CONTROL

Jinan DAZHONG RIBAO in Chinese 8 Jul 81 p 1

[Article: "Provincial People's Government Issues Notice To Register All Weapons and Ammunition; the Provincial Public Security Department Promulgates Regulations for Air Guns in Shandong Province"]

[Text] Recently, the provincial people's government issued a notice concerning the registration of weapons and ammunition, asking each locality to conscientiously implement and carry out the <<regulations for the control of weapons in the People's Republic of China>>, carry out the work of overall registration of weapons well and concretely strengthen control.

The notice points out that except for military weapons issued to the People's Liberation Army, militia and the people's armed police, all other military handguns, rifles, submachine guns, various types of guns used for shooting in sports events, hunting rifles, shotguns, firelocks, needle guns to paralyze animals, air guns that shoot metallic pellets and BB's and the ammunition for the guns described above (except pellets and BB's for air guns) must all be registered. Therefore, all units and individuals having the guns and ammunition described above, including servicemen and people's armed police that have hunting rifles and air guns that shoot metallic pellets and BB's, regardless of the origin of the guns and the ammunition, regardless of their condition and whether they are usable or not, must register with the local public security organ before 31 August. Those who miss the deadline and do not register will be severely dealt with in accordance with the respective situation.

The notice stipulates that after registration and after review and approval by the county and municipal public security organs, all those who meet the regulations concerning the carrying, assignment and ownership of guns will be issued new gun permits. All those who do not meet the regulations will have to hand over their guns and ammunition to the public security organs above the county and municipal level for processing. Various types of military guns, guns for sports events and their ammunition scattered in the hands of individuals and the various guns and ammunition privately manufactured, regardless of their origin, must all be submitted to the local public security organs. Those who refuse to submit and who continue to privately keep guns and ammunition will be dealt with severely in accordance with the law. Those who actively inform upon others who illegally hide guns and ammunition will be praised or rewarded. Those who hold information regarding such illegal possession but do not report it will be dealt with regarding responsibility in accordance with the respective situation.

The notice says that each unit and each department must concretely strengthen leadership in the work of taking inventory of guns and ammunition, fully mobilize the masses, and investigate and check up thoroughly to assure that the work of taking inventory is done carefully and well.

After approval by the provincial people's government, the provincial public security department recently issued a <<regulation for the control of air guns in Shandong Province>>.

This regulation was established in accordance with related policies and <<the regulation for control of weapons in the People's Republic of China.>> It covers all types of air guns that shoot metallic pellets and BB's. Air guns used by physical education departments in shooting sports events are subjected to control as guns for shooting sports events, those used for hunting by hunting units are subjected to control as hunting guns.

The <<regulation>> stipulates that except for the various air guns manufactured by factories appointed by the state, no unit and no individual are allowed to privately manufacture or assemble them. Stores dealing in air guns must register with the public security organs above the county and municipal level. Purchasing air guns requires a purchase permit issued by the public security organ for purchase at designated stores. Persons carrying and owning air guns must be citizens over 18 years old. Persons holding air guns must register with the public security organ at the place of residence to apply for and obtain a gun permit. Persons carrying guns on outings must carry gun permits for inspection. Persons who own air guns and who move from the original county and city of residence should return and cancel the gun permit at the public security organ that originally issued the permit and exchange it for a shipping permit. After arrival at the destination, they should take the shipping permit to the local public security organ and exchange it for a new gun permit. When transferring ownership of an air gun, a new gun permit must be applied for at the public security agency originally issuing the permit. Air handguns shooting metallic pellets can only be used in shooting sports events organized and led by the physical education departments at various levels. No other units or individuals are allowed to purchase and hold such guns.

The <<regulation>> also strictly prohibits shooting in public places, residential areas, scenic and tourist areas and other places where hunting is prohibited. Foreigners residing in the province will be subjected to the same regulation unless otherwise stipulated. All violators will be severely dealt with according to each case.

REFORM OF SCIENTIFIC RESEARCH SYSTEM URGED

Baoding HEBEI DAXUE XUEBAO--Zhexue Shehui Kexue Ban [JOURNAL OF HEBEI UNIVERSITY --Philosophy and Social Sciences Edition] in Chinese No 2, 25 Jun 81 pp 6-11

[Article by Zhang Qiang [1728 1730]: "An Important Issue on the Readjustment and Reform of Our Country's Scientific Research System--Also on the Controversy Over 'Whether or Not Universities Should Become Centers of Education and Scientific Research'"]

[Text] At present our country's scientific research system has many drawbacks. The development of modern science and technology changes with each passing day. The mutual infiltration among various departments of science, and the trend that day by day the development of science and technology becomes more and more the development of various departments as a whole, show that there is an urgent need for our scientific research system to carry out readjustment and reform so that it can free itself from the bondage of its drawbacks in order to accelerate the four modernizations, especially the modernization of science and technology. Here, I wish only to analyze and discuss an important issue in our scientific research system. From the standpoint of history and making a comparison with the scientific research systems of developed countries, I will probe into ways of making readjustment and reform, and present my views on the contention "whether or not our universities should become centers of education and scientific research" (the term "university" mentioned in this article, if not specified, means a key university and not a common basic university), a contention brought about by the separation and dislocation of scientific research and education in the past.

I. The Separation and Disconnection of Scientific Research and Education Constitute a Major Drawback of Our Scientific Research System

In the early 1950's, our country copied the method of the Soviet Union of separating and disconnecting scientific research and higher education, letting the academy of sciences undertake scientific research and the universities undertake education, thus separating and disconnecting the scientific research system from the higher education system in China. This improper practice remains unchanged to the present day, bringing about many problems for the development of our science and technology and higher education, and standing in the way of producing results and talent with high efficiency and good quality. It contradicts the trend of development of modern science and technology completely.

At present this major drawback of our scientific research system manifests itself especially in the following ways:

1. Each branch goes its own way and tries to set up a system of its own, which counteracts the superiority our socialist system should have. Under the present system, the scientific research departments (which are divided into four independent branches--the Chinese Academy of Sciences, the National Defense Scientific and Technological Commission, the local scientific research institutes and the industrial departments' scientific research organs) and the institutes of higher education are separated from each other; each is under the vertical leadership of its own branches, with very little or no horizontal contact. On the one hand, a large number of research projects are unnecessarily duplicated; on the other hand, many profound key projects have nobody to tackle them, thus creating an abnormal situation of extreme partiality. For instance, in 1978 one of our provinces, disregarding its more than 20 institutes of higher education, set up independently a provincial academy of sciences with nearly 1,000 personnel, including only one research person who had the qualification of an assistant researcher; meanwhile, the institutes of higher education of this province had 385 specialists with titles of associate professor and higher. In 1979 this provincial academy of sciences invested 2.7 million yuan in the establishment of a new laser research institute which, carried out a project of trying to make laser parts. These parts had been successfully made in China more than 10 years before, but, this laser institute could not make them and was compelled to buy the parts from one of the universities in the province in order to fulfill its research task. This situation of each going its own way, using funds without achieving due results, and making investment only in its own branch will certainly lead to sectarianism, and the results will be fewer, slower, poorer and more wasteful.

2. The separation of the research and education systems has created confusion in recognizing the nature, mission and orientation of universities. The "conflict of slogans" has continued for 30 years, and up to now the responsible persons concerned still contradict one another in their public speeches. In August 1977 Comrade Deng Xiaoping pointed out clearly that the schools of higher education are not only centers of education but also centers of scientific research. In 1978 this view was formally written into the "60 Rules on Higher Education." Later, however, some responsible persons did not agree with this in their speeches, as seen in the newspapers. They mixed up the fact that in any given period of time education can only concentrate on one thing, and the fact that education and scientific research are two aspects of the basic task of universities, which should supplement each other. This created even greater confusion at the lower levels. Consequently some people blamed college teachers for not doing their job properly by undertaking scientific research, and some universities and colleges asked themselves whether it was necessary to have graduation dissertations. It was even suggested that incompetent personnel in research departments be sent to colleges to teach. Therefore, it can be seen that the separation of the research and education systems for scores of years has become a very strong habit.

3. On the one hand, people clamor against the shortage of scientific and technical personnel; on the other, in universities and colleges many lecturers and persons of higher rank have no definite teaching and research tasks. According

to the statistics of not a few universities and colleges, in almost every semester only about one-third of the lecturers and persons of higher rank have fixed teaching and scientific research tasks. As all branches make investments mainly in their own branch to conduct scientific research, consequently the universities and colleges are badly in need of funds for research. Many people wish to do scientific research, but they lack the necessary material support.

4. The present system does not help in training talent. The history of science and technology shows that outstanding scientists have always stood out early, when they were college students. When education is separated from scientific research, it is very difficult to provide favorable conditions for the rapid growth of such talent.

5. With the separation of research and education, there is little mobility of personnel, it is difficult for the personnel to hold concurrent jobs, and mutual cooperation in conducting frontier scientific courses is beset with difficulties. Some large, advanced laboratory equipment cannot serve its purpose of general use, and it is difficult to arrange common service.

II. The Unification of Scientific Research and Education Is the Natural Trend of Historical Development

From the historical point of view, unifying education and research is the natural trend of the development of scientific technology and higher education.

In foreign countries, with the upsurge of the natural sciences in modern times, the question of integrating scientific research with education has begun to be raised.

As early as 1627, Bacon, whom Marx praised as the true father of English materialism and modern experimental science as a whole, formally suggested the establishment of an academy as a unified organization of scientific research and education.

In 1775, France reorganized the Paris Academy of Sciences into a department of the Academy of France, and also established a "polytechnic institute" with famous scientists as teachers which became the most important center of science and education in France at that time.

In 1809, Germany established Berlin University, laying down clearly the principle of unifying education and scientific research which the university must follow and explaining that if the two were separated it would run counter to the "inherent" nature of scientific research and education. This principle of unifying education and research dominated Germany's higher education as a whole, promoted the development of science and technology, and helped Germany to become the world's center of science and technology since the 19th century. From 1900 to 1945, 59 percent of the Nobel prize winners were trained in Germany. People outside Germany made the appraisal; "All of Germany's achievements in scientific research, which gave impetus to the modernization of Western Europe, were made by relying almost entirely upon its universities."

Since World War II, the unification of education and scientific research has become an important feature of the development of scientific technology and college education in all countries of advanced science and technology and, moreover, has gained remarkable results in accelerating the development of scientific technology in these countries.

Take the United States as an example. Before World War II, American universities and colleges were simply traditional organs of education, the scale of scientific research was fairly small, and there was very little government support for the scientific research activities in universities and colleges. During the war, to mobilize the manpower and material resources of the colleges and universities to serve the war, the American Government made great efforts to assist the universities in the work of scientific research, and began to set up large research centers in the universities. At that time, the University of California had established its Los Alamos Laboratory where the United States developed both its first atomic bomb and first hydrogen bomb. After World War II, especially under the stimulation of the launching of the Soviet man-made satellite in 1957, the U.S. Government continuously increased its appropriations for scientific research in universities and colleges and helped them to expand quickly the scope of their research work. From 1957 to 1967, the research funds for American universities increased at an average rate of 17 percent a year, including those for basic research at an average rate of 20.3 percent a year. At present, the American universities and colleges have gathered 60 percent of the nation's scientists and engineers with doctorate degrees and run thousands of research centers which undertake 60 percent of the nation's basic research. Of American winners of the Nobel Prize, 90 percent are working at universities and colleges. Yang Zhenning [2799 2182 1380], Li Zhengdao [2621 2398 6670] and Ding Zhaozhong [0002 5128 0022] are all Chinese-American scholars who have won the Nobel Prize; Yang is working at New York University, Li at Columbia University, and Ding at the Massachusetts Institute of Technology.

At present all famous American universities and colleges have their research institutes, such as the 30 institutes of the Massachusetts Institute of Technology, 12 of the California Institute of Technology, 48 of Harvard University, 57 of Columbia University, 53 of Cornell University, 38 of Princeton University, and 38 of Chicago University. The University of California has 184 research institutes in various school districts. Most of these institutes are administered by one university, such as the Lincoln Laboratory of the Massachusetts Institute of Technology and the jet propulsion laboratory of the California Institute of Technology. Some institutes are also under the combined administration of many universities, such as the National Atmospheric Research Center, which is under the administration of a committee formed by 45 American and Canadian universities. The Brookhaven Laboratory is under the combined administration of nine universities in the northeastern part of the United States. The research work of some departments of the U.S. Government is carried out almost entirely by means of giving support to the research institutes of the universities, without the departments setting up their own research organs. For instance, the United States is devoting very serious attention to the study of energy resources, and has established the Department of Energy. The outlay for this study was $1 billion in 1975, $2 billion in 1977, and $2.8 billion in 1978. It is one of the most rapidly increasing outlays of funds for scientific research in the United States. However, in its administration of scientific research, the Department of Energy studies are carried out mainly through support given to the research institutes of universities and some corporations, such as the Los Alamos Laboratory and the Lawrence Laboratory of the University of California, the Arkon Laboratory of Chicago University, and the plasma physics laboratory of Princeton University. These laboratories and the Brookhaven Laboratory under the joint administration of nine northeastern universities have all received direct support from the Department of Energy.

In 1973 Japan had 610,000 people engaged in scientific research, including 250,000 --more than 40 percent--working at universities and colleges.

The Soviet Union formerly separated scientific research from education. The organs of the Soviet Academy of Sciences specialized in carrying out scientific research, and the universities and colleges in undertaking education. Later they suffered a great deal and changed their method by integrating scientific research with education. At present the Soviet Union explicitly stipulates that scientific research is one of the principal tasks of the schools of higher education. In the Soviet schools of higher education, the number of scientists constitutes about one-third of the total number of scientists in the entire country, including some 105,000 doctors and assistant doctors, 44 percent of their total number in the country.

There have been many famous cases of achievements in scientific research in universities. For instance, since its establishment over 100 years ago, the Cavendish Laboratory of Cambridge University in England has trained a large number of talented people, including 10 Nobel laureates. At this laboratory, Maxwell formulated the theory of the electromagnetic wave, Thomson discovered the electron, Rutherford smashed the atomic nucleus, Bragg initiated the study of the biological molecular structure, and Mott was the world's pioneer in the study of solid physics. These great scientific achievements wrote magnificent chapters in the history of mankind's development of science. At the beginning of the thirties in this century before Hitler came to power, Gottingen University of Germany had 12 Nobel laureates among its professors, and then became the world famous natural science research center. In 1945 Stanford University in the United States made the first electronic calculator, which has greatly influenced both modern scientific technology and social progress.

Some famous universities in Western countries are even contemplating carrying out the whole work of education on the basis of scientific research.

Such a situation has emerged that many American industrial research organs and companies are being built and developed around the universities. At present many such large scientific and industrial research centers have been formed around universities. For instance, the Massachusetts Institute of Technology established its Lincoln Laboratory in 1951, and now hundreds of industrial research organs and industrial companies are gathered along Highway 128 where the laboratory is situated; the new construction groups extend more than 20 kilometers. For further example, Stanford University has stimulated and given impetus to the electronics industry in the United States; now a region scores of miles north and south of the university is called "Silicon Valley," which has become the center of the semiconductor industry not only of the United States but of the whole world.

As a result of this situation, many scholars abroad believe that "the success and application of scientific research have become the central task of higher education, and we should no longer take only the training of social and political leaders or vocational personnel as the principal task of higher education."

From all this it can be seen that the unification and integration of education and scientific research are already an important feature of the scientific research system in advanced countries.

III. The Unification of Scientific Research and Education Is Essential in the Training of Promising Personnel

The universities and colleges should train highly specialized personnel for the state. At present, the greatest majority of research personnel in our organs of scientific research were trained by our universities and colleges. The scale and speed of the development of modern science and technology are astonishing. According to statistics, of all the scientific achievements upon which mankind's present high civilization has been built, half have been in our hands only in the last 15 years. Moreover, according to the estimate of some people, the total amount of human knowledge will again double in about 10 years. Just imagine, in the developing circumstances of this "knowledge explosion," if we fail to achieve the integration and unification of scientific research and education, the development of our science and technology will certainly be confronted by many serious problems, such as a shortage of trained personnel. The universities also must be guided by a system of integrating research with education before they can continuously provide all quarters with promising specialized personnel.

1. As far as the substance of education is concerned, scientific research is the source, and education is the stream.

Education, in its narrow sense, means generally the systematic teaching of the results of research gained by predecessors. Modern science and technology are developing very rapidly, and the time required for the application of new inventions and discoveries for practical use is becoming shorter and shorter. From the time of invention to application, the steam engine took 80 years, the electric motor 65 years, and the vacuum tube 33 years, but atomic energy took only 6 years, the transistor only 3 years, the the laser only 2 months. In such circumstances, if our universities and colleges do not accord to scientific research its important status, and teachers basically take no part in research but are contented with only teaching what book knowledge we already have, undoubtedly it will make the content of our education fall far behind the daily developing science and technology. Consequently, our universities and colleges will turn out only students of low caliber, and still less will we ever talk about catching up and surpassing the advanced level of the world.

To repeat, scientific research is the source and education is the stream. If we cannot keep scientific research in schools ahead of teaching, then education can only be water without source, and trees without roots. Education can only be backward and of a low standard.

2. Universities should train personnel who can make achievements.

According to the requirement of the four modernizations, specialized personnel trained by the universities should not only inherit knowledge summed up by predecessors, but also make inventions and discoveries to carry forward the development of science and technology in our country. Such personnel will be "quality products" which can meet the requirement of the four modernizations. Precisely because of this requirement, the activity of scientific research is itself an important link in the education of senior students, an important way of learning. According to the "60 Rules" [on higher education], under the current 4-year course college system, the students should prepare their academic year thesis (or course design) during the second semester of the third year, and prepare their graduation thesis (or graduation design) in the fourth year. These links of education help the students to learn as much as possible the new developments of science within the scope of their specialized lines, and are an important guarantee for inculcating in the students the ability to analyze and solve problems. As far as the whole course of college education is concerned, for the purpose of training qualified personnel, such scientific research activities are included in education per se.

3. The participation of teachers in scientific research is an important means to raise the standard of education.

The development of modern science and technology changes with each passing day. To catch up with this ever-changing situation, teachers who teach the knowledge of modern science and technology are required to know of new developments promptly so they can raise the level of teaching. Thus, their participation in scientific research becomes an important means.

The substance of teaching material should be replenished and renewed continuously following the development of modern science and technology; moreover, the compilation of the teaching material itself is one of the important aspects of scientific research in universities and colleges. Without the ability to carry out scientific research and without personal experience, teachers have difficulty in improving their academic level and can only copy indiscriminately obsolete material; not only are they unable to prepare teaching material of a high standard but they also have difficulty in reading and understanding all the newly published teaching materials inside and outside the country. As a result, they will become more and more passive.

4. The training of postgraduates is also an important task of education in universities and colleges. Furthermore, the four modernizations require the universities to gradually increase the proportion of postgraduates for training. At present in the United States, the number of undergraduates and postgraduates is half and half in the universities and colleges.

Recently the "Regulations for Academic Degrees of the People's Republic of China (Draft)" was promulgated. As of 1981, action will be taken to evaluate and examine according to these regulations the different levels which higher education will reach in various stages. The key universities and colleges should actively undertake scientific research, continuously raise their academic level, and keep pace with the development of modern science and technology before they can take responsibility for awarding academic degrees for the state and for training persons qualified for such academic degrees.

In summary, it can be seen that education and scientific research are two complementary aspects. The practical meaning of "taking education as the main factor" should be "taking improvement of the quality of education as the main factor." Moreover, education means the whole course of education; we should not make a metaphysical, one-sided interpretation. In fact, the foundation of training technical personnel is education, and the improvement of the quality of education depends on scientific research. Scientific research per se is an important link and part of education. We must make an effort to conduct scientific research and turn universities into centers of education and scientific research. This is necessary for the universities to accomplish their task of education and train qualified personnel. Talk only about the center of education as it stands is one-sided. Artificially cutting apart education and scientific research and setting them against each other is even more harmful.

IV. There Is Every Facility To Unify Scientific Research and Education

Can we turn universities into centers of education and scientific research to produce both talent and results? Is scientific research an extra task forced upon the universities, or is there any basis for the universities to become centers of education and scientific research? Have the universities the potential to undertake scientific research on a large scale? We believe that the universities truly have adequate favorable conditions. These conditions have the following three aspects:

1. They are comprehensive.

A general feature of the development of modern science and technology is the tendency toward comprehensiveness. In a university, the specialities are often linked up to form a whole course, the subjects are fairly complete, and there are facilities for cooperation in order to break through difficulties in science and technology. At present, this tendency makes the branches of learning highly divided and also highly comprehensive, each infiltrating very much into the other. Frequently many branches are required to carry out joint study before it is possible to recognize and uncover the deeper nature of things. The universities have favorable conditions to facilitate the mutual infiltration of many branches of learning, and to facilitate the study of new science and technology which transcend the branches of learning. For this reason, many of our new techniques were first achieved by the universities and colleges, such as China's first integrated circuit, first electronic computer, first large wind tunnel and first proton electrostatic accelerator, which were all made by the universities.

The development of modern science and technology also continuously strengthens the mutual contact and infiltration among natural sciences, philosophy and social sciences, and has brought about some new cross-frontier branches of science between them. A comprehensive university has both liberal arts and science courses which facilitate the comprehensive study of natural sciences, philosophy and social sciences.

2. They permit mass participation.

Besides full-time research personnel, a university has a large number of teachers, postgraduates and students. As young people are full of vitality and free in their thinking, they constitute a shock brigade and a reinforcement full of creativity. The postgraduates and senior students can work in coordination with the special research organs and teachers of their universities. Moreover, every year there will be new persons to participate in the study, so that the work of research in the universities can always maintain its vigorous and creative spirit.

3. They teach basic theories.

The strongpoint of universities (especially the comprehensive universities) is the study of mainly basic theories, with a fairly good reserve of basic theories. This is a very important advantage.

Basic research is exceedingly important to the scientific and technological development of a country. For instance, the white paper on science and technology prepared by the Japanese Department of Science and Technology states: "There is no way to solve completely some current technical problems by relying simply on accumulated experience and known facts." "...from the development of science in recent scores of years, it may be seen that we always understood the universal law of nature through basic research, and thus broke through the barriers and opened up new territories." The American National Science Foundation submitted a report to the President of the United States, saying: "If a country relies on new basic knowledge imported from abroad, the pace of its industrial development will slow down and its competitive status among nations will also decline."

Facts show that in many studies of new science and technology, only when there is a breakthrough in basic theory can practical research free itself from the shadow of imitation and make a fundamental breakthrough or change. Comprehensive universities give full play to and enhance their strongpoint of being good at providing for the study of basic theories, and can perform a lot of creative work with distinctive features.

In summary, by giving full play to their strongpoints and potentials in these three aspects, it is entirely possible to turn universities into centers of education and scientific research which will produce both talent and results.

Now some people argue that education and scientific research are fighting for personnel. (Here, it means the kind of education which is short of an important link and artificially isolated from scientific research.) What is the real situation? On the one hand, there are still the trammels and pressure of the ultra-left line and the "two whatevers" policy on the people's enthusiams; on the other hand, at present the middle-aged key teachers in the best years of their lives have not yet devoted themselves entirely to teaching and scientific research, many of them even have no particular work to do. Therefore, at this time the crux of the matter still lies in administration and in work to find ways to liberate the productive forces and fully bring out the latent potentialities.

V. A Few Suggestions on Adjustment and Reform

The system of separating and setting apart scientific research and education has been going on for 30 years, and we are afraid that it will not be easy to change the system overnight. We think that to make a start in adjustment and reform right now, the following steps may be taken into consideration:

1. It should be made clear that we should change the current system of separating and setting apart scientific research and education. We should no longer vacillate on the nature and mission of the key universities, and should make it clear that the key universities must truly become the centers of education and scientific research. (The basic universities may undertake only education and conduct no or little scientific research. There are many such universities in China, and still more in foreign countries. When such a university carries the high-sounding name of a "key" university, it is not so in the real sense of the term.)

2. Plans should be drawn up and new organs of scientific research should be set up. The small producers' way of administration should be discarded and there should no longer be an attitude of setting up research organs only in one's own department. I suggest that the present departments should be notified that they should each "submit a tender," and a choice will be made according to various plans. The sites of new organs will be chosen from among those which have the best foundation, require the least amount of money and can produce results quickly. At present, we may first consider and give support to the establishment of a few research organs in some key universities on the basis of their foundations, superiority and features, in order to strengthen the work of scientific research in these universities. The various departments should also increase their investment in the scientific research of these universities.

3. The personnel of all universities and research organs of departments should be allowed to hold posts in each concurrently. For instance, it is perhaps possible to call upon assistant researchers and those of higher rank within 2 years to concurrently teach a half-year course in a university, to give instruction on a university graduation thesis or to give guidance to postgraduate students; and to call upon associate professors and those of higher rank within 2 years to do concurrent work on a research project at a research organ and submit a report on the research. It might also be possible to take the fulfillment of this requirement as an important credit for the assessment of the person's work proficiency, with the exception of those who are old (such as exceeding the age limit for retirement) and physically weak.

4. It might be possible to issue a publication for limited circulation only among various research departments and universities, provided it does not violate security regulations. In this publication, all departments could solicit solutions to their problems and invite applications for certain research projects

from responsible units and personnel. All competent units and personnel could offer their services in competition, by submitting their research plan and investment budget. The departments concerned could then make their choice and sign a contract. At present, each of the departments has very little horizontal contact; they either carry out duplicate projects or leave some fields blank, and cannot make good use of their investments. This open competition would help gradually to change the present situation.

SHANXI PARTY COMMITTEE URGES USE OF LAW TO ATTACK CRIME

Taiyuan SHANXI RIBAO in Chinese 27 Jun 81 p 1

[Article: "Fully Utilize Legal Weapons To Severely and Quickly Attack Crime; the Provincial Committee of the Chinese Communist Party in Shanxi Province Issues a Notice Calling Upon the People of the Whole Province To Conscientiously Learn and Implement the Three Legal Documents Passed by the Standing Committee of the National People's Congress"]

[Text] Recently, the Shanxi Province Committee of the Chinese Communist Party issued a notice calling upon the people of the whole province to conscientiously learn, propagate and implement the <<resolution concerning strengthening the explanation of the law>>, <<the decision concerning the question of approving cases of death penalty>> and the <<decision concerning the handling of convicts serving labor sentences and personnel serving labor and education sentences who have escaped or who have committed new crimes>>.

The notice points out that these three legal documents fully manifest the spirit of severely and quickly dealing with criminals who have seriously damaged social and public security at the present time. These resolutions and decisions are important measures to make sound socialist democracy and rule by law. They are forceful weapons to struggle against criminal activities and activities that violate the law. They are completely appropriate to the benefits and the demands of the broad numbers of people and the masses.

The notice points out that throughout the province at present, and especially in the cities of Taiyuan, Datong, Yangquan, and Changzhi, social and public security still is not good, criminal activities are still rampant, and serious malicious cases frequently occur. Among them, continued criminal activities committed by convicts sentenced to labor reform and personnel sentenced to labor and education who have escaped or who have been released after serving a full sentence are an outstanding problem. The notice calls for:

1. Every level, every department and every unit throughout the province should organize the broad number of cadres, workers, farmers, students and all the masses to conscientiously study, discuss, implement and carry out these three resolutions and decisions; combine, implement and carry out the various measures proposed by the provincial public security conference; widely and profoundly carry out propaganda and education in socialist rule by law in the towns and villages throughout

the province, and especially in cities; further purge the remnant poison of anarchism, beating, destruction, and robbery undermining social convention that were instigated by the counterrevolutionary cliques of Lin Biao and Jiang Qing so that the broad number of cadres and masses can gradually understand pertinent laws and regulations and clearly understand that such behavior is illegal and criminal and thus strengthen the concept of rule by law and conscientiously obeying the law; and carry out a determined struggle against the various types of illegal and criminal behavior, develop correct behavior, strike at evil behavior, and promote a rapid improvement of public security and social order throughout the province. In particular, outstanding achievements must be made in the near future in Taiyuan city, Datong city, Yangquan city and Changzhi city.

2. The political and judicial departments at each level must conscientiously learn the law, grasp the utilization of the law and act strictly in accordance with the law. They must use the three resolutions and decisions as weapons to launch a political attack upon elements who violate the law and commit crimes, educate them so that they will admit their guilt and obey the law, confess and inform, accept reform, and change their evil ways and become good citizens. The very few criminals that commit murder, robbery, rape, arson, bombings and other acts that seriously damage social and public security must be attacked in time so that they will receive proper punishment by law; they should be punished severely and quickly in accordance with the law. At the same time, new cases of injustice, trumped up cases and mistaken cases must be prevented. The family dependents of convicts sentenced to labor reform and personnel sentenced to labor and education who have escaped must be lectured on the three resolutions and decisions in order to win them over so that they will inform on and expose the escapees and mobilize those at large to rapidly return to their camps.

ROMANIAN MODEL OF URBANIZATION WORTHY OF STUDY

Beijing RENKOU YANJIU in Chinese No 3, 81 pp 12-17

[Article by Qin Renshan [4440 0088 1472], of the Central Party School: "Problems of Urbanization of Population"]

[Text] The industrialization of a country always leads to the migration of its people from its villages to its cities. This is a worldwide process [known as] "urbanization of the population." The socialist industrialization and modernization of our country will no doubt attract more people to the cities (both cities and towns). This meets the objective requirement of the development of social productive forces and helps to control the natural growth of population and to improve the quality of population.

This article proposes to analyze five different aspects of the problem of urbanization of the population.

I. Cities

The concept of cities needs careful scrutiny. For instance, there are people who allege that any place with a population of 5,000 or more is a "city."

This is a questionable approach. Although population density is associated with cities, it is not the only earmark to distinguish cities from villages.

Cities are the product of private ownership rather than a concomitant of the human race. "The separation of industrial and commercial labor from farm labor" (according to Marx) set in motion the separation between cities and villages. This distinction will cease to exist in a unitary economy based on public ownership, where residential complexes throughout the country will combine industry and agriculture and cities and villages. Elimination of the distinction between cities and villages "is one of the primary conditions for achieving social unity" (according to Marx). But this will not come to pass until social productive forces reaches a very high level. Consequently, the distinction between cities and villages all over the world will remain for a long time to come. It is clear, then, that cities are a long-term economic reality.

The capitalist concept of a city touches only its appearance. A "city" as defined in English is a "densely populated area, larger than either a village or a town, permanently and well organized with people who are engaged in various trades and occupations. Unable to provide its own food, it normally relies on manufacture and commerce to satisfy the needs of its residents."[1] This explanation does not cover the real substance of capitalist cities. A capitalist city is a place where private capital and accompanying surplus population converge. The surplus city population is both the condition and the result of capital circulation. The more the big industries develop, the greater the fluctuation of their demand for workers. "This fluctuation is the law of capitalist production" (according to Lenin). The circulation of capital would be difficult without a surplus labor market. That is why capitalist cities are overpopulated.

A socialist city is where socialist industry and commerce converge and where the working class lives. It is also a center where the working class guides and assists the peasants in achieving the political, economic, and cultural transformation of the villages. Socialist cities and capitalist cities are basically different. A capitalist city, founded mainly on private ownership, is controlled by private capital; every urban resident works for the capitalists, and the relationship between the city and the villages is one between exploiter and exploited. A socialist city, founded on public ownership, is where the workers are masters, and its relationship with the villages is one of mutual assistance and mutual benefit. In a socialist state, the quality of a city depends on three different things. First, we must examine how well developed are the socialist economy and culture of that city. Second, we must examine how satisfactory are the working, learning, and living conditions of the staff and workers of that city. Third, we must examine the kind of guidance and assistance the city provides for the political, economic, and cultural affairs of the adjacent villages. These three aspects are not on a par with one another, but none can be dispensed with.

Socialist cities and villages, which form a harmonious socialist society, are independent of each other but closely related. They work harmoniously and cooperatively in dividing and sharing the work.

II. Urbanization of the Population

Urban population refers to those who left their sporadic farmwork and settled permanently in the city to engage in various intensive nonfarm labor activities in order to support their families (in some cities, most people still do farm work). Urbanization of the population means that more village people are moving into the city, where the population outnumbers that of the villages. The process involves the following two factors. First, when the size of the urban population of a country exceeds the number of farm workers that the cities need for various nonfarm jobs, the cities will face a scarcity of employment openings and a deterioration in the standard of living. Second, when the increase in the urban population exceeds the farm commodities that the agriculture of a country can provide in order to meet the daily needs of the urban population, agriculture will decline, leading to rising prices, inflation, and a lower standard of living. Urbanization of the population combines the working of these two factors.

This is what Japan has encountered. The unrestrained flow of farm labor into the cities in 1960-1980, according to Professor Kiyoshi Oshima, "has led to such an excessive density of the urban population and excessive sparsity of the farm population, and to such a decisive decline in agricultural production, that the level of self-sufficiency in food has fallen below the 40-percent mark."[2] This means that the demand for labor by industry in Japanese cities far exceeds the marketable grain the villages can provide.

Growing Urbanization of World Population[3]

Year	Urban Population (100 million)	Urban Population as Percentage of Total Population
1925	4.05	21
1950	7.24	29
1975	15.6	39
2000 (Estimate)	32.08	51

The above table shows marked changes in ratio every 25 years, from 8 to 10 percent, 10 to 12 percent, and all the way up. Although this signifies notable progress in agriculture, it also poses a new problem for the human race. Inasmuch as the villages cannot be abandoned altogether, the vast agricultural resources of the world's farms have to be developed and managed. Consequently, a given part of its population must remain in the villages. Since urbanization cannot go on without limit, the ratio between urban and rural population must be well coordinated. The different priorities of economic development in different countries have given rise to different urban-rural population ratios. A new problem confronting all countries is how to decide on the proper size of the urban population or the extent of acceptable urbanization of the population.

In our past studies of economic construction, we focused our attention solely on industrialization and did not consider urbanization. Industrialization and urbanization in a capitalist society are spontaneous and interrelated. Since industrialization in a socialist society is planned, its urbanization must also be planned rather than lopsided.

In a word, the construction of cities is "a great achievement" of mankind (according to Marx). Cities and villages must not be kept separate permanently. The communist ideal is to eliminate step by step the separation of cities and villages by an equitable distribution of industry and population.

III. Urbanization in Capitalist Society

The urbanization of population in capitalist [society, which is based] on private ownership, is determined by the direction in which capital is invested according to the principle of free competition. Trade in larger cities is much easier because there are better transportation, huge markets, and massive aggregates of customers. All these factors help the big industrial cities to grow at surprising speed.[4] Concentration of capital inevitably breeds concentration of population, attracting bankrupt and unemployed people who flock to the big cities to await available employment (or unemployment) opportunities.[5] Thus, capitalist urbanization means essentially big city urbanization in its initial stages.

The United States offers a typical example. Over 150 million people (three-fourths of the total population) live in densely populated cities (1 percent of the area of the whole country). Disenchanted with the "forest" of high-rise buildings, the traffic jams, the smog-filled sky, and the dirty air, "more and more workers have lost interest in the cities" and are willing to move to the countryside in spite of the lower pay.[6] American cities "are so dirty" that life in the country is becoming more and more attractive.[7] Notwithstanding the enormous price the capitalists pay for urban renewal, the deterioration of the cities is still very serious.

The Japanese are very sensitive about this. In view of "the deterioration of European and American cities," they predict that "Japan will face the danger of urban deterioration."[8] Consequently, "there has been an outcry in all the cities for a reassessment of the project to break up the big cities." They believe that "the era of concentration of population in big cities has come to an end," and that the state policy toward big cities ought to be revised.

This shows that urbanization in the developed capitalist countries, which has developed blindly, has gone from the worst expansion to urban deterioration and is forcing the capitalist governments to "disperse" the big city population. This is what the Mexican Government has been doing.[9] In 1978, Japan decided to work out a "balanced development" or large, medium, and small cities.

While capitalist urbanization in the developed countries was ushered in by the development of agriculture, capitalist urbanization in the underdeveloped countries, on the other hand, is due to agricultural stagnation. Urbanization of the population and centralization of the cities go hand in hand in these countries, where the rate of urbanization of the population is two and a half times that of the total world population.[10] If the governments concerned cannot control the expansion of the big cities, the situation will not improve.

The United Nations is aware of the problem, even though it has not spotted the real cause (the capitalist system of private ownership). Describing this as "a tragic population problem,"[11] Ken-du-er hopes the governments will act to bring it under control. Ge-de-si-te-vin said the problem of cities cannot be solved until "the problem of the poverty of the rural population is resolved."[12] They know that the expansion of big cities in the developing countries is due to agricultural stagnation. The governments do not have the kind of financial resources to arrest the trend of migration. Nor is there private investment big enough to get agriculture out of its prolonged stagnation. The good intentions of Ken-du-er and Ge-de-si-te-vin are too big a dose for the developing countries to take.

In a word, capitalist urbanization has taken too many detours and is irrational. Urbanization under socialism must avoid what has been brought about by urbanization under capitalism.

IV. Urbanization in Socialist Society

Urbanization in a socialist [society] takes place according to socialist planning based mainly on public ownership. The permissible size of urban population is determined by the labor requirements of all nonagricultural sectors, on the one hand, and by farm commodity production, on the other. The scale of a socialist city is based on both demand and practicability, both of which are indispensable.

The nature of a socialist city can be seen in two particular areas. First, as a part of the macroeconomy of the state, a city should both serve itself and work for the development of such socialist enterprises as the economic and cultural growth of the surrounding areas. The bigger the city, the greater its role in these major tasks--especially its role as a center of agricultural modernization. Second, the staff and workers of the city, including those of its collective enterprises and a small number of individual workers, are the masters of the city, which should provide them with satisfactory production, working, and living conditions. These two points are based on the socialist nature of the state. Any city which fails to do well in these areas will become lifeless, unattractive to its staff and workers, and unable to provide a guiding influence to the villages.

In a socialist society, urbanization falls generally into two different types.

When Stalin was in power, the Soviet Union favored the development of big cities. Stalin, who frowned on the idea of "combining the city and the country," asked "the villages to look up to the cities." Now there are 1,151 cities in the Soviet Union. Even though they form only a tower on the horizon, these cities are so overpopulated (62 percent) that agricultural development is retarded and grain production has increased only a little over 100 percent in a period of 60 years.[13] Acute fluctuations of grain harvests have led to huge grain imports annually.[14] Because of sharp differences between the cities and the countryside, and because of the mounting migration of people from the countryside to the cities, there is a shortage of labor in the farm regions.[15] The Soviet Union's indiscriminate emphasis on big cities has resulted in huge losses in agricultural production. The Soviet system of relationship between the cities and the country is irrational.

Another type of socialist urbanization is represented by that of Romania, which strives to achieve a rational distribution of its productive forces as it develops agriculture. In 1956, about 66 percent of its industries were in five localities within the capital. Now Romania has 365 cities, 269 of which are small and have a population of less than 30,000 people each. The blending of the industry of each small city with the agriculture of the surrounding countryside within a circumference of 15-20 kilometers helps to stop the exodus of the village population and to improve the economy of backward localities.[16] The difference between the cities and the countryside has shrunk so much that in 1977 the ratio of personal income between industrial workers and peasants was as close as 1.5:1, and per capita income in 1976 was $1,100. Having the advantages of both city and country life, Romanian small cities are neither "monotonous and crude" like the villages nor "crowded and noisy" like the big cities. Many Romanians are seeking "to return to their hometowns to work "because the small cities are "attractive." We must keep this in mind as a frame of reference.[17]

V. Socialist Urbanization in Our Country

The urbanization of population in our country has been rather slow, as the size of our urban population is comparatively small. In 1978, the urban population for the whole country was 120 million, only 12.5 percent of the total population. In spite of the high index of our agricultural production, a rapid population increase has kept the average per capita grain supply quite low. We must see the reality in this particular case and stop entertaining subjective fantasies. The painful lesson of sending 20 million people to the countryside in 1958 is too hard to forget. However, the modernization of both industry and agriculture will inevitably lead to the urbanization of our population.

Our urban population consists mainly of residents in the big cities, expecially those with over 1 million people each. This is contrary to the plans of the Party Central Committee and the State Council. RENMIN RIBAO pointed out 23 years ago: "The principal task of a socialist city is to develop production and provide satisfactory living conditions for the working people." It also criticized the "big-city syndrome in city planning."[18] In 1959, Comrade Chen Yun said that most industrial enterprises "ought to be constructed in mediumsize and small cities or near the site of mineral resources."[19] The National City Construction Planning Conference, held in October 1980, proposed an urban construction program calling for "control over the size of big cities, rational development of medium-size cities, and active development of small cities."[20] In the past 30 years the policy, expounded by Comrade Mao Zedong, to develop more small cities, has not changed. But why is the development of small cities trailing behind that of big cities? Why do small cities fail to emerge? Why are big cities getting out of control? I think the following are some of the crucial reasons.

First of all, in the past we set up agricultural production quotas without setting up any average personal income quotas for the village population. As a result, there has been an ever-widening gap between industry and agriculture and between the cities and the country. Comparing 1979 with 1952, the average per capita income of the staff and workers in 1979 was 425 yuan, an increase of nearly 300 percent. The per capita income of the peasants, including income from household sideline production, was 101 yuan, an increase of only about 100 percent. The income of the nonfarm population, by comparison, was over four times that of the farm population. With economic conditions as they are, people are bound to be disenchanted with country life.[21] In other words, people are drawn toward the cities. This problem deserves our profound consideration.

To enable the peasants to live contentedly in the country, we must follow the Romanian example and help them live practically like city folks. In its resolution on speeding up agricultural development, the Central Committee points out: "The focus of attention should be directed toward speedily constructing small cities and reinforcing them with step-by-step modernization of transportation, modern commercial services, modern education, science, culture and health services so as to turn them into staging grounds for changing the countenance of our villages throughout the country." This is an important strategic decision. We have to visualize that 20 years from now, the problem of employing 300 million farm workers will be far more taxing than the problem today of youths awaiting job openings in the cities. If we were to use these small cities as links between the cities and the countryside, we would have to have not just some 3,000 cities but tens of thousands of small cities. These small cities, once constructed, would make the rural areas so much more attractive that the people would no longer want to rush to the cities. The construction of so many small cities, however, depends on the communes and production brigades. Those countries and communes which can handle the task should take the initiative to do it. Waiting for state investment means falling into a passive position. The state of course ought to offer active assistance as far as possible.

Secondly, we face the contradiction of planned industrialization and (substantially) unplanned urbanization because we did not plan for urban construction. Even as recently as 1978, our long-term planning covered 120 industrial projects, but practically none was for urban planning. I think this is accountable for the failure to keep the big cities under control. Over the past 30 years, a total of 20.7 billion yuan has been invested in capital construction in Shanghai, but only 1.9 billion of the total went for urban construction. The gap between rising industrial investment and declining investment in urban construction has widened so much that the ratio between the two during the Fourth Five-year Plan period was 65.2:6.4.[22] The increase in socialist labor productivity should not rest on the hardships of the staff and workers. The expansion of the big cities is unavoidable unless they are controlled or reorganized. This is true in Shanghai as well as in all the other big cities. At the initial stage of our industrialization, in the 1950's, Comrade Mao Zedong advanced the concept of "serving the people." It runs contrary to Mao Zedong Thought to focus industrial construction only on industrial projects, without considering the daily needs of people living in the cities. Now the party and government organs at all levels are working satisfactorily to resolve this problem.

Furthermore, the state should set aside urban construction funds to invest in the development of medium-size and small cities, with priority placed on those engineering projects which provide the "three basic services" (water, electricity, and roads) required to open up new bases for new industrial projects. It is even more important to have an improved standard of living in all medium-size and small cities, an improved wage scale, better educational and employment opportunities, and equitable retirement and old age benefits so as to attract more enterprises and their staff and workers to settle down in medium-size and small cities.

Finally, we have to comment on the idea that the big cities "cannot be contained." Big industries and big cities are not inherently tied together. Capitalists do not find it absolutely necessary to develop big industries in the big cities. Why can't socialists develop big industries in medium-size and small cities? Luxembourg, Toyota, and Bern are not big cities, but they have flourishing industries. Instead of trying to be "big and all-inclusive," they are "small and special." The major industry of Luxembourg is steel, Toyota manufactures automobiles, and Bern makes watches.[23] In the final analysis, the idea that the big cities cannot be contained is itself an admission of failure to uphold the purpose of socialist production and to draw a lesson from the capitalist experience of urbanization.

The five problems dealt with above may be summed up in four points: We must have a clear concept of both industries and cities; we must know the meaning of state industrialization and urbanization of the population; we must have a rational concept of cities that is derived from comparing capitalist and socialist urbanization; and we must have the resolve to sum up our work and uphold our urban construction policy, based on the actual conditions in our country.

The above is only an initial analysis. Queries, criticisms, and comments are appreciated.

NEW U.S. AMBASSADOR READY TO ASSUME POST

Beijing SHIJIE ZHISHI [WORLD KNOWLEDGE] in Chinese No 17, 1 Sep 81 p 19

[Article By Dong Wen [2639 2429]: "The New American Ambassador to China, Arthur W. Hummel"]

[Text] The new American ambassador to China who is about to assume his new post, Arthur W. Hummel, Jr., is a professional diplomat, 62 years old this year, born June 1920 in Fengyang in our country's Shanxi Province. He not only speaks Chinese, but also reads and writes it. He has already visited China in 1973 together with Dr Kissinger. It is said that because of his admiration for the famous Song Dynasty politician and literary figure, Wang Anshi, he chose as the Chinese version of his name Heng Anshi.

Hummel has very deep roots in our country. He is an expert in things Chinese, just as was his father, Arthur W. Hummel, Sr., who was a missionary of the American Congregational Church. In 1915 he came to Shanxi and at that time also taught English at a middle school in Fengyang. Later he joined the faculty of history of Yanjing University in Beijing. In 1927 he returned to America and was invited to become the director of the Oriental department in the Library of Congress, where he remained until his retirement in 1954. The elder Hummel was a scholar specialising in Chinese studies. He compiled the "Eminent Chinese of the Ch'ing Period." After his retirement he lectured on Chinese history at various American universities. He was president of the American Oriental Society and the Association for Asian Studies.

When the new ambassador was 7 years old, he returned to America with his parents and continued his education there. After graduating from Antioch College, he returned to China. He studied Chinese at the College of Chinese Studies in Beijing and later also taught English at Furen and Muzhen middle schools. At the outbreak of the Pacific war, he was detained by the Japanese occupation army and held at the interment camp at Weixian in Shandong Province. In 1944 he was liberated by a local armed force of the Kuomintang, with whom he stayed and worked for some time. Following the victory in the war of resistance, he was liaison officer of the UN Relief Agency in Tianjin for a short period. He returned to America in 1946 to study at the University of Chicago, where he obtained an M.A. degree in the field of Chinese literature.

In 1950 Hummel joined the State Department and began his long career as a foreign service officer. He is a taciturn man, a specialist who does not like to be in the limelight. He received two citations from the State Department, in 1959 and 1966, for meritorious services. In 1974 he was promoted to the diplomatic rank of ambassador. He mainly served in Asian countries and was concerned with Asian affairs. He is very familiar with Asian conditions and Chinese problems and is well-known in the State Department as an "expert on Asian problems," and recognized as one of the men of "highest attainments" in the State Department regarding China studies. In his early career he served as public affairs officer in the American consulates at Hong Kong, in Japan and in Burma and as deputy director of the Voice of America" in the U.S. Information Office. During 1963 to 1964 he served as deputy assistant secretary for educational and cultural affairs in the State Department. In 1965 he became deputy head of the U.S. mission in its "embassy" on Taiwan. In 1968 he became ambassador to Burma. From 1972 to 1975 he served as deputy assistant secretary for East Asian and Pacific affairs. In 1975 he was appointed ambassador to Ethiopia and the following year became assistant secretary of state for East Asian and Pacific affairs. In 1977 he was appointed ambassador to Pakistan, where he worked hard for the restoration and strengthening of U.S. relations with Pakistan, his work in this respect is highly appreciated by the U.S. Government.

Hummel advocates the development of United States-China relations, and he recognizes that the development of these relations is of "great strategic significance." He expressed the opinion that a large country like China must play an extremely important role in Asian and world affairs. In recent years, the development of United States-China relations has reduced the danger of conflicts in Asia and improved the world balance that is needed to preserve peace. He indicated that after he has assumed his post, he will "exert himself to the utmost" to further consolidate and develop United States-China relations. He also thinks that the United States must not meddle in the Chinese problem of Taiwan, which is a problem "to be solved by the Chinese people themselves."

HAIG ADDRESSES CONGRESS ON STRATEGIC BUILDUP

OW050900 Beijing XINHUA in English 0718 GMT 5 Nov 81

[Text] Washington, 4 Nov (XINHUA)--Secretary of State Alexander Haig told the Senate Foreign Relations Committee today that in the strategic environment of the 1980's, the United States has "no alternative but to pursue a comprehensive and balanced program which strengthens our conventional capabilities and, at the same time, modernizes our nuclear forces."

Urging support for President Reagan's strategic force modernization program, he drew attention to the fact that the Soviet Union has built rapidly and relentlessly to become a global military power. "They now have the capability--and have increasingly demonstrated the willingness--to project power and intervene in the affairs of other nations, either directly or through surrogates," he said. "One of the most profound changes in the international environment over the past 15 years has been the growth in the number and quality of Soviet strategic nuclear weapons."

A nuclear balance, Haig went on to say, is a "crucial, if unstated, factor for all those countries who seek stable security arrangements in the face of Soviet expansionism."

"This is particularly the case for our allies, the strategic force modernization we are now undertaking is a key element in the continued health and unity of the Atlantic alliance. For more than 30 years the fate of the United States and its European allies has been inseparable. By correcting the perceptions--and reality--of emerging imbalances in strategic forces, we will underscore our commitment to resist Soviet expansionist goals and reaffirm the credibility of the 'nuclear umbrella' which we extend over our allies."

Haig urged Congress to support President Reagan's strategic force modernization program, his decision to deploy the MX missile, develop the Trident II, and deploy the B-1 bombers. "B-1 and MX--and the degree of Congress' support for them--will make or break our attempt to negotiate a reasonable arms control agreement," he said.

He told the Foreign Relations Committee that U.S.-Soviet negotiations to limit strategic arms could begin next spring. But he warned that "arms control negotiations cannot be conducted in a political vacuum. They must be closely related to the overall state of U.S.-Soviet relations."

DENG CRITICIZED FOR SUPPORTING U.S. NEUTRON BOMB

OW071355 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 6 Nov 81

[Text] Since U.S. President Reagan ordered the production of neutron bombs the world's people, including the American people, have raised strong protests against Reagan's criminal act. Voices denouncing Reagan reverberate across five continents and four oceans. The indignation, worry and bewilderment of the Chinese people and the people of the whole world are not without grounds.

Comrade Deng Xiaoping, as the real party, government and army leader of our country, not only has failed to object to Reagan's decision, but has approved and supported it, adding fuel to the flames, lest U.S. production of neutron bombs is not fast enough and not in sufficiently large numbers.

Comrade Deng Xiaoping hastily instructed the National Defense Scientific and Technological Commission to step up research on neutron bombs and to start to build accelerators of 30 billion to 50 billion electron-volts to hasten neutron bomb development.

However, the designing and manufacturing of any modern weapon is expensive. Needless to say, this includes neutron bombs. At present, the greatest difficulty of the national economy is the lack of funds. Furthermore, the people's living standard is low. Development of the neutron bomb inevitably will swallow up huge amounts of money and further increase the people's burdens.

It should be pointed out: The small atom bomb dropped by the United States on Hiroshima, Japan, on 6 August 19745, destroyed an entire city and took the lives of almost all the inhabitants. Most of the survivors are still struggling on the verge of death even today. Offsprings of the victims of the atom bomb are in most cases suffering from defective functions. Modern nuclear bombs are far more destructive and cruel than what caused the scene at Hiroshima. The explosion of a single nuclear bomb will be a horrible massacre. The atom bomb dropped on Hiroshima was equivalent to only 130,000 tons of TNT. By contrast, a present-day nuclear bomb is equivalent to 250 million tons of TNT. Therefore, if a nuclear war breaks out, it will be impossible to try to "wath the fire from the other side of the river." It inevitably will mean destruction of our country's 5,000-year-old civilization, disaster to several hundred million people, even extinction of the Chinese nation.

People cannot help asking: We are now working for the four modernizations. Are we to go through innumerable hardships and work hard for many years to achieve something in realizing the four modernizations only to have it destroyed in one single day? Are we enduring hunger and making revolution only to get ourselves, our wives and our children killed in the holocaust of a nuclear war?

Elementary logic points out to us: Despite the fact that the United States regards our country as a potential enemy, and that when former U.S. President Carter was in office he ordered U.S. nuclear missiles aimed at major cities and strategic points of our country and that this order has not been withdrawn to this day, a certain leader on the Party Central Committee has seen fit to approve and support Reagan's order to produce neutron bombs. The Chinese people will not pay the heavy price necessary to enable that certain leader to cater to the Reagan administration's adventurist policy and to fish for fame and compliments in disregard of the national interest. From both a political and a strategic viewpoint, this policy of supporting U.S. production of neutron bombs is unwise and should be denounced.

BEIJING RADIO ON SAUDI MIDEAST PEACE PLAN

OW070420 Beijing Domestic Service in Chinese 1100 GMT 6 Nov 81

[Commentary from the "International Current Events" program entitled: "Saudi Arabia's Mideast Peace Plan is Taken Seriously"]

[Excerpts] The eight-point proposal put forward by Saudi Crown Prince Fahd in early August for the realization of peace in the Mideast is having an increasing influence on the diplomatic activities aimed at bringing about a peaceful solution to the Mideast issue.

The Saudi plan reflects, in effect, the basic stand of the moderate Arab states and incorporates the rational views of various international formulas for Mideast peace. It is both feasible and practicable. It presents a new hope for the peaceful settlement of the Mideast issue. This is why it was taken seriously by various countries as soon as it was put forward and why it is receiving an increasingly wider support among Arab countries and from the PLO and members of the EEC. The United States, too, has recently made known its stand on the Saudi plan.

The United States is an important partner in the Camp David peace process and a party to the Palestinian autonomy talks. At present the United States has not yet abandoned the Camp David agreement. President Reagan stated that the United States intends to continue the peace process initiated at Camp David. He stressed that the present question is to draw all Arab countries, not just one, to make peace with Israel and to work out together a formula for settling the Palestinian issue. However, because the Camp David peace process has not been able to receive the support from the majority of Arab countries and also because of Israeli stubbornness, the prospect of the talks on Palestinian autonomy scheduled for next April among Egypt, Israel and the United States is not bright. This is why the United States begins to show an interest in the Saudi plan.

U.S. Secretary of State Haig stated recently that some of the points contained in the Saudi eight-point proposal are acceptable and some can be the basis for future negotiations. He pointed out that the Saudi proposal implies the recognition of Israel's right to exist and the recognition of the UN Security Council Resolution No 242. U.S. State Department spokesman Fischer revealed that the United States has discussed the Saudi plan with Saudi Arabia on several occasions. From the above, it is obvious that the Mideast situation is in for certain changes.

However, the Soviet Union and Israel are opposed to the Saudi plan. Israel attacks the Saudi proposal as a formula aimed at eliminating Israel by stages. The Soviet paper IZVESTIYA attacked it as "in the final analysis, an appeal to the Arab countries to recognize Israel." The reason for the Soviet attack is clear: The Soviet Union wants the confrontation between Arabs and Israel to continue so as to provide it with an opportunity to fish in troubled water, sell arms to some Arab countries and carry out infiltration.

The Mideast is an area of rivalry between the two hegemonist powers. The Soviet Union is seeking every opportunity to poke its nose into the area while the United States is strengthening its posture to counter the Soviet Union. Thus, the settlement of the Mideast issue will be a long process. But the Saudi proposal has opened a new prospect for a comprehensive, just and peaceful settlement of the Arab-Israeli conflict.

BEIJING RADIO COMMENTS ON SALE OF AWACS PLANES

OW060101 Beijing Domestic Service in Mandarin 1100 GMT 5 Nov 81

[Commentary from "International Current Events" program: "Behind the Debates of the Sale of AWACS Planes by the United States"]

[Excerpts] During the past month, the U.S. Congress has experienced sharp debates on whether to approve the sale of AWACS planes to Saudi Arabia. On the surface, the U.S. congressional members argued about the advantages and disadvantages of the sale of advanced weapons, but in fact there is a deeper meaning. It has a bearing on whether the Reagan administration could successfully readjust its Mideast policy and carry out its overall foreign policy in a smooth manner.

For many years the United States has been carrying out a Mideast policy in favor of Israel and the relations between the United States and most Arab countries have required a lot of hard work. This has created an opportunity that can be exploited to the Soviet Union's advantage. As the Soviet Union deepens its aggression and expansion in the Mideast, especially following its invasion of Afghanistan by armed forces, not only does the United States face a serious challenge in the Mideast but the Arab countries are now facing a dual threat from both Israel and the Soviet Union. Under such circumstances, the Arab countries urgently desire a reasonable solution to the problems caused as a result of Israel's aggression and expansion and want to have stability and security in the Mideast region. On this basis, the Arab countries want to strengthen their unity in order to jointly resist the Soviet Union's expansion toward the south.

The policy and proposition of the Arab countries are contradictory to the U.S. pro-Israel Mideast policy. Since Reagan took office, the United States has repeatedly stressed that it will give priority to dealing with Soviet expansion in the Mideast and has made some adjustments to its Mideast policy. On the one hand, the United States has continued to support Israel and established a relationship of strategic cooperation with Israel. On the other hand, it has strived to improve its relations with the Arab countries in order to establish another relationship of strategic cooperation. The Reagan administration's decision to sell AWACS planes to Saudi Arabia is precisely a major step in balancing the relations between the United States and Israel and those between the United States and the Arab countries and in readjusting its Mideast policy.

The approval by the U.S. Senate of the sale of the AWACS planes has caused different reactions in the world. Saudi Arabia, Egypt and a number of other countries have welcomed the decision. They are convinced that this is a turning point in the relations between the United States and the Arab countries. Israel has expressed its regret. However, public opinion in the world has pointed out that the sale of the AWACS planes itself does not mean that the United States has already changed its basic stand of siding with Israel. The United States' readjustment of its Mideast policy is merely a beginning. The current U.S. Mideast policy is still far from being able to solve the fundamental crux of the Mideast issue.

BEIJING VIEWS U.S. ATTITUDE ON SAUDI PEACE PLAN

OW070831 Beijing in English to North America 0000 GMT 7 Nov 81

[Unattributed commentary]

[Text] The eight-point Middle East peace proposal made by Saudi Crown Prince Fahd has become a focus of attention in many parts of the word. It has led to extensive discussion in Washington since the U.S. Senate approval of the AWACS radar planes sale to Saudi Arabia. Washington's assessment of the positive aspect of the Saudi plan drew a strong reaction from Israel. U.S. State Department officials were quick in coming out with a clarification, saying that taking note of the Saudi plan does not amount to endorsing it. In spite of this ambiguity, there are signs that the Reagan administration will be giving careful consideration to the Saudi plan, which has brought new positive elements to the volatile Middle East situation.

When the plan was put forward in August, the United States tried to minimize its significance, for fear that it would adversely affect the peace process started by the Camp David accords. However, as more and more Arab, European and other countries indicated their approval of the Saudi plan, the U.S. Government, ranging from President Ronald Reagan to Secretary of State Alexander Haig and other State Department officials, has also changed its attitude and voiced guarded appreciation of the plan. In a statement a few days ago, President Reagan described the plan as a potentially important step, saying it will recognize Israel as a nation to be negotiated with. Many influential American politicians have also expressed flexibility toward the PLO. When asked whether the U.S. Government would eventually involve the PLO in the peace talks, President Reagan said that a solution has to be found for the Palestine problem and that the United States would like Saudi Arabia to bring the PLO into the peace process, provided it was willing to recognize Israel's right to exist.

Obviously, the American position toward the Arab-Israeli conflict is far from fair. It is partial to Israel and insists on the PLO's recognition of Israel's right to exist. However, Reagan's statement expressing readiness to solve the problem and eventually to talk to the PLO shows a sense of realism.

The Reagan administration has made clear its willingness to have more countries taking part in the Middle East peace negotiations, including Saudi Arabia and Jordan, and it regards Saudi Arabia as the key to spreading peace throughout the Middle East. On this score, the Reagan government agrees with some aspects of the Saudi plan. If progress could be made on the question of the PLO, the Saudi proposal might well lead to the solution of the Middle East issue.

What worries the United States now is the impact of the Saudi proposal on the Camp David accords that it has painstakingly helped to bring about. A U.S. State Department spokesman has stressed over and over again that the United States welcomes certain points in the Saudi plan, but that does not mean that the U.S. Government is backing away from the commitment it has made to the Camp David process.

Whenever there is any hope of a settlement of the Middle East conflict, Israel always comes out to thwart it, with subsequent support of the U.S. Government. The same pattern has been repeated many times. Israeli Prime Minister Begin recently wrote to U.S. President Reagan, urging him to reject the Saudi plan. The United States immediately made offers to appease Israel. Despite all that, the United States still showed interest in the Saudi plan and said that it could be talked over. It seems the door is still open, and the initiative is with the U.S. Government. The question now is whether Washington has the sincerity and determination to help solve the Middle East question.

SAUDI MINISTER URGES U.S. TO ACCEPT PROPOSAL

OW061608 Beijing XINHUA in English 1515 GMT 6 Nov 81

[Text] Beijing, 6 Nov (XINHUA)--British Foreign Secretary Lord Carrington said in Riyadh yesterday that the Saudi eight-point peace proposal was positive, correct and of considerable importance in maintaining the peace process in the Middle East, according to reports received here.

At a press conference, both Lord Carrington and Saudi Foreign Minister Prince Sa'ud al-Faysal described their talks as "useful, constructive and encouraging."

Carrington said that there were "common grounds" between the Saudi proposals and the EEC declaration on the Middle East issue, and that the EEC Ministerial Council will meet late this month to discuss the Saudi proposal. However, he predicted that before Israel completely hands back Sinai to Egypt next April, no progress could be achieved towards a Middle East settlement, he added.

He said: "Between the Arab Fes summit and next April all those who are interested in a negotiated settlement will seek to provde the climate and conditions in which that (negotiated settlement) is possible."

Faysal said at the press conference that his discussions with Lord Carrington had centered on the Saudi proposal. He hoped that the Arab summit held in Fes on 25 November would unanimously approve the proposals. This, he said, would provide a "very solid basis" for a negotiated settlement of the Middle East issue. He urged the United States and the Soviet Union to accept the proposal after its adoption at the Arab summit.

He pointed out that if Israel and Palestine do not recognize each other's right to exist, there would be no peace in the Middle East. The reason why Israel rejects the Saudi proposal was that it does not want peace, he said.

Referring to the need for an international conference on the Middle East, Faysal said that it should be decided by the Arab summit whether or not an international conference through the UN Security Council is needed.

As to the EEC's participation in the peacekeeping force to Sinai, Faysal said that Saudi Arabia stands opposed to it just as other Arab countries and PLO have done. He said that the participation of the West in the force means recognition of the Camp David accords.

CSO: 4000/11

SAUDI FOREIGN MINISTER COMMENTS ON PEACE PLAN

OW051948 Beijing XINHUA in English 1844 GMT 5 Nov 81

[Text] Kuwait, 5 Nov (XINHUA)--European Economic Community President and British Foreign Secretary Lord Carrignton ended a 3-day visit here which included talks with Crown Prince Sa'ud al-Faysal about the eight-point Saudi peace proposal and the EEC's Venice declaration of 1980 on the Palestinian problem.

At a joint news conference held before Carrington's departure, Prince Sa'ud answered a question on the seventh point of the Saudi peace plan which deals with the recognition of Israel by Saudi Arabia. He declared that the seventh point is connected with the other points and that the most important point is the one dealing with the recognition of the Palestinian state and holding of negotiations between that state and Israel, and this could not be achieved without mutual recognition.

Prince Sa'ud said that Israel has rejected the Saudi peace plan because it does not want peace in the area.

Prince Sa'ud said that Middle East peace negotiations could be conducted by the United Nations Security Council or during an international conference.

Carrington said at the news conference that the Saudi peace plan announced by Prince Fahd last 7 August does not contradict the Venice declaration, which clearly indicates Europe's position concerning the Middle East. The Venice declaration recognizes the Palestinians' rights and the right of all the region's countries to live peacefully, he added.

He said he hopes the upcoming Arab summit conference will adopt the Saudi peace proposal, which he said will boost efforts toward peace.

MUBARAK SPEAKS ON AWACS DEAL, SAUDI PROPOSAL

OW071302 Beijing XINHUA in English 1244 GMT 7 Nov 81

[Text] Kuwait, 7 Nov (XINHUA)--"The situation between Egypt and the Arab countries is better now," said Egyptian President Husni Mubarak in Cairo in an exclusive interview with the Kuwaiti newspaper ARAB TIMES which is published here today.

Mubarak said, "I feel the tension between Egypt and Arab countries has decreased since the death of President al-Sadat."

On Saudi Arabia's eight-point proposal, he said: "I hope Prince Fahd's initiative will proceed and that the parties concerned will accept the eight-point Saudi proposal."

Regarding the AWACS aircraft for Saudi Arabia, President Mubarak said he had told America in September that Egypt considered the AWACS deal to Saudi Arabia as a matter of principle. "Saudi Arabia has contributed greatly towards international issues, not to mention its moderate oil policy. This reasonable stance has to be duly appreciated by the U.S.A."

"Saudi Arabia has the right to defend its national security and assume its active role in the area," he added.

The president called on Arabs to consider Egypt's situation and not to allow "this Arab country to be a victim of world powers."

Husni Mubarak said that he had concentrated first on the security question. Since that has been dealt with, his second main point was the economic situation.

"My plan is that the political leadership should not be busy only with foreign affairs, but that it should concentrate on the national economy to turn Egypt from a consumer to a producer." He repeated his affirmation of an open economy and said there would be no objection to developing the laws regarding foreign investments in Egypt.

The Egyptian president said that America was serious in helping his country. "We asked them to aid us more and they have not refused any demand. We still need more."

He said that Egypt was prepared to deal with the Soviet Union "on an equal footing." He added, "I don't like to feel we are a small state in relation to a big one. We are equal members of the United Nations. I don't like anybody to impose anything against our national interests."

'XINHUA'REPORTS REAGAN MEETS JORDAN'S HUSSEIN

OW030834 Beijing XINHUA in English 0818 GMT 3 Nov 81

[Text] Washington, 2 Nov (XINHUA)--U.S. President Ronald Reagan and King Hussein of Jordan discussed today at the White House the overall situation in the Middle East.

King Hussein arrived here yesterday for a 4-day visit in Washington on the invitation of the U.S. president. The king's visit took place at a time when the U.S. administration is trying to seek increased security cooperation with Arab countries and broaden Arab participation in the Middle East peace process so as to form a "strategic concensus" in the region.

In his welcoming remarks, Reagan told the king that the United States is concerned about outside threats to the Middle East, as well as those issues which most directly affect the people of the Middle East. "When focusing on the internal problems of the region we must never lose sight of the role of external powers in aggravating those problems," he noted. He asked Jordan to work together with the United States to find solutions.

Briefing on the talks, a senior U.S. official said that the king gave the president his own point of view on the general situation of the Middle East and said that one of the most fundamental problems of the region was the solution to the Palestinian problem and the plight of the Palestinians specifically. The king believed "very deeply that the Palestinians in any case, must be involved in that settlement and their participation gives it weight and meaning."

The king critisized the intransigence of Israel and indicated that Jerusalem must remain a symbol of peace in the Middle East. It was a very important question to all Arabs and too important to be left to the sovereignty of Israel, he said.

The official made it clear that despite the United States appearing to look with some favor on the eight-point peace plan put forward by Prince Fahd of Saudi Arabia, the administration is not drawing away from the Camp David process. He said, the president indicated that there was in the Saudi plan an initiative where none existed before, but "the president did not deviate from the adherence of the United States Government to the Camp David peace process as the framework for achieving peace in the Middle East."

The official added that under ideal circumstances, the opportunity to have additional participants in the Camp David peace process is something that the United States Government would support, "but ovviously there are serious obstacles to the Jordanian participation in the Camp David process."

The king also met with Secretary of State Alexander Haig and Defense Secretary Caspar Weinberger today.

SYRIA'S KHADDAM ON U.S. MIDEAST INVOLVEMENT

OW021901 Beijing XINHUA in English 1843 GMT 2 Nov 81

[Text] Damascus, 2 Nov (XINHUA)--Syrian Foreign Minister 'Abd al-Halim Khaddam said Saturday peace in the Middle East will be achieved only by the total withdrawal of Israel from Arab land including Jerusalem and the Israeli recognition of Palestinian rights.

Speaking at a news conference for American journalists on a fact-finding tour of the Middle East, Khaddam also discussed the involvement of the United States in the Middle East.

On the U.S. Senate's approval of the AWACS planes sale to Saudi Arabia, Khaddam said, "We agree that Arab countries should obtain all means of development and all kinds of weapons." However, "we cannot be blind to the immense U.S. military aid to Israel, which is used to reinforce aggression against Arabs and continue its occupation of Arab lands," he said.

"This bargain with Saudi Arabia would have gained more importance if the United States had balanced its relations between the Arab countries and Israel," he explained. "Begin's visit to Washington and the U.S. strategic agreement with Israel have given rise to a complicated and dangerous situation in the region."

Khaddam also pointed out that "the U.S. strategic commitment to Israel has placed American interests and decisions in the service of expansionistic Israeli goals." "In our conclusion...we always take into consideration the Israeli war planes, artillery and tanks which are all American made." He said, "It is Israel which stands in the way of peace. Israel is the obstacle impeding the finding of a lasting peace in the region."

When asked about the massive military aid Syria receives from the Soviet Union and what influence the Soviet aid may have on Syria's policies, Khaddam said, "Syria is an independent state. It makes its national decisions about how to best serve national interests. The decision we take in Syria and all our practices are fully dictated by our national interests. There is no other consideration."

On the subject of future relations with the United States in a Middle East without conflict, Khaddam said, "I believe it would be a good relationship because the major obstacle existing today is America's unreasonable support of Israeli aggression."

"In the past the U.S. Government offered aid and we accepted it," Khaddam said, "and if it offers any help, it will be discussed, considering that the greatest help that the United States might offer is to stop its support of Israel."

JORDAN'S KING HUSAYN CONCLUDES U.S. VISIT

OW090229 Beijing XINHUA Domestic Service in Chinese 1545 GMT 6 Nov 81

[Text] Washington, 5 Nov (XINHUA)--According to a dispatch from a XINHUA reporter, Jordanian King Husayn left Washington today to continue his visit elsewhere after he concluded his 4-day sojourn in the capital.

While in Washington, King Husayn discussed the Middle East peace process with U.S. leaders. Prior to his departure, he said: The door to solving the Middle East issue on the basis of the eight-point proposal put forward by Saudi Arabia remains open. "The United States has not shut the door."

Husayn came to visit the United States at a time when there are rapid changes in the Middle East situation. After Egyptian President al-Sadat was assassinated, many people were worried about the stability of the Middle East situation and actively tried to find a way to achieve peace in the Middle East. As soon as he got off his plane, King Husayn stressed the important meaning of the Saudi plan. During his talks with Reagan, he emphatically pointed out that a basic problem in the Middle East region is that of Palestine and that without the participation of the Palestinian people, the solution of the Middle East issue is out of the question. He believed that the Camp David formula completely fails to satisfy the needs of today's peace process. A high-ranking White House official revealed that Reagan had told Husayn that in the Saudi Arabian plan, there existed an "initial proposal" which was never mentioned before--a recognition of the fact that all Middle East countries have the right to exist. However, Husayn still insisted that the United States fulfill its obligation to the Camp David accords. People have also noted that after the Senate approved the sale of AWACS planes to Saudi Arabia, U.S. leaders have more than once said that a certain part of the Saudi Arabian plan was "inspiring" and that it can become a "starting point for negotiations." Later, amid Israel's clamoring, the tone of the open remarks made by U.S. officials has somewhat changed. However, it is understood that issues in this regard remained the topics of discussion when Reagan and Haig met with Husayn. A high-ranking official of the U.S. State Department revealed to a XINHUA reporter this afternoon that Husayn's visit to the United States had mainly scored the following achievements:

The king has established personal friendship with the president. The two nations will strengthen cooperation in security affairs. The United States will try its best to satisfy Jordan's needs in national defense. The two sides have explored the Middle East peace process and agreed to find a joint method to solve problems. Some members of the press circles believed that the U.S. official circles try to avoid excessively stirring up Israel. Therefore, it is unwilling to openly discuss the Saudi Arabian plan. However, they feel in private that it is difficult to carry on the present Camp David process and that certain adjustments are necessary.

Husayn's visit has reflected a trend in the development of the Middle East situation--a trend to find a new way to solve the Middle East issue on the basis of the Saudi Arabian plan. Egypt's new president, Mubarak, has already expressed Egypt's willingness to improve and develop its relations with the Arab nations. PLO Leader 'Arafat praised the Saudi Arabian plan. The 10 nations of the West European community also sent British Foreign Secretary Carrington to Saudi Arabia to hold talks. The United States itself has taken some steps which have attracted public attention such as the approval of the sale of AWACS planes to Saudi Arabia, the strengthening of its relations with Egypt and Sudan, the appreciation of the Saudi Arabian plan and the strengthening of its ties with Jordan and so on. However, whether the United States will truly follow the path to improve and develop its relations with the Arab nations and to accelerate the Middle East peace process or whether it will still try to stubbornly cling to Israel is something which remains to be seen.

REPORTS CITE[illegible] ON U.S. ECONOMIC RECESSION

OW301916 Beijing XINHUA in English 1856 GMT 30 Oct 81

[Text] Beijing, 30 Oct (XINHUA)--The U.S. Commerce Department reported a 2.7 percent drop in the index of leading indicators during September, the biggest in 17 months.

According to western wire services, the Commerce Department reported that of the 10 economic indicators designed to predict economic trends only one improved in September.

Meanwhile, U.S. Labor Department statistics indicated that the productivity of American business fell at an annual rate of 1.9 percent in the third quarter of the year, the largest decline in 3 1/2 years.

The figures for the quarter ending 30 September showed that private business output fell 1.2 percent.

Higher prices for housing, food, transport and other sectors of the economy pushed the U.S. annual inflation rate to 14.8 percent during September, the Labor Department reported on 23 October. This was the third straight month of double-digit inflation.

During the last 3 months, consumer prices have climbed at an annual rate of 13.5 percent, a substantial increase over the 8.5 percent recorded in the first half of the year. Inflation rate was 12.6 percent in 1980.

"The administration has counted on inflation slowing and high interest rates easing to bring the U.S. economy out of its mild recession," a REUTER report commented, "but the surprisingly large rise in prices during September seemed likely to increase uncertainly in the financial markets."

On the other hand, a 27 October U.S. Commerce Department report said the American foreign trade deficit amounted to $2.6 billion in September with the cumulative trade deficit in the first 9 months of 1981 totaling $28.7 billion.

Total losses in auto industry reached $969 million for the third quarter of the year, with General Motors reporting $468 million losses, Ford Motor Co $334 million losses and Chrysler Corp $149.3 million losses.

The current recession in the United States, the eighth since World War II, could drive the government's 1982 budget deficit to a record $100 billion, House Budget Committee Chairman James Jones told a meeting of European investors.

President Ronald Reagan has proposed overall budget cuts and tax savings designed to reduce anticipated budget deficits by $115 billion in a 3-year period to achieve a balanced budget in the 1984 financial year. But Jones told the investors the president's economic assumptions were "wildly unrealistic." The deficits between now and 1984 could total $200 to $300 billion, he warned.

EGYPT'S GHAZALAH DENIES THREAT TO LIBYA

OW050119 Beijing XINHUA in English 0104 GMT 5 Nov 81

[Text] Cairo, 4 Nov (XINHUA)--Egyptian Defence Minister 'Abd al-Halim Abu Ghazalah declared that there is no Egyptian military build-up on the Libyan borders and that the Egyptian forces stationed there are only for defence in face of any foreign contingencies.

In an interview with the Egyptian weekly magazine (AKHER SA'A), the minister reiterated President Husni Mubarak's statement that there is neither build-up on the Libyan borders nor any plans or even intention for attacking Libya.

He said the historical relations between Egypt and the Sudan and the joint defence agreement make his country committed to a battle alongside with the Sudan in case it was exposed to any foreign invasion and this would be done in accordance with a request by the Sudanese Government.

He said there is an Egyptian military mission of officers and warrant officers in the Sudan to train the Sudanese forces on the use of certain weapons and equipment. There are similar missions in Somalia and Oman and a number of Gulf countries, he added.

Ghazalah said the joint Egyptian-U.S. military exercises to be conducted on coming Monday are aimed at introducing a new expertise in tactic and rapid air landing. These manoeuvres do not constitute any threat to the security of any neighboring state nor are they meant for invading Libyan lands as was alleged, he added.

'XINHUA' COMMENTS ON ISRAELI WEST BANK POLICY

OW031230 Beijing XINHUA in English 1210 GMT 3 Nov 81

["Roundup: Israel's 'New' Policy in West Bank of Jordan River"--by correspondent Yang Shaonan]

[Text] Damascus, 2 Nov (XINHUA)--The Israeli authorities put into effect yesterday a "new" policy in the West Bank of the Jordan River which would transform the military administration functioning since 1967 to a civil one headed by Israeli Professor Menhem Milson.

According to the policy called by the press as "the Sharon plan" as it was put forward by Minister of Defence Ari'el Sharon, a notorious hawk in the Israeli regime, the civil affairs in the West Bank would be handled by a civil administration with the participation of Palestinians as assistants. The Israeli troops stationed in the region would take charge of the security affairs. It can be seen that the reform only means a change of name while the real power is still in the hand of the Israeli Army.

Reaction to this new policy varies. The United States regards it as "a major step toward easing tension in the occupied area." However, almost all the mayors and Arab papers in the West Bank vigorously oppose it. The mayor of Nablus said, "Nobody could see what is new in the plan and Professor Milson is a colonel who has just taken off his uniform. He described the plan as a "desperate and futile attempt to undermine Palestinian unity." "In the final analysis, they want to annex the West Bank," he added.

In Beirut, a Palestinian in the PLO headquarters pointed out, "No one is going to go along with the plan because the real power remains with the Israelis." Even certain Israeli officials expressed doubts privately on the real effect of the reform.

Arab observers here said the real purpose of the plan is to sow discord between the PLO and the Palestinians in the occupied territory in an attempt to perpetuate Israel's domination over the territory. Milson revealed not long ago in an article carried in a U.S. journal that the aim of the plan is "to liberate the population of the territory from the PLO control."

However, the Israelis have underestimated the tenacity of Palestinian nationalism. The Palestinians in the occupied territory persistently oppose the annexation of East Jerusalem and regard the PLO as their sole legitimate representative.

To solve the conflict between Israelis and Arab Palestinians, the right thing for the Begin government to do is to stop its expansionist policy and recognize the inalienable rights of the Palestinian people.

'XINHUA' VIEWS ISRAELI STAND ON SAUDI PEACE PLAN

OW040720 Beijing XINHUA in English 0705 GMT 4 Nov 81

["Commentary: Policy of Suicide"--XINHUA headline]

[Text] Beijing, 4 Nov (XINHUA)--The PEOPLE'S DAILY today carries a commentary entitled "A Policy of Suicide" which reads as follows:

Increasing attention of the world public is being focused on Saudi Arabia's eight-point proposal on the peaceful settlement of the Middle East problem. The Palestine Liberation Organization, many Arab states and EEC member states have expressed support for or appreciation of the proposal. Even the U.S. Government held that there is something "positive" in the proposal which can be served as a "starting point" for dialogue.

However, the Israeli authorities categorically rejected the proposal and regarded it as "a plan to eliminate Israel by stages."

The Begin authorities argued that the withdrawal of Israeli troops to the border before the 1967 war as called for by the Saudi proposal would "put the vast majority of the Israeli citizens within the range of enemy fire" and would "mean the suicide of the state of Israel."

It is well known that the root cause of years of turbulence and unrest in the Middle East lies in Israel's intransigence in pursuing an expansionist policy and its refusal to return to the Arabs their territories it has occupied and to recognize the legitimate rights of the Palestinian people. Israel's position has brought disaster to the Palestinian people and jeopardized its own existence. In other words, it is precisely the incorrigible aggressive and expansionist stand of Israel that endangers its own existence.

The Saudi proposal presents a fairly realistic formula as it upholds the national rights of the Palestinian people and recognizes the right of all countries in the region to peaceful coexistence. By stubbornly insisting on basing their "security" on the occupation of the territories of other countries, the Begin authorities are acting like Hitler who based the existence of fascist Germany on the seeking of "Lebensraum" from other countries.

If the Begin regime is really concerned with the interest of the vast majority of the Israeli people, it should pull out from the occupied Arab land and recognize the natinal rights of the Palestinian people, thus bringing lasting peace to the Middle East. Otherwise, it is really committing suicide.

'XINHUA' ON BEGIN'S 'ATTACKS' ON SAUDI PEACE PLAN

O?041642 Beijing XINHUA in English 1612 GMT 4 Nov 81

["Commentary: Fantastic Logic by XINHUA Correspondent Yu Kaiyuan"--XINHUA headline]

[Text] Beirut, 3 Nov (XINHUA)--Israeli Prime Minister Menachem Begin has recently made unscrupulous attacks on the Saudi Arabian Middle East peace proposals, alleging that the proposals are aimed at "eliminating Israel by stages" and constitute "a large obstacle toward peace." Begin even described Saudi Arabia as a "petrodollar desert state where the darkness of the middle ages reigns."

In addition, Israel today adopted a resolution expressing its determination not to engage in peace talks based on the Saudi proposals.

The eight-point proposal on Middle East peace raised by Saudi Crown Prince Fahd last August embodied the spirit of various UN resolutions. The proposals demand recognition for the existence of various states in the Middle East while guaranteeing the right of the Arab-Palestinians. The proposal has provided a basis of dialogue for a fair settlement of the Middle East problem and has drawn international attention. Even U.S. President Ronald Reagan has stated that the Saudi proposal has positive factors.

On 1 October Begin said Israel opposes Saudi Arabia's proposal because the Israeli withdrawal to pre-1967 boundary lines that is urged by the proposal would threaten Israel's security.

But whose security is threatened? Israel occupies Arab lands and threatens Arab security. The Palestinian people's struggle against Israel is for their right to exist and for the right to return to their homeland. Begin's fear for Israel's security is more absurd. As science and technology advance, the range of weapons will become more distant. Someday Israel will be threatened by other countries' weapons no matter where its boundaries exist.

Israel's refusal of the Saudi Arabian peace proposal implies that Israel rejects peace and wants to stick to its policy of expansion.

UN BEGINS DEBATE ON GLOBAL NEGOTIATIONS

OW051351 Beijing XINHUA in English 1256 GMT 5 Nov 81

[Text] United Nations, 4 Nov (XINHUA)--The UN General Assembly this afternoon began its debate on launching global negotiations on international economic cooperation and development, with the developing countries favoring the General Assembly as the central forum of such negotiations.

Algeria, speaking for the host of developing countries known as the "Group of 77," was joined by Austria, Sweden and Norway in reaffirming negotiation framework. The General Assembly is where each nation has one vote and the developing countries have a large majority.

The North-South dialogue, Algerian Ambassador Mohamed Bedjaoui declared, was more than ever at a crossroad today. There was need to create a new world to establish the right of all to progress, he noted.

He assured that the Group of 77 had renewed its confidence in the virtues of a dialogue among countries on an equal footing, and deeply believed that it must replace "dogmatism and injunction."

In order to preserve the fundamental characteristics of global negotiations, he stressed, it was essential that the fundamental need for a universal dialogue be recognized; that the General Assembly remain the central forum for all stages of negotiations; and that negotiations form part of the dynamic perspective of the establishment of a new international economic order.

During the general debate of the General Assembly earlier, a very large number of countries expressed their hope that the current session would be able to adopt a decision on the launching of global negotiations. At the Cancun summit in late October, 22 leaders from the North and South also agreed on the "desirability" of such negotiations at the Un on a basis to be agreed upon and in circumstances offering the prospect of progress.

The president of the General Assembly said in his statement today that he had associated himself with those aspirations and hoped that that objective would be realized.

The representative of Austria said during the debate today that Austria realized that the problems related to global negotiations were manifold and extremely complex. They could only be successfully dealt with if the interests of all countries were being given due consideration, for only a mutually acceptable process of global negotiations offered the prospect of concrete and substantive results.

Australian representative declared that Australia had not been a participant at the Cancun summit, but it weclomed the results of the meeting. The summit paved the way for greater understanding between developed and developing countries, he noted.

He said that the world community was looking to the Cancun participants to do their utmost to build the consensus to ensure that global negotiations were launched as soon as possible within an acceptable framework.

That might not be easy, he pointed out, there was a need to ensure the widest participation, including necessarily the full involvement of the United States.

NATO COMMANDER COMMENTS ON SOVIET STRATEGY

OW080734 Beijing XINHUA in English 0704 GMT 8 Nov 81

[Text] Venice, 7 Nov (XINHUA)--NATO Supreme Commander Bernard Rogers stressed here today that the single most important factor determining the bounds of Soviet behavior will be the degree of resistance she expects to encounter." Rogers was speaking at the closing session of a seminar here on Soviet strategy and the response of the West.

He said that while massing forces periodically to intimidate the Polish people, the Soviets continue their brutal occupation of Afghanistan. Meanwhile, they aid Vietnamese aggression in Southeast Asia. This global expansion of Soviet power now menaces NATO's vital interests, beyond alliance boundaries as well as within them.

Rogers said, "Dominating our considerations must be the increasingly adverse force imbalance between the Warsaw Pact and NATO which has emerged over the last 20 years and which continues to grow."

He said, although the Soviet Union has internal difficulties but "history reminds us that nations with internal problems and excess military might often find a rationale for external excursions."

"As a result of the relentless accumulation of Soviet military power coupled with the inadequate and faltering response to commitments by NATO nations, the very credibility of our deterrent is decreasing and in jeopardy," he said.

"A primary alliance objective must be the fielding of a credible, integrated conventional deterrent during this decade." "Implementing NATO's two-track LRTNF decision and building a credible conventional deterrent are what I believe to be the two principal tasks for allied command Europe in this decade," he noted.

Speaking of "pacifism, neutralism and unilateralism" in the western countries today, Rogers said that "the dialogue will get us nowhere without an adequate and improving deterrent.

Referring to the present peace movement in Europe at a press conference earlier here this morning, Rogers said historical lessons showed that unilateral disarmament could not lead to detente.

Rogers stressed the importance of the southern flank of NATO because of the necessity to protect the flow of western shippings through the Mediterranean. He also stressed the key position of Turkey in the defence of this region and looked forward to the entry of Spain in NATO. He hoped the administration of Greece would decide to remain in the NATO military structure.

The 2-day seminar was sponsored by the Italian "Atlantic Committee." At yesterday's session of the seminar, Chief of Staff of the Italian Armed Forces General Umberto Cappuzzo described the Soviet military apparatus as a pillar of the Soviet power policy. He pointed out that by making good use of detente the Soviet Union has rapidly built up its military strength in recent years to the extent that is beyond defensive needs.

OPENING OF FRANCO-AFRICAN SUMMIT

OW041903 Beijing XINHUA in English 1831 GMT 4 Nov 81

[Text] Paris, 3 Nov (XINHUA)--The eighth annual Franco-African summit opened here this morning at the International Meeting Center. Speaking at the opening session of the meeting, French President Francois Mitterrand, who presided over the meeting, elaborated France's policy towards Third World countries, African countries in particular.

On East-West relations, Mitterrand said that France favors maintenance of the balance of force between East and West, saying "if the balance of force in the world were not guaranteed, then peace would be threatened." France "will keep a free hand in using its own forces and guarantee its independence in making decisions," he said.

On North-South dialogue, the French president pointed out that his country is in favor of reopening global negotiations in the framework of the United Nations. He said that "urgent discussions should be held on such issues as self-sufficiency in food, energy security and a steady primary products interflow and rapid industrial growth." "France will not wait for the end of global negotiations to act," he added.

Mitterrand pledged support for reform of the international economic order. This reform, he said, should serve to protect the weak and restrain the strong. "Giving free rein to market between the north and the south means allowing the strongest to pass the brunt of the crisis onto the poorest," he noted.

Referring to African questions, Mitterrand said that the object of the African nations "is to prevent Africa from being turned into an arena of rivalry and contradictions for external interests." He warned that in any area of tension in Africa the great powers were tempted to intervene if the problem was not settled quickly by the countries directly concerned.

On the current situation in Chad, the French president called for the creation of a pan-African force in Chad, saying it is the only reasonable way to create the necessary conditions for the legal government and President Oueddei Goukouni to govern the country and reorganise its national army. "France pledges its unconditional aid for Chad to regain its unification and independence," he said.

Turning to the question of Namibia, Mitterrand said that his country is opposed to "interminable negotiations" and hoped to see that a firm schedule on the Namibian issue would be worked out. He said France believes that "Namibia will become independent in 1982."

As the eldest participant at the summit, President Felix Houphouet-Boigny of Ivory Coast also addressed the meeting after the French president.

Apart from the French president, the meeting was attended by heads of state of 19 African member nations with the exception of Seychelles. They are: Benin, Burundi, Central African Republic, Comores, Congo, Ivory Coast, Djibouti, Gabon, Upper-Volta, Mali, Mauritius, Mauritania, Niger, Rwanda, Senegal, Seychelles, Chad, Togo and Zaire. Angola, Egypt, Somalia, Sudan and seven other African nations attended the meeting as observers.

After its first meeting in November 1973, the Franco-African summit was held annually since 1975 for a discussion of vital questions in Africa and issues concerning cooperation between France and Africa.

SOUTH ASIAN FOREIGN SECRETARIES MEETING HELD

Meeting Opens

OW021629 Beijing XINHUA in English 1543 GMT 2 Nov 81

[Text] Kathmandu, 2 Nov (XINHUA)--The second meeting of the foreign secretaries of South Asian region opened this afternoon at the Tribhuvan Memorial Hall of Tribhuvan University, Kirtipur, a small town near here.

Foreign secretaries and their assistants from Bangladesh, Bhutan, India, Maldives, Pakistan, Sri Lanka and Nepal participated in the opening ceremony.

Inaugurating the meeting, Nepalese Prime Minister and Minister for Foreign Affairs Surya Bahadur Thapa said: "Our common allegiance to the policy of non-alignment, mutuality of interests and above all similar problems and purposes of development bind us together in our current quest for further understanding and close cooperation."

Stressing the importance of regional cooperation and interdependence, he said: "We need cooperation and common approach not only to fight the battle against widespread poverty in our respective countries but also to minimize the adverse impact of external factors to our development efforts such as inflation, market uncertainty, resources constraint and difficulty in transfer of appropriate technology."

He said: "Regional cooperation should be based on and, in turn, contribute to mutual trust, understanding and sympathetic appreciation of the national aspirations of the countries of the region, and that such cooperation should also be based on the respect for the principles of sovereign equality, territorial integrity, political independence and non-interference in internal affairs of other states and mutual benefits."

The first meeting of the foreign secretaries of the seven South Asian countries was held in Colombo in April this year, which brought about the formation of the five study groups of agriculture, rural development, telecommunications, meteorology, and health and population. Since then group meetings of different fields have been held separately to consider concrete ways and means for regional cooperation.

The 3-day second secretary-level meeting, beginning today will scrutinize the reports of the five study groups and hold discussions on their suggestions and recommendations so as to develop appropriate mechanism for their implementation.

Regional Cooperation Stressed

OW021846 Beijing XINHUA in English 1832 GMT 2 Nov 81

[Text] Kathmandu, 2 Nov (XINHUA)--Foreign secretaries of seven South Asian countries stressed the importance of regional cooperation and collective self-reliance through common efforts at the second meeting of the foreign secretaries of the South Asian region in Kathmandu today.

Bishwa Pradhan, special secretary of the Nepalese Foreign Ministry pointed out: "The greatest achievement of the member countries of the South Asia during the past months has been the development of the South Asian spirit which is a spirit of understanding, closeness, tolerance, mutual respect, equality and unity." He said that regional cooperation has now become both desirable and necessary, because it will not only complement bilateral interests but also lead the member countries to adhere to a common collective approach to important global issues such as "North-South dialogue."

Foreign Secretary of India R.D. Sathe said: "Regional cooperation can and indeed should contribute to the progressive attainment of greater national and collective self-reliance in the region through the pooling of our resources and judicious exploitation of the complimentarities that exists in the region."

Riaz Piracha, foreign secretary of Pakistan, suggested that a standing technical committee comprising representatives of all the regional countries in each of the five fields of cooperation, agriculture, rural development, telecommunications, meteorology and health and population activities, be constituted to draw up concrete programs of cooperation, arrange their implementation and monitor progress.

Delegates from Bangladesh, Bhutan, Maldives and Sri Lanka also made policy statements at the meeting. Jagdish S.J.B. Rana, foreign secretary of Nepal, was elected chairman of the meeting.

INTERNATIONAL AFFAIRS

FIFTH OANA GENERAL ASSEMBLY OPENS 3 NOVEMBER

OW031618 Beijing XINHUA in English 1608 GMT 3 Nov 81

[Text] Kuala Lumpur, 3 Nov (XINHUA)--The Third World can no longer accept the imbalance of information between developed and developing countries, said Malaysia's Prime Minister Mahathir Mohamad here today during the opening of the fifth general assembly of the Organization of Asian-Pacific News Agencies (OANA).

"It is my hope that the time will not be long for us to see Asia's image being painted by Asians themselves rather than by outsiders who are neither sensitive to our needs and aspirations nor sympathetic to our cause," the prime minister said.

Referring to the Asian news exchange network which is to be launched during the current assembly, he said: "The time has now come for the Asian news exchange concept to be translated into reality as the first step towards the establishment of a new world information and communication order."

"A just and equitable distribution of information within the region and outside would inevitably help promote regional understanding and in the long run further enhance the cooperative efforts among the countries of the region," Mohammad said.

The Organization of Asian News Agencies was founded in 1961 following a meeting convened by UNESCO in Bangkok. The name was amended to the Organization of Asian-Pacific News Agencies at the current session of the fifth general assembly this morning with a purpose of inviting more news agencies from Asia and the Pacific to join it. At present it has a total of 23 member news agencies in all including XINHUA News Agency.

OANA objectives are to increase and free the flow of news in Asia and the Pacific and to actively participate in the flow of news between developed and developing countries.

The organization is specifically concerned with efforts to overcome poverty, hunger, unemployment and disease. It opposes racism, colonialism and neocolonialism and hopes to strengthen cooperative relationships among Asia-Pacific news agencies and other world agencies.

SOUTH ASIAN MEETING FURTHERS REGIONAL COOPERATION

OW041625 Beijing XINHUA in English 1607 GMT 4 Nov 81

[Text] Kathmandu, 4 Nov (XINHUA)--The 3-day second meeting of foreign secretaries of the South Asian region, which ended here today, has brought cooperation between these countries to a "stage of take-off."

Assuring the press to this effect, Bangladesh Foreign Secretary H.R. Chowdury attributed the success of the meeting to what he called "the spirit of Kathmandu" --a spirit of "accommodation and understanding."

Echoing his Bangladesh counterpart, Indian Foreign Secretary R.D. Sathe said he believed that "the meeting will turn the cooperation into reality."

Addressing the closing ceremony of the meeting, Nepalese Foreign Secretary Jogdish Shamsher Rana, the meeting's chairman, said that the meeting's joint communique on regional cooperation indicates that "all of us have reason to feel satisfied with the outcome of the conference."

The meeting also approved the recommendations of five study groups on agriculture, rural development, telecommunications, meteorology and health and population activities. It adopted an action program for the implementation of the recommendations.

In addition, the meeting selected three fields--transportation, postal service and science and technology--for further study.

It also was agreed at the meeting to carry on consultations among the foreign secretaries to review recommendations, monitor progress and lay down guidelines for further action and prepare for a meeting of foreign secretaries in 1982.

ITALIAN COMMUNIST VIEWS INTERNATIONAL CRISIS

OW090840 Beijing XINHUA in English 0816 GMT 9 Nov 81

[Text] Rome, 8 Nov (XINHUA)—Enrico Berlinguer, general secretary of the Italian Communist Party, said here today that he had "no hesitation in pointing to the Soviet Union's responsibility for the international detente crisis."

Addressing a rally here, he recalled that the Italian Communist Party had voiced its "resolute condemnation of the Soviet intervention in Afghanistan and other Soviet actions against the policies of dialogue and detente."

Berlinguer continued, "We must also reiterate our alarm and uneasiness over the actions of the American leaders, their actions, attempts and threats which are almost daily dangerously sharpening international relations as a whole."

He noted, "In face of the rivalry and confrontation between the United States and the Soviet Union, which is objectively the prime reason for sharpened international crisis, all forces that can mediate, ease and halt the arms race should bestir themselves and make their positive contributions to a negotiated settlement."

Referring to the 64th anniversary of the October revolution, Berlinguer said, "We have never forgot that the event opened a new era in the world. Nor have we forgot the historical and invaluable contributions made by the Soviet people with their sacrifices and bloodshed in the war against fascism and Nazism. But we at the same time have come to realize that the time has gone when all organisations of the revolutionary forces had to rally around a single centre."

"All communist parties, all other forces of the workers' movement and all progressive movements, should, more than ever before, use their absolute independent judgement and initiative and act in a new internationalist spirit to accomplish the great task of defending peace and safeguarding the independence and sovereignty of all peoples and nations," he stressed.

'XINHUA'NOTES POLISH WORKERS RETURN TO WORK

OW040740 Beijing XINHUA in English 0728 GMT 4 Nov 81

[Text] Warsaw, 3 Nov (XINHUA)--Thousands of Polish workers went back to their posts today as the Solidarity Union's National Commission met in Gdansk to discuss creation of a disciplinary commission that would purge local unionists who defy the national leadership's call for an end to wildcat strikes.

The meeting followed a SEJM (the Polish National Assembly) call for an end to strikes at a meeting last Saturday. The SEJM said if the call was not heeded, it would "consider a proposal to equip the government with extraordinary measures of operation" as the situation required.

In Tarnobrzeg, a center of sulphur mining and heavy equipment production about 120 miles south of Warsaw, 100,000 workers called off a wildcat strike yesterday after Solidarity Union Chairman Lech Walesa urged them to give the National Commission time to negotiate with the government, thus ending a 10-day walkout that had cost the country about $40 million.

But workers in Zyrardow, southwest of Warsaw, and in Zielona Gora, southwest Poland, continued their strikes today in defiance of calls by both the SEJM and the union for an immediate end of all strikes.

About 250 United Workers' Party members were charged today with corruption, the PAP News Agency reported.

PAP said 31 officials charged by the public prosecutor "held executive positions in various offices and agencies of a central level."

These officials were charged with counterfeiting documents, accpeting hard currency bribes, making out false work reports, using state-owned materials for private buildings and the private use of official vehicles, the report said.

POLISH GOVERNMENT, UNION, CHURCH LEADERS MEET

OW050740 Beijing XINHUA in English 0701 GMT 5 Nov 81

[Text] Warsaw, 4 Nov (XINHUA)--The leaders of the Polish United Workers' Party, the Solidarity Union and the Roman Catholic Curch met for 2 hours here today to discuss a possible "front of national agreement" to solve the country's 16-month-old crises.

Polish News Agency PAP said that the meeting of General Wojciech Jaruzelski, Roman Catholic Archbishop Jozef Glemp and Solidarity leader Lech Walesa, the first meeting of its kind since the labor unrest in summer last year, was held in a government guest house in central Warsaw.

The communique issued by PAP said the three leaders had exchanged views on how to overcome the crisis which has wrecked the country.

"They also exchanged views on the possibility of setting up a front of national agreement and reconciliation, a permanent platform for dialogue and mutual consultation of political and social forces on the grounds of the constitutional principles of People's Poland," the communique said.

The communique added that all three men had found the meeting useful and saw in it a step to further consultations.

At the end of the meeting, Walesa told newsmen, "We have at last begun talks. I am glad of it."

Observers here believe that the meeting will likely have a favourable influence on reduction of political tension and overcoming of the worsening social-economic crisis.

'RENMIN RIBAO' DELEGATION REPORT ON ROMANIA VISIT

OW301417 Beijing Domestic Service in Mandarin 1100 GMT 30 Oct 81

[Report by RENMIN RIBAO delegation: "Do Everything for People"]

[Text] On 23 August, the red banners of the processions to celebrate Romania's National Day were fluttering everywhere. In the huge crowd of people was a large placard which read: Do everything for people. Closely following the crowd were the workers who imposingly held rows after rows of rectangular cream-colored placards. One placard ornamented with flowers read: The new residences built since liberation have housed over two-thirds of Romania's residents! Another placard read: The wages of workers in 1980 increased by 660 percent over 1950! Still another placard read: Romania's commodity sales in 1950-1980 increased by 315 times! These eye-catching figures reminded us what it was like to live in Romania.

In midsummer, it sometimes rains in Romania. When we woke up in the morning and turned on the radio, we heard the announcer's warm voice: It is rainy today. Comrades, please do not forget to carry your umbrellas or raincoats with you when you go to work. After some music, the same warm voice said again: It is still summer vacation for our schoolchildren and motorists must pay special attention to children crossing the streets. After a whole, the announcer said: The festival is drawing near, do not eat too much at banquets. If you revel and sit up late in the night, try to take an afternoon nap on the following day. These exhortative words warmed people's hearts. We felt like we were living in a large united, harmonious family.

We deeply felt that the masses' destiny was taken great care of by Romania's party and government. In Romania, showing concern for people has become an important principle. Wherever we went and whenever local leaders briefed us, they would always zestfully talk about how many new residences, clubs, moviehouses, theaters, nurseries and stores had been built in their areas and how many things concerning the masses' living can still be built this year. They would also confidently say they were certain the plan would be overfulfilled.

In (Suchawa) County, the female secretary of the county party committee said one of the county party committee's major tasks was to improve the residents' living conditions. She said: We must do our best so the working people need not worry about living problems. After a day's work, the working people can comfortably enjoy their rest at home.

With regard to solving the residents' housing problem, the achievements made in the capital city Bucharest was especially prominent. In the initial period after liberation, the city had little more than 100,000 people. Today, the city's population has increased to 2 million. Over the past 30 years and more, the city has opened up and built four large residential districts. The city has built a total of 450,000 units of residences, including those spreading in various places of the city.

Responsible persons of the Capital Urban Design Institute told us that they planned to build an additional 150,000 units of living quarters in the next 5 years to provide comfortable housing for more people, eliminate the sharing of single living quarters by two households and further expand the people's living space. Pointing to some new buildings, the Romanian comrades who accompanied us on a tour of the city of Bucharest told us that they were built or reconstructed over the debris of the 1977 earthquake. These highrises are even more handsome than the original buildings. They also told us that upon hearing of the serious earthquake Comrade Ceausescu, who was paying a state visit to Africa at the time, rushed home immediately to personally take the command of the disaster relief work. They added: "The party has always taught us to constantly bear the people's hardships in mind."

We were deeply impressed by the work style of the leading comrades of some Romanian localities, who maintain close contacts with the masses. As we arrived at Solca, a city in Suceva District that has a population of 5,000, at noon one day for a visit, we were kept waiting outside the city office because the door was locked. After a little while we saw Mayor (Yunarscu), a lady in her 40's, rushing toward us in the distance. As she opened the door she apologized for being late, explaining that she had just attended a wedding. Later on we found out that the city office did not even hire a secretary or janitor and that everything was done by the mayor herself. This capable and energetic female mayor told us that she spent little time in the office and that her daily routine is to take a stroll around the city to inspect the market supply, hospital registration and production at the beer brewery and handicraft cooperatives and then go to the office to study and handle various problems with other leading members of the city government. Later on, as she accompanied us to visit the beer brewery and rug factory, we witnessed the close and harmonious relations between the mayor and the masses. Some female workers even teased her about her nice outfit.

(Amalia), the female mayor of the mountain city (Sangjieros), who was originally a textile worker, maintained the same good work style and close contacts with the masses. Leaving the city office to accompany us on a tour of the city, she was met outside her office by a group of people clad in sheepskin coats. They introduced themselves as individual herdsmen from the mountain who, because of the drop in temperature and snow the day before, had come to request the mayor's assistance in driving the sheep to the pastures at the foot of the mountain to take the shelter from the cold. After instructing other cadres to help the herdsmen, (Amalia) left the office with us. She told us that by law the leaders of all departments must designate a half day per week to receive the masses, listen to their opinions and help them solve their problems. But the people come to her at any time, and she thinks this shows the people's trust in her. While having lunch with us, (Amalia) repeatedly excused herself to answer telephone calls. We said: "You are really busy." She replied with a smile: "Because I am the housekeeper. A mother just called me about arrangements for her child to go to nursery school. Another woman worker asked me to mediate a family quarrel between her and her husband. Could I not care for them?"

In Romania we often saw the slogan "It is the people who build socialism; the building of socialism is for the people." We know that the principle summarized by the slogan is being put into practice in Romania, a prospering socialist country.

BRIEFS

BELGIAN PAPER ON USSR SUB--Brussels, 5 Nov (XINHUA)--The running aground of a Soviet submarine last week near the Swedish naval base of Karlsrona cannot leave western countries indifferent to their security, the daily bulletin EUROPE said editorially here today. It pointed out that the Soviet submarine's entry into Swedish territorial waters should make all Europeans concerned about their defence. The fact that a high class Soviet submarine was able to penetrate undetected into a secure and off-limits area is extremely worrying. The event, significantly different from most acts of espionage, constitutes an act of aggression, the editorial noted. Neutralists and unilateralists should reflect upon it. Then they may understand clearly that declarations of neutralism and pacifism such as Sweden's cannot always prevent aggression, the editorial said. The only way to discourage aggression, the editorial said, is to make it known unequivocally to an aggressor that the reprimand will be swift and harsh. [Text] [OW051622 Beijing XINHUA in English 1556 GMT 5 Nov 81]

MOSCOW ACKNOWLEDGES SUBMARINE HELD--Moscow, 4 Nov (XINHUA)--The official Soviet TASS News Agency reported for the first time a Soviet submarine being held in Swedish territorial waters today. TASS said, "On the night of 27-28 October, a Soviet diesel submarine, Number 137, performing a routine training cruise in the Baltic Sea, as a result of the failure of navigational equipment and errors in location finding in this connection, lost its course in conditions of bad visibility and went aground at the southeastern tip of Sweden." "Negotiations are underway with the Swedish authorities for the removal of the ship from Swedish territorial waters." The TASS explanation is inconsistent and full of loopholes. It did not mention that the submarine had been found near Sweden's large naval base, Karlskrona, and gave no reason why the Soviet submarine with a disorder "in navigational equipment" had run aground just near Sweden's naval base. The Soviet news organ neither made any mention of the Swedish protest against and the Soviet apology for this serious incident, nor did it disclose the interrogation of the submarine captain by the Swedish authorities. UN SECRETARY GENERAL VOTING DEADLOCKED--United Nations, 4 Nov (XINHUA)--The Security Council today again failed to agree on a recommendation for the appointment of a new UN secretary-general. Two rounds of balloting at the council meeting this afternoon indicated that the situation remained unchanged over the selection of a nominee for the post of the secretary-general from two candidates: Tanzanian Foreign Minister Salim and incumbent Secretary-General Waldheim who seeks an unprecedented third term of the office. According to council sources, Salim received 9 and 8 votes respectively, while Waldheim got 10 votes twice, each of them encountering a veto as they did in the previous six rounds of balloting. People expect that if the stalemate continues, some new candidates might be ushered in. The council has decided to conduct private consultations for a way out next Monday. BRITISH BOOK EXHIBITION--Beijing, 12 Oct (XINHUA)—A comprehensive book exhibition with 5,000 titles assembled by the British Council opened at the China Art Gallery here today. This is the first British Council book exhibition ever held in China. Zhao Dongwan, vice-minister of the State Scientific and Technological Commission, cut the ribbon at the opening of the exhibition. Ding Bo, general manager of the China National Publications Import and Export Corporation, and Sir Percy Cradock, British ambassador to China, made speeches at the opening ceremony. Sponsored by the China National Publications Import and Export Corporation, the exhibition will last till 21 October. [Beijing XINHUA in English 1205 GMT 12 Oct 81]

AID TO MALI--Beijing, 2 Nov (XINHUA)--A ceremony marking the delivery of 657 cases of medicine and medical instruments given by China to Mali was held in Bamako on 31 October, according to a report from Bamako. The gift totals 82,000 mf. The aid was provided in accordance with a protocol signed by the governments of the two countries last July. [Text] [Beijing XINHUA in English 0704 GMT 2 Nov 81]

JAPANESE MEETING DEMANDS ISLANDS RETURN—Tokyo, 3 Nov (XINHUA)--A Japanese national meeting held here today demanded the return of Japan's four northern islands illegally held by the Soviet Union. Among the 1,000 Japanese attending the meeting sponsored by the Committee for the Return of the Northern Territories, were mayor of Nemuro, Hokkaido Prefecture, Isao Terashima; residents who originally lived on the four Kurile Islands; and representatives of political parties. Director General of the prime minister's office Taro Nakayama, said at the meeting that "it is indeed regretful that the four northern islands are now still under the control of the Soviet Union. The Japanese nationals should come out with one voice in the campaign for the recovery of the northern territories." An appeal unanimously voiced at the end of the meeting demanded that the Soviet Union return the northern territories as early as possible. [Text] [OW031602 Beijing XINHUA in English 1524 GMT 3 Nov 81]

INTENSIFIED MILITARY TRAINING URGED--Tokyo, 1 Nov (XINHUA)--Japanese Prime Minister Zenko Suzuki has called on Japan's self-defense forces to intensify military training and to share in the burden of defending the country. Speaking at the 31st military review at the Asaka training ground in Saitama Prefecture, Suzuki said that in view of the present international situation, Japan, while relying on a Japanese—U.S. defense agreement, should strengthen its relations with western countries in America and Europe, and increase its defence planning to help maintain Japan's security. Suzuki observed the military review with the director general of the Defense Agency, Joji Omura. The military review was attended by 5,000 army, navy and air self-defense personnel. Military attaches and diplomats from foreign countries also observed the review. [Text] [OW011604 Beijing XINHUA in English 1517 GMT 1 Nov 81]

KAMPUCHEAN CALL FOR HELP—Beijing, 3 Nov (XINHUA)--The Kampuchean people are making an appeal for international aid to stop Vietnam from using chemical weapons against the Kampuchean people, Radio Democratic Kampuchea reported today. The appeal was addressed on 1 November in an open letter to the United Nations and governments and mass organizations of various countries. The letter says that the Vietnamese occupation troops have stepped up their use of chemical weapons in Kampuchea since its dry season began. Their airplanes have often spread poisonous chemicals over battlefields and villages, over mountain and forest areas and border regions. Poisonous shells have been fired over villages along Highway No 10 in Pailin County and also villages in many other counties. Fifty people were thus killed or poisoned on 5 October in Koh Slap County of Kompot Province, the letter recalls. A heavy toll of village life was taken on 17 October near Sisophon County of Battambang Province. Thirty-five villagers were killed or poisoned on 27 and 30 October in Sout Nikom County of Siemreap Province. The letter urges international institutions to provide food, medicine, poison protection equipment and other forms of humanitarian aid to the Kampuchean people. [Text] [OW030830 Beijing XINHUA in English 0754 GMT 3 Nov 81]

IRAQI PRESIDENT PROPOSES CEASE-FIRE—Beijing, 6 Nov (XINHUA)--Iraqi President Saddam Husayn yesterday made a new cease-fire offer on all fronts of the Iraqi-Iranian war in observance of the religious holy month of Muharrah in the Islamic Hijrah year, reported the Iraqi News Agency. Saddam Husayn made this statement when he addressed the ninth conference of the General Confederation of Arab Women. Muharram is the first month of the Moslem Hijrah year which began 29 October. Moslems are required to desist from quarreling among themselves during the holy month. Saddam Husayn said, "A cease-fire during the sacred month is an opportunity for the Iranians to prove their real faith and preparedness for peace and perhaps a cease-fire during this month would be an opportunity to reflect on a lasting peace between Iran and Iraq." The Iranian-Iraqi war has entered its 14th month. Iraq said its forces had occupied 8,000 square miles of Iranian territory and Iran rejected all the cease-fire proposals. Official news agencies of the two countries reported almost every day war communiques of the both sides. [Text] [OW061636 Beijing XINHUA in English 1529 GMT 6 Nov 81]

PAKISTAN PRESIDENT SUPPORTS PACT WITH INDIA--New Delhi, 8 Nov (XINHUA)--"We are very sincere on following a good-neighbourly policy," Pakistan President Ziaul Haq told the INDIAN EXPRESS recently. The INDIAN EXPRESS carried his interview today. In reporting the interview, the INDIAN EXPRESS said that President Ziaul is eager to go beyond a no-war pact if India is willing. He told the Indian newspaper that he was more than prepared to sign a joint declaration stating that India and Pakistan would regard an attack on the territory of the other country as an attack on itself. President Ziaul said, "Here is Pakistan offering—a smaller country offering to a giant in this region--the non-aggression pact...So far we have received no official response." "We are having 80,000 Russians knocking at our doors. And it is just a matter of time, we consider, that the Soviet Union is not going to confine itself to Afghanistan," Ziaul said touching on the Afghan problem. [Text] [OW081250 Beijing XINHUA in English 1207 GMT 8 Nov 81]

USSR URGED TO RETURN JAPANESE TERRITORIES--Tokyo, 5 Nov (XINHUA)--Over 2,000 people from various parts of Japan met in the city of Fukushima this afternoon to urge the Soviet Union to return to Japan the northern territories at an early date, according to a KYODO report. The meeting, the 13th since 1970, was sponsored by the prime minister's office and mass organizations in Hokkaido and Fukushima for the return of the northern territories. Addressing the meeting, Governor of Hokkaido Naohiro Dogakinai stressed: "The settlement of the issue on the northern territories is a precondition for the establishment of genuine friendly relations between Japan and the Soviet Union." An appeal adopted at the end of the meeting said: "Japan's basic policy is the return of the northern territories and the conclusion of a Japan-Soviet peace and friendship treaty. We strongly hope that the government will hold negotiations with the Soviet Union in light of this policy with the nation's public opinion as its backing." Attending the meeting were Deputy Director-General of the prime minister's office Shinji Sato, Governor of Fukishima Isao Matsudaira and former Foreign Minister Masayoshi Ito. POLISH GOVERNMENT DISCUSSES DOMESTIC SITUATION--Warsaw, 6 Nov (XINHUA)--The Polish Government Presidium met today to hear party and government leader Wojciech Jaruzelski's briefing on his meeting with Archbishop Jozef Glemp and Solidarity leader Lech Walesa on 4 November, said a government spokesman. The spokesman said the Presidium expressed satisfaction with the tripartite meeting which it said was of great significance and had "created favourable conditions for the formation of a front of national agreement, for improving the social atmosphere, overcoming the crisis and continuing socialist renewal within the framework of constitutional principles." The Presidium meeting also discussed the problem of setting up a social consultation council under the Council of Ministers, the idea of a draft social consultation law and a draft resolution on the employment of scientific advisers in adminstrative organs. The Presidium meeting also examined the production of farming machinery. Considering that it was not enough for 90 factories to turn out farming machines in the country as was the case this year, it decided to assign 400 more factories to make farming machines next year. [Text] [OW070838 Beijing XINHUA in English 0753 GMT 7 Nov 81]

SOLIDARITY READY FOR CONCESSIONS--Warsaw, 6 Nov (XINHUA)--Polish Solidarity Union leader Lech Walesa declared today that the National Committee of the union stands ready to make concessions and compromises in any bilateral talks with the government so as to fulfill the well-being and interest of the whole Polish community, according to a PAP report. These remarks were made in a statement he signed in the name of the Presidium of the National Committee of the Solidarity Union. He also said that Solidarity does not "seek the right to an exclusive representation of the Polish community." In all decisions concerning the Polish society, our union recognizes the necessity of taking into account views of all social forces, he added. In addition, ZYCIE WARSZAWY reported that Poland's Roman Catholic primate Archbishop Jozef Vlemp in Rome yesterday spoke of his talks with party leader Wojciech Jaruzelski and Solidarity leader Lech Walesa. He said to reporters, "We are thirsty for social concord, and need authority and work." [Text] [OW071240 Beijing XINHUA in English 1230 GMT 7 Nov 81]

SRV USE OF TOXINS--Bangkok, 8 Nov (XINHUA)--Vietnamese troops in Kampuchea continue to kill Kampuchean civilians and resistance fighters by using toxic chemicals, the Thai paper BAN MUANG reported today, quoting Kampuchean refugees who had fled to the border area in eastern Thailand. Aranyapprathet-based reporters of the newspaper yesterday visited the Kampuchean refugee camps near Nong Chan Village, Ta Phraya District, Prachin Buri Province of Thailand. They witnessed two free Khmer fighters who were seriously poisoned on 1 November when they engaged with Vietnamese troops who launched Soviet-made toxic chemicals with mortars and rockets. A Kampuchean doctor serving in the camps told the reporters that in that battle more than 10 free Khmer fighters were injured with poison. In addition, 19 Kampuchean civilians including old people, women and children had been poisoned by food bought from inland Kampuchea. It was reported that an old Kampuchean who had just fled to Nong Chan Village from Batdambang Province disclosed that the Vietnamese troops had sent a group of Vietnamese youngsters aging from 10 to 15 to infiltrate into Kampuchean settlements in Batdambang, Kampong Chhnang and Pouthisat Provinces and pour toxic chemicals into rivers, ponds and wells there. [Text] [OW081612 Beijing XINHUA in English 1507 GMT 8 Nov 81]

WARSAW PACT'S MILITARY COMMITTEE MEETS—Budapest, 31 Oct (XINHUA)—The Military Committee of the Warsaw Treaty Organization met here from 28 to 30 October to discuss pressing problems facing the unified armed forces of the organization, according to press reports here today. Relevant proposals were adopted at the 3-day meeting, which was presided over by Viktor Georgiyevich Kulikov, commander-in-chief of the unified armed forces. AP reported that the latest developments in Poland were one of the major topics discussed at the meeting. Janos Kadar, first secretary of the Central Committee of the Hungarian Socialist Workers' Party, and Gyorgy Lazar, premier of the Hungarian Government, received the committee members. SAUDI ARABIA WELCOMES U.S. DECISION--Kuwait, 4 Nov (XINHUA)--"The arrival of the (U.S. made) AWACS planes in Saudi Arabia is to be welcomed as a fruitful contribution to the protection of our security and stability," Saudi Defense and Aviation Minister Prince Sultan ibn 'Abd al-'Aziz al Sa'ud said in an interview published today in the Kuwaiti newspaper THE ARAB TIMES. "The U.S. administration has now demonstrated it is ready to safeguard its interests vis-a-vis the Arab world," al-'Aziz said, "they have not done that in the past. We consider the decision to sell us the AWACS as wise." "In signing the deal with the U.S. we have in no way compromised our dignity and sovereignty," al-'Aziz said. Al-'Aziz also said that Saudi Arabia has always stood for moderation. "Prince Fahd's peace plan is an initiative, a set of proposals, that can be improved upon or amended as the Arabs like them to be," he explained. "The world wants to know what the Arabs want, and here is what we wanted to reply." On Egypt, the prince said Saudi Arabia opposes the Camp David accords and hopes new Egyptian President Husni Mubarak will work for the benefit of his country, its national destiny and for better relations with the Arab countries. Al-'Aziz said his country hopes Mubarak will play a role that is in accordance with the interest of the Arab nations. [Text] [OW041516 Beijing XINHUA in English 1501 GMT 4 Nov 81]

BEIJING DELEGATION TO DPRK--At the invitation of the Pyongyang Municipal Administrative Committee of the DPRK, the Beijing municipal friendship delegation, which comprised eight members with Jiao Ruoyu, second secretary of the municipal CCP Committee and mayor, as the head and Wang Xian, secretary of the municipal CCP Committee as the deputy, left Beijing for Pyongyang by train on the afternoon of 15 October. Duan Junyi, first secretary of the municipal CCP Committee; Jia Tingsan, third secretary of the municipal CCP Committee and chairman of the municipal People's Congress Standing Committee; Zhao Pengfei, secretary of the municipal CCP Committee and vice mayor; and Wang Xiaoyi, municipal CCP Committee Standing Committee member and vice mayor, went to see the delegation off at the railway station. [HK290954 Beijing City Service in Mandarin 2300 GMT 15 Oct 81]

JAPANESE DELEGATION IN HEBEI--On 8 October, the Fukuyama municipal delegation of Japan visited Shijiazhuang Municipality. The same evening, Governor Li Erzheng and Vice Governor Li Feng met the delegation. The hosts and the visitors earnestly held talks on further deepening understanding of each other and strengthening friendship. After the reception, the provincial government gave a banquet for the delegation, which left Shijiazhuang for Xian on 9 October. [HK290954 Shijiazhuang Hebei Provincial Service in Mandarin 0400 GMT 9 Oct 81]

POLISH OFFICIALS ARRESTED--Warsaw, 2 Nov (XINHUA)--PAP reported today: A press spokesman for the Polish prosecutor general circulated a notice saying that as of 31 October, the Polish prosecutor's office and the Ministry of Internal Affairs had conducted preliminary hearing on 218 persons, of whom 99 had been arrested. All these persons had been accused of using the administrative and economic authority of their offices and of the party to acquire goods and materials by illegal means for personal gain. A total of 122 persons were found guilty in 57 cases. These persons included Y. (Kulpinski), former minister of mining and power industry; E. Pacia, former vice minister of food industry and purchases; Radosz, former governor of Leszno Province; H. Stachwiak, former governor of Opole Province; M. Szczepanski, chairman of the Broadcasting and Television Station Committee; and E. Patyk, vice chairman. Also included were former vice governors of Kielce, Gdansk, and Elblag provinces and former important officials of committees and departments under Ostroleka and Konin provinces. According to the PAP report, persons at the preliminary hearing were accused of the following crimes: Acquiring social wealth from labor in construction and maintenance by decree, forging documents, occupying public vehicles for private use, accepting payment of foreign exchange, money and valuables and other benefits; violating current rules and regulations by selling motor vehicle certificates or selling motor vehicles at a profit for personal gain; forging individual documents to buy foreign exchange at the bank; falsifying data on achievements made in economic activities; and engaging in profiteering, speculation and selling commodities at a profit for personal gain, especially building materials. [Text] [OW060121 Beijing XINHUA Domestic Service in Chinese 1320 GMT 3 Nov 81]

JAPANESE DELEGATION IN GANSU--On concluding its visit to Lanzhou Municipality and Dunhuang County, Gansu Province, the goodwill delegation from Akita Prefecture, Japan, left Lanzhou by plane on the morning of 15 October. A send-off party was given them by (Wu Qiuliang), mayor of Lanzhou Municipality, and (Li Zhengting), chairman of the Lanzhou Municipal People's Congress Standing Committee, at the place where the delegation was staying. Seeing them off at the airport were (He Ying) and (An Jing), deputy mayors of Lanzhou Municipality. A banquet was held on 14 October in Lanzhou. Attending the banquet were Xu Feiqing, deputy governor of Gansu Province, and responsible persons of the Lanzhou Municipal People's Government and People's Congress Standing Committee. [SK170658 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 15 Oct 81]

JIANGSU-OSAKA FRIENDLY EXCHANGES--The minutes of talks on friendly exchanges between Jiangsu Province and Japan's Osaka Prefecture was signed in Nanjing on 2 November. Attending the signing ceremony were Vice Governor of Jiangsu Wang Bingshi and the vice governor of Osaka. Both sides have decided to conduct exchanges in industry, agriculture, public health and other fields. [OW041005 Nanjing Jiangsu Provincial Service in Mandarin 1100 GMT 2 Nov 81]

SOVIET UNION LAUNCHES SPACECRAFT--Beijing, 31 Oct (XINHUA)--According to a TASS report, the Soviet Union launched a "Venus 13" unmanned interplanetary spacecraft on 30 October. The spacecraft will arrive in the planet's vicinity in March 1982. The basic aim in launching this spacecraft is to continue to carry out scientific study of Venus. In the course of its flight, the spacecraft will carry out a series of outer space observations. Instruments made in the Soviet Union, France and Austria are installed on the spacecraft which has already entered the interplanetary orbit. The first Soviet probe for the study of Venus, "Venus 1," was launched in 1961. The first U.S. spacecraft to probe Venus, "Mariner 2," arrived in the planet's vicinity in 1962. In 1975, Soviet "Venus 9" and "Venus 10" soft-landed on Venus and transmitted the first batch of pictures of the entire planet. In 1978, U.S. "Pioneer Venus 1" and "Pioneer Venus 2" and Soviet "Venus 11" and "Venus 12" spacecrafts arrived separately in the vicinity of Venus and launched landing vehicles on its furface to carry out comprehensive scientific study of the planet. CORRECT METHODS FOR CONDUCTING MEETINGS ENCOURAGED

Beijing RENMIN RIBAO in Chinese 9 Oct 81 p 8

[Article by Ge Qiong [5514 8825]: "The Correct Way To Hold Meetings"]

[Text] There are some comrades who argue: The way in which meetings are held is an expression of party style. This is perfectly true.

On the morning of 22 September, a plenary session of the committee on Lu Xun's 100th anniversary was held. At 8:30 the secretary-general of the anniversary committee, Comrade Chen Huangmei [7115 5435 3561], arrived at the conference hall. The chairman of the anniversary committee, Comrade Deng Yingchao [6772 4481 6389], arrived before 9:00, she too was early. She chatted cordially with section committee members then took her seat and announced the opening of the conference. She said that there were two agendas for this meeting, first would be a report by the secretary-general and second, the committee members would be invited to express their opinions. This was immediately followed by a concisely prepared work report given by the secretary-general. At the conclusion of the report Comrade Deng Yingshao invited the committee members to air their views. She took the lead and made specific suggestions on commemorative activities and presented her expectations and requests to committee members. One committee member made a brief speech. After a while Comrade Deng Yingchao asked: "Are there any other comments?" No one else had anything further to say. She then declared: "If there are no other comments then we'll keep it brief and adjourn the meeting." The time was 9:45 a.m. Although the meeting was short nevertheless problems were dealt with.

This meeting was handled well. Various facets are worth encouraging.

First, those in charge of the conference were punctual. In convening a conference there ought to be a vigorous and prompt work style. A starting time should be fixed and observed. There are to be no exceptions among the participants, this includes the leaders presiding over the meeting. The undisciplined and lax habit of arriving at 9:00 when the meeting begins at 8:00 or coming at time A when the meeting is set for time B must be corrected. The tardy work style of those in charge who keep participants waiting must be overcome. If the leadership sets a good example, not only will it be an expression of the mass viewpoint, it will also be of benefit to the good work style of creating unity, alertness, earnestness and activeness among the participants.

Second, the speakers made prepared speeches. Regardless of what meeting is being held, they should all strive for results and excellence. Prior to the meeting it is necessary to make full preparations. If a speaker is not well-prepared he will talk nonsense and ramble on about the Classic of Mountains and Streams during the meeting with the result that the participants miss the point and find it difficult to study and deal with problems. We strongly recommend that leaders make prepared reports. (They should do it themselves rather than making a secretary do it for them."

Third, speeches were brief and the meeting was short. The meeting mentioned above only lasted a short time, in all it lasted less than 1 hour. If people talk at length then the meeting is prolonged; if they come to the point then the meeting will be brief and won't drag on and waste time. We need this kind of work style. At the present time everyone has their hands full, they must hold all kinds of conferences to discuss and study problems. However, they cannot spend excessive time on conferences. Since the content matter of the meetings varies, some require more time than others. In any event, they should all make every effort to keep them brief. Lu Xun stressed being as succinct as possible in talking and in writing. We should learn from Lu Xun and advocate that: It is better to make a long meeting short than to prolong a short meeting.

One thing that must not be neglected in the rectification of party style is the encouragement of correct methods in conducting meetings and the correction of unsound practices in holding meetings.

PARTY LEADERS URGED TO CORRECT UNHEALTHY TENDENCIES

Beijing RENMIN RIBAO in Chinese 8 Oct 81 p 3

[Article: "Responsible Party Committee Members Must Stress Party Style and Correct the Flabby, Disorganized Situation."]

[Text] It was reported in the SHENYANG RIBAO that Comrade Li Tao [2621 3447], First Secretary of the Shenyang Municipal Party Committee, spoke at the experience exchange meetings dealing with the question of rectifying evil tendencies in the economic field held at both the Shenyang Municipal Party Committee and the Shenyang Municipal Government.

Comrade Li Tao pointed out that party committees at all levels throughout Shenyang Municipality should continue to bring order out of chaos ideologically, organizationally and in our work. We must alter the flabby and disorganized state and be inspired with enthusiasm in order to build both a spiritual civilization and a material one. In this respect, party committees at all levels throughout Shenyang Municipality have done a lot of work and have achieved successes. However, the flabby and disorganized state still exists in varying degrees ideologically, organizationally and in our work. Ideologically, on the one hand, the influence of the "leftist" guiding ideology has not yet been completely eliminated; and on the other hand, the struggle against the tendency of capitalist liberalization has not been effectively carried out and the party's workstyle has not taken a fundamental turn for the better. Organizationally, a phenomenon of anarchism, out-and-out egoism and the lack of organizational discipline is very serious. In our work, there are samples of performing one's duty in a perfunctory manner of irresponsibly. This is incompatible with the consistent traditional style of work of the party and a serious obstacle in implementing the lines, guiding principles and policies adopted since the conclusion of the Third Plenary Session of the Eleventh CCP Central Committee and in building the "two civilizations."

The reason why issues like this still exist is, aside from the influence of the foreign ideology of capitalist liberalization, mainly attributable to flabby and disorganized party leadership. For this reason, the party is no longer able to correctly carry out criticism and self-criticism, nor can it effectively wage struggles against evil tendencies. In this respect, the Municipal Party Committee should carry out self-criticism.

One of the important tasks of party organizations at all levels throughout Shenyang Municipality is to continue the process of bringing order out of chaos and rectifying the state of flabbiness and disorganization. Leaders at all levels must integrate themselves with reality, study the resolution adopted by the Sixth Plenary

Session of the Eleventh CCP Central Committee and the essence of the forum on problems on the ideological front, and conscientiously sum up experiences and lessons. First, it is necessary to start from the Municipal Party Committee and the Municipal Government and from leading cadres at all levels to alter the flabby and disorganized state, to take up the weapon of criticism and self-criticism in order to wage struggles against one's own shortcomings and errors, so that we can distinguish clearly between right and wrong and deepen our political understanding. Second, we must pay close attention to encouraging party cadres and party members to study, in order to enhance political understanding of the whole party so that alteration of the flabby and disorganized state will become a conscientious action of the whole party. Third, close attention should also be paid to inner-party activities. At present, one of the most important inner-party activities is to carry out criticism and self-criticism. Fourth, it is necessary to arouse and mobilize the masses to struggle against those who violate the law and discipline. It is impossible to rectify evil tendencies without being subject to the supervision by the masses. We must support and commend comrades who dare to wage struggles. We must also carry out criticism through education and struggles which are necessary for rectifying evil tendencies. It is not permissible to confuse right and wrong or good and bad, or to try to stay on good terms with everybody at the expense of principle.

Comrade Li Tao pointed out, rectifying the style of work of the party is one of the important tasks at present for us to bring order out of chaos. The question of the party's workstyle is in fact a question of party spirit. If the party spirit is not pure, it is impossible to rectify the style of work of the party. In order to rectify the style of work of the party, the first thing to do is to keep in conformity with the CCP Central Committee politically. It is a matter of political discipline, not an issue in general. It is not a matter requiring only lip service, but one that requires action. Second, it is necessary to resolutely correct evil trends in the economic field. At present, evil trends not only prevail in the circulation of commodities, but phenomena such as trying to establish a relationship with somebody or getting in by the back door also can be seen in other areas as well. With the deepening of the movement for rectifying evil tendencies, various grave problems like graft and embezzlement, speculation and profiteering, and offering and taking bribes are beginning to be exposed. Party committees at all levels must not lower their guard. The Municipal Party Committee has decided that the "back door" must be firmly blocked and the "front door" must be kept open. Institutionally, some rules and regulations must be formulated. Problems of the past must be examined. From now on, starting from the Municipal Party Committee and the Municipal Government, nobody is allowed to make purchases directly from plants. This is considered a disciplinary rule. In order to crack down on activities like speculation and profiteering, graft and embezzlement, and bribery, thorough investigations should be carried out. Severe measures should be adopted to put an end to practices of some departments that take advantage of their official authority to occupy the houses of others. Third, evil tendencies of such as making use of one's authority to seek personal interests, or seeking interests for one's children or relatives, estranging oneself from the masses, must be resolutely checked. In this respect, it is good that the majority of our cadres have set strict demands on themselves. However, the masses have a lot of complaints about a handful of people who make use of their authority to occupy other's houses and try to seek jobs for their children and relatives. Party organizations must take care of housing problems of our senior comrades. However, one cannot occupy more space than what is actually needed. A few leading cadres must think about the fine traditions of the party and return houses which are unnecessary on their own initiative. From now on, regulations dealing with housing for leading cadres should be formulated.

Comrade Li Tao said in conclusion that the whole party must pay close attention to the process of correction in order to rectify the style of work of the party so that we can help the general mood of society take a turn for the better. It is a task of the whole party to implement the "Guiding Principle" in order to do a good job in rectifying the style of work of the party. The party is to be supervised by itself and the leading cadre of a party committee should pay close attention to rectifying the party's workstyle. Whichever unit has an unhealthy workstyle, the secretary of the party committee of that unit should be held responsible. Leading cadres should take the lead to rectify the style of work of the party. Higher levels lead lower levels, and at every level the job must be done. The style of work of the party can be completely rectified through the concerted effort of the whole party. In order to build a spiritual civilization, each cadre of our party must get himself personally involved to keep himself politically pure and healthy so as to restore the fine traditions of the party and to vigorously build a material civilization.

'RADIO BA YI' HITS DENEGRATION OF LIN BIAO, OTHERS

OW030603 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 1 Nov 81

[Text] Following the 6th plenary session of the 11th Party Central Committee, truth has been restored to some historical facts that had been distorted. For political ends, the highest authority in the party, in particular the gang of four, never hesitated to distort historical truths and unscrupulously attacked and slandered the older-generation revolutionaries of our party and army who had made monumental contributions to the revolution in our country. Now articles are being published to commemorate the founders and leaders of our army. Regretfully, deep-rooted prejudices still prevail in this regard. Attacks are launched against the forerunners of the revolution on isolated points to the neglect of all the other things purely out of personal prejudices and feelings. For instance, Comrade Deng Xiaoping's avoiding the mention of the contributions made by Lin Biao, Gao Gang Rao Shushi and others to the revolution is a case in point.

We should understand that commemorating the revolutionaries of the older generation is not merely commemorating these persons themselves but more importatly the countless revolutionary fighters who fought heroically and desperately and sacrificed their lives for the people. The reason why the exhibitions everywhere on the glorious deeds of Zhu De, Peng Dehuai, He Long and Luo Ruiqing and on the early revolutionary interested so many commanders and fighters is that these exhibitions are paying tribute to the tens of thousands of the older revolutionary fighters and reminding them of the years of the flames of war and hardships. Comrade Deng Xiaoping's banning of the commemoration of Lin Biao, Gao Gang, Rao Shushi and others as well as the commending of the contributions of certain PLA units runs counter to the 6th plenary session's principle of seeking truth from facts and ignores the contributions of thousands upon thousands of revolutionary martyrs who shed blood and sacrificed their lives.

Comrade Mao Zedong committed terribly serious mistakes, victimizing 100 million people throughout the country and causing unjustified deaths of hundreds of thousands of cadres. Today he is being treated from the viewpoint of "one divides in two" and his merits and demerits are both recognized as they are. Why can't we treat others and in particular Marshal Lin Biao objectively and specifically. Like Mao Zedong, Marshal Lin Biao committed mistakes in his later years. However, Lin Biao's mistakes were not as serious as Mao Zedong's. Therefore, the responsibility Lin Biao should shoulder is lighter than Mao Zedong's. Among the 10 marshals in our country, Lin Biao ranks next only to Zhu De and Peng Dehuai.

Nobody in this world can deny the contributions made by the units commanded by Marshal Lin Biao at different times during the periods of the revolutionary civil war, the long march, the war of resistance against Japan and the war of liberation. "The first battle fought at Pingxingguan is world renowned," a sentence in a song sung by the eighth route army, exactly states in song the praise of Marshal Lin Biao and the units under his command. Later, the 1 million troops of the fourth field army commanded by Marshal Lin Biao fought battles from the Songhuajiang River all the way to Hainan Island and their exploits have long since been written in the glorious history of our army.

Speaking of Lin Biao as an individual himself, after graduating from the Whampoa Military Academy, he joined the northern expedition and later the Nanchang uprising. At the Gutian meeting, he supported Comrade Mao Zedong's military line and the Zunyi meeting he supported Comrade Mao Zedong as the leader of our party. However, Comrade Deng Xiaoping not only lent credence to the false Lin Biao case concocted by the gang of four, willfully slandered Lin Biao for engineering a counter-revolutionary coup d'etat and plotting to murder Chairman Mao and held a public trial of Lin Biao at a special court, but, in the form of the "resolution on certain questions in the history of our party since the founding of the PRC," again slandered Comrades Gao Gang and Rao Shushi as careerists who split the party and tried to usurp the supreme leadership of the party and state. In short, no efforts have been spared to erase the historical contributions of the revolutionary forerunners who were unjustifiably victimized.

In effect, Comrade Deng Xiaoping is grossly distorting and tampering with the history of our party and state.

BRIEFS

ZHEJIANG MEETING ON MEDIATION--The first Zhejiang provincial people's mediation work meeting concluded in Hangzhou on the afternoon of 29 October. As of the end of 1980 Zhejiang had more than 46,800 mediation organizations and over 203,000 mediators. From 1977 to 1980 the province mediated in and handled some 1.31 million cases of disputes, or 15 times the number of civil cases of first instance handled by grassroots courts during the corresponding period. These mediation organizations play an active role in safeguarding social order because they settle disputes among the people in good time, prevent expansion and intensification of contradictions and help reduce the crime rate. At the meeting Chen Zhoulin, secretary of the Zhejiang Provincial CCP Committee and vice governor of the provincial people's government; Liu Zizheng, vice chairman of the provincial people's congress standing committee; and Wu Zhichuan, vice governor of the provincial people's government, made speeches. JILIN DEPUTIES INSPECT CHANGCHUN--According to JILIN RIBAO, in line with the proposal adopted by the National People's Congress deputies that, on the eve of the convocation of the fourth session of the fifth National People's Congress, deputies should grasp the situation by carrying out inspections to get well prepared for the session, Jilin Province has organized an inspection group of 21 national-level deputies headed by Zhang Kaijing, with Xu Shouxuan and Chen Zhong as its deputy heads. The group began its inspection activities in Changchun Municipality on 4 November. During their inspection, in Changchun deputies of the National People's Congress will be briefed by responsible persons of the municipal departments concerned on industrial readjustment, agricultural production, labor employment, urban construction, culture and education, public health, finance and trade, commodity prices, public security and ideological work. Then, they will go deep into plants, rural communes, schools, neighborhoods and the second piped water reservoir construction site to conduct inspections. On the morning of 4 November, leading comrades, including Ren Qingyuan, of the Changchun Municipal CCP Committee, the Municipal People's Congress Standing Committee and the municipal people's government met these national-level deputies. GUANGDONG PEOPLE'S CONGRESS MEETING--Guangzhou, 5 Nov (ZHONGGUO XINWEN SHE)--The Guangdong Provincial People's Congress Standing Committee has decided to hold its third meeting from 12 to 15 November. The main agenda of the meeting will be as follows: 1) To listen to a provincial people's government report on the situation in the special economic zones and to examine and approve the provincial government's five provisional regulations for these zones; 2) to listen to a provincial government report on urban public health work and to examine and approve the provincial government's "provisional regulations for public health management in the province's towns;" 3) to discuss and decide on the date for convening the fourth session of the fifth provincial people's congress; 4) to approve appointments and dismissals. [Text] [HK050217 Beijing ZHONGGUO XINWEN SHE in Chinese 0133 GMT 5 Nov 81]

WANG ENMAO CHAIRS FUNERAL COMMITTEE--Zhang Siming, vice chairman of the Xinjiang Regional People's Government, died of heart disease at 1430 hours on 21 October at the age of 46. A funeral committee for him has already been set up with Wang Enmao as its chairman and Gu Jingsheng, Mushayef, Tan Youlin and Ismail Amat as its vice chairmen. Song Zhihe, Zhang Shigong, Tomur Dawamat, Huang Luobin, Li Jiayu, Janabil, Codanoff, Handinniyaz, Hou Liang, Bai Chengming, Yang Huangchang, Ren Gebai, Zhao Yuzheng, Simayi Yashengnuofu, Ba Dai, Tuohudi Shabier, Bodurman, Wang Zhenwen, Tian Zhong, Liu Zimo, Xie Gaozhong, Yiminnuofu Hamidi, Zhang Jifu, Nikamaidi Siminu and Zhou Liming are members of the committee. HUNAN PERSONNEL DIRECTORS MEETING--A provincial meeting of personnel bureau directors ended in Wuchang yesterday. The meeting reviewed the personnel work which has been carried out since last year's meeting of personnel bureau directors. All the participants maintained that various personnel bureaus in our province have achieved marked results in their work, and this has promoted the readjustment of the national economy. The meeting discussed the tasks of various personnel bureaus during the period of economic readjustment and held that, as the province is now carrying out the readjustment of its economic structure and systems and the gradual reorganization of enterprises, personnel bureaus should also accordingly reform the structure of personnel work. During the period of economic readjustment, personnel bureaus should carry out the following tasks: 1) Assist the party committees and organizing committees in selecting excellent young cadres. Through their practical work, personnel bureaus should discover, train and recommend excellent young cadres so as to make cadre corps more revolutionary, professional, younger and more educated as early as possible. 2) Do a good job in serving and supervising cadres who have retired or resigned from office. Personnel bureaus should politically show concern for them and truly help them overcome difficulties in daily life. 3) Actively assign cadres to key departments such as agriculture, light and textile industries, service trades and the judiciary. 4) Do a conscientious job in supervising specialized and technical cadres. Han Ningfu, provincial party secretary and governor, attended the meeting and spoke. [HK201449 Wuhan Hubei Provincial Service in Mandarin 1100 GMT 16 Oct 81]

'BA YI' ON DENG'S PLA CADRE PROMOTION POLICY

OW300611 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 29 Oct 81

[Text] Recent reports submitted to higher authorities by cadre affairs departments of various military regions, PLA arms and services and military academies reveal a number of serious problems in the reshuffle of cadres in PLA units. As everyone knows, Comrade Deng Xiaoping has acted on his subjective point of view after removing Comrade Hua Guofeng from the post of chairman of the military commission. He has said that in the next 2 or 3 years two-thirds of the cadres at and above divisional level should be purged and expressed the determination to get rid of all the so-called problematic persons who have behaved badly and are unreliable. Without doubt, this subjective way of handling PLA cadre affairs is extremely unfair and very detrimental.

Apart from other things, we have to point out that since the principle of selecting young and middle-aged cadres to fill leadership positions was put into effect, cadre policy has not attached importance to the cadre's ability in his field of work, his modern military knowledge or his job performance. The old criteria for selecting cadres have been used, and the primary concern has been whether a cadre has any problems. Comrade Deng Xiaoping once said at a military commission meeting: "We cannot say there is no problem at all with the leaders at various levels in our PLA units during the great cultural revolution and with those cadres who took part in the three support's and two military's tasks at that time." Everybody knows that during the great cultural revolution almost all young and middle-aged cadres in PLA units were involved in that political movement. According to what Comrade Deng Xiaoping said, the vast number of cadres mentioned above have problems; in other words, to promote them would be a matter of insurmountable difficulty.

Regarding whether a PLA leader of the older generation should be removed or not, the guidance used is still based on the feudal idea--whether he is loyal to the ruler. In consequence, some experienced and energetic cadres have been expelled from PLA units, while those who are old and weak have not only remained in PLA units but have been assigned important responsibilities. Because of the principle of appointing cadres on the basis of their loyalty to the leader and their trustworthiness in the eyes of the leader, a number of aged comrades who have not worked with the armed forces for a long time have been placed at important positions of leadership in our army. These comrades lack modern military knowledge; still less do they have any practical experience in building a modernized army. For example, Comrade Xiao Jingguang left his post of commander of the navy at the age of 77 and was replaced by 72-year-old Comrade Ye Fei. As is known to all, Comrade Ye Fei is not familiar with naval work, still less does he have any knowledge and practical naval experience. As another example, Comrade Xu Xiangqian left his post as minister of national defense at the age of 78, and his successor is Comrade Geng Biao, who is over 50 and has not touched on the work of the armed forces for more than 30 years. A third example is that not long ago Comrade Deng Xiaoping insisted on placing 77-year-old Comrade Yang Shangkun at the position of secretary-general of the military commission, but everyone knows that the latter did political work in the army more than 40 years ago and since then has not been connected with the armed forces. Since Comrade Yang Shangkun has neither modern military knowledge nor sufficient energy, how can he successfully shoulder the heavy and complicated task of building the army?

All in all, Deng Xiaoping's principle of reshuffling the PLA cadres does not agree at all with the spirit of the relevant resolutions of the central authorities on selecting successors as relayed by Comrade Hu Yaobang.

'BA YI' HITS DENG XIAOPING PLAN TO OUST ARMY CADRES

OW080614 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 6 Nov 81

[Text] The departments in charge of cadres of various branches of service and military academies in various major military districts reported that many serious problems have cropped up in the course of replacing army cadres en masse. Everyone knows that after stripping Comrade Hua Guofeng of his position as the chairman of the military commission, Comrade Deng Xiaoping said that in the next 2 or 3 years, two-thirds of the cadres at and above the divisional level, particularly those in military organs, will be combed out. He also wanted to get rid of all those people who fail to do their jobs well and who are unreliable. It is undoubted that the way he handles the issue of army cadres is not fair. It is extremely harmful. Ever since the implementation of the policy to select and promote young and middle-aged cadres to the leading posts, cadres are still selected and promoted according to the old criteria instead of attaching importance to one's professional competence, knowledge in modern military science and work performance. First of all, it is necessary to determine if the candidate has any problem or not.

In a meeting in September, Comrade Deng Xiaoping pointed out: It is hard to say that the leadership at all levels in the army and those army cadres who had participated in the work of "three supports and two militaries" during the cultural revolution have no problems at all. Everyone knows that during the cultural revolution, nearly all the young and middle-aged army cadres were involved in this political movement.

According to Comrade Deng Xiaoping's point of view, half of the army cadres have problems. In other words, it would be extremely difficult to promote them. As for the army leaders of the older generation, whether one should be retained or released is based upon the feudalist concept to see if "the subject is loyal to the monarch." Thus a number of experienced and fairly energetic cadres have been combed out from the army, while some old and infirm cadres are retained in the army and even given important posts. Due to the fact that the promotion of a cadre depends on his loyalty to the leader himself, a number of old comrades who had left the army long ago have been assigned to take important leading posts in our army. These comrades lack knowledge in modern military science as well as the practical experience in building a modern army. For example, Naval Commander Comrade Xiao Jingguang left his post at age 77. He was replaced by 72 year-old Comrade Ye Fei. However, everyone knows that Comrade Ye Fei knows little about the navy. Nor does he have the knowledge and practical experience in naval operation. Here is another example. Comrade Xu Xiangqian, former minister of national defense, left the post when he was 78 years old. But his successor Comrade Geng Biao is already 70 years old. In addition, he has not worked in the army for more than 30 years.

Also, Comrade Deng Xiaoping is bent on assigning 77 year old Comrade Yang Shangkun to work as the secretary general of the military commission. However, it is known to all that Comrade Yang Shangkun was doing political work in the army 40 some years ago, and later left the army. Let us ask one question: Comrade Yang Shangkun is devoid of knowledge in modern military science. Nor does he have enough energy to carry out his work. How can he possibly fulfill this arduous and complex task of army building? In short, the principle for replacing army cadres put forward by Comrade Deng Xiaoping fundamentally runs counter to the guidelines laid down by the resolution of the CCP Central Committee on successors as conveyed by Comrade Hu Yaobang.

MILITARY AND PUBLIC SECURITY

BRIEFS

REVOLUTIONARY EDUCATION JOURNAL--Beijing, 25 Oct (XINHUA)--The Propaganda Department of the PLA General Political Department recently issued a circular urging all units to use materials of the journal XINGHUO LIAOYUAN [Spark-generated prairie fire] for education in revolutionary traditions. Edited and published by the Fighers Publishing House, the journal carries revolutionary memoirs and materials on the history of the party and the army aimed at portraying the deeds of revolutionaries of the older generation and depicting major events of the party and the army. The journal started publication in August 1980 and has thus far published six issues. Beijing [stated] next year it will be published as a quarterly and distributed throughout the country. [OW261425 Beijing XINHUA Domestic Service in Chinese 0129 GMT 25 Oct 81]

GUANGDONG EX-ARMYMEN SETTLEMENT CIRCULAR--On 6 October, the provincial people's government issued a circular on doing a good job of the reception and settlement of retired armymen this coming winter, urging the people's governments at all levels to strengthen leadership, constantly study and examine the situation regarding the livelihood and settlement of retired armymen and help them overcome difficulties. All departments concerned should actively render support and work in close coordination. Beginning this October, a large number of armymen will retire and return to their native villages. The circular urged the people's governments at all levels to set up offices to handle the work of receiving these retired armymen and help them adjust themselves to civilian life. Special attention should be given to the maimed and disabled and they should be encouraged to undertake household sideline production to improve their livelihood. [HK160859 Guangzhou Guangdong Provincial Service in Mandarin 1000 GMT 6 Oct 81]

LANZHOU PLA LEADER--(Chen Hong), deputy commander of the Lanzhou PLA units, worked at grassroots units for over 200 days to help train soldiers and solve their problems. He is highly praised for displaying the lofty ideals and moral character of prospering China. [SK010945 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 30 Oct 81]

SHANXI MEETING ON SPIRITUAL CIVILIZATION

HK040500 Taiyuan Shanxi Provincial Service in Mandarin 2300 GMT 2 Nov 81

[Summary] The Shanxi Provincial Military District recently held a meeting of progressive representatives in building spiritual civilization in Taiyuan. More than 200 representatives of the PLA units, the militiamen, staff and workers and dependents of armymen attended the meeting. The meeting summed up experiences in launching the campaign of building spiritual civilization, commended the progressive units and individuals and called on the subordinate units and militia organizations to persistently launch the campaign of building spiritual civilization. After reviewing the situation in the initial period of launching the campaign of building spiritual civilization, the meeting held: "The provincial military district has seriously implemented the instructions of the CCP Central Committee and the Military Affairs Commission and has scored fruitful results in extensively launching the campaign of building spiritual civilization among the PLA soldiers and militiamen throughout the province. The flower of spiritual civilization has bloomed inside and outside the barracks."

In accordance with various experiences obtained in the course of building spiritual civilization, the meeting demanded that the following tasks should be done: 1) It is necessary to study revolutionary theories and apply appropriate theories to guide and lead the masses; 2) it is necessary to grasp education in the lofty ideal of communism in order to lay a solid foundation for building spiritual civilization; 3) all leaders must be bold in supporting and popularizing advanced models and push forward the launching of the building of spiritual civilization; and 4) it is necessary to seriously train advanced models and popularize their advanced experience in order to get better results.

"Principal leaders of the provincial military district attended the meeting and delivered speeches. They awarded prizes and citations to 34 advanced units and 189 advanced individuals. In conclusion, the meeting decided to organize a mobile report group to popularize advanced experience and deeds in various units and areas in order to further push forward launching of the building of spiritual civilization."

REGULATIONS TO INCREASE PROTECTION OF CULTURAL RELICS ADOPTED

OW071310 Beijing XINHUA in English 1257 GMT 7 Nov 81

[Text] Beijing, 7 Nov (XINHUA)--Beijing has adopted new regulations to preserve its ancient buildings and cultural relics. The regulations, proposed by the Beijing Municipal Government, were approved at the 16th session of the Standing Committee of the 7th Municipal People's Congress which closed here this morning.

The regulations urge that more places of historical interest, ancient buildings, gardens, tombs, temples, and inscriptions in the city be put under state and municipal protection. So far, 78 sites in the Beijing area--including the Great Wall, the Palace Museum and the Ming tombs--have been listed as monuments and relics to be preserved.

The new regulations stipulate that no ancient structure or cultural relic is to be dismantled, destroyed or rebuilt, and no new construction projects can be started within the protection areas for the relics. The regulations also say new buildings to be put up around protection areas must be in harmony with nearby ancient buildings in style, size and color.

The regulations stipulate that all relics underground are state owned. "No units or individuals are allowed to unearth relics without authorization, to take forcible possession of them, or to illicitly transfer them." The regulations also say that no precious relic is to be exported.

Under the regulations, a committee composed of officials, specialists and scholars, will be established for the preservation of cultural sites and relics.

The regulations say the municipal government will work out stipulations for awarding units or individuals who make contributions to the preservation and discovery of relics or donate relics to the state, and for penalizing those who steal or smuggle relics or engage in speculation.

The municipal government appropriated 70 million yuan (RMB) in the last 3 years to the municipal bureau of parks and woods for the repair of cultural sites and relics.

BRIEFS

QINGHAI IDEOLOGICAL FORUM--In Qinghai Province, Xining Municipal Party Committee recently held a forum on problems on the ideological front to discuss ways to strengthen party leadership over ideological and political work and change lax and weak leadership. The forum urged efforts to criticize bourgeois liberalization, conduct education in upholding the four basic principles and combining economic methods with political and ideological work so as to lead the masses of workers to correctly handle the relations between the state, the collective and the individual. (Tang Jianhua), first secretary of the municipal party committee, conducted self-criticism at the forum. He said that the municipal party committee had not attached adequate importance to political and ideological work, had taken a laissez-faire attitude toward unhealthy and evil trends and had not properly handled law and discipline violators. [SK250359 Xining Qinghai Provincial Service in Mandarin 2330 GMT 21 Oct 81]

GANSU LITERARY MEETINGS--The Writers Association, the Musicians Association, the Dramatists Association and the Artists Association subordinate to the Gansu Provincial Federation of Literary and Art Circles held meetings recently to study and discuss the guidelines of the national forum on problems on the ideological front and discuss ways to further make our province's literary and artistic creation flourish. (Wu Jian), director of the Propaganda Department of the provincial CCP Committee, said at a meeting: Writers and artists should conscientiously study Marxism-Leninism-Mao Zedong Thought, adhere to the four basic principles, smash the bondage of old and left ideas and eliminate formulism and generalities in art and literature. Writers and artists should be allowed to commit mistakes, but such mistakes must be corrected through criticism. In addition, literary and art criticism and commentary should be strengthened. [SK190657 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 16 Oct 81]

NORTHWEST REGION ISLAMIC SEMINAR--The five northwest provinces and autonomous regions sponsored an Islamic religious seminar in Lanzhou 13 October. Attending the seminar were social scientific workers engaged in Islamic research and workers engaged in national and religious work--over 150 persons in all. The seminar has received 65 religious research papers and reference materials. Also attending the seminar were representatives from the national and religious institutes under the Chinese Academy of Social Sciences, the Central Academy of Nationalities Affairs and the Chinese People's University, as well as national and religious research workers from Heilongjiang provincial, Shanghai municipal and Yangzhou City religious schools. Present at the seminar were Yang Zhilin, adviser of the

Gansu Provincial CCP Committee and chairman of the provincial CPPCC Committee; Wu Hongbin, vice chairman of the provincial people's congress standing committee; Huang Zhengqing, deputy governor of the province; and (Yang Hanzhang), chief of the National Institute under the Chinese Academy of Social Sciences. Yang Zhilin and Huang Zhengqing addressed the seminar, and (Yang Hanzhang) made an academic report. [SK152300 Lanzhou Gansu Provincial Service in Mandarin 1125 GMT 14 Oct 81]

JIANGXI WRITERS FORUM--The Jiangxi Provincial Federation of Literary and Art Circles and the provincial Writers Association recently held a provincial writers forum in Yichun. The forum was attended by over 30 writers from various localities in Jiangxi. (Yu Lin), deputy director of the Propaganda Department of the provincial party committee and chairman of the provincial Federation of Literary and Art Circles, presided over the forum. The forum noted that although works containing serious political errors like "Unrequited Love" have not appeared in the province, the phenomenon of bourgeois liberalization still exists. [OW231015 Nanchang Jiangxi Provincial Service in Mandarin 1100 GMT 20 Oct 81]

NEW PUBLICATION--Beijing, 4 Nov (XINHUA)--The first issue of RENSHENG [LIFE] journal, sponsored by the China Family Planning Association, came off the press recently. The first issue contains messages and articles by Wang Shoudan, vice chairman of the CPPCC National Committee; Zhou Yang, chairman of the China Federation of Literary and Art Circles; and well-known writers, Cao Yu, Ai Qing, Zang Kejia and Yang Mo. [OW041017 Beijing XINHUA Domestic Service in Chinese 0048 GMT 4 Nov 81]

YOUTH NEWSPAPERS--Beijing, 26 Oct (XINHUA)--The number of newspapers and periodicals directed toward China's young people is on the increase, according to an official of the Propaganda Department of the Central Committee of the Communist Youth League. At the end of July, there were 24 such journals throughout the country with a total circulation of 8.25 million. CHINA YOUTH NEWS, a national paper published 3 times a week, sells 2.75 million copies. Some go to Hong Kong, Macao and foreign countries. Many of the youth journals printed in the provinces are the most popular of the local papers. The SHANGHAI YOUTH NEWS and SHANXI YOUTH enjoy a circulation of nearly 1 million each. [Beijing XINHUA in English 1214 GMT 26 Oct 81]

FAST, SLOW CLASSES BANNED--According to our sources, the Provincial Education Bureau recently issued a circular forbidding all middle and elementary schools to classify students into fast and slow classes based on their academic scores. The circular states: In the past few years, middle and elementary schools have been readjusted and consolidated, and a normal and correct education system has been established and improved in our province. Since all middle and elementary schools have adopted a competitive grading system, the cultural levels of students at the same grade level and of the same age are relatively the same. This is advantageous to classroom instruction. Therefore, further grading of students into fast and slow classes is harmful to considering students as a whole and implementing the party's educational policy in an all-round manner. The circular states: The classification of fast and slow classes will be completely banned in all middle and elementary schools beginning in the 1982 autumn semester. Existing fast and slow classes should be reorganized if conditions permit. Efforts should be made to strengthen leadership, if problems exist in such work, and do a good job in the reorganization. Education administrative departments at all levels and all middle and elementary schools must strictly enact the spirit of the circular. Those who insist on classifying students into fast and slow classes will be dealt with in a timely manner. [Text] [SK300920 Jinan Shandong Provincial Service in Mandarin 2300 GMT 29 Oct 81]

SHANGHAI MAYOR VISITS HONG KONG AFTER UK TRIP

HK020651 Hong Kong SOUTH CHINA MORNING POST in English 2 Nov 81 p 1

[Article by Donald Cheung]

[Text] The people of Hong Kong and their property will be protected no matter what becomes of Hong Kong, the mayor of Shanghai, Mr Wang Daohan, said last night.

Mr Wang arrived earlier in the day after a 1-week official visit to the United Kingdom.

"You (the people of Hong Kong) should know China's policy towards Hong Kong," Mr Wang told reporters before having dinner with Hong Kong's shipping magnate, Sir Yue-kong Pao. He did not elaborate on what exactly this policy is and neither did he mention the new territories, the lease on which expires in 1997.

Mr Wang will pay a courtesy call on the governor, Sir Murray Maclehose, today at Government House and will "exchange opinions" on various issues.

He said his recent visit to the UK had nothing to do with Hong Kong. It centered mainly on better relations and cooperation between the two countries, he said. "We hope that through the visit, we could bolster our economic relationship with the UK Government and some of its cities, such as London and Liverpool. "We have also done some research on industry and commerce," he said.

Although the visit did not yield any major results, Mr Wang said his delegation had successfully concluded a joint venture with a British manufacturer on the making of glass.

During his 3-day stay, Mr Wang and his seven-member group are expected to visit local housing projects, shipyards and the mass transit railway.

It is understood that Shanghai, which has a long shipbuilding history, plans to expand the industry.

Mr Wang is the second high-ranking Chinese official to visit Hong Kong in the past week. Last week the first secretary of Guangdong Province, Mr Ren Zhongyi, spent a few days here before going on to Macao.

LIU TA-JEN SCORES 'PEIPING REGIME'S TRICKS'

OW301431 Taipei CNA in English 1341 GMT 30 Oct 81

[Text] Taipei, 30 Oct (CNA)--Liu Ta-jen, spokesman for the Ministry of Foreign Affairs, said Friday that the Peiping regime was attempting to play the "Soviet card" against the United States when it expressed its intention recently to negotiate with the Russians on the border disputes.

Speaking at the news conference, Liu said, "We are confident that the U.S. has seen through the Chinese communist tricks."

He pointed out that the recent commemoration of the Hsin Hai revolution and united front peace talks launched by the Chinese communists will never achieve their calculated purposes because the Republic of China and other nations of the free world are fully aware of the Peiping regime's tricks.

Commenting on the report that one million copies of the bible had been smuggled into mainland China recently, Liu said this clearly indicates the lack of religious freedom on the mainland. He called on leaders of the world religious circles to take note of the Chinese communist atheism. "Only when the communists are eliminated from mainland China, can the Chinese people enjoy true religious freedom," he said.

He also highly praised Prime Minister Lee Kuan-yew of Singapore for his remarks at the recent commonwealth conference that the Chinese communists continue to support the communist movement in Singapore and Malaysia, and that the improvement of relations between the U.S. and Red China will only aggravate the uncertainty of the situation in Southeast Asia.

BRIEFS

ECONOMIC COOPERATION WITH ROK--Taipei, 30 Oct (CNA)--Economics Minister Chang Kwang-shih said Thursday that to further strengthen economic cooperation between the Republic of China and South Korea, the private sectors of the two nations should continue to exchange visits and data on trade and technology. The 14th joint conference of the Council for Sino-Korean Economic Cooperation opened at the Grand Hotel with C.F. Koo, president of the Chinese Council, and Pak Yong-hak, chief Korean delegate, jointly presiding. Speaking at the meeting, Chang said that in the first three quarters of this year, the Sino-Korean trade reached U.S.$436.4 million. He also praised South Korea for its economic development and fast increase in exports. "I earnestly hope that this meeting will promote better understanding and cooperation between the business sectors of our two nations," Chang stressed. The Korean delegation also visited the Ministry of Economic Affairs, Board of Foreign Trade and Industrial Development Bureau Thursday. The meeting is scheduled to close Friday afternoon after 2 days of discussions on matters of mutual concern by delegates of the two nations. MILITARY STRATEGY SYMPOSIUM--Tokyo, 31 Oct (CNA)--A symposium on military strategy, sponsored by the Japan-ROC Cultural Association, was held Saturday noon in Tokyo with the participation of 10 Chinese experts on military strategy from Taipei and 10 former Japanese military leaders. Teing Chung-Chiang delivered a speech, dubbed "The Spirit of Kinmen," at the meeting. The ROC and Japanese attendants exchanged views on the current international situation centering on the triangular relations between the U.S., Soviet Union and Red China from the stragegic viewpoint. As regards the current peace proposals from Peiping, the ROC experts made the Japanese experts well understand that the ROC will never make negotiations with Peiping regime. Prior to the sumposium, a 12-member Chinese group, led by Ting Chung-Chiang, attended a 3-day international conference on the security of the Pacific region which ended Friday in Tokyo. The conference, sponsored by the Japan Strategy Research Center, was attended by some 80 parliamentarians and scholars from 12 countries, including the ROC, the U.S., South Korea, five member countries of ASEAN and Japan. SPORTS BODY ADMITS TAIPEI GROUP--Tokyo, 5 Nov (XINHUA)--The International Volleyball Federation has decided to admit the Chinese Taipei Volleyball Association as a provisional member. The decision was adopted by the federation's Administrative Committee at a 2-day regular meeting ending today in the city of Yokohama. The decision was made after the Chinese Taipei Volleyball Association had submitted its application and promised to revise its regulations, banner, insignia and song in accordance with the regulations of the International Olympic Committee. It also agreed to use the name of "Chinese Taipei Volleyball Association" both in Chinese and in foreign languages. Formal membership will be accorded to the Chinese Taipei Volleyball Association at the 1982 plenary meeting of the International Volleyball Federation. The regular meeting also approved the use of the "locomotive"-brand volleyball made in Shanghai, China, as in international games. President Pall Libaud of the federation announced at the meeting that the Chinese Volleyball Association will hold an international men's volleyball tournament in the Chinese cities of Shanghai and Nanjing next June. [Text] [OW051936 Beijing XINHUA in English 1841 GMT 5 Nov 81]

ENGINEERS INVITED TO DAM FORUM--Beijing, 6 Nov (XINHUA)--The Chinese Hydraulic Engineering Society today invited Taiwan experts on hydraulic engineering to a forum on the building of the Gezhouba Dam project, China's largest. The forum will be held before the end of the year. The invitation was contained in a letter from the engineering society to technicians and engineers of hydraulic engineering in Taiwan. The letter says that hydraulic engineering technicians and engineers from Taiwan are welcome to sightsee, visit relatives, lecture, and conduct academic exchanges. It says, "The society is ready to establish ties with colleagues in Taiwan at any time so that they can exchange information and scientific achievements for the common aim of furthering China's hydraulic science and technology." The forum, to be held at the site of Gezhouba, China's largest hydraulic engineering project, will be attended by 300 specialists and professors from hydraulic engineering, power and communications institutions and colleges. FBIS FOREIGN BROADCAST INFORMATION SERVICE

[illegible]TE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

PARTY AND STATE

POLITICAL PURIFICATION THROUGH CRITICISM URGED

Hangzhou ZHEJIANG RIBAO in Chinese 3 Oct 81 p 4

[Article by Chen Qingwen [7115 0615 2629]: "It Is Desirable To Purify Our Political Quality"]

[Text] In his "Speech at the Meeting in Celebration of the 60th Anniversary of the Chinese Communist Party," Comrade Hu Yaobang said: "We must be good at keeping ourselves politically pure and healthy, and under all circumstances maintain our revolutionary vigor as members of the party in power." This is one of our important missions in building the party during this new historical period.

Then how can successful efforts be made to constantly make ourselves politically pure and healthy? I feel that in this connection, stress should be put on the term "political consciousness," and that the daring spirit of self-criticism should be treasured. During the past several years, our emphasis on the liquidation of the errors that surfaced in connection with the excessive struggles within the party during the "Great Cultural Revolution" has led some comrades to come up with a misunderstanding. To them, it appears that the contradiction between the correct and erroneous ideologies within the party has ceased to exist, so that the party members are no longer required to sweep away the dust that dirties their faces; at least the demand in this respect is not so great as it once was. This is not true. In the past, the people were punished by Lin Biao and the "gang of four" under the pretext of ideological struggle and transformation. This despicable trick, designed to undermine our party's traditions and workstyle, should be resolutely repudiated. But when we profess to oppose and correct our past erroneous approaches, we have nothing else in mind but the objective of summing up experiences and seeking better ways to consciously clean away the dust that has contaminated the healthy organizations of our party, in the hope that our party organizations and their members will always maintain their firm revolutionary stand, uphold an excellent workstyle, and work enthusiastically and energetically in order to meet the needs of the socialist modernization program.

As the political party of the working class whose only purpose is to serve the people wholeheartedly, our party requires that its members be able to consciously make themselves politically pure and healthy and, in this regard, put stress on the term "consciousness." This nature of the party empowers its members to consciously liquidate everything that dirties their faces. As the political party in power, our party has many members working in leadership positions with the state organs at all levels, economic and cultural groups and mass organizations. This has placed the party in a position that requires its members, especially its leading cadres at all levels, more consciously to get rid of various nonproletarian ideologies, bureaucratic lifestyles, and special privileges that have contaminated their minds. Particularly during this new historical period, in order to enable our party to fulfill the difficult mission assigned by history, this type of political consciousness appears more necessary than ever. "Unless one can correct one's own mistakes, one will never be able to correct mistakes made by others." Only by consciously getting rid of everything that has contaminated their minds--including capitalism, feudalism, and all forms of tendencies toward small production--can our party members uphold the party's line, principles, and policies and lead the masses to carry the socialist modernization program to a successful conclusion. Just as Comrade Mao Zedong correctly pointed out: "The so-called leadership is neither a slogan to be shouted by the people every day nor a bully wanting them to follow us. It must persuade and educate them with the party's correct policies and exemplary performance in order to induce them willingly to accept our suggestions."

Of course, our emphasis on political consciousness does not exclude necessary criticism and self-criticism. If one wants to overcome one's shortcomings and correct one's mistakes, criticism and help is particularly necessary at a time when one remains unaware of one's problems. Nevertheless, to a person desiring progress, this is not a matter of prime importance. Criticism and help are external factors, while the conscious desire to liquidate something dirty resides in one's heart. The external factors are the conditions of change, while the internal factors are the basis of change. The external factors will become operative through the interaction of the internal factors. In real life, we often witness something like this: The same criticism and help provided by the same comrades will often produce diametrically opposite results. Some well-disciplined comrades appear delighted at being informed of their mistakes. They often accept criticism with a humble mind, examine their mistakes with courage, and go on to correct them in a sincere and conscientious manner. They can ignore the unfriendly attitude of other comrades in the course of being criticized. They can take a correct attitude toward criticism that is inconsistent with facts, by pursuing the maxim: "Correct mistakes when you have committed them, and guard against them when you have not." However, other comrades often act differently. They love being praised but hate being criticized. Once they are criticized, they fly into a rage. They often spare no effort to resist criticism, while rejecting any suggestions that they correct their mistakes. Faced with criticism based on facts, they dismiss it as "an attempt to deny their achievements and to touch one side of a coin and forget the other." As for exposing them to education full of reasoning, they accuse their critics of "exaggerating their minor faults to the utmost, nitpicking, and wielding the stick." They often mistake friendly help for a "trick with ulterior motives." Or else, they can listen to criticism only from those at the top, while rejecting criticism from those at the bottom or the masses. If anyone at the bottom criticizes them, they counter it with measures of attack, suppression, and retribution. These two diametrically opposed examples indicate that the role of self-consciousness is important to the transformation of oneself.

The most basic objective of being self-conscious is the call to firmly foster the idea of serving the people. The reason is that the desire to liquidate the dirty ideas that have affected someone is not just a general struggle between correct and incorrect ideologies, but may involve struggles between proletarian and non-proletarian ideologies and between individual and collective interests. Only by consistently doing everything possible for the interests of the party and the state can we, in the people's interests, consciously uphold what is right and correct what is wrong. The two diametrically opposed attitudes toward criticism that I mentioned earlier may have something to do with these fundamental facts. Now let me recite the brilliant example of self-criticism set by Comrade Chen Yi: During the war of liberation, while embarking on a military march, Comrade Chen Yi looked up a cadre in order to have a talk with him as soon as he heard that the cadre had committed a breach of discipline. The cadre presented a report to Comrade Chen Yi. Because the war was well underway at that time, Comrade Chen Yi did not pursue the case further and dropped it, after having verbally instructed the cadre to pay attention to his behavior in the future. Several years later, the masses exposed the cadre for the same problem. When an investigation initiated by an appropriate party organization proved it to be true, the [investigatory body] wrote a report to Comrade Chen Yi. After going over the report, Comrade Chen Yi knew that his original decision [not to pursue the matter] had been wrong, and he returned the report with a note saying: "I want to take this special opportunity to report to the commission for inspection of discipline that my abrupt decision to drop the case without investigation and without any effort to understand the situation was wrong. I also demand that disciplinary action be taken against me." This episode tells us that Comrade Chen Yi was an open-minded man who was able to discipline himself strictly, to uphold the truth, and to correct his mistakes. Did this reflect the noble qualities and farsightedness of the proletarian revolutionaries of the older generation devoted to serving the interests of the party and the people?

In his "Principles of Self-Cultivation," Comrade Zhou Enlai said: "As a matter of principle, we must resolutely struggle against our own and other people's incorrect ideologies." This should be regarded as a "permanent reminder" to every Communist Party member. As long as everyone follows this example and constantly and consciouly concentrates his attention on cleaning away the dust that contaminates his mind, we can certainly revitalize our party organization and make our socialist modernization program develop vigorously and continuously.

PARTY AND STATE

IMPORTANCE OF WESTERN IDEAS IN OPENING UP CHINA, JAPAN

Beijing LISHI YANJIU [HISTORICAL RESEARCH] in Chinese No 3, 15 Jun 81 pp 18-30

[Article by Lu Wanhe [0712 8001 0735] and Luo Shuwei [5012 3412 0251]: "Western Learning in China and Japan at the End of the Feudal Period"]

[Excerpts] The Western colonialists started the Opium War against China in 1840 and used force to compel Japan "to open the country" in 1853. At that time both China and Japan faced a very grave national crisis which, viewed as an international issue, represents a contradiction between the feudalist nations on the one hand and the capitalist nations on the other. The victims of aggression had no way of overcoming their national crisis unless they themselves became capitalist nations. Otherwise, they were bound to be reduced to colonies or semicolonies. Japan took the first option, while China stuck to the second.

Why did two countries, which started from the same point at the beginning of modern history, differ so much in their subsequent development? Why was Japan capable of launching the "Meiji Reform" only 15 years after being forced to open the country, while China's short-lived "1898 Reform" did not come about until 58 years after the Opium War? The difference in the modern history of China and Japan has become a focal point of interest for both Chinese and foreign scholars. We believe that what accounts for success on the one hand and failure on the other is neither the unwillingness of the Western aggressors to let China take the capitalist road (because it is inconceivable that they were more lenient toward Japan) nor the naivete of the Chinese capitalists (because the Japanese capitalists prior to the Meiji Reform were not any better). A more penetrating and extensive study of the history of these two countries, especially the history of 200-300 years prior to the "opening of the country," is required before we can arrive at a more profound and realistic understanding of the problem. After a cursory comparison of the two, we think the differences in the dissemination of Western learning in these two countries constitute an important factor to be reckoned with. This article is an attempt to offer some explanations.

I.

So-called "Western leaning" simply means modern European science and culture since the 16th century. The arrival of Matteo Ricci in China in 1581 marked the beginning of the dissemination of Western learning in China, although the Chinese people on Macao had already had some contact with modern European culture. Matteo Ricci came to China to preach Christianity (Catholicism). In order to adapt to the highly developed feudalist Chinese culture and to win over Chinese intellectuals and officials, he mastered the Chinese language and classics and brought to China modern European science and technology. In 1605 Matteo Ricci recommended to the Holy See that it dispatch to China more learned missionaries who carried weight (Pei Huaxing [5952 0553 5887]: "Priest Matteo Ricci and Contemporary Chinese Society, Dongfang Xueyisha [2639 2455 1331 5669 4357], 1943, Vol 2, p 227). Consequently, most of the priests who came to China during that particular period were both religious leaders and scientists. Matteo Ricci himself was a student of Ge-la-wei [2706 2139 4850] (1537-1612), also known as Father Ding, a famous mathematician at the Rome Academy. Jean Terrenz, who came to China in 1621, was a well-known European scholar versed in medicine, mathematics, biology, and a number of languages. He and Galileo, both members of the Lincei Institute, were close friends. Others, like Didaco de Pantoja, Ginleo Aleni, Sabbathino de Ursis, and Adam Schall von Bell Johann, were all prominent scholars. The fact that these missionaries won the respect of such Ming Dynasty scientists as Xu Guangqi and Li Zhizao is due primarily to their academic achievements. If we were to rank them, we would no doubt reaffirm their academic contributions. A total of 19 Jesuit missionaries came to China within a stretch of 62 years between 1583 and 1644. By themselves, or working with Chinese scholars, they compiled and translated 62 masterpieces of European works which, though limited in quantity, played an active role in transfusing new blood into Chinese culture. For example, the translation by Matteo Ricci and Xu Guangqi of the six volumes of "The Elements" introduced Euclid's plane geometry to China. In his introduction to the translation, Xu Guangqi spoke highly of the geometric method of reasoning as "an approach which proceeds from the obvious to the subtle, deriving affirmation from uncertainty and serving as a basis for all practical applications, even though it is not meant for direct practical application." Liang Qichao [2733 0796 6389] described the book as "store of exquisite treasures" (An Academic History of China in the Past 300 Years," Zhonghua Book Company, 1937, p 9). In 1584, Matteo Ricci drew the first world map for China. The "Zhifang Waiji" [5120 2455 1120 4764] prepared by Guileo Aleni in 1623 was China's first book of geography. In 1613 Li Zhizao translated the "Hungai Tongxian Tushuo" [3268 5556 6639 2009 0956 6141] to introduce modern European astronomy to China. In 1615, Emmanuel Diaz wrote a book called "Tianwen Lue" [1131 0795 3970] to introduce Galileo's telescope, which had been invented only 6 years earlier than the book. Jean Terrenz brought a telescope to China in 1621. "Yuanjing Shuo," [6678 6975 6141] written by Adam Schall von Bell Johann in 1626, was China's first exposure to modern optics. In 1634 Jean Terrenz and Wang Zheng [3769 1767] translated the "Yuanxi Qiqi Tushuo" [6678 6007 1142 0892 0956 6141], the latest book on physics at that time, which dealt with the modern theory of mechanics and Galileo's inventions. In their pursuit of Western learning, Chinese scholars such as Xu Guangqi, Li Zhizao, and Wang Zheng wanted their own contributions to blend Western learning with the reality in China, because they believed that "one must comprehend and apply what one learns in order to excel" (Xu Guangqi). Take astronomy, for instance. The official forecast of a solar eclipse before the Sung Dynasty often missed by a whole day. The range of error was reduced to about 1 hour during the Yuan and Qing dynasties. After the introduction of Western learning to China, Xu Guangqi, who blended the best of both Chinese and Western methods of calendar reckoning, was able to reduce the range of error to about 10 minutes (Zhu Kezhen [4555 0668 2823]: "Xu Guangqi, Pioneer of Modern Science" in "A Symposium of Writings Commemorating the Death of Xu Guangqi 300 Years Ago," edited by Xu Zongze [1776 1350 3419], 1933). Having selected Western water-conservancy techniques which could be used in China and testing them with the equipment he prepared, Xu in 1612 compiled a six-volume work called "Taixi Shuifa" [3141 6007 3055 3127], which became part of "Nongzheng Quanshu" [6593 2398 0356 2579]. His intense interest in militia peasantry led him to apply Western learning to military affairs and farming. He set up an experimental farm in Tainjin to try out new methods of plant breeding. Many Chinese intellectuals at that time were preoccupied with "speculative discussions of human nature and Buddhist theology," and they despised science and technology. Notwithstanding this decadent tradition, the progressive intellectuals in the final years of the Ming Dynasty, represented by Xu Guangqi, directed their attention to blending together Chinese and Western learning, the study of science and scientific experimentation, and assimilation of advanced foreign culture to raise the level of science and technology in China and to improve the material well-being of both the country and the people. Their praiseworthy patriotic endeavor is vouched for by their contributions to mathematics, astronomy, calendar reckoning, agronomy, water conservancy, national defense, geography, machinery, and economics.

In the second year of the reign of Chungzhen (1629), Xu Guangqi memorialized the emperor on "the application of degrees and numbers to 10 different things," on the grounds that "everything which has shape and substance is amenable to degrees and numbers." This meant applying "degrees and numbers" (calendar reckoning and surveying) to 10 different areas of scientific endeavor, such as astronomy and meteorology, water conservancy, surveying, music, arms manufacture, accounting, architecture, geographic surveying, medicine, and chronometers ("Tiaoyi Lifa Xiu-zheng Suicha Shu" [2742 6231 2479 3127 0208 2973 2978 1567 3990], "Collected Works of Xu Guangqi," Vol 7, Zhonghua Book Company, 1963, pp 337-338). This is a superb idea, quite close to the modern scientific approach. The scientists of our country value Xu Guangqi's scientific thought and practice and rank him as high as Isaac Newton of England (Zhu Kezhen, ibid).

"Western learning," known in Japanese history as "foreign learning," reached Japan roughly at the same time it reached China. In 1543 (1542 as alleged by some), a Portuguese ship drifted to Tanegashima off the coast of Japan. The shipowner carried firearms. That was Japan's first exposure to Western culture. In 1549, when St. Francis Xavier came to Japan to preach Christianity, Western culture began to reach Japan with the missionaries. Since the missionary traveled by way of Southeast Asia and Macao, it was also called "southern barbarian culture." It dealt mostly with matters relating to Christianity (Catholicism), such as Western painting, carving, technical crafts, music, printing, theology, philosophy, and Latin. It also covered nonreligious matters such as medicine, navigation, astronomy, geography, and firearms. The influx of southern bararian culture did not last very long, but it spread fast and exerted a great influence on Japanese society.

Even though "Western learning" spread fast in Japan, it was not as sophisticated as it was in China. The rapid development of missionary work in Japan involved more missionaries than learned scholars such as Matteo Ricci and Jean Terrenz. "Southern barbarian culture" was mainly practical technology and had very little which was as profound as the translation of "The Elements." Moreover, Japan did not have such learned scholars as Xu Guangqi and Li Zhizao, who were versed in both Chinese and Western learning. So these Chinese scholars and their translations of Western works played an extremely important role in the early exchange of Japanese and European culture. According to research, Shuangyugang [7175 1546 3263] off the shores of Ningbo (there were also other ports) was a huge hideout of Chinese, Japanese, and Portuguese smugglers as well as a center of exchange of Chinese and Western learning.

The fact that "southern barbarian culture" spread fast in Japan is attributable to the then existing social conditions. At that time Japan, dominated by warring feudal lords, was experiencing a transition from the rule of the Muromachi Bakufu (1338-1573) to that of the Edo Bakufu (1603-1867). Many of the rival feudal lords (especially those of Kyushu) were competing for foreign trade and advanced technology to strengthen their positions. This was true of the early years of Ieyasu Tokugawa (founder of the Edo Bakufu). When a Dutch merchant ship, the Liefde, drifted to the coast of Japan in 1600, Tokugawa hired its captain, Will Adams (known in Japanese as Miura Anjin) as his foreign affairs adviser and instructor in Western learning, and studied algebra and geometry under him; this is a widely known episode in Japanese history. He also gave British and Dutch ships permission to call at any Japanese port. During this period, there were more than 10,000 overseas Japanese in Southeast Asia. At least 355 "vermillion seal ships" were authorized between 1604 and 1635, an average of about 10 a year, to engage in foreign trade. (Seiichi Iwao: "Zhuyinchuan yu Ribending," [2612 0603 5307 5280 2480 2609 3957] Zhiwendang, 1962, p 32). According to "Nagasaki Anecdotes," at this time "the merchants were trading with nearly 20 different countries, a number never before achieved in our country." The widespread dissemination of the "southern barbarian culture" was closely tied to such an aggressive open-door policy.

A gradual change began to set in during Tokugawa's later years. Some of the feudal lords of western Japan (Seikoku Daimyo), the traditional opponents of Tokugawa, were converted to Christianity and became financially powerful through foreign trade, posing a great threat to Tokugawa. Moreover, popular discontent also began to find support in Christianity. According to data of 1605, there were 750,000 Christian converts in Japan at that time. Alarmed and panicky, Tokugawa in 1613 placed a complete ban on Christianity and extended it between 1633 and 1641 to cover overseas travel and trade, setting up a "closed-door" system. The ban was further extended in 1630 (the 7th year of the reign of Kanai) to cover foreign books, including 32 books translated by European missionaries such as Matteo Ricci, and especially 12 scientific books which formed a set known as "Tianxue Chuhan" [1131 1331 0443 0428]. The ban on foreign books was extended and reinforced in 1685. The book inspectors (known as Shomotsu Mokuri) stationed at the port of Nagasaki were authorized to confiscate (or destroy, obliterate, or reject) books on military art, Christian teachings, and rare editions of Chinese books (Yasuhiko Kimiya: "History of Cultural Exchanges Between Japan and China," translated by Hu Xinian [5170 6932 1628], Commercial Press, 1980, p 637). Since works on Western learning were often related to the missionaries, they were also banned. The ignorant officials, preoccupied with self-preservation, actually pushed the ban to such an extent of absurdity that any books in which Jesus or Matteo Ricci was mentioned were classified as banned. For instance, "Dijing Jingwulue" [1593 0079 2529 3670 3970], which described the Catholic churches and the tomb of Mateo Ricci in Beijing; "XITANG QUANJI" [6007 1016 0356 7162], which contained European sonnets, and "MINGJIA SHIGUAN" [0682 1367 6108 6034], which contained poems exchanged between early Qing Dynasty Chinese scholars and Westerners, were all confiscated (Osamu Oba: "Secrets in Japan and China During the Edo Era," Toho Book Company, 1980, pp 50-65). This brought an end to Western learning in Japan. Lots of historical data on the "southern barbarian culture" were lost during such brutal persecutions and destruction. The heroic voyage across the two oceans made by Tsunenaga Hasakura in 1613 did not become known in Japan until after the Meiji Reform, when the Iwakura delegation, on its way to visit Europe and America, heard about it in Venice.

While Japan was "closing the country" and "banning books," Western learning went on in China uninterrupted for 80-90 more years. This was due to the social conditions of the Ming and Qing dynasties, the endeavor of the Chinese scholars, and the enterprising, nonrestrictive attitude of the early Qing rulers. Emperor Kangxi was especially fond of Western learning, and he personally participated in various fields of scientific activities. Works on scientific subjects flourished during this period. For instance, in 1674 Ferdinandus Virbiest completed the "Kunyu Quantu" [0981 6559 0356 0956] and two volumes of "Kunyu Tushuo" [0981 6559 0956 6141] which described the physical and economic geography of various countries. In 1719, Chinese and Western scholars jointly prepared from actual surveys a 1:400,000-scale "Kangxi Huangyu Quantu." It was the most accurate map of the day, not only in Asia but also in Europe. "Shuli Jingyun" [2422 3810 4737 5686], a symposium of the mathematical achievements of Chinese and Western scholars since the latter part of the Ming Dynasty, was prepared under the auspices of Emperor Kangxi. In spite of ups and downs, the dissemination of Western learning in China flourished for about 140 years, from the latter part of the Ming Dynasty to the early years of the Qing Dynasty. It was not only ahead of Japan, but it also helped the development of foreign learning in Japan. What set the dissemination of Western learning in China and Japan far apart were the changes which took place after 1720.

II.

Kangxi, who had both an enlightened and a restrictive outlook, became increasingly conservative in his advanced years. The "restrictions on the sea" which had been in force had been lifted by him in 1684 (23rd year of the reign of Kangxi) but were reimposed in 1717 (56th year of the reign of Kangxi). In 1720 (59th year of the reign of Kangxi), the Qing Empire and the Holy See were at odds over "religious rites." Kangxi, who valued Western learning more than Christianity, tried to keep the two separate--a statesmanlike attitude. However, when the Holy See delegate insisted on the "religious rites," Kangxi was forced to impose a "religious ban," which, unlike one issued 7 days previously, did not expressly separate Christianity from academic studies. It "banned Christianity" but did not expressly "ban Western learning." Nor did it classify academic works on Western learning as "banned books." The touble was that he did not encourage further exploration of Western learning. Had his successors upheld his policy of separating Christianity from Western learning, it would still have been possible to continue the dissemination of Western learning in spite of the "ban on Christianity." But the Qing rulers, including Yongzheng and his successors, became increasingly tilted toward seclusion and literary autocracy. The ban on Christianity was finally extended in practice to cover Western learning. After 1720, although there were still individual missionaries working on the Board of Astronomy, they were restricted to technicial work insteand of promoting Western learning. Since they lived in secluded government quarters, they had very little influence in Chinese academic circles. The death of Jiang-you-ren [5592 0645 0088], a learned European missionary in China, in 1774 marked the end of the pursuit of Western learning in China. The enthusiasm of Chinese scholars in science that had been generated since the final years of the Ming Dynasty died out quickly, in the wake of the return of the decadent academic practices which once again gained control over Chinese culture. Confronted with foolish, arrogant feudal rulers, many intellectuals were forced back to the old classics. Ruan Yuan, a veteran Confucianist of the Qianlong-Jiajing period, attacked Western learning violently in his book entitled "Chouren Zhuan" [3985 0086 0278]. He said the Copernican theory "must not be taught, because it changes the positions of the high and the low, turns around the static and the dynamic," and "deviates from the classics and the Confucian Way." At that time, there were a few patriotic intellectuals and overseas Chinese who, alarmed by the intrusion of the Western aggressors in the East, had studied and written about the West. "Yingyi Shuo" [5391 1138 6141] is one those books describing the intention of the British to head for the south. Done by private individuals, these books did not carry enough weight to be noted.

In 1793, a British delegation led by McCartney came to China both to open the China market and to test the water for aggression. To display the military might of Britain, the presents they brought to the Chinese court were machines representing the most up-to-date technological wonders, including celestial telescopes, Mauser rifles and machineguns [as published], and a warship with 110 artillery pieces. In his letter to Qianlong, the King of England expressed his willingness to provide China with technical personnel. Emperor Qianlong was impressed and interested to know more about the war vessel and artillery pieces. Knowing very well that the English were far ahead of China, he should have realized the need for a new policy to catch up with them, to study their technology while resisting their aggressive demands. But he did nothing of the kind. Instead, he declared: "We have everything in this heavenly empire and are not after novelties." At that time, England was in the heyday of her industrial revolution, 40 years after Watt had invented the steam engine (1756) and 14 years before the invention of the steamship (1807). Those were the years of rapid advance of science and technology in the capitalist world. Yet the Chinese feudal rulers were as ignorant and conceited as ever. In fact, China was confronted with a very grave national crisis, but how many of the Qing rulers were aware of the danger?

At the time Kangxi imposed a ban on Christianity in China, Yoshimune Tokugawa (1683-1751), the eighth Shogun of the Tokugawa Bakufu, decreed in 1720 a lifting of the ban on Chinese translations of Western books not related to Christianity. We must add that even during the time of the strict "ban on books" (1630-1720), the Tokugawa Shogunate was not as intransigent as the mid-Qing era rulers who banned Christianity in China. Unlike the "sea restrictions" imposed by the Qing government, the "closed-door" policy of the Tokugawa Shogunate was meant to "strengthen the trunk and clip the twigs." "To clip the twigs" meant to prohibit the local feudal lords from secretly establishing foreign contacts. "To strengthen the trunk" meant that all foreign trade and foreign intelligence reports had to remain exclusively in the hands of the Tokugawa Bakufu. Unlike the Qing rulers, they were eager to understand the West. The Shogunate even required the Dutch ships to submit "Helanfeng Shuoshu" [0735 5695 7364 6141 2579] and supply foreign intelligence reports. By 1609 the head of the Dutch trading house began to call on the Shogun at Edo (this was known as the Edo audience). These visits became an annual event after 1633. By 1661, specific dates were scheduled for the "audience." Every year the visitors were to get to Nagasaki on the 15th day of the first month and have audience on the 1st day of the third month with the Shogun, who accepted the greetings behind a screen. The Shogunate was keenly interested in importing books. Scientific books were not banned. The banned Chinese translations of books on Western learning were often brought in by smugglers. All confiscated books were surrendered to the Shogunate. In a word, Nagasaki was an opening to let in fresh air from overseas. The ruling clique and a small number of intellectuals were still able to absorb foreign knowledge, even though the people were barred from it. This kept the roots of Western learning alive.

The enlightened policy of Yoshimune Tokugawa practically resurrected the disrupted dissemination of Western learning in Japan. Instead of the "southern barbarian culture," the Western learning newly brought in by the Dutch was called "Dutch learning." When the head of a Dutch trading house came for an "audience" in 1717, Yoshimune removed the screen to receive the visitor. Later, he dispatched his courtiers to visit foreign countries and buy books, machinery, and selected breeds of animals and plants. At about the same time, Hakuseki Arai (1657-1725) had written a book entitled "Siyang Jiwen" [6007 3152 4764 5113] based on information he had gathered while interrogating Italian missionaries. (He began writing it in 1715 and finished in 1724.) In his description of conditions in foreign countries, the author stressed the need to distinguish Western learning from Christianity. He said that even though Christian teachings were simple and shallow, the missionaries deserved respect for their knowledge of astronomy and geography. He favored banning their religion but not their science. The enlightened foreign policy of the later Edo Bakufu period was based on "banning Christianity" without banning Western learning, because they wanted to use West European science to supplement Japanese "theology" and sustain the feudal regime of the Shogunate. The idea later developed into a program of Eastern morality and Western technology" promoted by the advocates of an open-door policy.

Why were those progressive intellectuals so eager to learn? A Japanese scholar attributes it to their concern about their national crisis--thus implying patriotism. Japan is an insular country separated from the rest of the world by the sea--a natural barrier in defense of national seclusion. The emergence of armed warships had turned the barrier into sealanes of aggression from abroad. Unless it had a coastal defense, Japan would be exposed to assault and conquered at any time. Japan's national crisis at that time was in the north. Peter the Great had planned to expand southward via Japan. The Russian "exploration parties" which had been moving southward reached the first of the Kurile Islands in 1711. As their southward thrust began to threaten Japan proper and its territorial waters, the "northern crisis" loomed large in the minds of the patriotic Japanese leaders. By the mid-18th century, the Western colonialists began to break into Japan. Within a 90-year period between 1764 and 1854, there were 52 attempts by the Western powers to gain entry into Japan--17 of them by Russia, 19 by Britain, 14 by the United States, and 2 by France. Motivated by a patriotic resolve to defend Japan against foreign aggression, the progressive Japanese turned their attention to studying the West and absorbing new knowledge from abroad. In his book entitled "Cailan Yiyan" [2231 6031 3976 6056], Hakuseki Arai described the "material wealth" and "military might" of the European countries. He said the English "were skilled in manning ships, brave and rugged, and good at naval warfare;" that Holland "looks like a great power by virtue of its military superiority"; and that Denmark "enjoys the respect of many Western countries for the excellent cannons it makes." He was motivated by his concern about Japan's national defense and the danger of its being isolated from the rest of the world. The same concern had motivated a host of others to write about the West, including "Chixiayi Fengshukou" [6375 5802 1138 7364 6141 5072] by Heisuke Kudo (in 1783); "Sanguotonglan Tushuo" [0005 0948 6639 6031 0956 6o141] and "Haiguo Bingtan" [3189 0948 0365 6151] by Shihei Hayashi (in 1786 and 1787-1791, respectively); "Luxiya (Russia) Zhi" [7627 6007 0068 6125] by Hoshu Katsuragawa (in 1793); and "Huanhai Yiwen" [3883 3189 3976 5113] by Gentaku Otsuki (in 1807). Many of these progressive people were imprisoned, banished, or killed for opposing those ignorant villains preoccupied with xenophobic conservatism detrimental to national security. For instance, the conservatives in the Shogunate put Shihei Hayashi in prison in 1828 and destroyed the typeset of "Haiguo Bingtan" on the grounds that "the outrageous commentaries by a private individual undermine public morale." Kageyasu Takahashi, an official in charge of astronomy, was arrested in 1828 and put in prison for giving a map to Xi-bo-er-de [6007 0590 1422 1795], a German scholar who was about to return home. Xi-bo-er-de was deported the following year. This is known as the "Xi-bo-er-de Incident." In 1839, Kazan Watanabe and Choei Takano,both specialists in foreign learning, were persecuted and killed for their opposition to the "closed-door" policy. This was known as the Barbarian Culture Club litigation.

Persecution by the reactionary forces did not succeed in uprooting the new reformist tide. The Japanese progressive elements were undergoing a new ideological orientation as they broadened their view of the world. They were seeking to free themselves from the blind worship of "Chinese culture."

It is easy to see how the different pattern of dissemination of Western learning in the more than 100 years after 1720 led China and Japan to different ideological paths in facing the armed aggression of the Western colonialists.

III.

By the mid-19th century, both China and Japan were engulfed in extremely grave crises involving their nations and their own feudal ruling regimes. Capitalism and the capitalists in both countries were so immature that it was impossible to expect a capitalist-led revolution to emerge. Such being the case, should they defer all social reforms until the capitalists had matured? Given the existing historical conditions, such a course was no longer affordable, because capitalism had already gained control over the whole world. The Western capitalists, armed with military might and merchandise, could "crush all the Great Walls" and "force every nation fighting for its survival to adopt the capitalist method of production." Under such historical conditions, the ability of a backward country to adapt to the world situation and launch capitalist reforms to defend its national independence depended on how quickly a guiding reformist group could emerge from the feudalist camp to learn from the West and change the old system. It so happened that the samurai were such a group which emerged not long after Japan had "opened up the country." China, however, trailed behind in producing such a group after the Opium War. The difference is attributable to the dissemination of Western learning during that period of more than 100 years.

After the outbreak of the first Opium War, Lin Zexu, a patriotic Chinese leader, immediately began, while he was resisting the British aggressors, to translate Western books, which were published in 1841 as "Sizhouzhi" [0934 3166 1807]. By placing China's national crisis in a broader world perspective, Lin showed his foresight and wisdom. He turned the work over to Wei Yuan when he was removed from office by the Qing ruler under pressure from the aggressors. After gathering more information, Wei expanded the "Sizhouzhi" in 1842 into a 50-volume "Haiguo Tuzhi" [3189 0948 0956 1807]. It was expanded in 1847 to 60 volumes and finally to 100 volumes in 1852. Wei Yuan's book and his project "to use superior foreign technology to contain the foreigners" had a far-reaching impact on China and won strong support in Japan.

At that time, China and Japan were confronted with identical national crises. China's defeat in the first Opium War made Japan feel not only more exposed to assault but also shocked by that fact that China, the venerable Confucian empire which Japan had held in awe, had been defeated by a small "barbarian" insular country. Many Japanese intellectuals immediately began to sound the alarm in comments and poems. The "Haiguo Tuzhi" began to appear in Japan between 1851 and 1852.

Comparing the response it received in Japan, the impact of "Haiguo Tuzhi" was felt in China practically 10 years later than in Japan. Before 1860, very few people paid any attention to the book Wei Yuan had prepared. He was only a Xian magistrate when he finished the book, and was promoted to the position of a Zhou magistrate for 3 years only when the Taiping forces were approaching his territory. The Qing rulers were so ignorant of the world situation that, according to Wei Yuan, they wondered: "Where are those insular barbarians who have been trading with us for 200 years?" They had no idea where England was. When war broke out, they asked: "How far is the capital of the English barbarians from that of the Russian barbarians, and do the English barbarians have an access road to the Muslim countries?" In 1858, Wang Maoying, senior vice minister of the Board of War, memorialized the throne to reprint the "Haiguo Tuzhi" and "give a copy to every royal prince and minister and order all royal descendants and bannermen to study it...." This was a wise recommendation, but nothing was done to implement it. Why was China's response to "Haiguo Tuzhi" so far behind that of Japan? It cannot be denied that this was due to different ideological orientations in the two countries, brought about by different patterns of dissemination of Western learning. Not long after the completion of the "Haiguo Tuzhi," someone pointed out that the book, which dealt exclusively with conditions overseas, "had offended the dignitaries." This meant the feudal rulers in power did not appreciate Wei Yuan's efforts. It is clear that the way China and Japan responded to "Haiguo Tuzhi" was by no means accidental but was due to the differing ideological orientation in these two countries. When confronted by aggressive Western colonialists, the dispatch with which each of the two reacted and the way their reform forces gathered were also different. This can be shown by a brief chronology of events:

The first Opium War broke out in 1840. In 1841, Shuran Takashima, a Japanese military leader, began using foreign drill methods to train Japanese troops, trial-manufactured guns, and attempted to reorganize the military structure. In 1843 the observatory of the Shogunate translated the "Handbook of Naval Gunnery." Shuran Sukuma in 1846 manufactured telecommunication machines. Genpo Mitsukuri translated "An Outline Account of Steamships" in 1849. A high-temperature smelting furnace (reverberatory furnace) was built in 1850. A refining plant was set up in 1851 by the Satsuma Han to make scientific instruments. The Satsuma Han shipyard was built in 1854. A naval training center was set up at Nagasaki in 1855 by the Shogunate. The "Office for Japanese Annotation of Barbarian Books" was changed in 1856 to the "Barbarian Book Processing Office" (a translation research agency for foreign learning). In 1860 a Japanese delegation traveled to the United States on board the SS Xian Maru, a warship purchased in 1857. The "Barbarian Book Processing Office" was expanded in 1862 and renamed the "Western Book Processing Office." In that same year, the Shogunate dispatched the first group of Japanese students to study abroad. In 1863 the "Western Book Processing Office" became the "Teaching Institute" (the predecessor of Tokyo University), and by 1866 it had 11 professors and 29 lecturers.

The courses it offered included various foreign languages and natural sciences. None of these measures taken by Japan had any impact on China until the establishment of the Tongwenguan in 1862. According to "A Biography of Yukichi Fukuzawa," when Fukuzawa in 1862 ran into a Chinese in London, they started talking about the need to study modern European culture in order to make both China and Japan strong. The Chinese asked Fukuzawa about the number of Japanese who could read and teach foreign books. Fukuzawa said there were about 500 of them in Japan. When he asked the Chinese how many China had, the Chinese hesitated and said there were only 11. Even though the figures are not necessarily accurate, the incident helps illustrate the gap between the two countries.

Although the Japanese feudal rulers were apparently forced by circumstances to implement these measures, they also needed them to strengthen their own position. Once these measures were set in motion, however, it was no longer possible to contain the growth of new reform ideology and new drives for reform. The Japanese pursuit of Western learning after 1853 was noted for its expanding to cover both natural and social sciences, which involved intellectuals as well as political activists. This means Western learning had outgrown [merely] academic pursuits and joined the forces for reform. Dejected samuria, who had become disenchanted with the feudal system and the powerful families, also opted to take up foreign learning as a means to free themselves from the fetters of the powerful clans. Some of them had actually become restive in thought. The leaders of the anti-Shogunate group, such as Shinsaku Takasugi, Masujiro Omu, Hirobumi Ito, and Kaoru Inoue, were either samurai or scholars of foreign learning who were known for their political and military talent. Their slogan was "Make the country rich and build a strong army." The leading group working to "make the country rich" was in the departments of industry and finance. Its leaders were versed in foreign learning. Those working "to build a strong army" were in the Department of War, led by Masujiro Omu, who was later assassinated by terrorists in 1869. The senior aides of Aritomo Yamagata, who succeeded Omu, were new military officers educated in Germany and France and versed in foreign learning. The new government also hired a number of scholars of foreign learning who were not members of the anti-Shogunate group. According to a study, 27 noted scholars of foreign learning who had taught at the "Teaching Institute" or had served under the old Shogunate were hired by the new government. They played an important role in policymaking and government reform. Takahira Kanda's proposal to abolish the system of annual tributes and "land tax reform" was one of their outstanding contributions. Kakuseri Arai himself did not hold government position, but his writings carried a great deal of weight. The Keio Gijuku he founded, the JIJI SHIMPO run by him, and the "Meiji Six Club" headed by him were instrumental in promoting education, shaping public opinion, and making policy recommendations to the Meiji government. But China did not have such an influential group, even at the time of the 1898 Reform. The reformist group headed by Kang Youwei and Liang Qichao never had the kind of following, experience, or public backing to match those [of the Japanese].

The dissemination of Western learning no doubt provided ideological ground for the Meiji Reform, but it did not provide a strong material incentive for a thorough reorganization of the feudal system. Japanese scholars of Western learning were not completely free of feudalist influences. Western learning, a product of capitalist society, has its historical and class limitations. Likewise, the Japanese scholars who opted to absorb Western learning were not completely above their own limitations.

Many of them who became the representatives of the privileged big Japanese capitalists often sided with the conservatives and reactionaries and tailored their selection of Western learning to serve the interests of the ruling Meiji autocracy.

The above is a simple comparison of the dissemination of Western learning in China and Japan toward the end of the feudal period. What lessons can we draw from such a comparative analysis?

First, while patriotism provides the motivation to assimilate advanced foreign culture, it is the ability of a nation to make use of it that contributes to its creativity. The history of China and Japan demonstrates that a nation which knows how to assimilate advanced foreign culture always prospers. On the other hand, exclusion and isolation retard national growth and breed conservatism and backwardness. During the Han Dynasty, China had such emissaries such Zhang Qian to bridge the East and the West. Xian was the receptacle of various European and Asian cultures during the most prosperous years of the Tang Dynasty. The Ming Dynasty was known for its overseas explorations, led by Chinese navigator Zheng He Even in the final years of the feudal period, China was still ahead of all other Asian countries in receiving Western culture for about 140 years out of the of 260-year period between Matteo Ricci's arrival in China and the first Opium War. It was during that 100-year period, beginning with the reign of Qianlong and of Jiajing, that China's time-honored tradition of assimilating advanced foreign cultures suffered a disastrous setback, perpetrated by the exclusionary policy of the feudalist Qing rulers. As attested by the history of China and Japan, the reception of foreign culture promotes the development of one's own culture, the prosperity of the motherland, and the defense of one's land against foreign aggression. This patriotic urge proved to be a tremendous motivating force behind the national development [of China and Japan].

Second, we must pay close attention to the propelling influence of advanced ideology and science on the progress of history. This is an important principle of historical materialism that has been eloquently confirmed by the dissemination and influence of Western learning in China and Japan. The level of economic development was about the same in China and Japan by the mid-19th century. However, the rapid expansion of world capitalism led all backward countries to try to change their faces. The difference in the assimilation of Western learning in these two countries under such historical conditions was reflected in their ability to adapt to the world situation and to bring about social changes.

Third, we must reject national arrogance and national abasement. Historically, Japan respected China as a "nation of decorum" and accepted Confucianism as "the Chinese way." To accept modern European culture, it had to shake off its national abasement and the bondage of Confucianism. This kind of "national abasement" often leads to "national arrogance." Many Confucian scholars often invoked Confucian classics to oppose modern science and technology. For a long time throughout her history, China was ahead of others, and there is bound to be a certain degree of national arrogance. However, we are opposed to national abasement, which leads to capitulation. Modern history shows that an arrogant nation often develops national abasement once it is defeated by a powerful enemy. These are two sides of the same coin and should be abandoned altogether.

THOSE WHO WOULD ABOLISH SOCIALISM, PARTY LEADERSHIP HIT

Nanjing XINHUA RIBAO in Chinese 22 Sep 81 p 3

[Ideological Commentary by Qian Tang [6929 1048]: "On the 'Relationship' Between 'Officials' and 'Private Citizens'"]

[Text] A few people with a laissez-faire tendency often like to call the leaders of the party "officials," while addressing themselves as representatives of the "private citizens." They also like to address the "officials" as "you" and themselves as "we." They have even taken pride in keeping their distance from the party and in taking a stand in opposition to it. The people will not find it difficult to expose this allegation as an attempt to cover up a centrifugal tendency to move away from the party.

Originally, the term "officials" was an old name and a reference to the state power which stood above the masses and which was antagonistic to and aloof from them. Today, this tendency is address [the leaders of[our party as "officials" and to put the party on a par with that old state power is actually an attempt to get across to the public this viewpoint: Since becoming the ruling political party, our party has changed its position and hence its relationship with the people. In that position, it can no longer represent the people. This viewpoint is clearly a gross distortion of the nature of our party and its relationship with the people.

Since capturing national political power, our party has become the political party in power. Can we put our ruling party on a par with the old state power and call it [leaders] "officials" not qualified to represent the people? Certainly not. The Marxist theory of the state tells us that the key to the state lies in which class holds political power, and that class is represented by a political party. In our country, the political power of the people's democratic dictatorship, or the dictatorship of the proletariat, is exercised by the proletarian working people through the medium of their vanguard--the leadership of the Communist Party. The fact that our party is now the political party in power indicates that the state power is exercised and the country is managed by the working people under the leadership of the proletariat. Furthermore, only by putting ourselves under the leadership of the party can we make our political system move in a socialist direction and can we constantly improve it in order to ensure that the overwhelming majority of people are able to participate directly in the management of the affairs of state and the enterprises. If we call [the leaders of] our party "officials" standing above the masses of people, in an attempt to split with and abolish its leadership, we will virtually end up taking the old road toward democracy in abstract and general terms, as called for by the bourgeoisie.

To address [the leaders of] our party in power as "officials" aloof from the masses of people is an allegation that is inconsistent with reality. Today, as in the past, our party always considers its objective to be its devotion to serving the people wholeheartedly. In pursuit of this objective, our party has come up with a political line on work which calls for fully trusting and relying on the masses and encouraging them to demonstrate their enthusiasm and creative power; a series of principles and policies which have been formulated in conformity with the will and aspirations of the overwhelming majority of people and which, as an obligation to the people, are consistent with their interests; the party's three styles of work, one of which calls for forging close ties with the masses; and the party's method of work, which calls for coordation between the leadership and the masses and calls for those "who come from the masses to go back to the masses." In this way, our party's promise always to stand close behind the masses of people can be guaranteed forever. In China, who can truly represent the people's interests and untiringly work for this purpose? Only the Chinese Communist Party. Except for our party, no political parties or forces or individuals deserve to be called the genuine representatives of the people's interests. This was verified long ago by the historical facts of the Chinese revolution. We need not go back too far for a review of such facts. Merely a review of the series of the party's principles, policies, decisions, and measures adopted since the Third Plenum and designed to benefit the people and eliminate unhealthy practices will enable us to give a negative response to this question: Can anyone name any of them that was not formulated by the Party Central Committee? Every unprejudiced person will deeply understand that our party is a party sincerely devoted to the happiness of the people—a party worthy of complete popular trust rather than [made up] of "officials" who allegedly stand above the masses.

Some self-styled representatives of "private citizens"—who profess to stand behind the masses of people, represent their interests, and speak on their behalf—have tried to convince the people that they are the only ones who can understand the plight of the masses, can dare to "take up the cudgel" for them, and can safeguard their interests. Actually, this allegation that they represent the people's will and speak on their behalf needs to be analyzed in specific terms. What does the people's will imply? From the Marxist point of view, it refers in social practice to the aspirations and demands of the masses of people which essentially and comprehensively reflect the direction in which history develops. Undoubtedly, the Communist Party has to respect and conform to such a will. But this does not mean that any move made by the masses, any aspiration, demand, or sentiment expressed by them, is correct and justified. For various reasons, including differences in their social existence, their limited knowledge, and their subjection to the influence of old ideas, what they have reflected is probably only a simple aspiration or a short-term, local interest. In response to those incorrect, unreasonable, and unrealistic aspirations and demands of the masses, we should patiently give them education and guidance instead of blindly endorsing and accommodating them and giving them encouragement. This is the correct attitude which takes into account their basic interests. Otherwise, it should be called a lack of party character. Departing from the principle of party character will make the people lose sight of their human character. Deviating from Marxism has led some of our comrades to observe real life in a simple, one-sided way or even with emotion. For this reason, they cannot come up with correct conclusions. As a matter of fact, they are able to represent only the negative aspirations of a minority or only their own aspirations. With regard to the tendencies to adopt one method or another of spreading erroneous statements with the aim of negating and opposing the four basic principles, and to interpret them as "a reflection of the people's will" or "speeches on their behalf," we should come to view them as an intentional or unintentional reflection of the will of a minority intent on making trouble and as an attempt [by that minority] to speak for themselves and nobody else. The reason is that the broad masses of people have demonstrated their sincere support for the leadership of the party and have displayed a determination to take the socialist road. On this basic issue, the views of the said minority are at variance with the will and aspirations of the overwhelming majority of the people.

Some self-styled representatives of the "private citizens" often contend that their active campaign against "special privileges" qualifies them to be spokesmen for masses. As a matter of fact, bureaucratic practices, special privileges, and other unhealthy tendencies have never been legalized by the Communist Party, because they are inconsistent with the basic purpose of the party and the fundamental interests of the people. During the past several years, our party has consistently made efforts to rectify the unhealthy workstyles as a matter of prime importance to the ideological building of the party. It is our party that has formulated and put into effect the "Principles for Inner-Party Political Life" designed to control the statements and conduct of its members. It is our party that has reactivated the commissions for inspection of discipline at all levels to handle the cases of violations of law and discipline by those in the ranks of the party. It is our party that has taken the lead in implementing the election system and in reforming the cadre system, with the aim of systematically solving problems. It is our party that has spared no effort to support the masses inside and outside the party in exposing and combating unhealthy tendencies. Our current problem is that, under the pretext of struggling against bureaucratic practices and special privileges, some people have slung mud at socialism and the leadership of the party. They have explicitly and implicitly advocated the abolition of the leadership of the party and socialism. Can all this be construed as "statements made on behalf of the masses?"

The so-called problem of the relationship between "officials" and "private citizens" is actually a problem of the relationship between the leadership of the party and the people as masters of their own country. This problem has been frequently presented in a biased way or even misinterpreted. Some people maintain that since democracy means entitling the people to take care of their own country, the leadership of the party cannot extend its tentacles into this business; perfect democracy can be realized only on the premise that the leadership of the party will refrain from intervening. This view of effecting a split between the people and the party and between the people as masters of their own country and their allegiance to the leadership of the party appears to be terribly wrong. In our view, the key to socialist democracy lies in making the people masters of their own country under the leadership of the Communist Party. For this reason, the concept of the leadership of the party is a theme that is indispensable to socialist democracy. Allegiance to this principle is extremely important. Any departure from this principle will cause us to steer democracy away from the socialist course and toward the road ending in abolition of the leadership of the party. This is a truth we should always remember.

EFFORTS MUST BE MADE TO CURB SMUGGLING, CONTRABAND TRADE

Beijing BEIJING RIBAO in Chinese 25 Sep 81 p 3

[Article by Niu Hongrui [3662 7703 3843]: "Smuggling and Contraband Trade Are Criminal Activities Harmful to the Country and People"]

[Text] Over the past 2 years, the implementation of our open-door economic policy and the development of the work of enlivening the economy and the markets have provided some unlawful elements at home and abroad with opportunities for smuggling and contraband trade on a massive scale. They have adopted various unlawful tactics to smuggle into our country through various channels one shipload after another of surplus daily necessities, poor quality goods, and imitation commodities produced in the capitalist countries which have escaped inspection, control, and examination by customs officials. Meanwhile, by cheating they have shipped out of the country large quantities of gold, silver, precious artifacts, jewelry, and medicinal herbs. In this way they have seriously undermined our national sovereignty, disrupted the development of some of our national industries and commodity circulation, caused fluctuations in market prices, adversely affected social stability and unity, and jeopardized the development of the four modernizations. Smuggling and contraband trade are criminal activities harmful to the country and people.

Particularly noteworthy is the fact that smuggling and contraband trade still exist in our own midst to a serious degree. A few government institutions, other organizations, enterprises, establishments, and members of state organs, having their own selfish interests in mind, have taken direct part in smuggling and contraband trade in violation of our national dignity, law, and discipline. With the support and connivance of certain leaders, and with state funds at their disposal, they have relied on their own authority and have taken advantage of their official positions to smuggle and supply the markets with contraband goods. Their capacity in this connection is far greater than that of the smugglers and their sales agents in society. For example, after signing a contract with a foreign firm for processing imported materials into finished apparel, a commune-operated plant in a certain county, under the pretext of "processing imported materials," has ganged up with its foreign counterpart to falsify reports to the extent that imported materials are often deliberately figured less and exported finished products are figured more than their actual quantities, so that they can illegally sell large quantities of nylon textiles and finished apparel to the local markets. In a specific short period of more than 2 months, their profits from such contraband trade have exceeded 250,000 yuan. In another example, when a purchasing agent of a department store and an assistant trade manager in a supply and marketing cooperative in a certain county were sent to Guangdong on a mission to purchase imported merchandise, they went to the communes and brigades in search of goods smuggled in from abroad, instead of placing orders with authorized units for supplies, this action violates state regulations. Before closing the purchase deal, they accepted bribes from a speculator and then decided to buy from him more than 2,200 wristwatches, contraband goods smuggled in from abroad, on terms entirely favorable to the seller. An inspection by an authoritative department revealed that some 40 percent of the wristwatches were either unwanted, poor quality products or counterfeited timepieces with cases filled with iron and plastic materials. This caused the state to suffer a loss of over 70,000 yuan. Moreover, some units, thirsty for profits, have provided the smugglers and their sales agents with capital, bank accounts in their names, transportation, letters of recommendation, invoices, certificates of outbound shipment, and other forms of assistance in their attempts to support, shield, and protect such contraband trade. Some law enforcement officials have knowingly broken the law by setting smugglers free without authorization, in exchange for bribes and to get directly involved in smuggling. This is one of the major reasons why the smugglers and their sales agents have been so active these days. This being the case, efforts must be made to clean out the smugglers and their sales agents from our own house so as to deal blows to their activities. This is a matter of prime importance in our efforts to maintain the sovereignty of our socialist country, to uphold the four basic principles, to protect the development of our national industry and foreign trade, to rectify the workstyle of the party and the government, and to purify the organizations of the party and state.

Why are some units so interested in smuggling and contraband trade? One reason is that they often desire to make small profits from their departmentalist point of view, which leads them to ignore the larger interests, to seek to fatten their private purses at the expense of the public interest, and to jump at any opportunity for this purpose. They have done so on the wrong assumption that there is nothing wrong with buying and selling contraband goods for a profit, which then can be used to finance their local construction and thus help solve the problem of unemployment and problems concerning the workers' welfare. What they do not realize is that smuggling poses a grave danger to the interests of the state, and that reliance on smuggling and contraband trade to open new sources of revenue, increase income and bonuses, and improve the material well-being of workers of specific units is an approach that is extremely harmful to everyone. The aim of the enforcement of the incentive system in our country is to stimulate the broad masses of cadres and people to work hard to promote production, [to stimulate] the enterprises to improve their management, to encourage workers to raise the level of their professional skills and their labor productivity, and to develop production. The income level and the material well-being of the workers can be raised only on the basis of increased production and output, which will bring additional revenue to the state. The adoption of the indecent strategy of smuggling and selling contraband goods in order to increase the source of bonuses will make it impossible to achieve our intended objectives of stimulating the enthusiasm of the workers for production, of improving the management of enterprises, of promoting production, and of improving the quality of products and lowering production costs. On the contrary, it will have the effect of demoralizing cadres and workers to a serious degree, disrupting the development of the socialist economy, and, finally, impeding the development of enterprises themselves and impairing the endeavor to raise welfare benefits for the workers. Ours is a socialist country where the people have no alternative but to work hard to develop production as a means of creating wealth. On no account can we depart from the socialist road to engage in this indecent business of smuggling and speculation.

Efforts must be made to strengthen the education of cadres and workers as to the necessity of stopping the tendency, which still exists in our midst, to smuggle and sell contraband goods. No sovereign state will allow smuggling to exist. Nor can smuggling and contraband trade be allowed to exist in a socialist country like ours. We must foster a social climate in which everyone will take pride in boycotting contraband goods and will feel ashamed to profit from such business, even in a small way. Cadres and workers in government institutions and other organizations, enterprises, and establishments should consciously resist the temptation to smuggle and sell contraband goods and to seek personal gain at the expense of the national interest, in violation of law and discipline. A smuggler once said: "I never fear being caught. The thing I fear most is that I can find no buyers for my contraband merchandise." As long as those in our midst refuse to smuggle and to sell and buy contraband merchandise, and as long as they decide not to condone and protect smuggling and contraband trade, it will not prove too difficult to bring this activity under control. We must strengthen the socialist legal system, which calls for investigating cases of smuggling and contraband trade thoroughly and for handling each case on its own merits and in a stern manner consistent with the provisions of party discipline and state laws, which do not permit anyone to tolerate or condone such activity for any reason whatsoever.

BAI HUA REFLECTS ON HIS WORK

Beijing XIN GUAN CHA [NEW OBSERVER] in Chinese No 14, 1981 p 21

[Article by Bai Hua [4101 2901]: "Springtime Gives Me Such Great Joy"]

[Text] In Wuhan, March had gone and the fragrance of the drizzle-soaked lilacs had spread into April. In early April I sat before a window, the spring rain pattering, writing a movie script, "Dream Bridge" asked for by comrades in a film shooting team. In a hamlet south of the Yangtze in old China, an old stone bridge is obscured in the mists, and several kindhearted, hardworking ordinary folk, among them an odd-jobs man, a man who blows candy figurines, a bamboo basket weaver, a cotton cloth weaver...Under the hypocritical, feudal regime, they struggle for their food and clothing, dreaming that they will one day shatter...During 1962 and 1963, I lived for a year in the rural village of Shaoxing, Mr Lu Xun's old hometown. I wrote the stories I heard there into a script. Writing the script went along very smoothly, and on 10 April I mailed a preliminary draft to Guangzhou, because some of the comrades from the film shooting team were shooting some additional scenes. In mid-April, the sky in Wuhan unexpectedly began to clear little by little, and after the 18th there was finally bright and sunny weather such as had been a rarity in earlier years. I dropped everything and went off to East Lake to take a day's vacation. The fragrant grass beside the lake was like a carpet, and I lay on the ground with the rays of the sun as a cover. For many years I had scarcely been able to get this close to the earth and have a day long chat with springtime. I brought a few lively Wuchang fish, which I took back home to cook by myself. My hands had been busy during the past few years with holding pens, so they were not accustomed to picking up the handles of a wok. But the comrades who dines with me acknowledged that my manual skill had not become rusty, and the dishes, which looked as though they had been licked clean by cats, demonstrated incontravertably that they had not been merely flattering me. After the 20th, I again bent over my desk to write. Twenty years earlier the Beijing People's Arts Theater had asked me for a draft, but I had never found a suitable theme or favorable opportunity for writing anything. For the past several years, writing a lively play had become increasingly difficult, and numerous playwrights had switched over to writing novels of for the movies. But I never abandoned the dream of working together with these familiar artists and of sitting in a theatre in the capital watching the performers, whom I had so much loved in my youth, bringing to life the characters from my pen. Whenever I imagined this scene, I became too excited to contain myself. I would like to speak more about Shaoxing too. During the 1960's not only did I eat fermented bean curd and dried, pickled vegetable for a year in Shaoxing, but I also read books about Shaoxing for a year and came to be acquainted with quite a few runtu [7032 0960] children and grandchildren as well as becoming acquainted with quite a few ancients. Some examples were the great Emperor Yu who saved the Chinese people from a turtle's fate lie drowning; Go Qian, the King of Yue during the Spring and Autumn Times, and the great ministers of the Kingdom of Yue, Fan Li and Wen Zhong; the old poet of the Southern Song, Lu You; the master artist of the Ming dynasty, Xu Wenchang; the painters Chen Laolian and Ren Bonian of the Qing dynasty; the woman knight errant, Qiu Jin of Jianhu, and the literary craftsman, Lu Xun, both of whom I particularly respected and admired...I was very dissatisfied with existing depictions of the literary masterpieces of these historical figures, the characters written about seemingly rather remote from the persons themselves. Could I depict them in a true to life way? Clearly I could not, and inevitably there were also the limitations of many times. But I could depict them in a way and with an understanding that differed from what had been done in the past. Life changes as fast as the scenery on a stage, and in the twinkling of an eye another 20 years has gone. The manuscript I had written had been destroyed, but fortunately what I had not written still remained in my memory. The spirtual wealth, but the descendants have not used it well to build a road of progress, but instead have moved back and for several thousand years over a bumpy road. In the spring of 1981, the trend of my thought flew back to the spring of 491 B.C. when Go Qian, the King of Yue and his queen, and Fan Li were released after 3 years as prisoners and slaves in the Kingdom of Wu to return to their own kingdom. The first act of the historical play that I wrote, "The King of Wu's Gold Dagger-Axe and the King of Yue's Sword" began with this. I had just finished the initial draft on 1 May when on 6 May the film shooting team arrived in Wuhan from Guangzhou. Their work had not gone at all smoothly because of day after day of rainy and overcast weather in Lingnan and because of man-made obstacles, which delayed work for many days. They arrived just at the time that I was looking into revisions to "Dream Bridge," about which we talked for a whole week long. Next, Comrade Lan Tianye [5663 1131 6851], representing Beijing artists, arrived from Beijing wanting to know what plays I had written for their theater, and what was the status of them? I could only tell him that I had written some old material that they had already performed. I watched him carefully, but it was hard to discern whether he was disappointed or glad. All my initial drafts looked like scrawls, and no one but myself, the devil included, could read them, so I could not ask him to take a look at them. Lan Tianye, who spoke so incisively on the stage, had little to say in real life, but he knew very well that by staying with me, he would hurt my work, so only remained overnight and returned to the north. Around this same time, I received an old comrade in arms from my youth, Comrade Peng Jingfeng [1756 5427 7364] and some college students who had come from Kunming especially to see me. After having seen my guests off, I sent the finished draft of "Dream Bridge" to the Changchun Film Studio, and then went on to transcribe the stage play. I thought that I might be able to take advantage of a trip to Beijing to accept a poetry prize to turn the stage play over to the theater, but my expectation did not materialize. The poets who got the prizes collectively sent me a long letter brimming with enthusiasm. I supposed I might be able to take it easy, but beginning in early April, I received almost 1,000 letters and telegrams, which were staring me in the face. I frequently received letters from readers, but never as many as during this time. Every evening, Little Wang the postman would grinningly deliver me a big stack. I carefully read the letters and telegrams from these strangers, trying to imagine their occupations, temperaments and what they looked like, and I selected the important one for replies. I was frequently choked with tears of emotion and lost track of time....

In mid-June, I received a notice from the film shooting team, calling me to the Changchun Film Studio to view the edited rushes. As I boarded the train to leave Wuhan, I realized that the continuous nice weather in Wuhan had not made the temperature climb to 30 degrees. Really strange! Sprintime in Wuhan never lasted this long! Was I chasing springtime around? Or did springtime partitularly like me? On the 17th I reached Changchun where the fragrance of the lilacs again assailed my nostrils, and the peas in flats and looking like jadeite astounded me. Wasn't this like the area south of the Yangtze in March! The young grass in the white birch forests had just begun to poke its tender shoots through the damp soil.... After seeing the revised rushes, I again revised the play, "Dream Bridge." On the 26th, I worked all day long, and hurriedly stole the time to make a lightning visit to Haerbin, which I had long desired to visit. The wind from the Songjiang River forced me to put my woolen sweater back on....I couldn't help being secretly happy that I had been able to sojourn for so long a time this year with springtime, and though there had been wing and rain, it was the wind of springtime and the rain of springtime....Everywhere was a sea of new greeness. "Fragrant grass extended as far as the eye could see," the tender and multitudinous young grasses! It is only you who are the symbol of spring....

In order to consolidate the line of the Third Plenary Session of the 11th Party Central Committee, and the conclusion of the Sixth Party Central Committee, the train I boarded raced toward the capital, Beijing, quicker than the wind and as quickly as lightning.

PARTY AND STATE

LI JIAN NOVEL CRITICIZED FOR ERRING IDEOLOGY

Wuhan CHANGJIANG RIBAO in Chinese 4 Oct 81 p 3

[Article by Xue Si [1331 1835]: "Do Not Be a Detached Bystander in Life, Plus a Critique of the Novel NUER QIAO [Girl Bridge]"]

[Text] Recently in an article titled "Whose Bitter Wine," Comrade Li Jian [2621 0494] made a countercriticism of those who had criticized his work. He said that the characters in his novel "are all the inevitable products of their representative envireonment." He asked that readers not reproach them for their failings, but rather to blame the times!" Because we have gone through a dark age of 'not very high literary style' and 'things disgusting to the eyes'."

It is self-evident that the "dark age" that Comrade Li Jian wants to "blame" is the 10 years of the so-called "Great Cultural Revolution," and is not, nor can it be, any revolutionary or social progress in any sense of the terms." It "was a mistake made by the leaders that was used by counterrevolutionary blocs, which brought the serious calamity of chaos to the party, the country, and all nationalities in the country. However, the "Great Cultural Revolution was, after all, the countercurrent of an historical stage that was not a normal historical state of affairs, much less able to reflect the nature of socialist China. We cannot, nor should we, rashly make of it an "age" designated or crowned with the term "dark." Even during the days of rampage of Lin Biao and the "gang of four," our society was by no means a dark tract with no hope of the light of dawn. Among revolutionary cadres, among the masses of workers, peasants and soldiers, and among intellectuals, aside from the unbridled, despicable, and frightening, outrages of Lin Biao and the "gang of four" that caused people to rise in indictment, there was also righteousness, warmth, kindheartedness, and help, and there was active struggle and obstinate resistance. The people were not isolated and in helpless despair. Did not the film, "Rainy Night on Ba Mountain" fully depict this righteousness and friendliness? It must be said that the righteousness, sympathy, warmth, kindheartedness and help that fermented among the older generation of proletarian revolutionaries and the people at that time, as well as thier unity in taking flexible and diverse action to resist Lin Biao and the "gang of four," was a reflection of the representativeness of this socialist environment, and a representation of the overall trend of development of life in our age. However, Comrade Li Jian's work did not depict this representative environment and even though he himself continually professes that the characters in his work are "inevitable products of the representative society," in fact, the impression conveyed is one of utter darkness. It is like a "trade fair" in which every effort is made to display to the reader the filth and gloominess of life, thus producing a social result that is not good.

Let us look at Du Ruomei and the 10 women and their husbands from Kangzhuang depicted in his novel, "Child Bridge," and how they suffered cruel persecution by "Black Five Donkey," boss of the "counter-rebel to the end" military unit, a tragic story in which the husbands are cruelly beaten to death after which the women are molested until they kill themselves. Such a theme may be written, of course, and handled well, and it can also achieve a positive social result. But the writer has to have the correct standpoint and used correct methods. Regretfully the reader cannot realize from this work the righteousness, the sympathy, the warmth of the people, nor can he see hope, light, and a future. It is as though all of Kangzhuang, or even the entire world, would come to an end. "Mankinds final days have arrived," "all the people of the world have died." In the novel, Du Ruomei and the 10 women are bullied and humiliated like "rare animals," and "female donkeys with human faces." The author has "Black Five Donkey" entirely shamelessly and obscenely ravish and torment Du Ruomei and the other women, and these scenes have been portrayed in a revolting manner. In the face of these atrocities by "Black Five Donkey," which should cause people to rise up, not a single person among all the commune members in the billage step forward to stop them, nor do they say a single word of opposition; instead they "walk along facing forward," or stand beside the highway bridge looking on. After the 10 women drown themselves in the river, no one tries to save them; instead, "people slowly back away." Fairmindedness, courage, struggle, and resistance are not a part of the make-up of any of the peasants. Some are merely vulgar, selfish, doltish, superstitious....When a novel presents such a depiction, how can it be said to have been written from life or reflect real events in life (essential aspects)?

In a congratulatory speech given by Comrade Deng Xiaoping begore the Fourth National Literature Congress, he said: "Our socialist literature and art must be vivid and moving, truly reflecting the wealth of social life, reflecting the nature of various social relationships, and revealing the requirements for progress of the times and the trend of historical development. It must also strive to use socialist ideology to instruct the people and imbue in them an indominatable spirit of forging ahead and self exertion." This is the sacred social responsibility that the party has bestowed upon our workers in literature and art. We hope that Comrade Li Jian will be able to summarize well the lessions of experience in writing, intensify his study of Marxism-Leninism and of Mao Zedong Thought, probe life, correctly observe life, and understand life, and not be a detached bystander in life; that he will not give up obligation spurred on by himself to develop new material, and truly capsulize the nature and characteristics of life's phenomena. In that way, not only will he be able to divest himself of passive, and downhearted sentiments to write rather positive and beneficial works, but he will also, as a result of experience in study and creation, surmount petit bourgeois vacillation to make himself truly worthy of the glorious title of "engineer of the soul of mankind."

MILITARY AND PUBLIC SECURITY

SHANXI MILITARY DISTRICT COMMANDER ON STRENGTHENING MILITIA

Taiyuan SHANXI RIBAO in Chinese 31 Jul 81 p 2

[Article by Geng Shuming [5105 3219 2429], commander of the Shanxi Military District: "Strengthening the Buildup of Militia in a Big Way Under the Guidance of the Spirit of the Sixth Plenum"]

[Text] This year, the glorious day of the People's Liberation Army, "1 August," the anniversary of the founding of the PLA, is arriving while the whole party, the entire armed forces, all nationalities of the whole nation are learning to implement the spirit of the Sixth Plenum and are using the fundamental conclusion of the "resolution" to unite the ideology of the masses of cadres, at a time of great confidence and unity in carrying out the four modernizations. At the moment of enthusiastically welcoming the 54th anniversary of the founding of the PLA, a review of the battles of our province's militia organization is very educational.

During the war of resistance against Japan, the self-defense organizations against the Japanese in our border regions--Shanxi, Chahar and Hebei and the Taiyue region--at one time grew to over 1 million persons under the leadership of our party. Every one of them was armed and battlefields were opened up in every village; the areas were strategically mined; the men carried out tunnel warfare, sparrow warfare, sieges, and joint defense warfare; they became a strong people's armed force cooperating with the field armies and local troops in the struggle against the enemy. During the 8 years of the Sino-Japanese war, the militia of these two regions participated in over 58,300 large and small battles, killed over 35,000 enemy and Nationalist government troops. During the war of liberation carried out by our armed forces, the broad numbers of militia actively enlisted in the army and also launched the movement to join the war and support the frontlines in a big way. The militia followed the Liberation Army to fight in companies and battalions in remote areas, to fight shoulder to shoulder with the Liberation Army and contributed greatly to the revolution. Now, the Sixth Plenum has called upon us to continue to develop the spirit of the foolish old man moving the mountain, to be of one heart and one mind, and to exert efforts in the struggle for the building of modernization and of a highly democratic and highly civilized strong socialist nation. During this major period of change, cadres of our people's armed forces and the broad members of the militia should develop the glorious tradition and insist on implementing the line, principles and policies of the party since the Third Plenum so that our own thought and action can follow the strategic changes of the party closely, can make new contributions to building and protecting the four modernizations and thus celebrate the "1 August" Army Day.

To make new contributions, we must strive to be in the vanguard climbing the "18 hairpin turns" on the road toward the four modernizations. Recently, Comrade Hu Yaobang pointed out to the whole party: To build a strong socialist nation "is like climbing Taishan; we have already reached "Zhongtianmen"; before us is a road requiring a lot of effort--three sections of "18 hairpin turns." In climbing these three sections of "18 hairpin turns," our militia troops should be the vanguard. This is because our troops consist of young people who are at the prime in life and who are full of vigor, so in a sense, our troops have the least conservative ideology, the richest spirit of pragmatism, and they will necessarily become the backbone force in climbing the "18 hairpin turns." Then, concretely for each cadre of the people's armed forces and the militia, how can the "18 hairpin turns" facing us be ascended? I believe that to climb the "18 hairpin turns," we must first have a farsighted revolutionary ideal and strong confidence. With a farsighted and ambitious ideal, there will be a light to guide our own boat of life victoriously to the other bank. We will be full of hope and will look forward to the future, and therefore we will also develop a strong will and the spirit of struggling forward. We must have strong confidence before we can have the courage to face the tall mountains and the clouds and climb the peaks and tops like scaling the ladder to heaven. Therefore, I hope that comrades of the militia will never be afraid and hesitate or look at the mountains and sigh as we face these tall mountains and steep peaks in our endeavors. We must conscientiously study Marxism-Leninism and Mao Zedong Thought, realize the truth of human life, understand the principles of behavior, understand the principles of self-discipline, explore with untiring efforts on the bright road of life and advance forward courageously. I especially hope that those comrades who hold that "being a member of the militia is a loss" will change their attitude, and while they enjoy the glory of being a member of the militia, that they will strengthen their sense of responsibility as a member of the militia, clearly understand that serving as a member of the militia is the duty and right of each of our young citizens, and gain confidence in serving as a good member of the militia. We must climb the "18 hairpin turns" and we must also have strong stamina and take action. The success of our endeavor in a sense depends on stamina; whoever has strong stamina will be able to climb the peak of limitless scenery. The success of the endeavor is also the sum of countless actual steps and the fruit of a long period of practical action. Therefore, I hope the broad number of comrades of the militia will never make false statements, talk emptily and brag, which can spoil things; I hope they will never complain, criticize and make pessimistic statements, which will not help things. The militia must scorn empty talk and uphold practical action; each militia member must use his own practical action to solve every new problem encountered during the course of climbing at his own combat post, rely on his own strong stamina to overcome every difficulty on the long road of battle and to compete in becoming a vanguard warrior in climbing the "18 hairpin turns."

To make new contributions, one must be a model of building spiritual culture. This is a broad question. In concrete terms concerning our militia and the cadres of the people's armed forces, this means to develop the patriotic view that the benefit of the motherland is above all and to develop the spirit of creativity and hard work to contribute everything toward building modernization; it is to be like Lei Feng [7191 6912], like many heroes and models, to serve by leading and being a model in executing every duty, to become the glorious example of "having four things, talking about and doing three things, not fearing two things." Why do we say this? This is because our nation is large but still poor. Our population is large but our foundation is weak. It can be imagined that without the patriotic spirit of glorifying Chinese history, without the creative spirit of hard work and struggle, without the spirit of daring to sacrifice oneself and shed blood, without the common struggle of this generation or several generations of people with ideals, morality, intellect and talent, we could not build such a nation with a very weak foundation into a modern strong nation. Those who think only of themselves, who see only the benefits before them, who crave only for personal enjoyment, who can only ride with the tide will never succeed in building the four modernizations. In general, during the course of progress of building the four modernizations, we cannot separate ourselves for an instant from the building of spiritual culture. Therefore, I hope the broad numbers of the militia and the cadres of the people's armed forces learn the spirit of bearing hardships and difficulties like the ancestor who "imposed hardships upon himself to strengthen his resolve," to insist on the style of work of hard struggle in life, to maintain the lively revolutionary spirit in work, and to study hard in order to learn and advance with determination. We hope furthermore that everyone learns the heroism of the revolutionary martyrs who pursued the truth and who did not fear to shed their blood and sacrifice their lives, that everyone can contribute all he has in face of difficulties and dangers and come forward when the revolution needs him.

To make new contributions, we must make every effort to combine labor and military strength well in the new situation. Everyone knows that our militia members are both civilians and soldiers, that they bear a double responsibility. As a civilian, we are the main force in building the four modernizations. As soldiers, we are the important part in protecting the four modernizations. This requires that we lead in implementing the various economic policies of the party; we must offer our hearts to the motherland, contribute our youth to the four modernizations, glow and offer our warmth to the glorious endeavors of socialism. We must love our own work, stand at ordinary posts and create first-rate achievements. We must take up the attitude of the master, use our own sweat and all of our intelligence to create material wealth for the people. At the same time, we must also not forget about war preparedness in production, military training in labor, and we must insist on the principle of combining labor and military affairs. In the new situation, we must correctly handle the conflict between family duties and civil duties, the conflict between training and production; we must concretely act according to the spirit of the general staff concerning the readjustment of reforming the military training of the militia, suit measures to local circumstances to launch military training in many ways; and in a versatile, lively and active manner, we must overcome difficulties, create conditions, and exert efforts to complete the various tasks handed down by the higher authorities.

The broad number of comrades of the militia and the cadres of the people's armed forces, our militia in Shanxi once dominated the Taihang and Taiyue Mountain regions and contributed actively toward the establishment of new China. Today, we must develop the glorious tradition of making new contributions in order to make the motherland rich, strong and safe.

UNITY OF ARMED FORCES WITH GOVERNMENT, PEOPLE STRESSED

Yinchuan NINGXIA RIBAO in Chinese 1 Aug 81 p 2

[Article by Chen Ruyi [7115 1172 1942], commander of the Ningxia Military District: "Develop the Superior Tradition of Our Armed Forces, Strengthen Unity of the Armed Forces With the Government and the People"]

[Text] The Chinese People's Liberation Army has already traversed 54 years of combat history. Today, as we wholeheartedly celebrate this glorious "1 August" Army Day, we take the spirit of the Sixth Plenum of the 11th Party Congress as a guide to review history and to summarize experience. This will further encourage us to raise our revolutionary spirit, develop the superior tradition of our armed forces, confirm and unify the determination to look forward and hasten the building of a modern revolutionary army.

The "Resolution on Certain Questions in the History of Our Party Since the Founding of the Nation" passed by the Sixth Plenum of the 11th Party Congress pointed out that we must "revive and develop the superior tradition of close unity within the armed forces and between the military and government and between the military and the people." This is the demand presented to us by the party Central Committee under the new historical conditions, and it is also decided by the proletarian nature of our armed forces and the goal of wholeheartedly and willingly serving the people. Whether in years of war or in the time of building socialism, everything done by our armed forces is for the fundamental benefit of the people, and the unity between the military and the government and between the military and the people is where the strength lies in our victory over all enemies and in overcoming all difficulties. Comrade Mao Zedong once said that if the armed forces are regarded as the masses' own armed forces, this armed force will be invincible. Now we are in a new historical period of building a strong socialist modern nation and a modern revolutionary armed force. To victoriously carry out the various combat duties assigned by the party and win future victories in combatting aggression, we should even more continue to develop the superior tradition of our armed forces in supporting the government and cherishing the people, treasure the blood-and-flesh relationship between the military and the government and the profound fish-and-water relationship between the military and the civilian population, and further strengthen the unity between the military and the government and between the military and the civilian population.

Insisting on the principle of "the party commanding the gun," obeying the command of the party Central Committee, conscientiously respecting the leadership of the local party and government are the fundamental assurances of supporting the government and cherishing the people. The absolute leadership of the armed forces by the party is a fundamental system established for our armed forces by Comrade Mao Zedong; it was a very important principle in setting up a military establishment that has been tested by a long period of revolutionary struggle and won with fresh blood. The experience of history has proven that only by insisting on this principle could the victory of revolutionary war be won, could the blood-and-flesh relationship with the masses of people be maintained year after year, and could our armed forces develop into today's strong armed forces. The leadership organizations of the local military system and the military department of the local party committee at the same level are units of the people's armed forces of our military district, military subdistrict and county and city. Insisting on the absolute leadership of the party over military troops means to insist on implementing the dual leadership system by the local party committee and the military system under the unified leadership of the party Central Committee; the leadership of the local party committee must be respected and obeyed everywhere to maintain the party's unity and unification. In marching and fighting in the past, wherever we went, we devoted a lot of attention to respecting the leadership of the local party and government and cherished and protected the masses of people. The "three main rules of discipline and the eight points for attention" were not only advocated and talked about by the broad numbers of officers and men, but they became the standard for action of everyone. To win the war, the government and the people all supported the frontline with all efforts. They risked their lives to pass on information to our troops. They suffered hunger and cold to solicit food grains and funds for the troops. Now, although the situation has changed, our basic principles have not changed. We should see clearly that the modern buildup of our armed forces not only must rely upon the active efforts of the troops themselves, but it also must rely upon extensive help and support from the local governments and the masses of people. We must educate the troops, correct the basic attitude in dealing with the governments and the masses of people. Each unit must fully utilize reporting meetings, discussion meetings, "double support" representative meetings, visits to related exhibits, and the method of going out and inviting speakers in order to profoundly carry out the education of the troops in the goals of our armed forces, the superior tradition, policy, discipline and supporting the government and cherishing the people, so that the cadres and soldiers can establish the correct ideology, carry out the policies, laws, and commands of the party and the state as models, strictly obey the three rules of discipline and the eight points for attention, and carry out in practice the agreement on supporting the government and cherishing the people established by themselves. We must use social surveys, visits to localities, inviting local comrades to report, and widely launching the movement to learn from the people in order to learn the good ideology of the local comrades and the masses of people, their good style of work, and their good experience. In the course of making contact with the local comrades and the masses of people, the troops must be humble and considerate, they must have discipline so that the spirit of mutual tolerance and mutual respect exemplified in the saying "even an egg is given to the armed forces, and a bowl of fried noodles is always given to the countrymen" that existed between the military and the government and between the military and the civilian population during the war years can be further developed. Our district is one where many national minorities live together. We must also strictly adhere to the party's policy toward minorities, respect the customs and habits of the local nationalities and strengthen national unity.

Strengthening the buildup of modern revolutionary troops and training in the skills of protecting the people's benefits are the best measures to support the government and cherish the people. In the past, our troops together with the nation's people shed their blood and struggled to overturn "the three great mountains" and to create an independent and autonomous New China; this is the greatest love for the masses of people. Today, we bear the heavy duties of protecting the motherland and protecting the building of socialist modernization; these are also practical actions to support the government and to cherish the people. As we talk about supporting the government and cherishing the people, we cannot deviate from our own buildup. The whole body of officers and men must firmly establish the ideology of serving the people wholeheartedly and willingly; they must be trained well and concretely educated in the superior skills of serving the people. At present, our nation is in a period of readjustment; we must conscientiously share the worries of the nation. "Even the poor and the lowly share in the hope that you will successfully accomplish the matter." To revolutionary soldiers who have a spirit of progressing and advancing, difficulties are only the ladders to success, the obstacles to train one's determination, the motive force to encourage advancement. To go back to the early years of the 1950's and 1960's, our troops launched a big wave of large-scale military training under relatively poor material conditions. Today, if we continue to develop that spirit of progressing and advancement, work hard to improve and strengthen ourselves, and face difficulties, we will surely be able to carry out combat training well.

Continuing to actively support the building of socialism and of doing good deeds for the people and the masses is also an important aspect of doing the work of supporting the government and cherishing the people well. Building the four modernizations is the responsibility of the troops. Helping the masses should not be shunned. Since the Third Plenum of the 11th Party Congress, the troops of the whole district have done a lot in this regard, and have made definite achievements. During the second half of this year, the troops of the military district still have to do several good deeds for the masses in accordance with the plan. Since the farm villages are now implementing the various forms of production responsibility system, each unit must pay attention to studying the new situation, summarizing the new experience, and suiting measures to local circumstances to enliven support activities. Units must emphasize helping the communes and brigades in the locality where they are stationed to implement the various economic policies of the party for farm villages; they must treat poverty to create riches, develop and enlarge the collective economy, continue to concentrate efforts on supporting key production projects of the collective businesses and public works such as water conservancy projects, building schools, cooperative medical treatment, commune and brigade enterprises, fruit farms, forestry farms and livestock farms. When dividing support between the group and the families, first consideration must be given to the dependent families of soldiers, revolutionary martyrs, cadres and workers, five assured families, and families in difficulty. At the same time, we must also prepare all aspects well and carry out disaster relief work well to protect the people's lives and property.

The military cherish the people, the civilians support the military; the military and the civilian population are united as one. Each cadre and soldier must treasure the unity between the military and the government and between the military and the civilian population like protecting one's own eyes. We must further inherit and develop the glorious tradition and exert efforts to raise to a new level the work of supporting the government and cherishing the people; we must exert efforts in the struggle to build a modern, highly democratic and highly civilized strong socialist nation and to build a modern revolutionary armed force!

MILITARY AND PUBLIC SECURITY

GUANGZHOU AIR FORCE LEADERSHIP CADRES STUDY RESOLUTION

Guangzhou NANFANG RIBAO in Chinese 2 Aug 81 p 1

[Article by Zhang Dean [1728 1795 1344]: "Buildup of the Armed Forces Must Rely Upon Mao Zedong Thought as the Guide, Leadership Cadres of Guangzhou Air Force Units Link With Reality to Study the 'Resolution'"]

[Text] Building a modern revolutionary armed forces must rely upon Mao Zedong Thought as the guide. This is the unanimous belief of those participating in a reading class of political commissars and political department chiefs of the Guangzhou Air Force Military Advisory Group in studying the "resolution."

Comrades participating in this reading course include old soldiers who fought in many wars and middle-aged and young cadres who participated in the war of self-defense and retaliation. They profoundly realized in real revolutionary battle that Mao Zedong Thought is the guide toward strengthening our armed forces and toward victory. Political commissar Zhou Xianqin [0719 6343 0615] of the air force logistics unit of the Guangzhou troops said, in reviewing the history of our armed forces, that from the birth of the Red Army of workers and peasants, Comrade Mao Zedong had creatively combined Marxism with the actual situation of the Chinese revolution and used it to guide combat and the buildup of our armed forces. Historical experience proves that Mao Zedong Thought is the guiding ideology of our party, and it is also the guiding ideology of our armed forces. By insisting on Mao Zedong Thought as the guide, our armed forces will develop and become strong and will win victory after victory. By deviating from the correct path of Mao Zedong Thought, our armed forces will fail. The "resolution" passed by the Sixth Plenum sought truth from facts and appropriately evaluated the historical role of Comrade Mao Zedong and Mao Zedong Thought, clearly affirmed that Mao Zedong Thought was, is now and will continue to be our guiding ideology. This has truly been encouraging and exciting and this has an incalculable meaning for the future building of the four modernizations and the armed forces.

Many comrades pointed out that to the officers and men of our armed forces, insisting on Mao Zedong Thought, especially emphasizing learning and utilizing the military thought of Comrade Mao Zedong, are most important. Political commissar Li Yuanbin [2621 3293 2430] of a certain division of the air unit said: Comrade Mao Zedong established a whole set of strategic and tactical principles which were useful in the past, which are useful now and which will still serve importantly in the future. During the war of self-defense and retaliation against Vietnam, we organized combat according to the military thoughts of Chairman Mao. We widely developed military democracy, mobilized the masses to watch the enemy train, and within a short time found a set of effective tactics that could control the enemy and bring victory. Throughout the combat, our frontline air force units concentrated on control over the airspace, forcing the Vietnamese Air Force to stay still, and forcefully supporting the victorious retaliation by our border troops.

In learning and discussion, everyone present also conscientiously analyzed the present situation of the units learning Mao Zedong Thought and proposed preliminary measures to further learn Mao Zedong Thought. Everyone decided to take learning and utilizing Mao Zedong Thought as an important aspect in the implementation of the "resolution." To organize the units in learning, the party committee of a certain division of the antiaircraft artillery adopted several concrete measures: 1) take the "resolution" as the basis to educate the cadres and the soldiers to correct the understanding of learning Mao Zedong Thought; 2) lead in learning to serve as models for the masses; 3) train learning assistants for the basic levels, strengthen organization and guidance in learning; and 4) apply what has been learned, use the fundamental principles of Mao Zedong Thought in the buildup of troops, study new situations and solve new problems.

TIANJIN MEETING HONORS PUBLIC SECURITY MODELS

Tianjin TIANJIN RIBAO in Chinese 15 Aug 81 p 1

[Article by staff commentator: "Expand the Achievements, Maintain Social Order Well"]

[Text] The municipal people's government held a meeting yesterday to honor public security models and active public security elements. This was a victory meeting, and a meeting to summarize and exchange experience. At the meeting, 19 public security models and 52 active public security elements were honored; their unselfishness, fearlessness and heroic deeds, and their revolutionary spirit and models deeds in struggling against criminal elements were praised. These comrades made glorious achievements at their own posts to maintain revolutionary order, to protect the nation and the safety of the people's lives and property; by fortifying and strengthening the people's democratic dictatorship, they have won the broad praise of the people and have established themselves as models for the city's people.

The facts prove once again that in order to fortify the achievements we have already obtained, a fundamental change in our city's public security is an important condition. This means we must fully support the vanguard who dare to struggle against all kinds of illegal and criminal activities, we must praise their revolutionary spirit and heroic deeds in a big way and popularize their experience. The city government has called upon the broad numbers of cadres, workers and the people and masses to learn from the public security models and the active public security elements, and has called upon the people to study the political position of the great and limitless love these models have for the people, their hatred of the enemy, and the clear division between love and hate. The people have been called upon to learn the high degree of political awareness of placing the benefit of the party and the people in first place as these models have done, to learn their unselfishness, fearlessness, and their revolutionary spirit of daring to control and struggle against evildoers, to learn their honorable moral acts of sacrificing themselves to save others and to dare to perform good deeds. If their good thoughts and their good morality can be spread among the people of the whole city, then our work of reorganizing social and public order will have a broad mass foundation, all criminal elements will be surrounded by the masses that dare to struggle and that are skilled at struggle. In the 1950's, the evildoers feared the good people, feared the masses, feared the law, and the situation was stable, and this will surely be revived.

At present, the broad numbers of cadres and masses on each battlefront in our city are conscientiously studying and implementing the «Resolution on Certain Questions in the History of Our Party Since the Founding of the Nation» under the spiritual guidance of the Sixth Plenum in order to unify the ideology on the basis of the fundamental conclusion of the «resolution», to be of one heart and one mind, to lift the morale, and to achieve new victories. To maintain a political situation of stability and unity, to assure the smooth progress of economic readjustment and the building of the four modernizations, we must continue to mobilize the masses, to maintain socil and public security well in a big way, to exert efforts to create a good and safe environment, to let the masses of people calm down, and to concentrate efforts with one heart and one will to carry out the four modernizations. For this, we must broadly and profoundly launch propaganda on rule by law; we must especially strengthen the ideological education of young people in a big way, strengthen the concept of rule by law among the broad masses, and consciously struggle with determination against all criminal elements. Each factory, enterprise, office, school, and street organization must grasp well the work of mobilizing the ideology of the masses so that the broad masses will eliminate worry and actively participate in the struggle to reorganize social and public security.

The political and judicial organizations must insist on doing things according to the law, severely strike at the rampancy of criminal elements. The broad number of cadres and policemen of the public security organs, procuratorial organs and people's courts must learn to utilize the legal weapons well to struggle against criminal elements, to realistically correct the phenomenon of weakness in striking at criminals. Criminal elements must be dealt with seriously and correctly based on legal procedures according to the different situations and the severity of the cases. The murderers, arsonists, robbers, rapists, criminals carrying out bombings and other criminals who seriously damage social and public security, especially abettors, major criminals and recidivists, must be firmly and severely punished according to the law on a continuing basis. The large number of people who engage in slightly illegal behavior must be treated as parents treat their children suffering from infectious disease and as the doctor treats his patients with compassion; they should be carefully and patiently educated, reformed, and reeducated so that they will change for the better. To concretely do well the work of public security and prevention, the work of the residents committees, the public security and protection committee and the mediation committee must be strengthened; the safety measures of the "four preventions"--guarding against enemy agents, guarding against theft, preventing fires and preventing damage to public security--must be conscientiously implemented. Collection of lethal weapons must be continued and carried out thoroughly. Ideological work regarding people who privately keep lethal weapons must be done well so that they will hand the weapons over willingly. Those who refuse to hand over lethal weapons must be forced to do so, and the people and the weapons confiscated must be dealt with according to law. Patrol activities must be launched. Each factory, enterprise, store, and school must establish economic people's police and public security pickets according to regulations, insure that factories and schools are well protected, and strengthen joint prevention efforts between the region and the unit to actually maintain good public security and order.

The public security situation in our city has already begun to improve; each region, unit and department must continue to exert efforts to continue to expand the achievements on the foundation of those already realized so as to make new contributions in order to change the social security situation in our city, maintain the stable and united political situation, and assure the smooth progress of building the four modernizations!

SHANGHAI GARRISON COMMAND STUDIES RESOLUTION

Shanghai JIEFANG RIBAO in Chinese 18 Aug 81 p 1

[Article by correspondent: "Shanghai Garrison Command District Organizes Cadres Above the Regimental Level To Conscientiously Study the 'Resolution,' Strengthen Consciousness in Insisting Upon Mao Zedong Thought; He Yixiang [0149 0110 4382], Deputy Commander of the Nanjing Troops; Wang Jingkun [3769 2529 2492], Commander of the Shanghai Garrison Command District; and Zhang Chen [4545 1051], Political Commissar, Spoke"]

[Text] From 5 to 17 August, the Shanghai Garrison Command District held an enlarged meeting of the party committee and organized the cadres above the regimental level to conscientiously study the "Resolution on Certain Questions in the History of Our Party Since the Founding of the Nation." The participants further strengthened their awareness of insisting upon Mao Zedong Thought through learning.

Many comrades participating in the conference were old comrades who had taken part in the revolution during the war years. They all had personal experience in the development of Mao Zedong Thought and in the growth and strengthening of the party and the armed forces under the guidance of Mao Zedong Thought. A leading comrade who joined the armed forces during the warring period of the land reform revolution reminisced about the success and failures of the five counter-"encirclement" campaigns and said profoundly that practice shows that by insisting on Mao Zedong Thought, the revolution will be victorious; by violating Mao Zedong Thought, the revolution will encounter obstacles and defeat.

How do we insist upon Mao Zedong Thought in the new historical conditions? Comrades participating in the conference agreed: 1) We must righteously propagandize Mao Zedong Thought, conscientiously learn the works of Chairman Mao, and utilize Mao Zedong Thought to arm the minds of cadres and soldiers. Cadres above the regimental level must conscientiously study the 43 works by Chairman Mao listed in the "resolution"; they must especially study the philosophical writing and military works of Chairman Mao. 2) We must study and utilize the position, viewpoints and methods of Mao Zedong Thought and work hard in studying the three basic aspects of seeking truth from facts, the mass line and independence. 3) We must combine the study of Chairman Mao's writings with the study of the writings of the old generation of proletarian revolutionaries and the study of the party line, principles and policies since the Third Plenum. 4) We must insist on the style of study of linking theory with the actual situation and we must utilize Mao Zedong Thought to solve the new problems in the buildup of the troops.

At the conference, the comrades deputy commander of the Nanjing troops He Yixiang [0149 0110 4382], commander of the Shanghai Garrison Command District Wang Jingkun [3769 2529 2492] and political commissar Zhang Chen [4545 1051], talked about how we can further study the fundamental spirit of the "resolution," how we can insist on Mao Zedong Thought and similar questions.

MILITARY AND PUBLIC SECURITY

SHANGHAI PUBLIC SECURITY OFFICIAL ON CRIME SITUATION

Shanghai JIEFANG RIBAO in Chinese 19 Aug 81 p 2

[Article: "Deputy Chief of the City Public Security Bureau Lin Daosheng [2651 6670 3932] Reports to the Standing Committee of the People's Congress of the City; the City's Efforts To Reorganize Social and Public Security Have Achieved Preliminary Results; the Seriousness and Complexity of the Public Security Problem Must Not Be Underestimated"]

[Text] The reorganization of social and public security by the public security organs of Shanghai city has already realized preliminary achievements. During the past 2 months, they have readjusted and strengthened the scouting teams, and have solved 287 major criminal cases, equivalent to the number of cases solved in the 3 months of the first quarter. Of these, many major cases were solved within 1 or 2 days or within several hours. They also solved a number of difficult cases and cases that had not been solved for a long time, and a group of criminals who were well hidden and who had committed many crimes were exposed. The number of criminal cases occurring in the city in June showed a drop of 13.6 percent from May, and in July it dropped a further 28 percent from June. In particular, major cases of murder, robbery, rape, arson in June showed a drop of 8 percent from May, and in July they dropped a further 51.3 percent from June.

These figures were given in the report presented to the 14th meeting of the Standing Committee of the city people's congress yesterday by deputy chief Lin Daosheng [2651 6670 3932] of the Shanghai Public Security Bureau.

Comrade Lin Daosheng pointed out in the report that although the reorganization of social and public security has achieved preliminary results, we must not estimate them too highly. In recent years, the public security problem in Shanghai has been good at times and bad at times, and sometimes it has been very serious. so the seriousness and complexity of public security problems must not be underestimated. We must coordinate with the political and judicial departments and all sectors of society to fight crime so that a visible improvement in the social and public security in Shanghai will be realized at the end of this year.

Lin Daosheng talked concretely about the six preliminary results already realized in his report. He said: 1) The concentration of forces to solve major cases and important cases has improved the percentage of cases solved, and we have forcefully attacked current criminal activities. 2) We have correctly utilized legal weapons and grasped favorable opportunities; we have carried out repeated lectures and education of criminals in custody and persons subjected to labor and education, prompting them to see the future clearly, obey discipline, accept reform and repent, and become new persons. Since 10 June, among the criminals caught, sentenced and their cases solved, the number of persons released after serving a full sentence and persons relieved of labor and education who have committed new crimes has dropped 40 percent from 2 months ago. There were 186 persons sentenced to labor reform and labor and education who escaped but later returned to the labor reform units or labor and education units by themselves or accompanied by their family members. 3) Propaganda and mobilization were carried out on a broad basis to collect criminal weapons. Up to 10 August, 15,135 weapons, including indigenous firearms, daggers, and shaving knives, had already been collected, 1.5 times more than the amount collected last year. One hundred privately hidden handguns, rifles and flare guns were also collected, as well as 31,443 bullets of various calibers, 3,262 detonators, 77.3 kilograms of dynamite, and 13 hand grenades. 4) We repeatedly reorganized the social order at public places according to plan and at key places, and under the leadership of the people's government of the wards and the counties, the public security organs and the industrial and commercial departments coordinated closely and determinedly eliminated over 4,000 recreational ball game stalls involved in gambling activities, repeatedly cleared and reorganized illegal transactions and street peddlers without permits in busy sections of the city, investigated and closed down over 600 private hotels illegally doing business, and struck at criminal elements engaged in opportunism and smuggling. 5) With the support of the city's general union and related factories and enterprises, we readjusted and strengthened the workers' pickets and joint public security guard teams; the people's police led in strengthening joint guard patrols, and the results were outstanding. 6) Factories, enterprises, schools, offices and farms reorganized their internal public security and order; some units mobilized the masses to revise factory rules and regulations, and improved the concepts of discipline and rule of law of the broad number of workers.

Lin Daosheng pointed out in the report that the work of readjusting public security was able to produce such results within a relatively short period mainly because of the strengthened leadership of the party committee at each level and the determined implementation of the guidelines, policies and measures concerning the reorganization of public security issued by the party central committee; the severe and quick punishment of criminal elements involved in major current criminal cases in accordance with the law; and the correction of weakness and delays in striking at criminals. Starting out from the current situation in public security, the political and judicial departments grasped temporary solutions as the key first and concentrated superior forces to carry out continuous combat; they formed public opinion and created a trend in reorganizing social order in a big way. Lin Daosheng said in the report that during the past 2 months, the momentum of reorganizing social and public security has been strong, the actions have been quick, the results have been good, and criminals have been seriously attacked, their rampancy has been forced to retract, and they are beginning to show a trend toward division and demoralization. In June and July, 1,061 criminals gave themselves up voluntarily to public security organs, and those who informed upon other criminal activities were given lenient treatment.

SELECTIVE STUDY OF MAO'S WORK AS GUIDING IDEOLOGY URGED

Shanghai JIEFANG RIBAO in Chinese 28 Sep 81 p 1

[Article by JIEFANG RIBAO commentator: "Follow the Example of the Eighth Company in Giving Continuing Attention to the Study of Mao Zedong Thought"]

[Text] Is it still necessary to study Chairman Mao's important works during this new historical period of the development of the four modernizations? Our response is affirmative. A related report on the eighth company of a certain artillery regiment under the Shanghai Garrison Command, carried by this newspaper today, is an example that provides a relatively great power of persuasion.

In the course of strengthening ideological and political work, the party branch of this company has organized cadres and fighters to conscientiously study Chairman Mao's works as an answer to problems resulting from the loose organization of its leading groups, complaints from the fighters that "being a soldier is not rewarding," and lax organization and discipline. Regarding Comrade Mao Zedong's scientific works as valuable spiritual food, its members have persisted in educating the people in Mao Zedong Thought and have helped cadres and fighters foster the idea of devotion to serving the people as well as the lofty revolutionary ideals so that they can take a correct attitude toward individual interests, carry forward the decent moral virtue and the workstyle of hard struggle, and increase their ability to observe and analyze problems. Thanks to the relatively good results they have reaped, the outlook of the company as a whole has undergone a remarkable change.

Mao Zedong Thought, which has demonstrated tremendous power during the long period of revolutionary practice, is an application and a development of Marxism-Leninism in China, a theory and principle guiding the Chinese revolution which have been proved correct in practice, a summarization of related experiences, and the crystallization of the collective wisdom of the CCP. The Chinese people have long harbored profound affection for Chairman Mao's works. During the long period of practice in revolution and construction, in the course of studying Marxist-Leninist works many of them began to consciously study Chairman Mao's works long ago, with very good results. For example, during the Yanan rectification campaign, they acquired excellent experience in integrating theory with practice and in studying theory in order to improve their way of thinking. After nationwide liberation, a massive campaign to study Chairman Mao's works gradually grew in strength. But under the influence of the erroneous leftist guiding ideology, and especially under the disruptive influence of Lin Biao, the "gang of four," and Kang Sheng during the 10-year civil strife, this campaign did not achieve its intended objectives. Meanwhile, in his later years Comrade Mao Zedong made grave errors. This has prompted some comrades to ask: Is it still necessary to continue to attach importance to the study of Chairman Mao's works today?

A clear answer to this question has been provided by the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," adopted by the Sixth Plenary Session of the 11th Party Central Committee. The "Resolution" gives a full account of the historical role of Comrade Mao Zedong as the great leader and teacher in the Chinese revolution, emphasizing in detail the great significance of Mao Zedong Thought as the guiding ideology of our party. The "Resolution" clearly tells the nation and the world: "Mao Zedong Thought is a valuable spiritual asset of our party. It will continue to guide our actions for a long time to come. The attempts to cite the mistakes made by Comrade Mao Zedong in his later years as a reason for denying the scientific value of Mao Zedong Thought and its role in guiding the Chinese revolution and construction are an attitude that is completely wrong." Comrade Mao Zedong's scientific works cannot be discredited just because he made mistakes in his later years. Nor can the fact that the study of Chairman Mao's works was once a target of interference and sabotage by Lin Biao, the "gang of four," and Kang Sheng and company be cited as a reason for depriving the broad masses of people of a fervent desire to study Chairman Mao's works consciously. The eighth company of the artillery regiment of a certain PLA unit once again reminds us of the need to fully appreciate the continuing emphasis on the study of Chairman Mao's scientific works as a matter of far-reaching significance, and of the need to constantly raise our consciousness concerning the need to apply Marxism-Leninism and Mao Zedong Thought in order to remold our own world outlook. Of course, through study we must remember past lessons, so that studying in a summary fashion, in a philistine manner, and as a matter of formality, and a dogmatic approach to studying, will no longer be repeated and the debate over the two "whatevers" will no longer be rekindled.

How can we score success in studying Chairman Mao's works in the new situation? The experience of the eighth company of the artillery regiment of a certain PLA unit is an inspiration to us. After summing up their past experiences and lessons from a realistic point of view, they have come up with three proposals to "draw a demarcation line between what is right and what is wrong": It is necessary to draw a line between the absolutely necessary formulas for carrying on the study campaign and the practice of formalism; it is necessary to draw a line between the basic viewpoints and the repetition of individual phrases plucked out of the texts; and it is necessary to draw a line between the integration of theory and practice and the call for studying to get quick results. These three "demarcation lines" can be summarized into one single point: We must distinguish the learning experiences and methods acquired and verified as useful by the masses from the sabotage by Lin Biao, the "gang of four," and Kang Sheng, and we must truly come to grips with the stand, viewpoint, and methods of Mao Zedong Thought. In the course of study, we must focus attention on preventing some people from unilaterally seeking publicity and practicing formalism. Stress must be put on actual results; work must be meticulously and successfully organized to guide the study. In the course of study, we must persist in integrating theory with practice, while avoiding far-fetched interpretations and applying theory mechanically. No one can take such opportunities to punish others. Everyone should be encouraged to study the classic Marxist-Leninist works on his own and to make efforts to comprehend their essence fully and accurately. Collective study should be organized properly, so as to enable students to exchange views and to inspire each other to make joint improvements in study.

At present, as an in-depth study of the "Resolution" is underway, we should devote part of our study time to selectively emphasizing the study of Chairman Mao's important series of works listed in the section of the "Resolution" dealing with the discussion of Mao Zedong Thought. We must do so in a way that takes into account current realities. The aim is to help everyone think in a way that is consistent with the basic conclusions contained in the "Resolution." We must grasp the sharp weapon of Marxism-Leninism and Mao Zedong Thought for the purpose of changing the objective world as well as our own subjective world in a better way, and for the purpose of constantly deepening the understanding of the broad masses of cadres and people in proletarian ideology and communist morality. We believe that, as we are on the way to building a modern socialist power with a high level of democracy and a high level of civilization, our correct campaign to organize the broad masses of cadres and people to study Chairman Mao's works will give us a tremendous spiritual power to guide practice and will make a greater contribution to the four modernizations program.

BRIEFS

MILITARY ACADEMY GRADUATES--Kunming, 25 September (XINHUA)--Over 900 graduates from the military academies in Beijing, Nanjing, Dalian, Shijiazhuang, Kunming, and other cities requested recently transfers to serve the border defense troops in Yunnan, vowing to making contributions to the defense and development of the frontier region. Most of the graduates are youths selected from various localities to attend the military academy on the basis of their outstanding academic achievements in the nationwide college entrance examinations. There are also outstanding cadres and fighters selected by their PLA units to undergo further training at the military academy, in recognition of their distinguished service in the counterattack in self-defense. SOCIOLOGICAL, EDUCATION AND CULTURE

'EXCELLENT TEACHERS' COMMENDED IN SHANGHAI

Shanghai WEN HUI BAO in Chinese 1 Sep 81 p 1

[Editorial: "Be Excellent Teachers, as Expected by the Party and the People"]

[Text] The activity of recommending "excellent people's teachers"--sponsored by WEN HUI BAO, the municipal Bureau of Education, and the municipal Educational Trade Union--has now been satisfactorily concluded. The glorious title of "excellent people's teacher" has been given to 107 teachers, and 421 teachers have been appraised as advanced teachers. Among them are those teachers who have long been working on the foremost front of education, as well as new talents on the educational front. They are earnestly dedicated to the party's educational enterprises and have made outstanding contributions to the training of the next generation. Today is the first day of the beginning of the new school year. We respectfully extend our warm congratulations to those comrades who have been given the glorious title of "excellent people's teacher" and have been appraised as advanced teachers, and our high esteem to them! May they exert themselves time and again, climb still more peaks, and achieve even greater results in the new school year!

Elevating the teachers' social status, respecting the teachers' labor, and creating the new trend wherein everyone in society respects the teachers and pays attention to the training of the next generation are the consistent goals of the activity of recommending "excellent people's teachers" at this time. Respecting teachers and attaching importance to their learning has always been our fine tradition. This tradition, however, was subject to sabotage during the 10 years of turmoil. Although today the situation has taken a turn for the better, the mental attitude of looking down upon teachers' work has still not been completely eliminated. In recommending good teachers, the activity on this occasion broadly mobilized the masses and let students, parents, and comrades of various social circles all express their opinions, provide information, and exalt together the advanced ideas and advanced stories of excellent teachers. This served to propel respect for the teachers and an attachment of importance to their learning far beyond the limits of the school and thereby into the realm of public morality being developed by the whole society. If we wish to realize the four modernizations, we need to build an advanced socialist spiritual civilization, and teachers are none other than the cultivators of such a socialist spiritual civilization. While youths, children, students, and toddlers are the future of the motherland, teachers are the engineers who mold the souls of the new people "of ideals, morality, knowledge, and physical fitness." Since every person of scientific and cultural knowledge has undergone education in school, his career and his achievements therefore all gather in them their teachers' diligent labor. Consequently, we have no reason whatsoever to look down upon teachers' work. Facts illustrate that, under the situation of relatively difficult working and living conditions, the vast ranks of teachers have industriously and earnestly shouldered the heavy task of training the next generation and demonstrated their lofty sentiments and qualities; they deserve to be respected by the whole society. We believe that through the activity of recommending "excellent people's teachers" at this time, a great influence will be exerted upon the new trend of respecting teachers throughout society.

The "excellent people's teachers" and advanced teachers selected at this time are the new pacesetters who have surged forth after our appraisal and selection last year of special-class teachers and "model class presidents," advanded educational workers. The emergence of one contingent after another of excellent people's teachers is an indication of the prosperity and development of our socialist educational enterprise. Whether in terms of their teaching work or their work in ideological education and service at the rear, the advanced teachers selected at this time all have their own new characteristics and creativity. To make the work of appraising and selecting advanced personnel regular by summing up their experience--and to unite this closely with the promotion of daily schoolwork--is the method of mass-line leadership which has been effectively practiced on the educational front. We must through various means turn their advanced ideas and precious experience into the common wealth of all teachers and staff.

In the new school year, we must organize the vast ranks of the teachers and staff to really study well the "Resolution" and further properly carry out ideological and political work among the students. We must reinforce education on adherence to the four basic principles, strengthen and improve education on Marxist-Leninist theory, consolidate education on communist morality and education on labor, and continue to create and accumulate new experiences in ideological and political education. At the same time, we must comply with the requirements of overall moral, intellectual, and physical development and, in dealing with all students in order to improve in a comprehensive way the quality of our education, we must do a good job of classroom teaching in a down-to-earth manner, improve our teaching methods, and establish the improvement of the quality of our education on the basis of knowledge and a mastery of the laws of educational work. The formal promulgation of the Student Regulations for Middle and Elementary Schools is an important measure in carrying out the spirit of the Sixth Plenary Session of the 11th Party Central Committee, in reinforcing and improving our ideological and political education, and in educating our youths and children with the Marxist world view and communist morality on the educational front. As soon as the new school year gets started, we must immediately grasp closely and grasp well the task of implementing the Student Regulations.

In the activity of selecting excellent teachers at this time, even though only a small number of comrades were given the honor of being designated "excellent people's teachers" and appraised as advanced teachers, they are the common honor and pride of the educational workers in the municipality's middle and elementary schools as a whole. The party and the government entrust their earnest hopes to every teacher. The training of a generation of new people requires hundreds and thousands of "excellent people's teachers." Prompted by the activity of recommendation and selection at this time, may more "excellent people's teachers" surge forth on the educational front, so that they will vie with one another like a hundred flowers in the socialist educational garden and make even greater contributions to the construction of the four modernizations.

THREE COUNTIES IN ZHEJIANG PROVINCE REPORT POPULATION PROJECTIONS

Beijing RENKOU YANJIU [POPULATION RESEARCH] in Chinese No 3, 1981 pp 32-37

[Article by Zhuang Bingjin [8369 3521 3866] and Huang Xinmei [7806 9515 2812] of the Zhejiang Family Planning Office: "Projection of Population of Three Counties in Zhejiang Province"]

[Text] This paper analyzes the population of the three counties of Yuyao, Jiangshan and Huangyan on the basis of population figures by age and the death figures by age from the end of 1978. On the basis of these data we project the developmental trends in population for the next 20 to 60 years, and study the changes in composition of the population, and the influences this exerts to provide information for drafting a rational population plan.

Population Situation at the End of 1978

The total population of the three counties was 2,314,566; 1,194,730 males and 1,119,836 females.

1. Age Composition: Average age was 27.5 for males and 28 for females. Median age was 23.2 for both males and females.

Those below the age of 30 (0-29) made up 62.55 percent of the total population. The percentage of young people and children (0-14) was 33.2 percent and the percentage of the elderly (over 65) was 5.7 percent.

According to the generally accepted criterion adopted internationally for characterizing age composition, the age composition of these three counties is of the mature type. Since half of the population was under 23.2 years of age, the population under 30 was large and the percentage of the elderly was low, there was an inclination toward youth.

2. The percentage of those who had to be supported was 63.7. Young people and children were 54.4 percent of this and the elderly, 9.3 percent.

Of the working age population (15-64), the young working population (15-44) made up 74.66 percent and the elderly working population (45-64) made up 25.34 percent, about the 1935 world average.

3. Births and deaths: The proportion of women of child-bearing age in the population was rather high, women of child-bearing age of 15-49 made up 24.16 percent of the total population and women of child-bearing age of 20-39 made up 14.56 percent of the total population. The population reproduction base was high.

In 1978 in these three counties the birth rate was 1.539 percent, the death rate was .591 percent, and the natural growth rate was .948 percent (1.107 percent) for the whole county as a whole. The average age of death was 55 for males and 56.3 for females. Average life expectancy was 68.94 for males and 71.94 for females. The general childbirth rate was 6.172 percent. Materials are lacking on the childbirth rate by age. But if we take the childbirth rate by age for the suburban counties of Shanghai and Beijing and divide the number of people born among the groups of women of childbearing age and, making several assumptions, choose the highest, the total childbirth rate was 1.86.

4. Composition by sex: There were 51.6 percent males and 48.4 percent females, basically the same as the country as a whole. Divided by age groups they were as follows in the table below.

Table 1.

Age Group	Percentage of Females	Age Group	Percentage of Females
0	47.1	15-19	48.62
1	47.9	20-24	49.19
2	48.0	25-29	49.26
3	48.6	30-34	47.4
4	48.0	35-39	45.1
5-9	48.46	40-44	45.5
10-14	48.10	65-69	51.1

The proportion of females in the 0, 30-34, 35-39 and 40-44 age groups tended to be low. The tendency to be low in these last three age groups is because these persons were born in the old society and at that time, in Zhejiang rural areas, the idea of "favoring males and slighting females" was very prevalent and there was the practice of female infanticide and at the same time there was not much concern for the maturing of girls, so the death rate was rather high. But the 0 age group also is inclined to be low and should attract our attention, since this reflects the reoccurrence in recent years in some places of abandoning and killing infants, for the most part girls, we must further investigate the causes.

5. Age pyramid: To reflect the age composition of these three counties graphically, and observe the changes in birth rate and death rate in the age groups and the age base of the existing masses of child-bearing age which will directly influence the future population reproduction, we have drawn a population age pyramid. (See Figure 1)

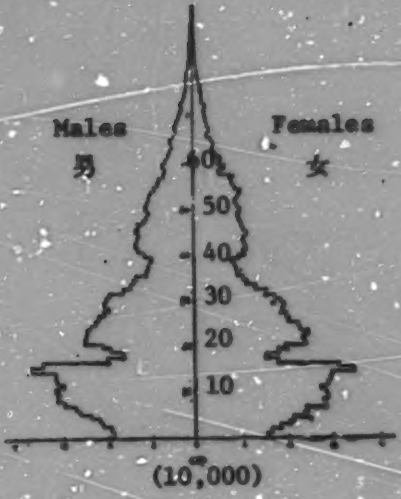

Figure 1

This age pyramid has three very clear contractions:

1. There is a contraction in the 36-40 age group;
2. There is a contraction in the 17-20 age group;
3. Before 1971 the pyramid shape was inverted, but since 1972 it has gradually contracted every year.

This contraction in the base of the age pyramid fully reflects the conscientious implementation of the party's population policy in Zhejiang in the 1970's and is an evident result of the family planning work launched. Since 1971 Zhejiang has strengthened leadership of family planning work at all levels, formulated and implemented a population plan to gradually lower the birth rate. The natural rate of population growth in these three counties in 1971 was 2.234 percent, in 1978 this had dropped to .948 percent, a 1.286 percent drop in 7 years' time. Although the economic and educational level of China's rural areas is rather backward, if the superiority of the socialist system can be fully developed, and a correct population policy carried out, population growth can be brought under control in a very short time. This time is not only much shorter than many economically underdeveloped nations, but also may be faster than the economically developed nations.

Population growth is not only influenced directly by the social system and population policy, but also is influenced by many other factors. The first contraction in the population age pyramid is due to the invasion of imperialist Japan from 1941 to 1945. China's rural areas suffered the destruction of war, the lives of the people were even harder and thus there is an evident decline in the birth rate and a sharp increase in the death rate. The second contraction in the population age pyramid came in the period from 1958 to 1961, first, because of the failure of the economic policy of the "Great Leap Forward"; second, serious natural disasters caused severe damage to national construction, and the people's lives were very difficult leading to a clear drop in the birth rate. This lesson was very painful.

Forecast of Population Growth Trends for the Next 20 Years

Not long ago, the party Central Committee and the State Council stated: We should widely promote the policy of one child per couple and strive to keep China's total population to under 1.2 billion by the end of this century. To realize this aim, we should formulate short-term and long-term population plans consonant with the actual situation in the local areas. In addition, we should forecast as accurately as possible the trends in population growth in the future, the changes in population age composition and the various influences which this will produce. For this reason, we have compared several population planning proposals and selected the best of them.

1. Drawing up a population forecasting model: The new marriage law went into effect at the beginning of this year, and comparing the marriage age of young men and women with the late marriage age a few years ago, we proposed five age groups for the urban areas and three age groups for the rural areas. But because of the propaganda and education on late marriage and late childbearing which has gone on for nearly 10 years, and the influence of other factors, some young people will postpone marriage and childbearing. Thus we designed a marriageable age ratio for young women and a proportional constant of age of childbearing as follows:

Age of marriage ratios: 20 percent at 20 years of age, 20 percent at 21 years of age, 30 percent at 22 years of age, 20 percent at 23 years of age, 10 percent at 24 years of age. First birth after marriage: 40 percent within 1st year of marriage, 50 percent in 2d year of marriage, 5 percent in 3d year of marriage, no births (including those not married) 5 percent. Second birth: more than 5 years later. No third child.

Forecast I: 1981-85 two children per couple, total childbearing rate is 1.935, 1986-2000, 50 percent of the couples have had one child, 50 percent have had two children, for a total childbirth rate of 1.46.

Forecast II: 1981-90 50 percent of the couples have two children, 50 percent of the couples have only one child, overall child-bearing rate is 1.46. 1991-2000 80 percent of the couples have only one child, 20 percent have two children and the overall childbirth rate is 1.184.

Forecast III: 1981-2000 each couple has two children, overall childbirth rate is 1.935.

2. Method of calculation (disregarding mechanical population movement factors)

(a) Calculate the change in women of child-bearing age in each age group. On the basis of the death rate of the 1978 age groups, we calculated the survival rate for women in each age group, then calculated the number of women in each age group for each year over the next 20 years, then predicted the number of births each year from 1981-2000 according to forecasts I, II and III.

(b) According to the death rates by age group for 1978, we calculated the number of deaths for each year and the overall number of deaths for 1981-2000.

(c) We predicted the population by age group at the end of the year 2000 according to the three forecasts.

(d) On the basis of the numbers of births and the numbers of deaths derived, we calculated the birth rate, death rate, natural population increase and total population year by year.

Table 2. 1981-2000 Yearly Birth Rates, Death Rates, and Natural Growth Rates for Forecasts I, II, and III

Year	Forecast I			Forecast II			Forecast III		
	Birth Rate	Death Rate	Natural Growth Rate	Birth Rate	Death Rate	Natural Growth Rate	Birth Rate	Death Rate	Natural Growth Rate
1981	16.80	6.24	10.56	12.44	6.14	6.30	16.80	6.24	10.56
1982	16.81	6.38	10.43	12.42	6.26	6.16	16.81	6.38	10.43
1983	17.68	6.52	11.16	13.29	6.41	6.88	17.68	6.52	11.16
1984	18.72	6.69	12.03	14.52	6.55	7.97	18.72	6.69	12.03
1985	19.57	6.79	12.78	15.59	6.70	8.89	19.57	6.79	12.78
1986	15.74	6.83	8.91	16.07	6.86	9.21	19.64	6.91	12.73
1987	15.27	6.92	8.35	15.59	6.99	8.60	18.77	7.01	11.76
1988	14.72	7.01	7.71	15.02	7.10	7.92	18.10	7.10	11.00
1989	14.77	7.10	7.67	15.07	7.21	7.86	18.46	7.19	11.27
1990	15.18	7.21	7.97	15.38	7.34	8.04	19.38	7.30	12.08
1991	15.63	7.43	8.20	12.86	7.42	5.44	20.30	7.42	12.88
1992	15.74	7.46	8.28	12.82	7.53	5.29	20.59	7.52	13.07
1993	15.33	7.51	7.82	12.48	7.58	4.90	20.03	7.55	12.48
1994	14.60	7.64	6.96	11.88	7.73	4.15	19.03	7.65	11.38
1995	13.81	7.69	6.12	11.19	7.79	3.40	18.05	7.65	10.40
1996	13.10	7.81	5.29	10.54	7.94	2.60	17.23	7.74	9.49
1997	12.39	7.93	4.46	9.85	8.07	1.78	16.45	7.82	8.63
1998	11.61	8.02	3.59	9.11	8.19	0.92	15.58	7.88	7.70
1999	10.93	8.07	2.86	3.50	8.26	0.24	14.73	7.89	6.84
2000	10.24	8.23	2.01	7.95	8.46	-0.51	13.81	7.98	5.83

Table 3. Comparison of Yearly Natural Growth Rates for Forecasts I, II, III

Forecast	Yearly Natural Growth Rate (per thousand)					2000年末 (1) 总人口数	为1978年末 (2) 人口数的%
	1981—85	1986—90	1991—95	1996—2000	1981—2000		
Ⅰ	9.34	8.15	5.85	3.55	7.83	274.77万	118.73
Ⅱ	6.00	8.35	4.65	0.85	5.66	262.00万	113.21
Ⅲ	9.34	11.94	12.12	7.63	10.64	292.13万	126.23

Key:
(1) Total population by end of year 2000 (in tens of thousands)
(2) Percentage of population at end of 1978

3. Comparison of the results of the three forecasts. From Tables 2 and 3 we can see the following common ground:

(a) Overall population figure increased over the 20-year period.

(b) Death rate rose year by year within the 20-year period.

(c) In the decade from 1981-90, the birth rate rose year by year.

Differences:

(a) The scale of population increase was different. (See Figure 2). At the end of 2000:

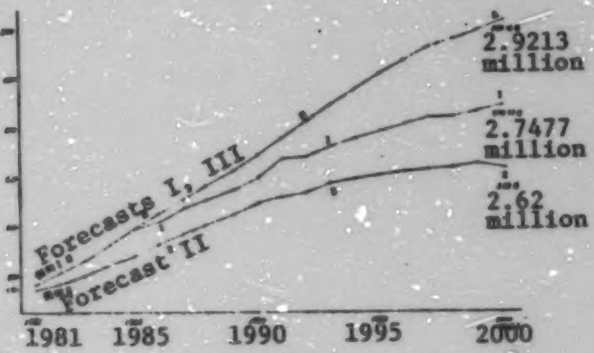

Figure 2

Forecast I is 118.73 percent of the end of 1978, an average annual increase of 7.83 percent; forecast II is 113.21 percent of the end of 1978, an average annual increase of 5.66 percent; forecast III is 126.23 percent of the end of 1978, an average annual increase of 10.64 percent.

(b) The number of people born is different (see Figure 3). In 20 years, forecast III has 2 birth peaks, right up until 2000, the number of persons born is still more than the number born in 1981; for forecast I, in the first 5 years and the third 5 years there are small birth peaks in each period, and then a decrease year by year; in forecast II, though there is an increase in births in 1983, it is small scale and after 1991 there is a decrease year by year.

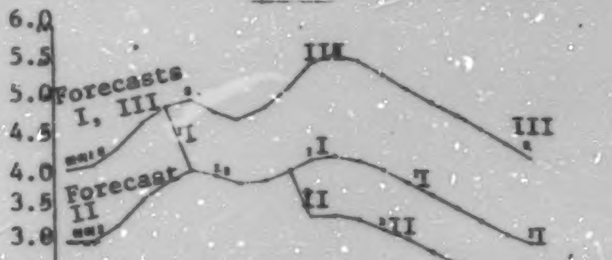

Figure 3

From the age pyramid it is evident (see Figure 4), that from the standpoint of the demand to control population, the contractions in the base of the pyramid for forecast II are ideal, the base for forecast I is stable and the base for forecast III is too broad and is even broader 10 years later and thus is not ideal.

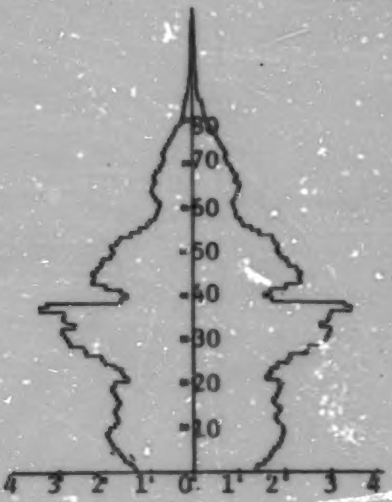

Figure 4.1 Forecast I
Population Age Pyramid
for End of Year 2000
(males and females not
separated)

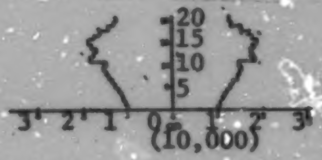

Figure 4.2 Forecast II
Total Birth Rate 1981-1990
= 1.46
Total Birth Rate 1991-2000
= 1.184

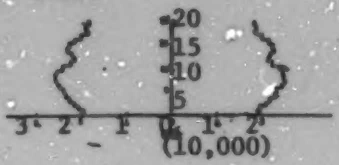

Figure 4.3 Forecast III
Total Birth Rate 1981-2000 =
1.935

From Table 4 it is evident:

(a) No matter which of the indicators is used, the age composition of the population at the end of 2000 for all three schemes belongs to the elderly type. For the 20-year period the population grows older daily.

(b) The load percentage is lowered, with the load percentage at the end of 2000 being lower than the level at the end of 1978.

Summarizing the above, universally advocating that couples have only one child had very important significance for regulating new peaks in childbirth and further controlling population increase. The question is, what level should the birth rate achieve in the next 20 years and how long should it be maintained.

The Best Choice of the Three Forecasts

Formulating plans to control population growth should both proceed from the actual situation of China which has a population of 1 billion, has 800 million peasants, little arable land and a poor foundation to start with and also should

Table 4. Population Comparison by End of 2000 and Comparison With End of 1978 According to Forecasts I, II and III

	End of 1978	Forecast I		Forecast II		Forecast III	
		End of 2000	Comparison with 1978	End of 2000	Comparison with 1978	End of 2000	Comparison with 1978
Average age	27.76岁	37.48岁	+ 9.72岁	38.70岁	+10.94岁	35.80岁	+8.04岁
Median age	23.19岁	34.07岁	+10.88岁	35.03岁	+11.84岁	32.57岁	+9.38岁
Percent of population of youths and elderly	38.9%	28.05%	-10.85%	26.49%	-12.41%	32.30%	-6.60%
" " " youths	33.2%	19.02%	-14.18%	17.02%	-16.18%	23.83%	-9.37%
" " " elderly	5.7%	9.03%	+ 3.33%	9.47%	+ 3.77%	8.49%	+2.79%
Support [non-working] coefficient	63.7%	38.98%	-24.72%	36.03%	-27.67%	47.76%	-15.94%
Percent of youths	54.4%	26.43%	-27.97%	23.15%	-31.25%	35.21%	-19.19%
Percent of elderly	9.3%	12.55%	+ 3.25%	12.88%	+ 3.58%	12.55%	+ 3.25%
Population of working age 15-44 years	74.66%	70.40%	- 4.26%	69.35%	- 5.31%	70.40%	- 4.26%
45-64 years	25.34%	29.60%	+ 4.26%	30.65%	+ 5.31%	29.60%	+ 4.26%
Percent of entire population under 30 years of age	62.55%	41.45%	-21.10%	38.06%	-24.49%	44.93%	-17.62%

consider the fact that China's rural areas are economically and educationally backward and that development is very uneven, and must consider fully the degree to which the broad mass of peasants can accept propaganda and education; furthermore, we should also strive to stabilize the age composition of the population to avoid or reduce the social problems which this produces. This was our basic point of departure in choosing the best of the three proposals above.

Forecast III could break through the goal proposed by the nation to control population growth and thus is unacceptable. Forecasts I and II: which is the better? We chose forecast I for these reasons:

1. It could realize the goal proposed by the nation to control population growth. After 20 years the total population of these three counties would increase by 13.2 percent. Extrapolating according to these growth ratios, at the end of 2000 the total population of the entire country would not exceed 1.2 billion.

2. At the end of 2000, the population of working age and the percentage that had to be supported would not create an excessive burden on society, and could be accepted. The population of working age would be 71.95 percent of the total population. The percentage of those who need support would be 24.72 percent lower than in 1978. Of this, the percentage of the young people and children in need of support would be 28 percent lower than in 1978, and the percentage

of elderly in need of support would only increase 3.25 percent over 1978. The social and family burden would be much lower than in 1978.

3. Changes in the base of the population age pyramid would be relatively stable. To make further comparisons, we have designed several scenarios which calculate roughly the population growth trends from 2001 to 2040. These are also based on the population at the end of 2000 calculated according to forecasts I and II. Hypothesizing an annual death rate maintained at the figure for the end of 2000, and using the "simple calculation method" (females making up 48 percent of those born, women of 22 having 1 child and women of 26 having 2 children) we came up with 4 models: viz., scenario a for forecast I, in the period 2001-2040 one-half of the couples would continue to have 1 child; scenario b for forecast I, between 2001 and 2040, 80 percent of the couples would have 1 child; scenario a for forecast II, in 2001-2040, 80 percent of the couples would have 1 child; scenario b for forecast II, in 2001-2007, 90 percent of the couples would have 1 child, in 2008-2040, 20 percent of the couples would have only 1 child. The results of the forecasts are depicted in Figure 5.1-5.4.

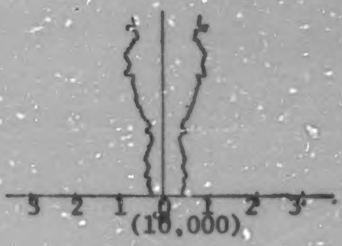

Figure 5.3
Forecast II a

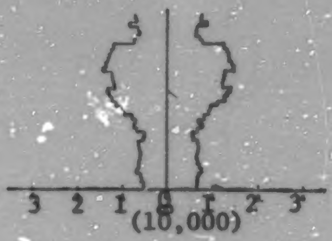

Figure 5.4
Forecast II b

The situation in scenario a for forecast I is: the total population of these three counties would continue to grow in 2001-2020, and at the end of 2020 the total population would reach 2,814,600, a 21.6 percent increase over 1978. This is a 20-year increase of 2.4 percent or an average growth rate of 1.2 percent per year. Projecting the national population figure on the basis of this growth rate, it would not exceed 1.2 billion. Beginning in 2020, the natural growth rate of the population would be negative, and the total population in 2040 would be 2,708,600, 117.05 percent of that at the end of 1978. The total population would have decreased 3.76 percent over the 20-year period, or an annual natural growth rate of -.19 percent. From this it can be seen that although there would be a slight increase in the total population resulting from the implementation of this plan, and it would reach a period of stasis and slow down slightly, the increase in the total population would be very small and the trend toward the population becoming older would be mitigated.

4. Through propaganda and education it is rather easy to reach most of the masses. In the early 1960's the slogan "one is not few, two is just right, three is too many" was proposed. After 18 years of effort these three counties have basically satisfied this requirement. If it had not been for the 10 years of chaos of the "Great Cultural Revolution" this requirement would have been met in an even shorter time. It is even more difficult to advocate that a couple have only one child. We plan to use a 20-year period to mobilize half the couples to want to have only one child. This is more realistic and can be consolidated. To prevent the population from further aging, at some time we will have to readjust consciously to the method of each couple having 2.2 children, to achieve a zero population growth. There is no doubt of this. On the basis of forecast I we have gradually turned in this direction. The resistance will be low and the masses will be happy to accept it.

According to scenario a of forecast II, the total population in 2020 would reach 2,581,600 million, which is 233,000 fewer than the population according to scenario a of forecast I. But the aging trend in the population is more severe. The base of the age pyramid for 2040 is too narrow, and there is an inverted triangle, which will create an excessive burden on society. In actual work it may not be possible to achieve this goal.

From this preliminary analysis forecasting population growth trends, we recognize that starting now to spread the idea of one couple having only one child, and gradually working up to half the couples having only one child and spreading the idea of not having the third child, and on the basis of this requirement formulating and implementing population plans is very much in line with the actual situation. What the objective outcome of this will be still awaits further examination in practice.

BIRTH RATE IN JIANGSU PROVINCE GRADUALLY DROPS

Beijing RENMIN RIBAO in Chinese 8 Sep 81 p 3

[Article: "Gradual Reduction of Birth Rate in Jiangsu Province; 11 Year Cumulative Number of 6.66 Million Births"]

[Text] Jiangsu Province has launched family planning work broadly and deeply and the 1980 birth rate for the province dropped to 1.215 percent, with the rate of 1-child families increasing to over 68 percent. Comparing this year with 1970 when family planning was started, 880,000 fewer people were born and the 11-year cumulative total is 6.66 million fewer births.

In directing family planning work, leadership at all levels in Jiangsu Province has upheld throughout the "three relys," i.e., rely on ideological and political work and maintain persuasive education; rely on implementing feasible policies; rely on spreading scientific knowledge and technical measures. Among the "three" relys," attention was paid to developing the role of party and league members as models. When formulating plans, many districts paid attention to guiding the cadres and masses to understand the important significance of family planning in relation of population growth to the national economy and other social questions. In actual work they stressed the five areas of ideology, organization, policy, planning and measures. Thus, since the 1970's, the birth rate has dropped steadily without any large increases or decreases

In recent years, along with the promotion of systems of production responsibility in the rural areas, the province has summarized and promoted in a timely fashion the experience of the system of responsibility of cadres on station at the three levels of commune, brigade and production brigade in Taicang and Dongtai Counties and demanded that family planning and agricultural sideline enterprise and industrial production be deployed, overseen, summarized and rewarded and punished together, and further mobilized the work initiative of cadres to "emphasize the two productions together."

On the foundation of present achievements, Jiangsu Province has already set targets for planned population growth this century, i.e., to lower the average annual natural population growth to .78 percent, so that the province's population will be controlled within 70 million. This is an enormous task. The broad cadres are resolved to continue, according to the spirit of the norms set by the party Central Committee and the State Council, to study the situation constantly, resolve new questions, and strive to do a better job of family planning work.

LITERARY REPORTAGE MUST BE TIME-SENSITIVE, NEWSWORTHY

Shanghai WEN HUI BAO in Chinese 8 Sep 81 p 3

[Article by Zhang Deming [1728 1795 2429] and Zhang Xiaolin [1728 2556 2651]: "Literary Reportage Must Strengthen Time-Sensitiveness"]

[Text] Please look at these figures: the 63 newspapers and 81 literary and art quarterlies in the country published a total of 1,409 articles of literary reportage in the 4 years from 1977 to 1980—an average of one article each day. Not long ago, the Writers Association of China entrusted RENMIN WENXUE [PEOPLE'S LITERATURE] and WENYI BAO [LITERARY AND ART JOURNAL] to sponsor the first literary reportage appraisal and award activity in our history; the 30 superior works of those 4 years were selected....

What do these figures illustrate? They illustrate the unprecendented prosperity of literary reportage in the past few years as it achieved results that merit our attention!

Development is of course very pleasing, but there is also a blemish in an otherwise perfect outcome: in the process of glancing over these hundreds of works, we clearly feel that while their literary worthiness is being continually strengthened, their newsworthiness is being weakened to a certain extent.

In the case of some works, they do not solicit themes from our present realistic life by paying attention at all times to those great matters relating to our party, our state, and the destiny and future of our people, but instead they avoid realities and write about things that took place many years and generations in the past.

In the case of some works, in order to placate the psychological demand of some of the readers, they only proceed from commercial worthiness, only pay attention to interest worthiness and knowledge worthiness, and do not look into the fighting value of a theme (we must be aware that literary reportage is not the same as short literary and art pieces or anecdotes about famous people).

In the case of some works, their themes duplicate one another and thereby present the scene of "a swarm of bees": someone once wrote about Chen Jingren [7115 2529 3387], and so for a while everybody else also proceeded to write about Chen Jingren, thereby repeating matters with which people were already familiar.

In the case of some works, they choose to snuggle up to the style of biographical literature; whether necessary or not, they run to unmanageable lengths by covering the whole lifespan of a person once they get on with his story. On the other hand, we see fewer and fewer people presenting the fast-moving, short, succinct features and sketches which actually belong to the realm of literary reportage.

All of the foregoing serves in different degrees to reduce the newsworthiness of literary reportage.

We are not necessarily opposed to having literary reportage strengthen its literary worthiness, and we think this is an unavoidable trend in the development of literary reportage. But if lieterary reportage does not at the same time pay attention to its newsworthiness, its fighting nature is bound to become greatly affected!

Literary reportage is literature with newsworthiness; it has always been known to be good at quickly and directly reflecting realistic life; it takes as its social duty the recording of the storms of the time and the footsteps of historical progress; it enjoys the appellation "the light cavalry of literature." Gorkiy said: "A feature story has its own characteristics. It may be said to be a rapid-firing rifle for short-distance fighting, as opposed to a long novel--a cannon suitable for long-distance fighting." It always steps ahead of other literary styles by telling the vast ranks of readers the sensational events that have just transpired in our life and by answering the questions that hundreds of millions of people are eager to understand. Newsworthiness is one of the main characteristics of literary reportage and a mark which sets it apart from other literary styles; with newsworthiness removed, there would be no "reportage" to speak of, and that would be equivalent to removing the vital element of literary reportage.

Our literary reportage has a glorious tradition of quickly reflecting realistic life. In the 1930's, Xia Yan's [1115 5888] "Baoshengong" ["Indentured Laborers"] and Song Zhidi's [1345 0037 4104] "Yijiusanliunian Chun Zhai Taiyuan" ["In Taiyuan in the Spring of 1936"] pierced the darkness of the old world like a bolt of lightning, thereby lighting up the people's eyes and inflaming the conflagration of hatred against the old system. During the period of the anti-Japanese war and liberation war, the works of Liu Baiyu [0491 4101 5038] and Hua Shan [5478 1472] rushed back and forth at the enemy's rear, at the front, and at the revolutionary bases like a contingent of dynamic light cavalry which inspired the fighting will and confidence in victory on the part of the people of the whole country. During the campaign to resist to America and aid Korea, Wei Wei's [7614 1550] "Shuishi Zui Keaidi Ren" ["Who Are the Most Lovable People?"] timely penetrated the smoke of the fires of war to answer the question with which the people of the motherland were most concrened, authentically conveying the common feelings and voices of the people of the entire country....

At present, our country has entered a new historical era. Since the Third Plenary Session of the 11th Party Central Committee, profound changes and transformations have been taking place, whether in the realms of politics, economics, ideology, and culture or on fronts such as factories, the countryside, military units, and schools. This requires our writers to take over the fighting tradition of literary reportage and reflect in a timely fashion such changes and transformations in order to stimulate and encourage the populace and inspire the people to make better progress. In these past few years, there have already appeared such good works as "Reliu" ["The Hot Current"], "Lijing Tushi ["Striving for Prosperity With Vigor"], etc., but their number remains far too small. Many works still give one the impression that they are distant, repetitious, commercial, and biographic, thus turning what should have been "a light cavalry" into "a heavy cavalry."

In order to change this situation, our writers should reinforce their sense of responsibility for the era and really join this great transformation in order to breathe and share the destiny together with the people and to keep in rhythm with the pulse of the era. They should at all times pay attention to the new personalities, new ideas, new contradictions, and new problems emerging in our life and at all times make it a point to pick the newly blossoming flowers in our life. The path of literary reportage can and should be greatly expanded so as to accommodate not only personality-oriented literary reportage, which reflects new personalities, but also event-related literary reportage, which embodies the spirit of the era--and even that literary reportage which concentrates on the study of the new contradictions and new problems emerging in the course of advances in our lives. Once literary reportage really puts in a position of primary importance those questions with which the masses of the people are most concerned, its relationship with the masses of the people will become closer and closer and the response it derives from them will likewise become more and more intense. Then, what it gains will not be limited to readers of a part of the social strata but will have the attention of far more people in the whole society.

In selecting themes, a writer must be good at uncovering them in his own life and must do his best to avoid duplicating those of others. The new life is rushing forward a thousand li each day; new personalities and new things emerge in droves; and new problems continue to appear. As long as we are willing to become attentive observers, equipped with the sensitivity of the era, fresh and valuable themes are never hard to find.

WEAPONS OF LITERARY, ART CRITICISM CANNOT BE DISCARDED

Tianjin TIANJIN RIBAO in Chinese 12 Sep 81 p 3

[Article by Wu Ruo [0702 3499]: "Weapons of Literary and Art Criticism Must Not Be Discarded"]

[Text] Society progresses amid contradictions. The contradiction between correct ideas and incorrect ideas is a phenomenon which exists objectively. The only correct way to solve it is to develop criticism and self-criticism. This is the case with respect to any front; the literary and art front is of course no exception. Literary and artistic undertakings are the "cogs and screws" of the vast machinery of the entire construction of socialist modernization. They shoulder the sacred mission of building an advanced spiritual civilization in the new era of history, and thereby they promote the building of an advanced material civilization. The masses of people honor writers and artists by calling them "engineers of men's souls" or "designers of spiritual civilization." This indicates the high esteem in which they hold literary and artistic undertakings and naturally brings forth a sense of honor in writers and artists. But it goes without saying that this also accentuates their sense of responsibility. As a social ideology, literature and art not only cannot avoid the ideological contradictions in society but often reflect them from different angles in a timely, sensitive manner, and thereby play a positive or negative role with respect to social progress. In the case of such noble, solemn social undertakings, whose influence, as Lu Xun said, may "last forever," they cannot help but undergo social tests. Literary and art criticism is precisely one of the most effective means for carrying out such social tests. The correct development of literary and art criticism not only can rectify the direction of development of literature and art themselves but also can promote the progress of the entire social ideology. Russia's revolutionary democratic literary and art critics, as represented by Byerinskiy, Chernyshevskiy, and Duboluoliubofu [phonetic], engendered a major influence over the development of Russia's advanced literature, painting, and music at the time, and also became the banners of the advanced social trends of the time. This is a fact with which everyone is acquainted.

Since the Third Plenary Session of the 11th Party Central Committee, we have changed the guiding ideology "with class struggle as the key link"; the focus of work of the whole party and the whole country has made a major, strategic shift; and the "leftist" guiding ideology has systematically been subject to cleansing. Under the influence of this fundamental change, the situation of "ten thousand horses standing mute being after all rather lamentable" in literary and art circles in the past was swept away, and a scene of colorful flowers vying with one another presented itself. During the 3 years of this great turning period, the results achieved on the literary and art front have been very conspicuous. This must be fully affirmed. But during this historical turning period, the entire ideological and cultural front (including the literary and art front) could not help but arouse unprecedented, drastic changes, so that the people's thinking would become enlivened and a hundred schools would contend. Under such circumstances, while the positive and healthy main current rushed forward, it could hardly avoid carrying with it mud and sand, thereby causing the dragons to mix company with fish. As a large number of fine works fully reflecting the spirit of the day and inspiring the populace surged forth, there appeared at the same time certain bad works which proved listless, demoralized, low-key, and even unhealthy and in violation of the four basic principles; this was hardly strange. But more important, the people must not look at this trend without seeing it, as if nothing had happened. They should advance positive assistance and necessary struggle through criticism in order to give scope to their due roles.

Yet with respect to the development of such literary and art criticism, there exist among the people certain incorrect understandings. Some comrades are in a soft, feeble state with respect to the question of such a trend in literary and art circles; some comrades have adhered to criticism but are regarded as "petrified in their thinking"; some comrades exhibit an attitude similar to those who pale upon hearing talk about a tiger and hence look at it as a fearsome path to follow. And still other comrades immediately think "the stick is being swung" when they hear people mention that criticism is to be launched against certain bad works and unwholesome trends. They even think that this would result in "choking off any lease on life." This is very wrong. Naturally, the fact that such phenomena have come to pass has its social and historical causes, but the main ones among them are the ill consequences left over by the mechanical and excessive intraparty struggles and the social, ideological struggles during the 10 years of turmoil under the influence of the leftist trend. The excessively radical and extremist devious trend has developed into just exactly the opposite and has been replaced by another overcorrective, new devious trend which is proving to be extremist in the other direction. To put it directly, this is the practice of unrestrictedly raising questions to the level of principle and of resorting to simplistic, crude, and excessive struggle giving way to [illegible] liberal trend according to which you are good and I am also good, so we had better not say anything about each other. As to the harm of the former [trend], everyone has already had profound experience. But, can the latter be all correct and beneficial? Of course not. Our current task is precisely to oppose both the "left" and the right through guidance, and thereby gradually to return them to the correct point. Only by establishing a normal habit of criticism and self-criticism can our undertakings make progress with broad strides.

Literary and art criticism is an important method for solving contradictions among the people in the activities of artistic practice on the literary and art front. Through literary and art criticism, we should timely overcome various erroneous trends and strengthen unity, adhering to the foundation of the four basic principles. With respect to the kinds of trends in literature and art which tend to deviate from the socialist course, deviate from the party's leadership, and resort to bourgeois liberalization, in particular, we must carry out solemn, correct criticism and the necessary, appropriate struggle. But this kind of criticism and struggle definitely does not mean swinging the stick." Correct criticism and swinging the

the stick are two things that are entirely different in nature. Correct criticism is a social test indispensable to the promotion of literary and artistic development; it is a scientific appraisal, whereas "swinging the stick" means unrestrictedly raising matters to the level of principle and so-called "criticism" of a simplistic, crude and subjectivist nature. As for "choking off any lease on life," that depends on which "lease on life" we are talking about. If it is the kind of "lease on life" in the wide world of serving the people and serving socialism, then no obstacle will be tolerated, let alone any "choking off." But, in the case of a "lease of life" with respect to bourgeois liberalization, we are sorry, but we really mean to suggest a halt (if some wish to put this in terms of "choking off," it will be all right with us, too), because otherwise we would be violating the people's fundamental interests.

Within the literary and art front, literary and art criticism is entirely a comradely kind of criticism. It is solemn and serious and is meant to help those who are criticized, because the goal for which they struggle is entirely consistent. What Mr Lu Xun and Comrade Qu Qiubai established between them was precisely this kind of relationship between revolutionary friends who gave forthright admonition to each other; their "correspondence on translation" was nothing other than model literature on criticism and self-criticism. It was precisely in the course of such comradely assistance that they regarded each other as "bosom friends" and "took each into the other's confidence."

Today, when we launch criticism and self-criticism on the literary and art front under new historical conditions, we must continue to give scope to the correct traditional workstyle which the party has practiced for a long time with good results and take constant warning from that whole simplistic, crude set of "leftist" approaches which resulted in extremely ill consequences and which incurred universal repudiation by the people.

Insofar as critics are concerned, the important thing is to place emphasis on the fundamental interests of the socialist motherland and the hundreds of millions of people, to take as the norm the "four basic principles" which reflect such fundamental interests, and to refrain from keeping silent and coexisting peacefully with certain erroneous ideological trends. A communist does not hide his own point of view, nor does a revolutionary conceal his point of view. If one sees mistakes but refrains from carrying out criticism against them in a forthright manner, adopting instead a tolerant and yielding attitude, then not only does he himself fail to fulfill his duties, rendering no benefit to the people's undertakings, but insofar as the comrade making the mistakes in concerned, he also "means to love him but actually does him harm." Historical experience proves that such a metaphysical approach, which only sings other people's praises but refrains from grasping criticism, is bound to bring about serious consequences. It is equally important, on the other hand, to remember that this means assisting one's own comrades with a view to helping them cast off the burdens on their backs so that they can march forward in light gear and keep pace with the army of construction of modernization in heroic, broad strides, and it is not meant for anything else. Comrade Liu Shaoqi once siad that in treating comrades who have made mistakes, one "must have the heart of an old man." This means that we must sincerely and patiently criticize them with the intention of helping them in the manner of seeking truth from facts, and not like a hot-blooded young lad who rushes into things.

This fundamental attitude is also why we ordinarily suggest that "we must have a desire for unity." It makes a great difference whether or not we have such a desire for unity as a premise in launching our criticism and self-criticism; in fact, it determines whether or not the criticism will be fruitful.

As for the ones being subjected to criticism, the key lies in their also taking the fundamental interests of the socialist motherland and hundreds of millions of the people as their point of departure and the "four basic principles" as the norm for their own conduct. In order to emancipate our thinking and make our creations prosper, we must break down certain conventions in our thinking. But, just as Comrade Zhou Enlai pointed out, this fundamental great convention still cannot be discarded. To a serious and prudent writer or artist, if the result of social practice of his own works is not very good, he needs to humbly listen to criticism from various quarters and absorb the necessary lessons from them. "Don't blame the speaker but take his words as a warning; correct mistakes if you have committed them and guard against them if you haven't. This saying is certainly applicable here. Of course, the power of countercriticism is also allowed. But if a person wishes really to absorb lessons, he should all the more conduct self-criticism. Whoever is good at doing so will never become backward. If the result of practice proves that one's works are not very good, yet one still thinks he is right and refuses to carry out self-criticism, is that not like what Comrade Mao Zedong pointed out--"a physician who cares only about providing a prescription but pays no attention to how many patients may die from taking it"?

When the critics and the criticized both adopt a positive attitude, criticism and self-criticism can be launched smoothly. The good workstyle fostered by the old generation of revolutionaries through long periods of struggle may then be taken over by us and passed on continually.

Therefore, insofar as their original meaning and the limits they have set are concerned, criticism and self-criticism on the literary and art front not only should not be things of which we are frightened but should even be things "from which we can hardly afford to depart for a single moment" insofar as the development of our literary and art movement is concerned. The weapons of literary and art criticism cannot be discarded.

In the final analysis, so-called literary and art criticism is nothing but a discussion of the success or failure, an appraisal of the good or bad points, and a statement of the pertinent or misdirected efforts of the activities of practice in literary and art creations and the execution of their scientific analysis--the summing up of their experience for the benefit of re-creation. Self-criticism in literature and art is nothing but a self-conducted summation. All this is in accord with the dialectic laws of the history of man's perception. Writers and artists, armed with the advanced ideology of the socialist era, should consciously master such laws and convert them into people's habitual behavior so as to promote the further development of our literary and artistic undertakings.

TIANJIN PLANT PRAISED FOR PROPER USE OF INTELLECTUALS

Tianjin TIANJIN RIBAO in Chinese 7 Sep 81 p 1

[Commentary by special commentator: "The Responsibility of Leaders"]

[Text] After reading the report "Place Confidence in Them, Entrust Important Responsibility to Them," one is encouraged and aroused to profound reflection.

The experience of the No 4 semiconductor apparatus plant provides us with an important pointer: how would it be called a comprehensive implementation of our policy on intellectuals? We have rectified unjust, false, and erroneous cases of litigation, arranged definite jobs for them, and improved their living conditions somewhat, and all this is of course very important. But we must not be satisfied with such measures. It is more important to determine how we can give full scope to the specialty of each intellectual, and thereby let the wisdom and talent of each of them flower and take fruit in scientific research and production. And the responsibility of leaders lies precisely in knowing and being good at using each intellectual and in mobilizing the enthusiasm and creativity of all intellectuals to the maximum by adopting methods of organization and management suited to the characteristics of intellectuals.

We should see that, since the Third Plenary Session of the 11th Party Central Committee, the Party Central Committee, in order to give full play to the role of intellectuals and develop science and technology, has formulated a series of principles and policies to gradually change the situation, whereby people look down upon science and technology and discriminate against intellectuals. Many leading cadres have paid attention to science and technology and also to giving full play to the role of technical personnel, and they have done a great deal of work. But at the same time we should see that in a considerable number of factories and enterprises, technical work remains a weak link and cannot even be placed among the leaders' important agenda items. In certain big factories, college graduates from the days prior to the 10 years of internal disturbance are found in droves, and no small number of them are also brilliant students from well-known universities; thus they may be termed to be in possession of a galaxy of talent. But the technical personnel here somehow do not feel very pleased, and they find that there is no place to apply their sinews. Those who ask for transfers are quite numerous, and both production and scientific research are greatly affected. The causes leading to such a state of affairs may be multifarious, but no doubt one important reason is the fact that leaders fail to understand them, are not good at training and using them, and even intentionally or inadvertently stifle and suppress their talent. Leaders of such units may gain some pointers from the experience of the No 4 semiconductor appratus plant.

In the early 1970's, because it was affected by "leftist" ideology, the No 4 semiconductor apparatus plant did not pay attention to science and technology, nor did it make it a point to give scope to the role of technical personnel. This resulted in a monotony in the variety of products, low quality, no sales outlets for old products, the failure of new products to be up to the standard, and the danger of approaching collapse. Today, this plant not only has achieved diversity in the variety of its products and in their good quality, but it also has turned losses into profits and dares to stand up to well-endowed big plants in the trade and to compare its own products with well-known brands. On what did it mainly rely to bring about such a tremendous change? It relied mainly on the power of science and technology, on giving full play to the role of its technical personnel. At present, while the national economy undergoes a period of readjustment, many factories and enterprises are charged with insufficient tasks, cannot even find enough things to do, and suffer from not being aware of relevant outlets. An important reason for this is that they cannot make a go of their technological capabilities, cannot increase the quantity of products that are suitable for consumption and relevant to the market, and cannot carry out a renewal or replacement of their products. Under such circumstances, an important responsibility on the part of the leaders is how to give full scope to the role of their technical personnel, make a breakthrough in technology, and open up new vistas for production.

"Place Confidence in Them, Entrust Important Responsibility to Them": this is an important experience. First there is confidence; this is the premise. If we do not take intellectuals as forces on whom socialism can rely just as we rely on workers and peasants, and if we do not trust them, then of course we will be less than willing to put them in any important position; or even if we put them there, they are actually in a powerless position or in a position where they cannot fully play their [proper] role. "Entrusting important responsibility to them" by no means suggests indiscriminately giving them some "office." Rather it suggests taking into account the characteristics and strong points of each of them and placing them in posts where they can best put their specialties to use, making it possible for their office, power, and responsibility to be closely united. It also suggests paying attention to their political progress, absorbing into the party those technical personnel who are qualified for party membership, and not stopping them at the door. Some technical personnel are both proficient in technology and equipped with organizational and leadership capabilities. Their political stand is firm, and they are young and energetic. In such cases, we should elevate them to leadership posts as soon as possible in order to give full play to their technical leadership role, and thereby gradually change the intellectual structure of the leading groups. Some technical personnel possess special skills in their trade and also are capable of achieving results. In such cases we should let them play their role at technical posts of work and not alienate them from what they are good at while using them for what they fall short of. Generally speaking, the greatest wish of specialized technical personnel is to achieve some success in the trade they are good at, and thereby to make their own contributions in the service of the people. Just as one scientist has said: Some leaders do not understand the psychology of intellectuals, thinking that implementing the policy on intellectuals means having them serve as presidents of institutes or as engineers. Actually, we merely want the leaders to create the necessary working conditions, such as guaranteeing time for scientific research, improving laboratory conditions somewhat, and providing assistants, so that we can make our contributions in the service of the state and the people. What is precious about the experience of the No 4 semiconductor apparatus plant is that the leaders there are good at training and using technical personnel according to their respective differences and in proportion to their respective competencies, so that each person can devote all his talent to his work and each kind of talent is used to the maximum, and also that technical power is really granted to technical personnel. This definitely does not imply any renunciation of leadership but merely implies that leaders should mainly strengthen their ideological leadership and mobilize the enthusiasm of technical personnel through the party's policies, and not interfere at random in specific technical work.

In order to be able to "assign tasks relevantly," it is necessary first of all to "know the person." If nothing is known at the leadership level as to what special talents the technical personnel have, what their weak points are, what they are doing, what they are thinking, what their needs and difficulties are, and so on, how can anyone talk about "assigning tasks relevently?" In order to "know the person," a leader must regularly go down among the technical personnel and mix with them and become their "confidant." Comrade Wang Naizhu [3769 0035 5511], director of the No 4 semiconductor apprratus plant and concurrently deputy secretary of the party general branch there, has been conducting himself precisely in this manner during the past 4 years and more. He always remains with the technical personnel in "going through their routine rounds," and thereby he also traverses the bottlenecks with them and shares the pleasures of triumph with them. He chats and engages in heart-to-heart talks with the technical personnel, looks after their work and their living conditions, and supports them on crucial occasions. In time, he has gradually come to understand them, to become familiar with them, and to possess a knowledge of the specialties and weak points of every one of them. The technical personnel, too, take him as their bosom friend, and when they come up with certain ideas and opinions they willingly seek him out to talk about them. This is precisely what some of our leading comrades still lack.

In order to manage our production and technical work well, our cadres must also be required to understand some technology. To understand too much, of course, would present difficulties, but it also won't do if they understand too little. Many of our old cadres have relatively high organizational and leadership talent and are willing to serve as "rear service chiefs" silently without making any fuss; this is their precious trait. If these leading cadres could learn more technology and understand more of the business, they would gain the initiative in presiding over production and, when they dealt with the technical personnel, they would have greater authority to speak and to issue commands, as well as an intelligent eye for recognizing talent, for knowing people, and for using them in a relevant way. This requires our leading cadres to make the necessary effort to study the specialized knowledge related to their respective trades and gradually transform themselves from novices into experts.

The experience of the No 4 semiconductor apparatus plant is of universal significance. The production basics of this plant, and especially the original foundation of its technical ranks, were rather inadequate, and the professional knowledge and management level of its original leading cadres were also no higher than those at other plants. The things that such a small plant can achieve should also be gradually achievable at factories and enterprises that have similar or better conditions. The key lies in the leaders seriously paying attention to science and technology and paying attention to, and being good at, giving full play to the role of the technical personnel. This requires a high sense of dedication to the revolutionary cause as well as a sense of responsibility to cast off "leftist" constraints and comprehensively carry out the party's policy with regard to intellectuals. Such leadership is needed in the improvement of our party leadership, needed in the demonstration of the superiority of socialism, and needed in our undertakings for modernization.

LU XUN'S VIEWS ON LITERARY CRITICISM APPLICABLE TODAY

Shijiazhuang HEBEI RIBAO in Chinese 22 Sep 81 p 3

[Article by Zhou Zhemin [0719 0772 3046]: "Make Literature, Art, and Criticism Advance Together"]

[Text] At a time when the Party Central Committee calls on us to correctly use the weapon of criticism and self-criticism and overcome the tendency of bourgeois liberalization today, it is of great realistic significance to earnestly grasp the singular views of Lu Xun on literary and art criticism.

As far back as 1929, Lu Xun already raised a cry of warning in his "Wenyi Yu Piping--Yizhe Fuji" ["Literary Art and Criticism--Translator's Note"]: "We must have more genuine criticism before we have any hope that new literature and art and new criticism will emerge." Later on, he specifically wrote numerous articles such as "Women Yao Pipingjia" ["We Need Critics"], "Pipingjia di Pipingjia" ["The Critic's Critic"], "Duiyu Pipingjia di Xiwang" ["Our Hope for Critics"], "Masha Yu Pengsha" ["Hurt by Abuse and Hurt by Praise"], and "Fandui Hanleidi Pipingjia" ["Opposing the Critic With Tears"] to repeatedly state his view that "literature and art must have criticism"; "only thus can we make literature, art, and criticism advance together."

Why did Lu Xun pay so much attention to literary and art criticism? Because "the task of a critic is not only to remove bad weeds but also to water good flowers--the buds of good flowers": 1. to point out what is bad; 2. to reward what is good; 3. in the absence of that which is good, that which is relatively good will also do. Apart from this, a literary critic is also "the iron fence of harmful literature"--that is to say, in order to enable a reader to know himself as well as his reading, a critic also has the task of correctly directing youths to read certain poisonous works.

Then why has literary and art criticism not gained the people's attention in the past few years? Because it violated the triple tasks of removing bad weeds, watering good flowers, and serving as the iron fence of harmful literature as defined by Lu Xun, and therefore it fell into the muddy pit of absolutization. During the 10 years of internal disturbance, the "gang of four" held sway in literary and art circles and proceeded to remove all literary and art works, along with their authors, as if they were "bad weeds," trampling on them even after they were thrown to the ground. But after the smashing of the "gang of four," the trend turned to the other extreme, as people started to consider whatever works they found as "good flowers" and watered them all, poured perfume over them, or were afraid to touch those products which were obviously harmful to youths and were in the way of the progress of the four modernizations. Such a practice must be reversed. We must develop well the function of literary and art criticism in curing the diseases in literature and art, pointing out where the esthetic appeal lies, broadening the people's vision, and strengthening their immunity, and thereby enable authors to gain some improvement and readers to absorb some nutrition.

In order to correctly develop literary and art criticism, we must have a clear-cut stand. Said Lu Xun: "Have we ever seen a critic in the history of literature who did not belong to a definite circle? All critics belong to a circle, be it of esthetics, or of realism, or of progressiveness. A critic without a definite circle would be a strange fellow.... We cannot blame him for belonging to a circle; we can only criticize whether or not his circle is relevant." A critic "must have a clear standard of right and wrong and ardent likes and dislikes." Insofar as today's critics are concerned, the four basic principles constitute our very fundamental stand. But regrettably, some workers in literary and art criticism at present often remain nonchalant about this point. Not only do they look at but not see certain works with serious mistakes, but they also trumpet them and openly propound views in opposition to the four basic principles, such as demanding that the party "rule by doing nothing," and advocating that "we must break through the four basic principles politically" and that "literature and art can put up a rival show vis-a-vis the party's central authorities," and so on. This is very harmful.

Lu Xun stressed the scientific attitude of literary and art criticism: "In airing his criticism, a critic must regard as bad what is bad and regard as good what is good; only thus can it be of benefit to the author." In order really to adhere to seeking truth from facts, a critic must preclude bias and prejudice. A critic "should analyze and judge his own spirit a little, before he analyzes and judges the works of others, in order to see whether there might not be something shallow, inadequate, or preposterous on his own part" and in the hope that he "is not 'addicted to scabs,' nor drunk, nor fever-ridden, with a coating on the tongue 2 or 3 fen thick." It is also necessary to oppose malicious critics who conduct themselves like "galloping horses on a field of tender sprouts," because they tend to trample on the budding shoots which embody our future and our hope. We must likewise exclude critics who "resort to random scolding and swinging of the stick," because they "take a heroine to be a prostitute, and turn a prostitute into a heroine," thereby making such "random" assaults unwarranted by facts and rendering the criticism impotent. Lu Xun emphatically pointed out: "Today, not very many are picked off by scolding, but a great many are done away with by the swinging of the stick." After 50 years, literary circles in China unfortunately have come to confirm what Lu Xun often regarded to be a situation "that I have regrettably predicted"--a trend of unprincipled "praise" now prevails. In question is one who is clearly just a youth in his 20's and who has written only a few novels which by no means have proved to be of any great influence; yet someone insists on blowing him into "the successor of such and such a school." A movie clearly happens to be disappointing; yet someone insists on trumpeting it as one whose "script, direction, and performance are all superior." At hand are what obviously are but a few obscure poems which are hard to understand and are reflective of petit-bourgeois self-expression; yet someone insists on applauding the "new principles of esthetics that are emerging."... "By criticizing or introducing an author under the signboard of a scholar or a poet, one may at first be able to confuse the onlookers. But by the time the onlookers clearly recognize the true complexion of the author, what is left will be that critic's own insincerity or lack of erudition. But if there are no onlookers to point out the truth, that author will be done away with, and no one knows how long it will take for him to turn up again." These words by Lu Xun are worthy of our profound reflection. It is hoped that those recipients of such unprincipled praise will hereby become warned of their thus losing their heads, and it is further hoped that such unprincipled praisers will also refrain from any repetition of this kind of performance from now on!

Literary and art criticism must also follow correct methods. Said Lu Xun: "I am always of the opinion that if we are going to appraise an article, the best thing to do is to take into consideration the whole text and also pay attention to the whole personality of the author and the social circumstances in which he finds himself. Only in this way can our appraisal prove relatively relevant. Otherwise, it would be too much like somniloquy." Concretely analyzing concrete things is the living soul of Marxism; literary and art criticism must also follow this method. With respect to an author and his work, we should not expect perfection. "Universality, permanence, and completeness, as three treasures, are of course incomparable, but they are also coffin nails to an author which could well seal his fate." What we should do is something similar to scraping out the rotten parts of an apple. "The way we expressed criticism in the past was to say that this apple is scarred with rotten parts, no good any more, so it must simply be thrown away.... From now on, it seems best to add some words--that is, if it is not yet rotten to the core, we should say: This apple is scarred with rotten parts, but some parts are still not rotten; hence it is still edible." Thus, literary and art criticism should ascertain the overall ideological orientation and artistic value of a work from the pattern of life as reflected by all the shapes of its characters, and not seize upon one minor detail or aspect and thereby wrack one's brains in order to strain one's interpretations and draw farfetched analogies or read meaning into it and resort to insinuation. "Informants in past as well as contemporary literary circles often think that certain novels are basically meant as a vengeance of personal grievances. Therefore they insist on straining their interpretations by saying that so-and-so in a book is actually so-and-so in real life." Lu Xun castigated such utterances on their part as "superfluous" "nonsense." During the 10 years of catastrophe, the practice of straining interpretations prevailed for a while. The criminal label of "having attempted to establish a tombstone and pass on a biography of good repute for so-and-so" was strained to cause the death of many writers and artists. Such a bloody lesson should never be forgotten! "The viewpoint assumed by an article also depends on what kind of person its author is," and "it likewise changes according to what perception a reader derives from it." Therefore, contention between differing views should be permitted in literary circles, so that "a critic has the right to criticize the author on the basis of his work, and an author also has the right to criticize the critic on the basis of his criticism." "Literature and art must be subject to criticism. If the criticism happens to be irrelevant, corresponding criticism must be invoked to resist it: only thus can we make literature, art, and criticism advance together. If everybody's mouth is invariably shut, and literary circles are thus said to be clean, the result may be just the opposite." The more a truth is debated, the clearer it becomes; likewise, the more a right is defended against a wrong, the clearer it becomes. Only by letting a hundred schools contend can literary and art criticism be correctly carried out. This contention is fully based on persuasion, in which everyone expresses his own opinion freely so that all can compensate the weak points of one with the strong points of another and thereby improve themselves together. At present, some people do not agree with launching such literary and art criticism; they say that once such criticism is launched, there is bound to be "great disturbance" again and it will "hamper stability and unity." This really borders on something like the man of Qi worrying about the sky falling. To strive to launch literary and art criticism from a Marxist standpoint, with a scientific attitude, and according to correct methods is precisely to better solve the various contradictions and telltales in literature and art and to benefit the promotion of stability and unity. On the contrary, if "everybody's mouth is shut and literary and art circles are thus said to be clean," if people are not allowed to carry out criticism of ideologically erroneous and poisonous works that have bourgeois liberalization tendencies, and if, once such criticism is expressed, accusations are made about someone "swinging the stick," then that will really be a very abnormal phenomenon. The upshot of covering up contradictions is the destruction of stability and unity.

Let us endeavor to study and inherit Lu Xun's precious experience in literary and art criticism by both being against "raising an author to the sky" and refraining from "pressing an author down to earth." Let us adhere to seeking truth from facts, conscientiously "uncovering fine points," and "fanning the fires of literature and art," and thereby propel the gigantic wheels of the four modernizations forward!

SOCIOLOGICAL, EDUCATION AND CULTURE

THOSE CRITICIZED BY NEWSPAPERS SHOULD REFORM, NOT RESENT CRITICISM

Beijing ZHONGGUO QINGNIAN BAO in Chinese 26 Sep 81 p 2

[Editorial: "Newspaper Criticism Must Be Handled Correctly"]

[Text] The criticism and supervisory advice given by the masses of people through newspapers, in connection with the shortcomings and mistakes of the leading organs of the party and state at all levels and of enterprises and establishments, constitutes a force that advances our cause. In the meantime, the form of criticism that appears in newspapers is significant, in that it can reflect the opinions and voices of people and play a role in improving the democratic life inside and outside the party and in stimulating the enthusiasm of the broad masses for socialism. For this reason, newspapers cannot operate without lending space to criticism. A newspaper not devoted to criticism is unlikely to gain the trust of the masses. Nor can it bring its role into full play.

Since the smashing of the "gang of four," the step-by-step improvements in democratic life in our party and country have lent vitality to the activity of criticism in newspapers. Many units and comrades have been praised by the masses for humbly accepting criticism, for conscientiously drawing lessons from it, and for actively improving their work. But many people have failed to initiate investigations into their mistakes as charged by the newspapers. Instead, in an effort to discredit entirely the merits of the criticism, they have concentrated on nitpicking about insignificant inconsistencies or individual inappropriate terms and phrases in the critical reports. When they have not been able to nitpick, they have even gone so far as to argue and defend their cases with lame and perverted logic. They often make themselves out to be "innocent victims" whenever they get a chance "to vent their grievances," whereupon they slap a variety of "labels" on their critics. Over a certain period of time, this practice has almost become a trend. If this unhealthy trend is not stopped, newspapers will find it difficult to go on with the regular business of criticism.

"Newspapers have been accused of smearing the party." Can those being criticized represent the party? Is it true that criticism is an act of "smearing?" How can anyone link this form of criticism with the act of "smearing the party?" This is a primary point of concern. At the third forum on implementation of the "Resolution," held last November by the Commission for Inspection of Discipline of the CCP Central Committee, Comrade Huang Kecheng [7806 0344 6134] pointed out: "The commissions for inspection of discipline at all levels must forge close ties and cooperation with the newspapers and encourage and support them to develop accurate criticism on the basis of seeking truth from facts. The newspapers have the responsibility to reflect public opinion. For a long time, our newspapers carried only eulogies, thus leaving the impression that the Communist Party is infallible. Actually, this is not true, and the people will never be fooled by it. For example, during the 'Cultural Revolution,' when the prestige of our newspapers dipped to a new low, few wanted to read newspapers saying that they were only bluster and lies. Earlier, our newspapers received warm support from the masses of people for openly and unequivocally criticizing unhealthy trends and for giving cadres education." This indicates that our party never resents mass criticism, including newspaper criticism, as an act of "smearing; on the contrary, it has fully endorsed, warmly encouraged and supported it as a positive service in improving its work and advancing its cause. This is the second point of concern. The third point of concern is that it would be truly inimical to the interests and prestige of the party if we failed to acknowledge, examine, and correct our mistakes and if we insisted on rejecting criticism. Isn't it more proper to call that an act of "smearing the party?"

"Newspapers have been accused of punishing the people." During the 10-year civil strife, Lin Biao, Jiang Qing, and company did exploit the newspapers in order to launch the so-called criticism as a form of punishment against the people, which resulted in bringing calamity to the country and the people. This phenomenon is gone forever, with the downfall of the "gang of four." Today, we must break with the old idea of regarding any name-calling in newspapers as a tendency to punish someone, so that we can use criticism of the bourgeois concept of freedom, the unhealthy trends, and other erroneous tendencies as an important method of self-education in the political life of our party and state. Of course, newspapers should strive to conduct criticism in a way that is regarded as appropriate. We welcome suggestions from those being criticized if they see any shortcomings in this regard. But they should refrain from indiscriminately nitpicking about the minor inconsistencies that are reported and calling the entire process of criticism a form of "punishment against the people." When they do [such things], don't they give the people the impression that their understanding of their own shortcomings, and of the party's tradition of criticism and self-criticism, is very limited?

"Inaccuracy of newspaper criticism." The facts listed by newspapers in connection with criticism should be accurate. They must do everything possible to avoid even the most insignificant errors. If the basic facts listed in connection with criticism are not accurate, the editorial department of the newspaper involved undoubtedly must clarify them and conscientiously launch self-criticism. If the individual facts are erroneous, those being criticized are absolutely entitled to bring them to the attention of their critics, on the basis of seeking truth from facts. Although this newspaper has tried very hard along this line, it still cannot give everyone complete satisfaction. We welcome supervisory advice from the public. But there are cases such as the Shuguang Chemical Plant, whose leadership has seized on insignificant, inconsistent points in critical reports as a propaganda stunt to "air its grievances" everywhere, while refusing to acknowledge its mistakes and continuing its unhealthy practices. Can we tolerate this behavior? We hope that the leadership of this plant will swiftly change this attitude. We also hope that other comrades being criticized will not follow suit. The reason is that doing so is not in the interests of the party, the people, or the comrades being criticized. If they fail to conscientiously examine or take measures to correct their mistakes but still behave as before, treading the same old road to the dissatisfaction of the masses, they may unavoidably encounter difficulties in their work. On the contrary, if they conscientiously draw lessons from criticism and bear them in mind as a warning, they may begin to enjoy rising rather than lowered prestige among the masses, thus marking a new beginning of their work. This reasoning has been repeatedly verified by facts.

The leading cadres and personnel of our party and state are the servants of the people. We must do everything for the people and hold ourselves responsible to them. For this reason, we must develop the habit of constantly and consciously listening to the people's opinions and accepting their supervision, including criticism from newspapers and journals and from the public. Newspaper criticism is a serious matter. The editorial department of every newspaper should seriously select typical examples and conscientiously and carefully investigate and verify facts, from the standpoint of serving the people's interests and in accordance with the party's principles. Units and comrades that are being criticized should take a correct attitude toward criticism, in a sense of responsibility to the party and the people. The more swiftly and thoroughly they correct their mistakes, the better. Only in this way can newspapers carry on their business of criticism along sound lines and fully play a positive role in this field. This newspaper will do everything possible for this purpose.

SOCIOLOGICAL, EDUCATION AND CULTURE

SUGGESTIONS FOR IMPROVING QUALITY OF EDUCATION

Foundation for Intellectual Development

Beijing GUANGMING RIBAO in Chinese 29 Sep 81 p 1

[Commentary: "Establish an Excellent Foundation for the Development of Students During Their Lifetime--On Improving the Quality of Education and Building a Spiritual Civilization"]

[Text] In order to train students to become workers with socialist consciousness and culture and talent, with overall moral, intellectual, and physical development, and with both Redness and expertise, schools not only must assume the educational responsibility of the students during the period they are on their campuses but also must pay attention to laying an excellent foundation for the development of the students during their lifetime. In this sense, middle and elementary schools provide a basic education, but institutions of higher learning to a considerable extent also provide just a basic education. How can this foundation be properly laid? To generalize from the angle of pedagogics, the main thing is to foster the students' two capabilities: i.e., to foster their self-learning intellectual capability and to foster their self-educating moral capability. The forging and mutual promotion of these two capabilities would make it possible for a student to strive consciously to become a good student while in school and, after he enters society, also to continue his efforts to become a good citizen in a socialist society.

The question of fostering students' self-learning capability has already attracted attention in our educational circles. How today's education can catch up with the rapidly advancing pace of scientific development, or how to adapt to what people have called the "knowledge explosion," is a question being explored by scientists and educationalists in many countries of the world. After many years of exploration and experimentation, one of the conclusions people have come to is that the traditional educational theory and pedagogics, which stress only the imparting of knowledge and overlook the fostering of capabilities, should be changed so that the teaching of every subject will be geared to fostering the students' capabilities, thus making it possible for them to continue to absorb new scientific knowledge after they enter society and thereby become persons with creative talent. Our educational reform should also advance along this road. During the past 2 or 3 years, teachers in some schools have carried out experiments in educational reform for this purpose; this merits our encouragement. But this extremely important work still remains in the beginning stages and awaits our sustained efforts and gradual development.

The so-called self-educating capability mainly means the establishment of a correct political orientation, an understanding of the basic knowledge of Marxism, the study of the use of the weapon of criticism and self-criticism through political lessons and ideological education with a view to enabling the students to acquire proficiency in summing up their experience in life, and the ability to distinguish right from wrong and beauty from ugliness, thereby making it possible for them consciously to continue to engage in self-cultivation. Take, for example, the moral conduct of fulfilling one's social duties—from perceiving morality and forging moral concepts, to exemplifying them in one's own conduct. All of these processes require that a foundation be laid through education in school. Today, elementary schools are already generally providing classes on education in moral qualities, and the initiation and teaching of political lessons in middle schools and universities have already been, or are being, improved. In addition the Student Regulations for Middle and Elementary Schools have been promulgatd and implemented. All of these measures have served to provide the means and conditions for the schools to accomplish this task. As long as all teachers strive with one goal and with coordinated efforts and earnestly engage in practice, the spirit of our schools and the moral outlook of our students are bound to improve quickly and exhibit a new atmosphere.

In order to foster these two capabilities on the part of the students, we must also study the relationship between them. In the daily work at school, the greatest amount of educational activity is the teaching of various basic subjects and professional subjects, and the most complicated problem is how to correctly handle the relationship between intellectual education and moral education. We must correctly understand the function of intellectual education and implement it correctly. The function of intellectual education is not limited to imparting knowledge and developing the intellect; it assumes at the same time the task of teaching the students to establish a dialectical-materialistic world view and to cultivate communist moral qualities. In the processes of imparting knowledge and developing the intellect, teachers teach a great deal of scientific and cultural knowledge. Such knowledge is indispensable in the forging of a dialectical-materialistic world view and of communist moral qualities. Ignorant people can have neither a dialectical-materialistic world view nor communist moral sentiments.

On the other hand, the function of morality is not limited to ideological education; it is capable at the same time of promoting and helping students to study basic knowledge and professional knowledge. A person with a dialectical-materialistic world view and communist moral qualities is bound to be one who is dedicated to ideals and is diligent in his studies.

School is the cradle where socialist spiritual civilization is built. It has the burden of assuming responsibility for the whole life of its students, of fostering one generation after another of socialist new people, and of turning them into the seeds that spread spiritual civilization. This is indeed not an easy or a lightly accomplished matter; it requires educational workers to have a strong sense of educational responsibility and advanced educational skills, as well as to make long, tireless endeavors, before success can be expected.

Basis for Physical Education

Beijing GUANGMING RIBAO in Chinese 30 Sep 81 p 1

[Commentary: "Put the Physical Education of Work Schools on a Scientific Basis--On Improving the Quality of Education and Building a Spiritual Civilization"]

[Text] The physical and mental health of students is a question with which the Party Central Committee, educational circles, and various other circles in society are constantly concerned. During the past few years, because the students' health has not yet reached the proper level, this question has come to people's attention even more.

According to statistics compiled through physical examinations conducted by relevant departments among 250,000 students in 22 provinces, municipalities, and autonomous regions across the country, urban students who have various degrees of myopia make up an average of 29.4 percent of the total, and in the case of the highest incidences they make up as much as 42 percent of the local total. In some localities, when institutions of higher learning proceeded to recruit students, those who were entirely qualified physically made up no more than one-third of all the students taking the required physical examination. A certain city conducted physical examinations of all 6,600 students within its jurisdiction; those who measured up to the norms made up only 34 percent of the total. These situations all illustrate that it is necessary to adopt effective measures to quickly improve the level of health of the students.

Speaking of strengthening our physical education and improving the level of health of our students, we often hear complaints about the difficulties in this work: playground space is too small; there are not many qualified physical education teachers; there is a serious lack of equipment. Playgrounds, teachers, and equipment are indispensable for developing physical education activities, and we should do our best to solve [these complaints]. But the meaning of strengthening our physical education is not limited to that which concerns only sports on the playgrounds; it has to do with looking from the viewpoint of benefiting the healthy growth of the student's physique, benefiting the student's intellectual development, and benefiting the student's cultivation of a lofty character--thereby placing the school's physical education work and health work in the position they deserve and making overall arrangements accordingly. We must regard physical education as an important component of our educational work.

Comrade Mao Zedong said that morality and the intellect both dwell in the physique; without a healthy physique, there would be no moral and intellectual qualities to speak of. From the interrelationship between physical education and intellectual education, one can see that a student whose health conditions are not good often exhibits drawbacks in the results of his study as well. This is a commonly witnessed situation and is easily spotted. But there is another situation which is often neglected. In teaching work, when the study load is extended beyond the student's physical and mental capacities, when the time required for study is continuously prolonged, and when the proportion of the subject being taught is increased, although the student might achieve the marks desired in examinations through such guerrilla tactics, and although good results seem thereby to have been scored in intellectual education, they are, in essence, not only harmful to the student's health but even damage his intellectual development. Because study under such circumstances often means mechanical memorization and rigid recitation, the student feels that it is really a hardship; this can hardly nurture a vigorous desire for knowledge. Such teaching is incapable of fostering the student's good learning power. In institutions of higher learning there is often this familiar phenomenon: some students who scored high marks on the entrance examination somehow gradually lag behind in the process of their study, and by the time they graduate they turn out to be on only a medium level. The fundamental reason lies precisely here. The development of a student's intellect and the improvement of his memory, his attentiveness, and his imagination depend to a very great extent on the degree of his physical liveliness. As an educational worker, one must remember never to promote a student's study by methods which sacrifice his health. If, in one's ordinary teaching process, one continues to increase the time required for study, time and again tries to push forward his teaching schedule, resorts to large-scale assaults just prior to the examinations for promotion, and constantly puts his students in a tense state of mental labor, then he not only harms the students' health but also makes it impossible for them to develop their mental powers properly. Looked at from the point of view of long-range effects, both [the students and the teacher] actually lose and suffer.

Looked at from the point of view of the relationship between physical education and moral education, the situation is similar. Whether in their childhood, their youth, or their young adulthood, the students' bodies are growing vigorously all the time, and their character, their will, and their morality are also taking gradual shape all the time. How to foster their mental esthetics through various activities in the process of their physical growth should be one of the tasks in our educational work.

How to make the students' physical growth and intellectual development mutually promotive, and how to enable the students to continue to improve their ideology and their character along with their chronological growth and physical development--questions of this type must be studied and solved from a combination of educational theory and educational practice, so that a school's physical education work is placed on a scientific basis. Viewed from the current situation, it is necessary first of all for us to have a reasonable work-and-rest system. While guaranteeing to the students the necessary time for study, we must at the same time guarantee time for them to sleep, to take physical exercise, to work, and to engage in extracurricular activities. Insofar as feasible, we must create sanitary conditions beneficial to the students' health, such as making the campus green by planting trees and flowers, having illuminating equipment installed, making the size of desks and chairs relevant to the students' height, etc. We must organize physical education classes and many phsyical exercises well. We must take physical labor as a means to improve the students' health, so that they can also exercise their will while they develop their body. We must also study how to do a good job of arranging the students' spare time rest. Some educationalists are of the opinion that in modern social life, how students spend their rest periods is one of the most complicated problems in the realm of our spiritual life; if improper arrangements are made, some youths and children will engage in activities that harm their health and help nurture unwholesome conduct on their part. Educating and organizing the students to make use of their rest periods by engaging in various beneficial activities constitutes a kind of "positive rest" which is capable of promoting their health, enhancing their knowledge, and shaping their character.

Paying attention to students' health, doing physical educational work well at the school, and enabling students to have both a healthy physique and a spiritually civilized disposition is one of the very important tasks of an educational worker. May all of us strive together to foster a generation of new people for the state, with even more of them developed morally, intellectually, and physically as a whole.

GENERATION GAP BETWEEN PRC LEADERS, THEIR CHILDREN SEEN

Hong Kong CHENG MING [CONTENDING] in Chinese No 10, Oct 81 p 75

[Article by Du Feng [2629 3526]: "China's Political Generation Gap"]

[Text] Just as the cold anti-"laissez-faire" winds were blowing in Beijing, Ye Xiangzhen [5509 0686 4176], daughter of Ye Jianying, was making a thought-provoking statement in Hong Kong.

Deng Xiaoping said in Beijing: We must carry out criticism and self-criticism, particularly the serious and correct form of criticism and the necessary and well-reasoned struggles against those laissez-faire tendencies that depart from the socialist orbit and the leadership of the party.

Ye Xiangzhen indicated in Hong Kong that antagonism always exists between creative literature and art and their critics, but that this should not hamper the growth of creative literature and art.

Hu Yaobang said in Beijing: "Unrequited Love" must be criticized for its harmful effect on the people and socialism.

Ye Xiangzhen said philosophically in Hong Kong: The topics presented in female writer Zhang Jie's [1728 3381] medium-length novel "Wings Under Heavy Pressure" are more acrimonious than those in the novel "Unrequited Love." But in fact, the former was printed anyway.

Although Ye Xiangzhen's remarks cannot be interpreted as "a song sung on a discordant tune," a "disagreement" obviously exists. Although some politically sensitive people may interpret her remarks as a reflection of "a struggle between Ye and Deng," this writer prefers to call this "a gap between two generations" rather than "a struggle between Ye and Deng." In Chinese society today, the political generation gap has reached very serious proportions. Perhaps this great discrepancy between different generations that spent their "formative" years in different periods of history has been caused by the abrupt transformation of Chinese society that has taken place during the past several decades.

Although Ye Xiangzhen is now 40 years old, she belongs to the younger generation in every sense. At the outbreak of the "Cultural Revolution," she was a senior in college. At the height of the Red Guard movement, she was pulled into its whirlpool, which made her an active college student leader of the movement. During the 10-year turmoil, like other members of her generation she experienced frustrations and confusion which tormented her mind.

This "generation gap" between the members of the supreme leadership of the Chinese Communist Party and their sons and daughters is a reflection of the "political generation gap" in Chinese society. Tao Siliang [7118 2448 0081], daughter of Tao Zhu [7118 6999], once said: "During the 10 years of upheaval, I was once perplexed by what my parents had done." It has been said that in the home of Deng Xiaoping, there have also been "wars of words" between that old man and his children over the dining table.

The National Federation of Students recently called a meeting in Wuhu, Anhui; Lin Yanzhi [2651 3508 1807] was elected its new president. He is the son of Lin Feng [2651 2800], a student of engineering and physics of Qinghua University, and president of its student government.

During the meeting, "A Message of Appeal to College Students Throughout the Country" was issued. Although this is an "official document," some sort of "generation gap" can still be sensed between the lines. For example, Deng Xiaoping's once-famous remark: "Without Mao Zedong, there would have been no new China," was made to read: "Without the Communist Party, there would have been no new China" in the appeal. With regard to Mao Zedong, the appeal has this much to say: "Without Chairman Mao, the Chinese revolution would not have succeeded so early, and we college students would not have their present stature." What is meant by "college students' present stature"? The appeal describes "today's college students" this way: "We college students of this generation have experienced turmoil for years, lives full of twists and turns, and hot debates in our own hearts." True, if there had been no "Great Cultural Revolution" started by Mao Zedong, how would our country have been able to produce such a generation of college students such as exists today?

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

SPROUTS OF CAPITALISM IN FEUDAL PERIOD REVIEWED

Beijing LISHI YANJIU [HISTORICAL RESEARCH] in Chinese No 4, 15 Aug 81 pp 126-138

[Article by Fang Xing [2455 5887]: "Economic Structure of China's Feudal Society and the Sprouts of Capitalism"]

[Excerpts] Productive forces in China's feudal society for a period of time underwent fairly rapid development. Under the impact of these productive forces, there was a transition from the feudal economy to the landlord economy. Purchase and sale of land took place fairly early, and a large united empire with all powers concentrated in the central government also appeared early. After a long process of development, China's feudal society became a typical society with a highly matured feudal system. In the course of this development, small agriculture and household handicrafts became solidly integrated; and small local markets in both urban and rural areas could be seen everywhere. The "trinity" of landlords, merchants, and userers formed a series of unique internal structures for production, circulation, and distribution. As Marx pointed out, "The Economic structure of capitalist society has grown out of the economic structure of feudal society. The dissolution of the latter set free the elements of the former." ("Das Kapital" Vol 1, p 783) "To what extent it [the development of commodity economy] brings about a dissolution of the old mode of production depends on its solidity and internal structure." ("Das Kapital" Vol 3, p 371) This article will attempt to make a preliminary study on the causes of the slow growth of capitalist sprouts, or the prolonged existence of fuedal society in China, beginning with the internal structure and the solidarity of China's feudal economy.

I. A Solid Integration of Small Agriculture and Household Handicrafts in Production

Small-scale peasant economy in the feudal society of China was carried out by peasants of two different types according to the regulations and restrictions of the landlord economy: those who rented their land and those who owned their land. In this small peasant economy, each household became a basic production unit of the society and carried on simple reproduction year after year. These peasants were engaged in not only agriculture but also handicrafts, thus closely combining the production of both food and clothing, or grain and textile products--which were two important items in the national economy and people's daily life--in the household. This was exactly what the old saying "Men plow and women weave" described. The combination of small agriculture and handicrafts under the landlord economic system was the basic structure of production in the feudal society of China.

Though similar to the serfs in Europe, Chinese peasants enjoyed the right of private possession in an economy based on a combination of agriculture and handicraft. Chinese small peasant economy also had some special features of its own. Tenant peasants in China had more personal freedom than the serfs in Europe did, and their right of private possession indicated greater independence than that of the European serfs. The rent in kind, long popular in China, was different from labor rent in Europe. Thus, the peasant "has more room for action to gain time for surplus-labor whose product shall belong to himself." ("Das Kapital" Vol 3, p 896) In the Ming Dynasty and particularly in the Qing Dynasty, the percentage-drawing system in payment of rent had mostly been replaced by that of a fixed rent. This change in the relations of production further strengthened the independence of the peasants' private-possession economy. As we know, commodity economy is "a very Eden of the innate rights of man. There alone rule Freedom, Equality, Property and Bentham." ("Das Kapital" Vol 1, p 199) Commodity economy is absolutely necessary, aside from developing capitalism. In China, the dependency of the tenant peasants was rather loose. They had rights of possession over their products and more room to manage their own production. These advantages helped them develop commodity production in the private-possession economy. However, Chinese tenant peasants had less economic protection than that of the serfs in Europe. These serfs were secure in their own land. It is true that they could not leave their land at will, but the feudal lords could not rob them of it either. Chinese tenant peasants did not have a permanent claim on the landlord's land, because of competition from prospective tenants among the peasants, i.e., they needed to be able to pay more in advance before they could be sure to rent the land. More means of production meant a better opportunity of survival. Peasants who owned their land were quite numerous across the country in the Ming and Qing Dynasties, although they were more highly concentrated in some places. They were unrestricted by rent, enjoyed greater freedom in planting, and could more easily include handicrafts as part of their occupation. There were certain innate elements of commodity production in China's small peasant economy, which was therefore far more adaptable to the development of commodity economy than the serf economy was in Europe.

During the Ming and Qing Dynasties, the peasants planted their own food crops and weaved their own cloths. The self-sufficiency of a small peasant economy in which farming was combined with weaving was then markedly predominant in the entire social economy. Along with the development of productive forces in agriculture and the commodity economy, however, there also were corresponding developments in other economic crops such as cotton, cocoon, tobacco, sugarcane, tea, peanuts, broad beans, and fruits; and the varieties of agricultural products continued to increase. At the same time, the production of cotton and silk fabrics, paper, sugar, oil, mat, porcelain, and other goods processed from agricultural products and agricultural sideline products developed, and the varieties of household handicraft products gradually increased. Many peasants, with either agriculture or household handicrafts as their main concern, had already allotted part of their productive capacity for the production of small commodities. Thus, there was a combination of commercial agriculture and commercial handicrafts, as shown by the cotton cloth peasants engaged in weaving, the sugarcane peasants engaged in sugar-extracting, and so forth. The integration of self-sufficient agriculture with commercial handicrafts was even more common. This was similar to what Marx particularly mentioned in "Das Kapital" about the prevalence of paper-making by peasants as a sideline occupation in the 19th century. Again, in the early years of the Qing Dynasty, procelain wares were produced in 20 out of approximately 70 prefectures and counties in Shanxi Province. These wares were listed as native products in the local chronicles. These products were "carried away by itinerant peddlers" "to be sold in various localities." (See Li Jixian's [2621 4764 6343] "Notes on Kiln Sites in Local Chtonicles and Classic Documents," WENWU ZILIAN CONGKAN [HISTORIC RELICS JOURNAL] Vol 2)

What should be particularly noted is the production by the peasants of cotton fabrics as a commodity. After the Yuan Dynasty, cotton replaced silk and hemp as the principal material for people's clothing. The output of cotton was higher than that of hemp or ko-hemp, and its processing was much simpler. With its higher practical value, cotton was a more suitable object of labor in the combination of plowing and weaving. Thus, cotton planting quickly developed and cotton spinning and weaving spread throughout the country. It became an important productive activity second only to the growing of grain. Many peasants had more cotton cloth than they needed for themselves and gradually produced cotton for the market. The production of cotton as a commodity was carried out, either in a concentrated or a sporadic way, throughout the country. In the Ming Dynasty, the Susong area became the national cotton textile center as well as the largest market for cotton cloth as a commodity. In the early years of the Qing Dynasty, a number of special cotton production areas and markets of various sizes also appeared in Hebei, Shandong, Henan, Hubei, and Sichuan Provinces. In the middle of the Qing Dynasty, cotton cloth again became the third most important exported good after silk and tea, as well as the most important handicraft product. By that time, there were already a few handicraft workers independently engaged in cotton cloth production. The peasants, however, produced nearly all the cotton cloth required for domestic consumption and export. This was a unique economic phenomenon in Chinese as well as foreign history.

In the Ming and Qing Dynasties, the small peasant economy was still under the feudal system. The scope of production was small and feudal exploitation was severe. Most of the peasants' products were not intended as commodities, and the amount of surplus products which could be used as commodities, or the products specially produced as commodities, were very limited for each peasant household. However, during this time, the development of small commodity production by the peasants far surpassed the development of independent handicrafts in urban and rural areas in both speed and scope. Moreover, because of the vast numerical superiority of peasants, a small amount from each of them would combine to form a huge amount; that was why the commodity production by peasants far exceeded that by the urban and rural handicraft workers. This was how the above-mentioned unique economic features came into being.

Small peasant economy featuring a combination of agriculture and handicrafts may, to a certain extent, become commercialized. This was only a possibility, and certain social economic conditions were necessary to translate this possibility into reality, and the most basic condition was the development of productive forces. The population increase also was a strong catalyst. Population increased slowly during the Ming Dynasty, when it was approximately 100 million at most. In the middle of the Qing Dynasty, however, it increased rapidly and, during the 60 years of the reign of Emporor Qian Long, the number doubled and then trebled. When Emporor Daoguang was on the throne, the population had already increased to 400 million. Although the development or urban industry, commerce, and mining could help take care of the excessive population, such help was limited, and the countryside provided the best way out. The heavy pressure of population in combination with feudal exploitation forced the peasants to expand the planting of crops for the market and to engage in handicraft production according to the natural conditions. In places where the pressure was particularly heavy, hunger served as a ship to drive the peasants on their march toward intensive and extensive production. The density of population in Susong area was well known. According to the Songjiang Prefectural Chronicle, there were in that prefecture some 40,103 hectares and 41 mu of land and a population of 2,484,728 during the 15th year of Emperor Jiaqing's reign; and the per capita acreage worked out to only 1.61 mu. According to the Suzhou Prefectural Chronicle, in the reign of Tongji, there were in the 23d year of Emperor Jiaqing's reign some 62,225 hectares and 79 mu of farmland; 2 years later, there was a population of 5,908,435, with a per capita acreage of 1.05 mu. Again, in the case of Mengxian, Henan Province, "the per capita acreage was less than 1 mu," "land was scarce, and the people were so poor that besides farming, they had to spin and weave." ("Mengxian Zhi" of Qianlong, Vol 4) This was how cotton cloth came to be produced as a commodity in Susong and other special producing areas. The peasants' household handicrafts including the production of pottery also developed under similar conditions.

Through the production of handicraft goods as commodity in the tradition of "supplementing farming with weaving" and "supporting agriculture with sideline production," the peasants gained increased economic benefits.

The development of commodity production was a historical prerequisite of capitalism. For the same reason, the same development in agriculture and handicrafts provided the conditions for the sprouting of capitalism during the Ming and Qing Dynasties, and this must be affirmed. In human society, however, two different types of small production, that is, the self-sufficient small production and small commodity production, existed with different characteristics and historic backgrounds. Only through highly developed small commodity production can the human society come to take the road of large-scale capitalist production. During the Ming and Qing Dynasties, the development of independent small commodity production in urban and rural areas was far from adequate, and the broad masses of small producers were peasants engaged in small-scale production under a self-sufficient natural economy. Although part of their products became commodities, the peasants were tied to their land, and could not be called independent small commodity producers in a strict sense. The prevalent existence of self sufficient small economy among the peasants and the very slow development of small commodity production could only serve to protect the feudal economy; to restrict the social division of labor, the accumulation of social wealth, and the expansion of social production; and to create unfavorable conditions for the development of capitalism.

The choice of the old and new modes of production was finally decided by the amount of economic benefit each can offer. The economic benefit offered by the household handicrafts among the peasants could hardly be surpassed by that offered by the sprouting capitalist methods of production, and that was why the latter could not win the competition in the market in order to develop itself. In the case of cotton cloth production, for example, the peasants had to work hard day and night, or, as the old saying goes, to "do 45 days' work in 1 month" as a means of making a living. The work of farming and weaving were closely coordinated by the peasants, and the time left in the lax farming season was fully utilized. "Children at or above the age of 8 could spin, and those of 12 or 13 could weave." Thus, people of both sexes and all ages joined in weaving and the household labor power also was fully utilized.

This resulted in "substantial economy and saving in time," ("Das Kapital" Vol 3, p 373) and a very low production cost. With the same level of productive forces, mainly in the form of instruments of production, the hiring of people in cotton production or the adoption of the capitalist mode of business management would limit the number of labor hours, which would not be as many as in the peasant families. This limit was a serious hindrance to the sprouting capitalism which could only exploit the absolute surplus value. Moreover, in the age of handmade tools, the outlay on the means of production formed only a small part of the production cost, while the purchase of labor power cost a great deal more. If people had to be hired for production, board and lodging had to be provided in addition to the payment of wages, and the production cost would be far higher than that of the peasant households. Because of the prevalence of weaving by peasants, the price of cotton was mainly determined by the peasants' production costs. Under such conditions, cotton production with hired hands would certainly result in a loss which the peasants could not afford. Furthermore, since the peasants were not separated from their land, their self-sufficiency, based on a combaination of framing and weaving, could still be maintained. Should they incur any loss in the production of cotton in a commercial venture according to the law of value, they could still fall back on their land as a means of subsistence, and the capitalist polarization could not occur among them as easily as it would among the independent small handicraft workers.

The widespread existence of small production by peasants provided ample scope for the merchants to control production, but this control also, in return, provided this type of small production with long-lasting protection. In the early years of the Qing Dynasty, there was the practice of exchanging raw materials for finished products, such as "exchanging cotton for cloth" and "exchanging cotton for muslin" in the cotton textile trade; in the paper-making trade, there was the practice of merchants "charging for the use of the sizing-but"; in tea production, there was the practice of merchants providing the "capital" to the sugarcane peasants in the spring and "collecting the interests" in winter; in tobacco production, there was the practice of merchants "assigning mountains" to the "prospective tobacco-planters" and so forth, as a means of controlling the circulation of the peasants' products. The systems of production control based on the extention of loans and the stipulation of the terms of exchange were quite popular in the early days of the Qing Dynasty. Although these systems were comparatively primitive and there were no capitalist elements whatsoever to speak of, the merchants were glad to "appropriate their surplus-labor on the basis of the old mode of production" and "retain it as its precondition." ("Das Kapital" Vol 3, p 374) The widespread existence of small production helped them in their wanton exploitation of the peasants. Merchants would not directly invest in production unless they were assured of even greater economic returns.

As a result, in the Ming-Qing period, the growth of the sprouts of capitalism was in inverse proportion to the development of handicrafts in rural households, as vividly shown by the cotton textile trade. In Western Europe, textile (mainly woolen textile) was the first important trade in breeding capitalism. The situation in China was exactly the reverse. In the early years of the Qing Dynasty, production was carried out with hired help in many different trades; but, in the textile trade, either as a branch of small production or the result of merchants' investment in production, no sign of sprouting capitalism could be detected. This was by no means coincidental. Whenever development was inadequate for independent handicraft production in urban and rural areas, the sprouts of capitalism could only grow or decline as a rival of handicrafts in peasant households.

In the late stage of feudal society in Europe, many peasants left their land and drifted into the cities to engage in handicraft production, resulting in a large-scale separation between handicrafts and agriculture, and the strengthened independence of handicrafts. This provided favorable conditions for the birth of capitalism. The situation in China was different. During the Ming-Qing period, the development of handicrafts was mainly confined to the peasant households instead of the urban and rural areas. Along with the natural growth of population and the spread of the peasants' children, the combination of small agriculture and household handicrafts also spread like living cells; and, after a process of regeneration and remaking, these living cells covered the whole length and breadth of China like a big ocean. This further strengthened the combination of agriculture and handicrafts and further developed the "broad basis of the mode of production" formed by them. What should be particularly pointed out is that, since the peasants could reap greater economic benefits through the commercialization of their household handicrafts, the small peasant economy became more capable of enduring exploitation, more adaptable to the increased population, more powerful in repelling the new mode of production, and even better able to resist production with machinery. Such was the whole secret behind the tenacity of this type of economic structure. Therefore, the development of European handicraft was a centrifugal force, forcing the disintegration of the feudal economic structure, whereas the development of Chinese handicrafts was a centripetal force, preserving the stability of the feudal economic system.

II. Prevalence of Small Local Markets in Urban and Rural Areas in Circulation

Production has a decisive effect on circulation, and the structure of production determines the structure of the market. In a feudal society, there were small local markets as a necessary component of the natural economy; zone markets formed under certain natural conditions and according to customs as a reflection on certain social division of labor; and, possibly, large and overseas markets transcending zone barriers. All these markets were most needed for the development of capitalism. China's peasant economy was a scattered individual economy. Like the European feudal countryside built on the foundation of scattered small production, China's feudal countryside was mainly "a network of small local markets" ("Collected Works of Lenin" Vol 3, p 340) as manifested by the myriads of country fairs and market towns spread all over the country. At the same time, the individual handicrafts in Chinese cities produced mostly luxury items and daily necessities for the city dwellers. Since the products were mostly absorbed in the cities, very little was left for the rural market. This was a special feature of small local markets confined within the cities. For a long time, small local markets remained as the basic structure of markets in the feudal society of China.

Of course, zone markets and even large markets did exist. Along with the development of social productive forces and the commodity economy in the Ming and Qing Dynasties, particularly in the latter, some localities, according to their natural conditions, brought into play their strong points and developed commercial agriculture and the processing of agricultural products. These activities led to a certain regional division of labor. This development of social division of labor transformed the products of peasants and handicraft workers into commodities for each other's consumption and to be sold in each other's market. This was an exchange of industrial and agricultural products to a certain extent. These products became important wares for the itinerant traders and led to economic exchanges between different areas. Grain and cotton cloth were the two most common commodities in these economic exchanges.

While cities were the places of large-scale transactions, the market towns and country fairs served as the bases for the collection and distribution of commodities by linking together the broad masses of small producers. The development of production and exchange of commodities as mentioned above provided the cities with consumer goods and raw material for handicrafts and helped promote the economic prosperity of the cities as well as the development of market towns and country fairs. The numbers of market towns and country fairs and the volume of commodities transacted in the early period of the Qing Dynasty exceeded those of the Ming Dynasty. The exchange of industrial and agricultural products over long distances thus accumulated capital and prepared the market for capitalist production. This was exactly how the sprouts of capitalism developed.

However, the significance of commodity production and exchanges developed during the Ming Dynasty and the early part of the Qing Dynasty should not be overestimated. Generally, the natural economy remained basically intact, and the layout of small local markets remained virtually undisturbed. This was particularly true of many areas other than the coastal provinces.

In the countryside at that time, the broad masses of peasants were engaged in the production of use-value on a self-sufficient basis; and their products could not, or very rarely, went into the process of circulation. Even peasants engaged in commodity production had to keep part of it to preserve their self-sufficiency and could not be separated from the system of natural economy. Even that part of their products intended as commodity were sold only for the purpose of buying something in return. In other words, these products were the result of use-value production carried out in the form of exchange-value production. The purpose of their production was the assurance of their own survival instead of getting rich. Commodity production of this nature is "everywhere subordinated to consumption as a prerequisite, while supply is subordinated to demand and can only expand slowly." ("Collected Works of Marx and Engels" Pt I, Vol 46, p 516) In other words, the amount of commodities supplied by the peasants to the society was directly decided according to their demand for the means of living and the means of production in the forms of commodity. They had only limited surplus products, and the volume of exchange also was limited. Furthermore, there were restrictions from feudal exploitation and the scope of small production; and that was why the growth of the commodity portion was very slow.

Marx pointed out: "The intensity of exchange, as well as its extension and its manner, are determined by the development and structure of production." ("Collected Works of Marx and Engels" Vol 12, p 749) In the Ming and the early Qing Dynasties, there was still basically a natural economy in the countryside, while the production carried out by peasants and small handicraft workers was still use-value production in the form of exchange-value production. It was thus beyond question that small local markets were still the mainstay of the rural market. These small local markets also were the outcome of, as well as a necessary supplement to, the natural economy. Although their role as a base for the collection and distribution of agricultural and handicraft products, sold as commodities, had been developed in the country fairs and town markets, they still served as a means of helping the local inhabitants, mainly the peasants, to supply one another's needs and to make up one another's shortages, so that, between the peasants and the handicraft workers, an exchange, aiming at exchange-value, might take place. Many places were "[previously] inaccessible to commerce" and many peasants "did not go to town throughout their lifetime."

China's natural environment also was playing its role in consolidating the small local markets. Natural environment is the most fundamental condition for material production and material life as well as an important source of social wealth. China has a huge area with a mild climate, rich material resources, and many varieties of natural products, all of which certainly provide a natural basis for the social division of labor, although there must also be other social economic conditions for the development of the economy. Under normal conditions, this natural environment should be the foremost and the direct basis of small local markets. For example, cotton, the principal material for producing cloth, can be planted almost anywhere; and, with the exception of iron, important raw materials for making tools, such as bamboo and wood, also can be found anywhere. As for the important means of subsistence and means of production, self-sufficiency can be attained within the narrow confines of the localities. Ningguo County of Anhui Province, for example, "was the region of agricultural production, rich in native products, and enjoying self-sufficiency with no merchandise passing through. Before the reign of Xianfeng in the Qing Dynasty, the people were wealthy and products were plentiful. Except for salt, it hardly imported anything at all." (Gui Min's "Chronicle of Ningguo County" Vol 8) Similar conditions existed in many other parts of the country.

In the middle of the Qing Dynasty, the rapid population increase also played its part in consolidating the natural economy. When the increase of the means of production failed to keep pace with the population increase, many people naturally became busy looking for a means of subsistence. It is true that the absolute value of the amount of agricultural products, including the commodity portion, could be increased; but the ratio of the commodity portion would naturally decline. That was why, in many places, self-sufficiency in certain essential products could only be attained within certain areas, thus preserving the small local markets in their original state.

What deserved particular attention were the cities. Chinese cities were mainly political centers, or the centers of feudal rule, and were different from the European economic cities bustling with commercial activities. The concentration of government officials, landlords, and others of the consumer-population became an important feature of Chinese cities. These people had a good appetite for commodities, especially the luxury items, high-grade consumer goods, and famous native and special products. Their heavy demand for these commodities were mainly met by itinerant traders and the urban handicraft workers, in that order. Among the urban handicraft products were rhinoceroses or elephants made of gold and silver, toys made of jade or precious stones, silk, fancy lamps and fans, and high-grade writing paper. None of these products were required in the countryside. Some consumer goods for daily use were supplied to meet the demand in the cities where they were produced only, but not sold in the countryside. Many important handicraft products, particularly processed agricultural products, such as paper and sugar, were developed at the source of raw materials instead of the cities. In trade, therefore, there was a basically one-way traffic from the countryside to the cities; and the idea of using the countryside as a market for urban handicraft products never materialized or made any headway.

At the same time, the closed-door policy of the feudal political power left no avenue open to an overseas market. The ban on intercourse with foreign countries was very strict in the Ming Dynasty. Even after the lifting of the ban in the Qing Dynasty, there were still tight restrictions on the export of handicraft products. For example, the silk of Suzhou, Hangzhou, and Ningpo and the metal wares of Foshan were subjected to all forms of restrictions. Thus, urban handicrafts could hardly be developed through foreign trade.

Because of these reasons, with the exception of silk, pottery, cotton textile, and manual dyeing, all urban handicraft products were intended for local consumption and could not go beyond the limits of small local markets. Such small markets were everywhere in the cities and the countryside, and it was difficult to prepare the market conditions for the development of capitalism. Among the different handicraft trades which might breed capitalism during the Ming-Qing period, including the production of tea, tobacco, and sugar; lumbering; paper-making; metal smelting; coal mining; copper extracting; and so forth, most of them took place in the countryside or in towns close to the countryside. The sprouts of capitalism appeared only in a few types of handicrafts, such as silk textile, pottery, and manual dyeing, because such products were sold in various parts of the country. It was by no means coincidental that the sprouts of capitalism could not be seen in other types of urban handicraft.

III. Trinity of Landlords, Merchants, and Userers in Distribution

The land, the capital of commerce, and the money to be used as loans were the three means of economic exploitation in the feudal society, all based on the surplus products of peasants and handicraft workers. In a feudal society, agriculture was the principal department of production and land was the principal means of production. Land, therefore, was the most reliable means to increase social wealth as well as the end-result of social wealth. In China, because of the free land transactions, merchants and userers, fascinated by an asset which "can withstand flood, fire and plundering," bought land avidly and converted part of their income from business profits and loan interests into rent. At the same time, landlords also hoped to amass more wealth through business venture and usury--which, though more risky, had a stronger element of exploitation--and decided to make money in the form of business profits and loan interests instead of rent. This brought about an interchange among land, business capital, and money for loans; and the landlords, merchants, and userers became "close relatives" and gradually formed a "trinity" of feudal economic relationships, which has been all along the basic structure of the distribution of social wealth and the main orientation of social accumulation, particularly in the later stage of China's feudal society.

Private ownership of land and the permission for land transactions were important features of the feudal economy in China. This was a special way for the survival of the landlord economy so that, after every periodical land crisis and social upheaval, it could be reborn in its original form. Merchants and userers were not the only ones permitted to buy land and become landlords; even peasants and other laborers could do the same by "working hard in the field to become rich." In this way, the landlord system in China possessed greater vitality than that of the system of land ownership in Europe in the forms of enfeoffments and protectorates. It also must be noted that, in the feudal society of China, landlords from the ranks of high government officials were always the strong supporters of the landlord economy. Although their prodigal offspring might squander their inheritance as the saying "wealth does not last more than three generations" goes, feudal officials invariably wanted to spend their ill-gotten money on manorial fields in order to "enjoy an idyllic life" and to "provide security for the future generations." With this powerful support, the landlord economy continued to wax strong until it finally became strongly entrenched. Along with the expansion of the commodity and money economy and the commercialization of land, such a phenomenon became even more prevalent in the later stage of the feudal society.

Occupation of land on the strength of feudal privileges in a feudal society was the main obstacle to the commercialization of land. With the development of social productive forces and the commodity economy, however, the power of money continued to pound at the feudal privileges and the scope of land transactions continued to expand, while the feudal traditions and customs restricting land transactions became more lax. In the early days of the Qing Dynasty, the buying or selling of manorial fields and banner land was strictly banned. Under attacks from the power of commodity and money, such transactions were permitted inside the banners during the reign of Emperor Kangxi; and the ban was totally lifted during the reign of Emperor Qian Long when land transactions were permitted "in any banner." The preferential rights of purchase for close relatives, mortgagors, and former owners under the old customs were abrogated along with the development of the relations of land buying and selling during the middle of the Qing Dynasty. During the reign of Emperor Yongzheng, the Qing government formally negated the "theory of preferential rights for close relatives" in land transactions.

There could be real freedom in land transactions only when such transactions were carried out on equal terms and at certain prices. Special prices obtained under political and economic pressure could not be consistent with the relations of buying and selling in a strict sense. During the early part of the Qing Dynasty, the practice of forcible occupations and selling of land by applying political and economic pressure still remained. However, the change of deeds of title on the land was accomplished with economic means of business transactions. At the same time, the fertility of the land, the rate of rent, the relation between supply and demand, and other economic factors played an increasingly decisive role on land prices; and land in different locations and with different degrees of fertility was sold at what people generally called "current prices" for their "current value." This shows that land transactions had generally been liberalized. For the development of the "trinity" feudal economy, this liberalization was a very great advantage. By this time, therefore, there was a marked tendency toward an interplay between the merchants and userers trying hard to possess land, on the one hand, and landlords eager for business ventures and usury on the other.

First, let us look at it from the angle of land accumulation. Along with the development of productive forces in the early Qing Dynasty, land yielded greater benefits. The system of percentage-drawing in rent payment was replaced by that of a fixed rent. The payment of rent deposits also became popular. Thus, the landlords were ensured of a steady income in addition to certain extra benefits. At the same time, the development of industry and commerce and, particularly, the rapid increase in population exerted an increasing strain on the supply of food; and food prices continued to soar. During the reign of Emperor Qian Long, which lasted 60 years, the price of rice in areas south of the Changjiang River quadrupled. Under such circumstances, those who owned more land would possess more grain or social wealth. These were the factors driving people to a rush for land.

In the rush for land, the bigger share still went to the noble-official landlords. It is, however, noteworthy that large-scale purchases of land merchants and userers were even more common during the later part of the reign of Emperor Qian Long. Someone said: "Recently, wealthy merchants bought a gread deal of land, amounting to scores of hundreds of hectares." (Hu Ding's Memorial to the Throne in the 5th Year of Emperor Qian Long's Reign, from the file of the Board of Revenue, Qing Dynasty) "According to an estimate, the commoners owned less than 20 or 30 percent of the land in the prefectures and counties, and the rest all became the property of squires and merchants." (Fang Bao, "Notes on Economic System," "Collected Works of Fang Wangxi" Vol 1) Some of these merchants and userers bought farmland "for their future generations," which was described as "buying more land and houses to bring up the children and grandchildren"; or "for their own remaining years," which was described as "buying land as a protection in old age"; or for controlling the food supply in an attempt to earn greater profits. This was how a large number of merchants and their offspring became landlords or owned land as an additional source of income.

At the same time, there were peasants "working hard in the field to become rich." They generally went through the stage of "hiring people to work in the field" as the rich peasants did. Under conditions then prevailing in China, hiring people for farming was not very profitable. Both Zhang Lixiang in his "Notes on Supplement to Agriculture" and Qian Yong in his "Luguan Miscellaneous Talks" spoke to the same effect. People in the academic circles also have recently studied this subject. Therefore, under certain conditions, peasants generally wanted to make more money from business ventures or through usury in order that they could buy land and join the rank of landlords.

In the early Qing Dynasty, many peasants turned landlord under these circumstances. This was an important change marked by a relaxation of the rules concerning feudal land, but this change by no means weakened the landlord economy. On the contrary, it adapted the landlord economy to the development of a commodity and money economy and helped to consolidate its position and to prolong its existence.

Secondly, let us see how the landlords devoted their efforts to business venture and usury. The development of social economy and the expansion of the commodity and money economy further whetted their appetite for luxury. The government officials living together in cities became more extravagant, while more and more landlords moved from the countryside into the cities to seek pleasure. The system of selecting government officials by holding imperial examinations was originally a sacred affair under the feudal system. Being no match for the "magic of getting-rich-quick," it was left wide open for corruption. This practice called for increased supplies of luxury items and daily necessities to be financed by high-interest loans. Landlords, especially the noble-official landlords, then used the cities as the bases of their commercial and money-lending operation and, the more prosperous the commerce of a city, the more densely they concentrated their capital in that city. Their money was mostly invested in the production of luxury goods to be used for bribery and to earn high profits or was loaned out a high interests. The luxury goods included silks and satins, pearls and precious stones, and antiques, while their trades included the running of money exchanges and pawnshops. Of course, their business also developed to such an extent as to include the production of daily necessities and the transportation of goods for sale.

At the same time, the peasants-turned-landlords strengthened their control on money in the countryside. Milling, oil pressing, winemaking, and the processing of other agricultural products had always been the hereditary privilege of the landlords in the countryside. With the development of agricultural crops to be used as commodity, the landlords opened up new fields of activities, such as sugar extracting, tea making, and the processing of more agricultural products. The increased demand for commercial grain led them to the hoarding and cornering of goods, selling goods at far away places and resorting to fraudulent activities in business. The running of retail stores and the floating of high-interest loans by landlords in the countryside became even more common. The entire economic life of the countryside then was controlled by the landlords.

Along with the development of capitalism in the later stage of the feudal society, the principal social contradiction between the feudal-lord class and the peasants was gradually replaced by the contradiction between the feudal-lord class and the bourgeoisie. The essence of this contradiction was in the conflict between land power and money power. It was precisely the development of this conflict that led to the rise and demise of the feudal society. Such is the universal law of historical development; and this law applies to the West and the East alike, the only difference being in the characteristics of feudal economy and their forms of development.

There were some exceptions in China, though. Because of the private ownership of land and the permission for land transactions, particularly during the later stage of feudal society, the development of commodity economy and the increased commercialization of land offered the landlords, merchants, and userers generally equal opportunities for exploitation in their own ways. Since they were able to enjoy their proprietary rights over their land and their money in harmony, the contradiction between land power and money power was alleviated with important social aftereffects. As members of the principal ruling class, the landlord controlled not only the land but, also, the money through business ventures and usury. Thus, they could exercise their ruling power not only politically but also economically in the cities as well as the countryside. Their ruling position was undoubtedly stronger than ever.

Now let us look at the position of the merchants and userers. Because of the political and economic domination by the powerful landlord class, the characteristics of Chinese cities as political centers, and the traditional policy adopted by the feudal autocratic power of "stressing the roots and neglecting the branches," the economic position occupied by industry and commerce in the cities became weakened, and the social position of merchants was a humble one. They usually sought the patronage of those with feudal provileges or the feudal bureaucrats in order to develop their business. In the early Qing Dynasty, the most wealthy merchants became salt dealers or government traders. Their duty was to amass wealth for the feudal rulers and, at the same time, they tried to "pick up some fallen crumbs for themselves." Other merchants of the upper-middle level invited the bureaucrats into partnership or tried to bribe their way to officialdom so that, in collusion with other government officials and in the dual capacity of officials and merchants, they could circumvent the official prohibitions or resist excessive demands. Merchants as a class had to stoop to compromise and to carry on their commercial activities cautiously; otherwise they might invite disaster and bring ruin to their families. Many of them would invest their gains in land instead of production. This shows their dependency on the landlord economy and their lack of independence. Since they could not develop independently in economic and political spheres, their role as "revolutionary elements" ("Das Kapital" Vol 3, p 1,019) could not be given full play as it was in Europe. Precisely because of the political and economic power of the landlord class in the urban and rural areas, Marx made these remarks: "Asian history is all about the unity of the city and the countryside." ("Collected Works of Marx and Engels" Pt I, Vol 46, p 480) These remarks aptly summed up the history of China's feudal economy.

"The economic relations of a given society present themselves in the first place as interests." ("Collected Works of Marx and Engels" Vol 18, p 307) The "trinity" feudal economy was precisely the economic relation which was capable of bringing great benefits to the feudal lord class. Exploitation in the form of rent was very severe in China, because the rent rate was above 50 percent. Commercial profit rate and loan interest rate were based on the rent rate as the minimum, or else the merchants and userers would rather become landlords then take the risk of loss. Furthermore, there was the opportunity to monopolize and swindle in commerce and usury which could raise exploitation to a degree far above that of rent. At the same time, they could invest their accumulated wealth in the most profitable way according to the changing social and economic conditions, so that rent, business profits, and loan interests could be transformed into one another and loan interests could be transformed into one another with great flexibility and, thus, bring about great economic benefits for the feudal lord class.

The "trinity" feudal economy, with rent exploitation as its foundation, combined the most steady with the most lucrative form of interest-bearing instruments into a single entity. This was a powerful means of increasing wealth based on simple cooperation and handicraft production, leaving the sprouts of capitalism--which carried out exploitation only on the absolute surplus value--far behind. Since the sprouts of capitalism could not attract the huge money capital that was in the hands of merchants and userers, they could only grow in some crevices of feudal economy and wait for large profits to be made under extraordinary circumstances. Sometimes, they may become the tools for other people to accumulate wealth and to buy land, so that, finally, it could only help strengthen and landlord economy. It was beyond doubt the structure of wealth distribution and the orientation of accumulation of the "trinity" feudal economy could only strengthen the landlord economy, restrict the growth of the capitalist sprouts, and then lead to the stability and prolonged existence of feudal economy.

The law of motion in the contradiction between productive forces and the relations of production is the fundamental law of development of the human society. The contradiction between productive forces and the relations of production also is the basic cause for the development and changes of all forms of society. In studying the cause of the prolonged existence of China's feudal society, we must start from the interaction among the productive forces; the relations of production; the superstructure; and then the population, the geographical environments, and other factors, with particular stress on the contradiction between the productive forces and the relations of production. We have already mentioned the main features of the economic structure in China's feudal society (especially during the Ming-Qing period). How are the productive forces now?

Productive forces did develop during the Ming-Qing period. In agriculture, the popularization of such drought-resistant and high-yield crops as maize and sweet potatoes and the division of labor in agricultural areas were new factors in the development of productive forces. In handicraft, remarkable innovations in the tools and equipment used in various trades, such as well-salt, were carried out. On the whole, however, the development of social productive forces was still limited, as can be seen from "a merely quantitative extension of productive forces already known" ("Collected Works of Marx and Engels" Vol 3, p 24), but not qualitative improvement. In agriculture, for example, there were only increases in the farmland areas and the amount of labor power, the popularization of intensive farming, and the use of fairly efficient farm tools and farming techniques previously invented. In handicraft, there were only certain improvements in the work process and the division of labor according to the requirements of specialization and so forth. There was no new or important breakthrough in the tools of production. Tools of production are the most effective and most important factor in production. If we only rely on the above-mentioned factors without changing the tools of production, social productive forces can only be increased slowly and to a certain limited extent.

"How far the productive forces of a nation are developed is shown most manifestly by the degree to which the division of labor has been carried." ("Collected Works of Marx and Engels" Vol 3, p 24) In a feudal society, the separation of agriculture from handicrafts was most important. During the Ming-Qing period, the broad masses of peasants sold agricultural products mainly to meet the needs of their daily life but not under compulsion from the division of social labor. The sale of handicraft products did not indicate the development in the division of social labor either. In social production as a whole, handicrafts had never been detached from agriculture, and this shows the lack of progress in the division of social labor as well as the inadequate development of productive forces.

Agriculture is the foundation of all societies, and the development of agricultural productive forces had a very important bearing on the transition of a feudal to a capitalist society. There was development in grain production during the Qing Dynasty, as clearly shown by its ability to feed a population increased from 100 million to 400 million. By the middle of the Qing Dynasty, however, the increase of population was faster than the increase of the means of production; and a nationwide shortage of food supply resulted. The development of commercial agricultural crops, handicrafts, and commerce in the early Qing period had actually been based on an agriculture which could only provide stopgap measures detrimental to long-term interests. The number of laborers engaged in commercial agricultural crops, handicraft production, and commerce was invariably decided by the amount of surplus grain. With the productive forces available in the early years of the Qing Dynasty, a complete separation of handicrafts from agriculture was obviously impossible. Most of the social products were consumed by the excessive population, and little was left for social accumulation. Therefore, social production could hardly be expanded.

Because of the tenacious internal structure of China's feudal economy, and the fact that the development of social productive forces during the Ming-Qing period could not hasten its disintegration, it was difficult for the sprouts of capitalism to grow; and the feudal society could only be allowed to remain for a long time.

PARTY AND STATE

CRITICISM OF BOURGEOIS LIBERALIZATION DEFENDED

Beijing ZHONGGUO QINGNIAN BAO in Chinese 1 Sep 81 p 1

[Article by Yan Nie [3601 5119]: "A Reply to Reader's Questions About Criticism of the Tendency Toward Bourgeois Liberalization"]

[Text] What is the Tendency Toward Bourgeois Liberalization?

That which is called the tendency toward bourgeois liberalization is the mistaken tendency to shake off the leadership of the party and depart from the socialist path. Its core is opposition to party leadership. Without party leadership there will be no socialist system. In the past period there have actually been some persons who, by publishing literary works, writing articles, making speeches to the young and other means, have vilified party leadership, defamed the socialist system, maligned Mao Zedong Thought and placed a black mark upon the face of the motherland. They attribute nothing good to the party and the socialist system and even go so far as to speak of "breaking through the last line of defense." They want the party to "rule laissez faire," and they openly want to free themselves from the leadership of the party and Marxism-Leninism, Mao Zedong Thought. And there are those who are members of the Communist Party but who nonetheless refer to party leadership as "officialdom," refer to themselves as representing "the people," and so forth. Although it is only an extremely small number of people who have this mistaken tendency, we should not underestimate their negative impact. If we passively tolerate the spread of this kind of mistaken tendency, it will do grave damage to the socialist cause of our motherland. Because of this, we must overcome the weak and disorganized state of leadership on the ideological front and carry out serious and correct criticism and necessary and appropriate struggle against every kind of mistaken tendency.

Does Criticizing the Tendency Toward Liberalization Mean Attacking Individuals or Groups of People?

Some comrades ask: since the tendency toward bourgeois liberalization is expressed through certain literary works, articles and individual speeches, isn't criticism of these a way of attacking individuals or groups of people? We say that this is not so. The criticism that we carry out today, in both goals and methods, is basically different than the evil actions carried out by Lin Biao and the "gang of four" in the name of criticism. We cannot adopt a heedless atttitude in regard to contradictions between the enemy and ourselves or in regard to contradictions of such a nature. But, we use criticism and self-criticism to overcome mistakes with regard to contradictions within the ranks of the vast people and here our goal is to cure the sickness and save the person, not to attack him; to lead the mistaken comrade back onto the correct path, not to strike him down and leave him no hope. In terms of methods we must seek the truth from facts, strictly distinguish the enemy and ourselves, differentiate between right and wrong, not go to extremes in criticizing, raise a hue and cry, recklessly criticize and struggle, or beseige comrades. In criticizing we must adopt methods of presenting the facts and reasoning. In addition, we should carry out different criticism in different situations. For example, some criticism should openly name names in the newspapers, while some should criticize mistaken concepts without naming names, and other criticism should be nothing more than brief oral comment. The method of criticism should be particular and judgments appropriate, but this should not be used as an excuse for failing to criticize or criticizing weakly, both of which are incorrect. Doing so is, in fact, tantamount to foregoing criticism, which will result in harming the interests of the people and will be of no benefit in correcting the mistakes of mistaken comrades.

In Criticizing the Tendency Toward Liberalization Do We Want to Carry Out Political Movements?

The criticism in 1965 of "Hai Jui Dismissed From Office" initiated the "Great Cultural Revolution" movement, the memory of which remains fresh in the minds of the people. Some comrades have doubts about whether or not today's criticism will be accompanied by more political movements. Such doubts are unnecessary. Since the 3rd Plenum of the 11th Party Central Committee the Party Central Committee has indicatdd several times that, the socialist transformation having been basically completed, class struggle is no longer a primary contradiction in our country. The Party Central Committee has already formally indicated that we should stop using the mistaken slogan, "take class struggle as the key," and that we will no longer carry out political movements. Our central task is to unite the people of the entire country in single-mindedly carrying out the four modernizations. Our criticism of the mistaken tendency toward liberalization is basically intended to get the people of the entire nation to distinguish right and wrong, to improve ideology and to better carry out the four modernization constructions. Because of this, in dealing with the tendency towadd liberalization with which we are presently confronted, we cannot repeat the mistaken method of the past of carrying out political movements.

Does Criticism of the Tendency Toward Liberalization Mean We Cannot Speak of Democracy?

Since the Third Plenum the Party Central Committee has indicated many times that we must forcefully develop democracy and this principle will not be changed. During 10 years of unrest Lin Biao and the "gang of four" instigated despotism and trampled on democracy, causing everyone to fall mute, and this situation can never be allowed to repeat itself. We must certainly work hard to create a lively political situation which encompasses both centralism and democracy, both discipline and freedom, and both unified determination and satisfied individual aspirations. We must encourage free discussion within the ranks of the people and see to it that everyone feels free to speak his mind. Within the ranks of the people varied opinions can be aired, but since mistaken ideas are allowed to be aired, we must, of course, allow criticism of mistaken ideas. All the legitimate democratic rights of the masses must be completely protected. However, our democracy is socialist democracy, democracy with leadership, and there is no place for bourgeois liberalization. In upholding the "double hundred" principle, we cannot forego criticism and self-criticism. If, in the name of promoting democracy, we recklessly publish literary works or make speeches which deny the four fundamental principles, then we are completely mistaken. We must carry out criticism and self-criticism concerning this kind of mistake, see that people improve their ideological understanding, and not allow them to be poisoned by mistaken ideologies. We cannot view this kind of proper criticism as obstructing or damaging democracy. At present, the so-called democracy in the minds eye of some people just so happens to allow them to speak their minds, to argue with others and to issue speech which weakens or denies the four fundamental principles, and does not allow others to carry out criticism of their mistakes. Rather, they say that the criticism of them by others is destroying democracy. This is clearly quite mistaken.

Will Criticism of Liberalization Dilute or Obstruct Criticism of Improper Tendencies Such As Those Toward "Leftist" Ideology and Privileged Treatment?

Since the Third Plenum, in guiding ideology our Party Central Committee has thoroughly split with "leftist" ideology and established the correct line, principles and policies. But in terms of the entire nation, the task of completely correcting "leftist" mistakes in practical work is still a formidable one. It remains extremely important to continue tirelessly to overcome "leftist" mistakes. By saying today that we must criticize bourgeois liberalization, we do not mean that we should no longer criticize and correct "leftist" ideology. Both the tendency toward liberalization and "leftist" ideology are harmful to our cause, and so we must seriously criticize and correct them both. Our party's principles have historically upheld struggle on two fronts, opposing both the "left" and the right, and concretely analyzing concrete conditions. Similarly, at the same time we oppose the tendency toward bourgeois liberalization, we must continue to oppose privileged treatment and other improper trends. The question of party style relates to the large question of the life and death of the party. The party has repeatedly insisted that our party style must be good. Because of this, we must continue to criticize improper trends within the party and in society. The problem is that at present some comrades only see the harm done by "leftist" ideology and improper trends, and fail fully to see the harm done by the tendency toward bourgeois liberalization and so abandon the weapon of criticism in the face of this tendency. This situation should be corrected. In short, we should criticize whatever mistakes there are. Only this will lead to smooth progress in our four modernization constructions.

What is the Connection Between Criticism of Bourgeois Liberalization and Our Vast Youth?

Our vast youth are the successors of the proletarian revolutionary cause who will shoulder the heavy burden of realizing the four modernizations. The party and the people rest their hopes on the generation of young people. If we are to assume responsibility for this glorious historical mission, then we must uphold the four basic principles, unwaveringly follow the party along the socialist path and carry out righteously fearless criticism of all tendencies which depart from party leadership and the socialist system. Only by so doing will the interests of our nation and people, as well as the interests of our youths, truly be protected.

Criticism and the prohibition of the tendency toward bourgeois liberalization are also for the good of the healthy development of our youth. Young people do not exist in a vacuum and always feel the impact of the various ideological tides in society. In their search for knowledge and strength they like to read literary works and to invite persons to make reports on various problems. This is one of the unique characteristics of youth. It is worth noting that some of the ideological tides tending toward bourgeois liberalization just happen to be spread through literary pieces and books, and through speeches. Due to insufficient historical knowledge and social experience, it is easy for youths to become ideologically one-sided, and some youths will, in varying degrees, be subject to the decay brought on by the tendency toward bourgeois liberalization. Because of this, criticizing mistaken tendencies is an effective way of preventing harm to our youth. Our vast youth should seriously study Marxism-Leninism and Mao Zedong Thought and should be aware of criticisms of the tendency toward bourgeois liberalization. In this way they will raise their own ideological awareness, improve their ability to distinguish right and wrong, and lead to their healthy development.

PARTY AND STATE

WESTERNIZATION MOVEMENT IN LATE QING DYNASTY

Beijing JINDAISHI YANJIU [STUDIES IN MODERN HISTORY] in Chinese No 2, May 81 pp 127-144

[Article by Compilation Group of "Modern History of China, Draft:" "Westernization Activities--Creation of Modern Military Industry"]

[Excerpts] Currently, the history circle is enthusiastically discussing the "Westernization Movement." We now publish here the section on westernization activities in Volume 2 of "Modern History of China, Draft" for comments and corrections by our comrades, in order to make revisions and supplements before formal publication.

Not long after the emergence of the situation of "peace" between China and the foreign countries, some of the people in the landowner class began to create a modern military industry. Those in charge were the same people who vigorously advocated "peace," including Yi Xin, Zeng Guofan and Li Hongzhang. They relied mainly on foreign countries for their activities. Dealing with foreigners belonged in the realm of the so-called "westernization" at that time, and the group of people engaged therein was known as the westernization faction.

In December 1860, upon the opportunity of using foreign troops to suppress the Taiping Rebellion, Zeng Guofan submitted a memo to the Qing government: Using the forces of foreign countries today to assist in suppressing the rebellion and ship grain will reduce current worries; in the future, learning foreign technology and manufacturing cannons and building ships will bring permanent benefits.[1] Next year, he further developed his proposition: The purchase of foreign ships and cannons is the foremost task to save the situation today. After purchasing them, we can seek able persons and ingenious artisans to practice first and trial manufacture later. Within a year or two, steamships will become available for both government and civilian use. By that time, "it will be possible to suppress the Fa and Nian rebellions; it will be possible to form long-range strategies."[2] After coming to Shanghai in 1862, Li Hongzhang acquired the aid of foreign aggressors to train foreign rifle units and establish a foreign artillery bureau, and was very active in learning how to manufacture foreign ships and cannons. He felt that the main reason that the Qing army often used several times as many men as the foreigners in battle and yet failed to win was because of the inferior weaponry and the crude guns and cannons. If the weaponry were comparable to the West, the Qing army "will be more than adequate to pacify China and compete with the foreign countries." Paying serious attention now will finally bring independence.[3] As long as China possesses big cannons and steamships, the West will stay its hands.[4] Seeing that Zeng Guofan and Li Hongzhang were learning to manufacture foreign ships and cannons, Yi Xin decided to send soldiers to learn. In his memo to the emperor, he said: To rule the country, we must become strong. To become strong, training the troops is primary, which is premised on manufacturing weapons. While the foreigners are willing to render help, we must seek all kinds of foreign firearms and uncover their mysteries and secrets. By then, we will be able to resist humiliations when necessary or demonstrate our might in times of peace. The attitude of the foreigners depends on the strength or weakness of China. "If we can be strong, we will be able to live in peace with them."[5] Yi Xin, Zeng Guofan and Li Hongzhang hoped that purchasing and imitatively manufacturing foreign guns and cannons and ships and organizing and training new-style troops would realize the "strength and independence" of a landowner country in face of the foreign aggressors while suppressing the people's revolution. They thought that adding some advanced technology of the Western capitalist countries to the decadent feudal system would stabilize the old order and that the rule of the Qing Dynasty would remain peaceful forever. They felt that westernization was necessary and feasible and that they would win the sympathy and aid of the big powers.

The main contents of the westernization activities begun in the sixties were, at first, the purchase of modern military equipment, the creation of a military industry, the training of new-style navy and army and the cultivation of westernization talents. After the seventies, such activities gradually expanded to mining, shipbuilding, telegrams, railways and textile.

Beginning in 1862, the Qing government engaged English and French instructors, bought guns and cannons, and trained foreign gun units successively in Tianjin, Shanghai, Guangzhou and Fuzhou, gradually expanding to Wuhan, Nanchang, Anqing and Jinan. In 1866, Yi Xin obtained permission from the emperor to train 15,000 infantrymen in Zhili [Hebei]. The personnel were mostly transferred from the Manchu units and the Green Battalions. Among the newly organized troops, the equipment and training of the Xiang [Hunan] and Huai [part of Henan and north Anhui] Armies were the best.

The large-scale conversion to foreign guns and cannons by the Xiang and Huai Armies began in April 1862 when the Huai Army was assigned to garrison in Shanghai. The moment he arrived in Shanghai, Li Hongzhang ordered the Huai Army to learn the use of the new-style guns and cannons and tactics from the foreign troops. He wrote Zeng Guofan: China is far inferior to foreign countries in weaponry, and I feel very ashamed. To be stationed in Shanghai for an extended time without utilizing the skills of the foreigners will be difficult for me to avoid censure.[6] He said to the officers of the Huai Army: In regard to bombs, I personally am determined to imitate the foreigners. I hope you will all exert an effort to do so.[7] Utilizing Shanghai's monthly tax revenue of 200,000 to 300,000 liang, Li Hongzhang recklessly bought foreign guns and cannons, spared no expense to hire foreigners as army instructors and recruited foreign artisans to operate the equipment for making cannons imported from Hong Kong. The old-style guns were discarded in favor of the foreign guns.[8] From April 1862 to the interval between fall and winter of 1864, the land and sea personnel of the Huai Army expanded from 6,000 plus men to 50,000 or 60,000, with 30,000 to 40,000 foreign guns and 6 or 7 artillery units. Li Hongzhang was pleased with himself. In his report to the Qing government, he bragged: Battling the Taiping army south of Changjiang, he was accustomed to the efficacy of foreign firearms which most others had never seen or known. He was the only one to have paid attention to them for several years and glimpsed the mystery therein.[9] The Xiang Army under Zeng Guofan and Zeng Guoquan also began to use foreign guns and cannons in 1862, and subsequently made large purchases in Shanghai and Hong Kong. Zeng Guoquan said in 1864: His troops were helped considerably by the use of foreign guns and were able to compete against the Taiping army effectively.[10] The Xiang Army under Zuo Zongtang began to cooperate with the French in the fall of 1863 and set up foreign gun units. After marching into the Northwest in 1867, he expanded the gun units. Foreign guns increased to 60 percent, and special persons were stationed in Shanghai to purchase guns and cannons and ammunition from abroad. In the first half of the eighties, the Beiyang [Liaoning, Hebei and Shandong] garrison consisted mostly of the Huai Army, the garrison stationed in the Northwest provinces mostly of the Xiang Army, and the Nanyang [Jiangsu, Zhejiang, Fujian and Guangdong] garrison both Huai and Xiang Armies in equal numbers, while most of the other provinces also had Xiang and Huai Armies stationed in them. The Xiang and Huai Armies equipped with foreign guns and cannons gradually replaced the Eight Banners and the Green Battalions and became the main strengths of the Qing government to suppress the people's resistance and stabilize the semi-colonial and semi-feudal regime.

Purchasing foreign ships and preparing for a new-type navy also began in the early sixties. In 1862, the Qing government entrusted General Commissioner of Customs(Li Taiguo),returning to England on vacation, to order warships from England. In 1863, a fleet of 8 large and small ships led by British naval officers reached Shanghai and prepared to join the operation against the Taiping army. Due to the conflict of Zeng Guofan and Li Hongzhang with the English officers for command power, the Qing government had to disband the fleet and send all the ships back to England. Subsequently, Jiangsu and Guangdong bought separately a number of small warships to suppress local mass uprisings. Between 1874 and 1875, after an extended discussion on coastal defense, the Qing government decided to prepare to create a navy. Li Hongzhang was one of the high commissioners in charge. Between the second half of the seventies and the first half of the eighties, he successively bought 20 naval vessels (subsequently 4 Nanyang gunboats were allocated) at a cost of more than 7 million liang. Together with the ships built by the Fujian Ships Administration Bureau, the Beiyang provinces had a total of 20 plus vessels. The Nanyang provinces had 10 plus vessels of different kinds, Fujian 10 plus, and Guangdong 20 plus small ones.

Buying firearms and ships from the West was only a part of the activities of the westernization faction to improve the military apparatus; the more importang part was creating a modern military industry. In 1861, Zeng Guofan established the "Interior Ordnance Post" in Anqing to manufacture new-type guns and cannons. Two years later, he sent Rong Hong with a large sum of money to America to buy machinery for expansion of the post. Beginning in 1862, he established successively 3 foreign cannon bureaus in Shanghai. He felt that, though the expenses of the foreign cannon bureaus were more than 10 times greater than those of ordinary cannon bureaus, they must be continued even at the expense of reducing the soldiers' pay.[11] In 1864, he expanded one of the bureaus and moved it to Suzhou. Inspired, Yi Xin sent soldiers to Suzhou to learn and planned to create machine bureaus. In 1864, Zuo Zongtang trial manufactured steamships in Hangzhou. After the failure of the Taiping revolution, the westernization faction, for the purpose of continuing to suppress the mass struggles of the various areas and expanding its own power, undertook the building of a modern military industry on an even larger scale.

From the sixties to the early eighties, the westernization faction operated four key military industries: 1. Jiangnan Manufacturing Bureau. In 1865, Li Hongzhang bought an American machine plant in Shanghai's Hongkou and included in it the 2 cannon bureaus originally in Shanghai and the machinery bought by Zeng Guofan from America. He also manufactured a part of the machinery and formally set up the Jiangnan Manufacturing Bureau at a cost of approximately 200,000 plus liang. In 1867, it was moved to the south of Shanghai and vigorously expanded. By the first half of the eighties, it possessed more than 10 plants of various types and 1 dry dock, and also had a translation office and an artillery school attached to it. Costing a total of approximately 2 million plus liang,[12] it was the largest weapons manufactory built by the westernization faction. It utilized the 20 percent of the annual revenue of the Shanghai Customs allocated to it, approximately 500,000 to 600,000 liang, for its annual outlay, manufacturing guns and cannons and ammunition to supply the troops stationed in the south and the north (mainly the Huai Army, with the Xiang Army next), and at times to the troops in other provinces. From 1867 on, it began to build steamships, successively producing 8 naval vessels. Suspending shipbuilding after 1885, it concentrated on repairing the naval vessels of the Nanyang and Beiyang provinces. 2. Jinling Machine Bureau. In 1865, Li Hongzhang moved the Suzhou Foreign Cannon Bureau to Nanjing and expanded it into the Jinling Machine Bureau. By the first half of the eighties, it possessed more than 10 plants at a cost of 500,000 plus liang. The weapons and ammunition manufactured by it were mainly supplied to the Nanyang and Beiyang garrisons. 3. Fujian Ships Administration Bureau. In 1866, Zuo Zongtang set up the Ships Administration Bureau in Fuzhou, which was later taken over by Shen Baozhen. At the beginning, the plan was to build 16 vessels in 5 years. The plants were built at a cost of 400,000 plus liang and monthly shipbuilding cost was 50,000 liang. Production started in 1869, and a total of 15 vessels was built by 1874. By this time, the bureau had 16 plants, 3 berths and 1 ship slot, with an attached technical bureau. With the plant building cost totaling 1.35 plus million liang, the bureau was the largest shipyard undertaken by the westernization faction. At the beginning, shipbuilding was entirely controlled by Frenchman (Riyige) and others. When the contract expired in 1875, it was taken over by the students of the technical bureau. Starting with imitative manufacturing of old-type wooden ships, it began in 1876 to build 750-horsepower new-type machine iron-side steamships. In 1881, it built 3 2,400-horsepower fast patrol ships of 2,200-ton displacement for the Nanyang Navy, the largest naval vessels built by China itself at that time. 4. Tianjin Machine Bureau. Training new-style troops in Zhili in 1866, Yi Xin ordered Beiyang Minister of Commerce Chong Hou to establish a machine bureau in Tianjin. The east and west bureaus were preliminary completed in the eighties. Not long thereafter, Li Hongzhang took over and expanded the project. By the first half of the eighties, a total of 1.1 plus million liang was spent. The Tianjin Machine Bureau mainly produced ammunition and weapons to supply the Huai Army and the Zhili troops now under Li Hongzhang's command. The plants of the four bureaus each had its own special functions. Concurrently making guns and cannons, ammunition and steamships, the Jiangnan Manufacturing Bureau was the most comprehensive in its functions. The Jinling Machine Bureau mainly produced cannons, the Tianjin Machine Bureau made gunpowder and shells, and the Fujian Ships Administration Bureau specialized in building steamships. Together, they formed the mainstay of China's early military industry.

The bureaus and their plants, regardless of the size, were all run by the government. Their initial cost and annual expenses were allocated by the government. The greater part of the guns and cannons, ammunition and steamships produced by them were directly allocated to the Xiang and Huai Armies and the coastal provinces, while the smaller part was traded to the provinces under the name of rendering financial assistance or sold to them for a price. The outlays were reimbursed or disbursed according to routine expense accounts. The cost of production was never computed, and even less attention was given to efficiency. Each bureau and plant was a government office, with a horde of high and low bureaucrats. Above them, there were the governor-generals and governor-supervisors, known as commissioners. Within the bureaus and plants, there were, in operation and management, such personnel as general managers, assistant managers, submanagers, titiao, commissioners and affairs managers, and in charge of production, Chinese and foreign supervisors, chief foremen, chief inspectors, chief engineers, foremen, team leaders and chief artisans. In addition, there were also aides and deputies who received salaries but performed no work. The structure was ponderous, filled with redundant personnel. Take the Jiangnan Manufacturing Bureau and Fujian Ships Administration Bureau for instance: In Jiangnan Manufacturing Bureau, each time there was a new general manager, he would follow the same routine and add 30 or 40 trusted commissioners and affairs managers, ever increasing the personnel. In regard to expenses, the salaries of the Chinese and foreign personnel often constituted 10 percent or more of the total expenses, and as high as 20 percent or more in some years.[13] The minister of the Fujian Ships Administration Bureau appointed an excessive number of personnel, and the successive persons in charge each brought in a group of people. There were only additions, never dismissal. As a result, a large portion of the shipbuilding fund was spent on salaries, not on production.[14] In some plants, troops were detailed to serve as workers, and the military management system was followed. In Fujian Ships Administration Bureau, for instance, "able-bodied units" were formed, and the system of troop management was completely followed to control the hired laborers and helpers. Minister of the bureau Shen Baozhen declared in 1868: The daily 800 or 900 hired laborers and helpers must be controlled by military law before we can prevent them from becoming careless and sloppy and unmanageable. There will be a corporal for each file of 10 and a leader for every 5 files, and diligent and able soldiers will be assigned to command them. Their sleeping quarters, kitchens and toilets will be strictly checked. Ramparts will be built along the mountains, roughly like barracks.[15] Some bureaus and plants prohibited the men from coming and going freely; others set up criminal courts and openly administered punishments. Without any freedom, the workers encountered bureaucratic oppression everywhere. China's feudal era had long had handicrafts run by the government. Making only certain products needed by the aristocrats and bureaucrats, all were operated by the government. The modern military industry at present remained basically a sort of feudal governmental enterprise. The only difference was the production of firearms by new technology. In 1865 and 1876, Li Hongzhang repeatedly asked the Qing government for its attention: Military industry must be strictly controlled. If certain people in remote areas surreptitiously learn the foreign ways and successfully manufacture sharp weapons, once they rise up and revolt, government troops will not be able to resist them. "Every time I think of it, I cannot help but rise suddenly and heave a long sigh."[16] He also said that foreign machinery could also be used to manufacture farming, textile, printing and ceramic implements, not just firearms. After its introduction into China, the rich merchants would use it to seek profit. The government must issue orders and ban its use to make such things as electric wires and firearms. The personnel engaged in manufacturing guns and cannons in the bureaus and plants must also be constantly checked. Such psychology of fear against the people made the production and management of military industry even more feudal then the government operated old-style handicraft industry.

To train a new-type army and establish plants and bureaus, foreign personnel must first be engaged, "borrowing material from foreign land." The training of the navy and army mainly depended on foreign officers. The military industry, from the purchase of machinery, its installation and operation, to production and manufacturing, completely depended on foreign technicians. The employment of foreign personnel cost the tremendous sum of 100,000 plus liang to several times that much annually. According to incomplete statistics, from the sixties to the first half of the eighties, the cost of hiring foreign personnel and artisans by the Huai Army and Beiyang Coastal Defense and the Jiangnan Manufacturing, Tianjin Machine Bureau and Fujian Ships Administration Bureau through the years came to 3 million plus liang. With the cost for hiring foreign personnel and artisans by the Nanyang Coastal Defense and the training of troops and establishment of bureaus by the various provinces on top thereof, the total should come to 4 million plus liang. The figure was approximately equivalent to the grand total of the money for plant building and expansion of Jiangnan Manufacturing Bureau, Fujian Ships Administration Bureau and Jinling Machine Bureau through the years. In other words, it would have been sufficient to build three more bureaus and their plants of the same scale. A part of the control power of westernization actually fell into the hands of the highly paid foreigners, such as Frenchman (Riyige), commissioner of customs of Fujian Ships Administration Bureau, and (Mitoshi), British consular officer of Tianjin Machine Bureau. Beginning with its predecessor, the artillery bureau in Shanghai and then Suzhou, Jinling Machine Bureau was controlled by Englishman Margary for more than 10 years. Foreign artisans were in charge of the shipbuilding and manufacturing work of Jiangnan Manufacturing Bureau. Though the Beiyang Navy was spared the fate of being handed over to Hart, the chief commissioner of customs, it was later controlled by English officer (Langweili) and others. Under the management of foreign personnel, most of the imported equipment and production technology were obsolete and backward. Some people among the westernization faction also pointed out that what the Fujian Ships Administration Bureau followed was the old ways of France; what the Jiangnan Manufacturing Bureau followed was the old ways of England; what the Beiyang Shipyard and the various bureaus of naval machinery followed was the old ways of England and Germany. They all kept to a set pattern, without any innovation.[17] At that time the Kangbang new machine and iron-side had long been introduced in Western shipbuilding, yet the Fujian Ships Administration Bureau only began to do imitative manufacturing in 1876, after the withdrawal of the foreign personnel. While the foreign countries had long changed to breech-loaders, Jiangnan Manufacturing Bureau still made muzzle-loaders. Though it also changed to breech-loading later on, it was unable to manufacture the new-type. The products of the military industry were mostly inferior in quality. In charge of Jinling Machine Bureau, Englishman (Mageli) manufactured cannons for the Dagu Fort. Shipped to the fort in 1875, they immediately exploded when fired and turned into piles of scrap metal.

Westernization activities were a manifestation of reliance on foreign countries. When it came to equipment and finished products, large sums were spent on foreign purchases, while manufacturing at home was scorned. According to incomplete statistics, from the early sixties to the first half of the eighties, the funds for purchasing foreign ships, cannons, firearms and ammunition totaled approximately 20 million plus liang, while the funds directly devoted to manufacturing (including the cost of foreign material and shipping) for the same period only came to 14 million liang, or only 2/3 of the funds for purchasing. Some people advocated large-scale imitative manufacturing of new-type ships and apparatuses, but Li Hongzhang rejected it categorically as ignorant talk. He said: As the machineries and artisans of China's bureaus and plants are incomplete, manufacturing is easier said than done. Among the many plants in the West, we can select freely, and buying is far more convenient than manufacturing.[18] The bureaus and plants only copied old-type ships and apparatuses and made ammunition, and China imported all its new-type ships, cannons and firearms from foreign countries. Furthermore, it relied on foreigners to buy on its behalf. Preparing to organize the Nanyang and Beiyang Coastal Defenses, Yi Xin, Li Hongzhang and Shen Baozhen, at the beginning, relied entirely on Hart and others to buy ships and cannons on their behalf. They felt that sending Chinese personnel to do the purchasing would make it more complicated and add to the cost. Once someone going abroad was requested to find out directly from English plants the cost of gunboats. Hearing about it, Hart was greatly disturbed, claiming that it was an indication of distrust. Li Hongzhang and Yi Xin immediately changed their minds. The 10 plus gunboats purchased by Hart for the Qing government at a cost of 2 or 3 million liang were all old-type vessels. Li Hongzhang was forced to admit that it would be difficult for these vessels either to hit the target or to effect self-defense,[19] and that matters would be bungled.[20] Other provinces mostly ordered ships, cannons and firearms from the foreign merchants in Shanghai and Hong Kong. The foreign merchants were bent solely on profit, and the ships and cannons purchased through them were either mixed models, the inferior passed off as the superior,[21] or obsolete items after the exporting countries had changed to new-type products.[22] Some merchants bought the old stock at a cheap price and misrepresented it as newly manufactured, while others inflated the price of the cheap merchandise imported by them.[23] The abuses were innumerable, and large sums of the state were squandered.

When a backward country wishes to change its status quo, it is entirely necessary to import advanced technology from foreign countries and to buy some foreign products which it is unable to produce for the time being, and it cannot be criticized for doing so. The key is to preserve sovereignty. In the various westernization undertakings, the westernization faction of the landowner class relied on foreign countries in all matters, without any independence and self-determination, because the landowner state had long lost its sovereignty. Since they placed the cause of their own class on the foundation of reliance on foreign countries, they could only turn themselves more and more into compradors. The close combination of the feudal and comprador qualities was the dominant characteristic of the westernization faction and their activities.

Yi Xin, Zeng Guofan and Li Hongzhang vigorously promoted westernization activities, but other high bureaucrats and aristocrats, such as Grand Secretary Wei Ren and others, vigorously opposed them. Just as reactionary in politics and extremely stubborn and conservative in ideology, the latter group was the diehard faction in the Qing government opposed to the westernization faction. They opposed without exception the new-type army and navy, the modern military industry, and industrial, mining, communication and transportation enterprises for civilian use and all the related activities. Their reasons were: 1. All the advanced science and technology of the West are "clever and bizarre tricks." 2. Learning from foreign countries is equivalent to remolding Chinese culture with foreign culture, "changing the Chinese by means of the barbarian." 3. Ever since ancient times, China's astronomy and mathematics have not lagged behind, and there is no need to learn from the West. 4. Once machinery and technology are spread into China, they can be utilized by the people to make weapons, which will be a most dangerous thing. In 1866, Wei Ren submitted a memo to the emperor opposing the creation of Tongwen Hall, on ground that the essence of building a country is ethics and loyalty, not tactics and trickery. Whether in ancient times or today, there has never been a dynasty which could avert its decline by means of technology. If we actually make the barbarians our teachers for the sake of acquiring some minor technical skills, it will inevitably cause China's scholars to "change and follow the barbarians." When the upright influence fails to prevail, the evil influence will spread. It will not take more than a few years to force China's scholars to turn into barbarians.[24] Imperial Censor Zhang Shengzao said in his memo to the emperor: If the court wishes to become strong and prosperous, there is no better way than reinforcing the laws, meting out rewards and punishments strictly and fairly and seeking and employing able persons. Those following the orthodox way by passing the examinations, "studying the books of Confucius and Mencius and learning the ways of Emperors Yao and Shun," are the most useful talents for the country. When Tongwen Hall wants them to learn astronomy and mathematics and seek such skills as manufacturing steamships and foreign guns, it is actually stressing fame and profit and scorning integrity. Putting the cart before the horse, it is bound to fail.[25] When discussing coastal defense in 1875, Administrative Commissioner Yu Lingchen opposed manufacturing foreign implements and making foreign ships, on ground that, in order to do so, they must learn foreign knowledge which would lead to the extent of taking foreign knowledge as the criterion of employment. By then, "is there anything more humiliating than making the foreigners our teachers?"[26] In 1867, in his memo to the Qing government, a candidate for departmental magistrate of Zhili region said: When it comes to astronomy and mathematics, China is the best; when it comes to skills and techniques, China is the most complete. Western knowledge of steamships and machinery may not be comparable to ours. China's land is vast and its population large. Is it conceivable that we cannot find people in astronomy and mathematics who excel the Westerners?[27] Wei Ren also declared: If we must have astronomy and mathematics, we will, by searching extensively in China, find proficient people. "Why must we make the barbarians our teachers?"[28] In 1875, the comment of a diehard bureaucrat on learning technology and manufacturing machinery was: Strict prohibition of private casting of guns and cannons and private caching of firearms is naturally correct. By extensively recruiting people to learn about machinery, those people will teach others in turn, and the country will be filled with machinery. We can encourage everyone to learn about humanity, justice, loyalty and faith, but we must not permit many people to study firearms.[29] As late as 1884, Cabinet Scholar Xu Zhixiang submitted a special memo to the emperor: It has been more than 10 years since the creation of the Nanyang and Beiyang Machine Bureaus and the Fujian Ships Administration Bureau, at a cost of no less than 20 or 30 million liang, yet they end up by being useless. Now some people advocate adding the subject of technology in the examination system. It must be firmly checked. If not, perhaps in the future there will be suggestions to build railways and manufacture balloons,"[30] and one has no idea where it will all end. Comments of this nature fully indicated that, muddleheaded and idiotic, they were completely ignorant of the world situation. They continued to wallow in conceit and arrogance, bragging about "barbarians in all directions submitting themselves to the court" and "10,000 countries coming to pay tribute," and stubbornly held on to the feudal dogmas, opposing science and all new things.

The reactionaryism of the westernization faction and its undertakings was not in learning and importing advanced science and technology from the West, but in their capitulationism abroad and suppression of the people's revolutionary struggles at home, in order to maintain the shaky feudal system and feudal control. Precisely in these two aspects rested the fundamental identity of the diehard and westernization factions. The diehards were often impassioned against foreign aggression and clamored for resistance, such as "the barbarians are our enemies" and "we must not forget the enemies even for one day and the humiliations suffered by us." However, all they did was to utter hollow words, and they had no intention to take practical action. When the westernization faction advocated capitulating to the foreigners, besides continuing to express discontent, they accepted the status quo completely. In 1872, diehard bureaucrat Song Jin opposed manufacturing steamships, declaring grandiloquently: If steamships are a preparation to resist foreign countries, then, since China and the foreign countries have long attained peace, we should not do anything which may provoke the foreigners. If they are to be used for fighting the foreign countries, then, we can rest assured that Chinese steamships cannot compete against them.[31] According to this view, there was no need to make any effort. They would wait for the foreign invaders to fight their way in and kneel down and surrender. Therefore, the opposition to importing Western science and technology on the part of the diehard faction was actually not a desire for independence and self-determination, but approval of capitulation.

Arguing against the fallacious views of the diehard faction, the westernization faction at times appeared to be just and forceful. Yi Xin answered Wei Ren and others: You do not propose any practical means, but only make such remarks as using loyalty and faith as the armor and propriety and morality as the weapon, feeling that you will thus outmaneuver the enemy over glasses of wine and send him to his doom. I really cannot believe you.[32] Westernization commentator Ma Jianzhong discussed the diehard advocacy of war: They fail to analyze the reasons for war or seek the material preparations for victory. They feel that, only by bringing out the classics of ancient times, copying certain stories of Han and Tang, and expressing their views, they will castigate Japan and Russia and whip England and America. There is no such thing in the world.[33] Such arguments against the diehards indicated that the westernization faction believed that promoting the study of Western languages, importing foreign machinery and technology and undertaking industry and mining were completely proper, without anything wrong. However, in regard to the views of Wei Ren and others, they admitted that "their meaning is lofty and their arguments just," and explained that the goal of learning Western science and technology was "merely for the purpose of verifying the Chinese ways by means of the Western ways, and not abandoning the principles of the sages for the wrong road." On the issue of the capitalist system, the attitudes of the westernization and diehard factions were basically the same. Though they did not have the concept of capitalism, they realized that the machinery and technology of foreign countries would produce an influence on China's social production. Machinery would produce firearms, which would be very dangerous to start with, and machinery was the product of the Western social system, viz., capitalism. Such system ran counter to China's national conditions, and therefore was not acceptable. Once machinery filled the country, the rich merchants and prominent businessmen would produce for profit, and it would be an even graver danger to the feudal system. Therefore, restrictions must be enforced at every level. On the basic issue of opposing national capitalism and preserving the feudal system, the standpoint of the westernization faction was also that of the diehard faction. The essential difference between them was that the diehard faction was more feudal in nature, while the westernization faction was more comprador in nature. Within the Qing government which performed the function of maintaining the semi-colonial and semi-feudal regime, the two forces could work in complete coordination with each other.

The Empress Dowager relied on the westernization faction to promote westernization activities, pleasing the foreigners abroad and strengthening her ruling power at home. She also permitted the diehard faction to oppose the westernization activities, calling such opposition "clear comments" and "just views," in order to prevent the westernization faction from becoming too powerful. The two factions mutually attacked and checked each other, while she manipulated and utilized, restricted them in all their actions and kept them within bounds. Li Hongzhang complained time and again: The vision of the group of people in the capital is limited. Acting pettishly day in and day out, they are afraid that too little attention is given to the domestic and too much to the foreign, and they scheme to strip the power of the generals and frontier officers.[34] Clear commenting has already done its damage, and who should be responsible for it?[35] He then said: The country of Japan is under the control of one monarch, yet its subjects exert themselves with one mind, and its financial power and talents continuously improve. In China's imperial court, what is discussed in the morning is changed in the evening and what is undertaken in the forenoon is suspended in the afternoon. Just what the future holds is hard to predict.[36] I only hope to continue in the same old rut, go through the motions and drift along for a decade or more "until the new emperor (indicating Emperor Guangxu) personally takes over the reins of the government." I do not know whether we can hold out until then without any serious mishaps.[37] The conflict between the diehard and westernization factions in the Qing government continued for a period, at times violent. With the increase in the enterprises promoted by the westernization faction, its contacts with the foreign aggressors became ever more numerous. As a result, its power far surpassed that of the diehard faction, and it occupied a dominant position.

All founders of the westernization cause, Zeng Guofan, Zuo Zongtang and Li Hongzhang, in their activities, each formed his own clique. Li Hongzhang started the largest number of westernization enterprises, and the Huai clique with him as the key man was the most powerful. He used the Huai Army as his capital and, after 1870, he was entrenched for a long time in the position of governor-general of Zhili and minister of Beiyang, actually in complete control of the westernization cause. He considered the military industry created by him the lifeline of the Huai Army and controlled it firmly. In 1866, he was transferred away from his position as the governor-general of the Jiangnan Provinces [Jiangxi, Jiangsu and Anhui], but still supervised the Jiangnan Manufacturing Bureau. Required to allocate a part of the weapons and ammunition produced by it to the Huai Army, the Jinling Machine Bureau was regarded for a long time as an auxiliary to the Huai army. By the first half of the eighties, Li Hongzhang was in control of six plants and bureaus engaged in modern military industry, and the cost of their creation and expansion totaled approximately 4 million liang, which was more than 50 percent of the building cost of military industry in the entire country. The warlords of the Huai clique became the largest westernization clique in the country. At the very beginning, Zeng Guofan cooperated with Li Hongzhang to create the Jiangnan Manufacturing Bureau. After returning to his position as governor-general of the Jiangnan Provinces in 1866, he controlled jointly with Li Hongzhang the Jiangnan Manufacturing Bureau and the Jinling Machine Bureau, and expanded the Nanyang maritime forces. Zeng Guofan died a relatively early death, and the Xiang Army commanded by the Zeng brothers was either disbanded or wiped out. The westernization enterprises built by the Zeng clique failed to make any independent development. Zuo Zongtang possessed the Xiang Army of the Zuo clique and also controlled for a long time the Fujian Ships Administration Bureau. He relied on the bureau to manufacture and purchase all kinds of ships and cannons and created the Nanyang Navy. Appointed as governor-general of the Jiangnan Provinces in 1881, he acquired a part of the authority over the Jiangnan Manufacturing Bureau and the Jinling Machine Bureau. Remaining in the Northwest for an extended period of time, his contact with the foreign aggressors was not as close as that of Li Hongzhang, the number of westernization enterprises started by him not as numerous, and the arms and equipment of the Xiang Army of the Zuo clique not as fine as those of the Huai Army. For these reasons, the power of the Zuo clique could not match that of the Li clique.

The spheres of activities of the various cliques of the westernization faction were different, and the foreign countries relied on by them were also not the same. Li Hongzhang mainly relied on England, and subsequently linked up with Germany at the same time. Zuo Zongtang mainly depended on France, and subsequently also formed ties with Germany. Zeng Guofan associated with America and England. The aggressor countries competed with one another in China, while the various cliques of the westernization faction also conflicted with and attacked one another. To win French support, Zuo Zongtang did his best to put in a good word for France and asked the Qing government to pay serious attention to its role, in preparation for obtaining foreign aid in the future.[38] On the other hand, he attacked England: England is treacherous and crafty and does not sincerely help the Qing government. In addition, it is "jealous of our capabilities and pleased with our shortcomings."[39] When France helped Zuo Zongtang establish the Fujian Ships Administration Bureau, England tried to sabotage it. Hart and the Fuzhou commissioner of customs first wanted to have a share in the bureau, but failed to attain their goal. Thereupon, they attacked (Riyige), the French general supervisor of the bureau, saying that he was deliberately hoodwinking Zuo Zongtang by claiming that the Chinese would learn to manufacture and operate steamships in 5 years, and that he would not succeed.[40] Subsequently, when the shipyard was built and steamships manufactured, Li Hongzhang stepped forward to make accusations: Zuo Zongtang relies solely on (Riyige) to build and operate the Fujian shipyard. The models of the ships and machinery are all obsolete, and the steamships built by him are very unwieldy.[41] Hart also charged that the SS "Kangde" built by the bureau was unsafe and impractical. The conflicts and struggles among the foreign aggressors were intertwined with the squabbles among the high level bureaucrats of the westernization faction, reflecting the close ties of the various westernization cliques with the particular foreign powers relied on by them. England, which backed Li Hongzhang, was the most powerful among the big powers struggling over China, and it was one of the reasons for Li Hongzhang to be the strongest man in the westernization faction.

The emergence of the westernization faction and its cliques and the modern military industry indicated profound changes within China's ruling class. 1. For the first time in history, differentiation in the economic components of China's landowner class occurred. 2. China's first-generation modern warlords emerged. 3. The previously constantly split feudal cliques due to conflict of interest in the ruling class now began to split into cliques serving as the tools of foreign aggression.

When deciding to undertake modern military industry, Yi Xin, Zeng Guofan and Li Hongzhang, at the beginning, stressed "forming long-range strategies," "fighting foreign countries" and "resisting foreign aggression" alongside with the emphasis on "exterminating the Fa and Nian troops," "pacifying China" and "promptly suppressing the bandits," thus reflecting the contradictions between the feudal ruling class and the broad masses and those between it and the foreign aggressors. When the two goals were mentioned together, it indicated that the Qing rulers were confronted simultaneously with the issue of the class contradiction and that of the national contradiction. But the situation was greatly different from the period of the second Opium War. At that time, the Qing government was faced with the high tide of people's uprisings and the troops of foreign aggressors at its gate, both "domestic troubles" and "foreign invasion," and the situation was extremely critical. The issue of whom to attack and whom to surrender to required immediate decision. Now the issue was temporarily solved by capitulating to the foreign aggressors and "peace between China and the foreign countries." The military industry built by the westernization faction at this time was basically only for the purpose of reinforcing the suppression and control of the people. Furthermore, the project could only be carried out by a greater reliance on the West. There was no country or government among the Western powers which opposed the military industry of the Qing government. On the contrary, they always actively supported its endeavor to build up arms. It was a fact which explained the issue. A conflict continued to exist between the Qing government and the big powers, and it was at times very intense. However, it did not originate from the Qing government, which had no strength to recover China's sovereignty and change the semi-colonial order; it originated from the big powers which demanded more concessions from the Qing government, while the latter found it difficult to surmount the people's powerful resistance and therefore hazardous to submit to the aggressors. Therefore, the so-called "forming long-range strategies," "fighting foreign countries" and "resisting foreign aggression" advocated by the westernization faction were clearly negated by the guiding ideology announced by it and by its admitted result of practice.

By 1880, the westernization cause had been pursued for 20 years. According to his view, Li Hongzhang summarized the guiding ideology of westernization into eight words: "Make peace with the foreigners abroad; introduce political reform at home." To "make peace with the foreigners" was to faithfully abide by the unequal treaties and bow to the demands of the aggressors, in exchange for the situation of "living in peace with the foreign countries," and promoting westernization activities was the primary condition. In regard to foreign invasion, the westernization faction generally followed the policy of nonresistance. They advanced all kinds of reasons in defense of nonresistance, the main one being the inferiority of China's weapons and techniques. In 1872 and 1874, Li Hongzhang stated time and again in his memos to the emperor: At this late hour, maintaining peace and defending our territory basically cannot be accomplished without new-type weapons. Resisting the barbarians and expelling the foreigners are all sheer unfounded views.[42] Fa, Nian, Miao and Hui are all inland people. Though they were extremely courageous and persevering, their implements were inferior; therefore, we could exterminate them. The big powers are enemy countries and, with powerful weapons and superior technology, they excel one another with their military strengths. If China should resist, "even if temporarily victorious, the final result will be defeat."[43] In his letter to the prime minister's office in 1883 on current affairs, Li Hongzhang said: Ever since the Europeans came East, the Asian countries, in the many wars, always won first and lost later. "The track of an overturned cart should serve as a warning."[44] In other words, resisting foreign aggression with inferior weapons would result in final defeat even if there were temporary victories. It had become an irresistible law. The conclusion was: When China does not have anything to rely on, it must not rashly talk about resistance. There is only one way out: Seek foreign ways and learn to use foreign implements, in preparation for independence.[45] Li Hongzhang used the inferiority of weapons and the incapacity to resist foreign aggression as the reason for promoting the westernization cause. On the other hand, he used the fact that the westernization cause had not been sufficiently developed and that the weaponry was still inferior as the excuse to follow the policy of nonresistance. By going round in circles, the time to resist foreign aggression would never arrive. The "political reform" mentioned by him mainly consisted of reorganizing the Green Battalions, introducing new-type firearms and adding the subject of westernization training in the examination system. In "Protests from Xiaobin Cottage," Feng Guifen, the famous westernization theoretician who had long suggested suppressing the Taiping rebellion with foreign troops, advocated the necessity to "take China's feudal order of importance and the Confucian ethical code as the foundation, supplemented with skills of the various countries, to attain wealth and power."[46] In "Views on Westernization," Xue Fucheng, another westernization theoretician, suggested "taking the knowledge of implements and the mathematics of the Westerners to defend the ways of our Emperors Yao and Shu, Yu and Tang, Wen and Wu and of Zhou Gong and Confucius."[47] The substance of the "political reform" advocated by Li Hongzhang, Feng Guifen and Xue Fucheng can be summarized into one point: Without infringing on the interest of the feudal class, make some minor changes and add some capitalist smatterings. In short, under the condition of observing the unequal treaties, submitting to foreign control and keeping the vital interest of the feudal system intact, the Qing government should utilize Western science and technology to replenish its strengths, suppress the people's revolution and protect the regime. It was the guiding ideology of the westernization faction. In other words, "becoming strong," "independence," "forming long-range strategies," "fighting foreign countries and "resisting foreign aggression" advocated by them had long vanished without a trace.

The practical result of the war industry admitted by the westernization faction itself was also thus. Li Hongzhang's Huai army possessed the best equipment and cost the most money. Many criticized him for compromising with and surrendering to foreign aggression and for the corruption and untrustworthiness of the Huai Army. Li Hongzhang defended himself in many ways, but more than once he admitted that, if the Huai Army should encounter "inland bandits," he was sure that it would win, but if it came up against foreign attack, "the outcome cannot be predicted," but it would not panic and flee upon hearing of the enemy. Though the arms and ammunition of the Tianjin Huai Army were not small in quantity, "when it comes to fighting against the West, it is hard to say."[49] The Zhili troops "may be used to exterminate internal bandits, but whether they can resist external aggression is not clear"[50]--probably alright. Ding Richang, an important member of the westernization faction, was more blunt: The ships and cannons "can subjugate internal bandits, but not external aggression."[51] What he referred to was the result of the military industry of the westernization faction after one or two decades. One can thus see that the character of the military industry was only an extension of borrowing foreign troops and buying foreign arms to "exterminate the Fa and Nian rebellions" and "subjugate the bandits," and not the simultaneous starting point of "forming long-range strategies" and "fighting foreign countries."

The political power of a state includes two functions: Dictatorship at home and defense of sovereignty against the outside. Military strength is the main component of the state machine. Whether reinforcing the army, navy or other branches of service, whatever which can produce an influence outside can produce an influence at home. One cannot imagine that the navy has only an external role, not an internal one. By firmly undertaking modern military industry and thereafter building ships and railways, the westernization faction indeed manifested a considerable spirit of "innovation." It was even more so when contrasted against the diehard faction. The meaning of innovation, however, must be determined by its concrete content. The westernization faction did not aim at national independence; on the contrary, it "innovated" toward the semi-colonial path. Almost at the same time, there was Japan's Meiji Restoration in the East, which followed a different path. In comparison, the reactionaryism of the westernization faction and the westernization cause becomes even easier to recognize.

Science and technology belong in the realm of the social productive forces. By importing modern science and technology from the West, the westernization faction brought in a new kind of social productive forces which was not acceptable to the feudal productive relations. It would inevitably hasten the collapse of the feudal productive relations and promote the emergence of the new ones. In this sense, the westernization cause objectively had its progressive effect. Such were the contradictions of things! The activities of the westernization faction eventually created a number of objective conditions and feasibilities for the emergence of the modern capitalist industry in China.

1. Beginning in the seventies, Li Hongzhang and others expanded the military industry to civilian use. Some of the landowners, bureaucrats and merchants

began to invest in modern industry. It became one of the patterns of the brith of China's capitalist industry.

2. Promoting the westernization cause required training scientific and technical personnel. The westernization faction took a number of commensurate measures. In 1861, Yi Xin created Tongwen Hall in Beijing, selected children of the 8 Banners under 13 or 14 years of age to learn English, French and Russian and engaged foreign teachers to teach in various schools. After studying for 5 years, the students were able "to understand foreign writing and foreign languages."[32] By studying foreign implements and seeking Western knowledge, a breach was made in the feudal culture of several thousand years, and the capitalist social theories of the West spread into China. In terms of its ideological origin, the early reformism of the bourgeoisie was partly so fostered from here on.

NEED FOR CONTROL OF FAMILY PLANNING STRESSED

Experiences in Anhui

Beijing RENMIN RIBAO in Chinese 17 Sep 81 p 3

[Article by Wei Xinyi [7614 1800 0001]: "Unified Control of Family Planning by Leadership at All Levels in Dingyuan County"]

> [Text] Editorial note: Here are some excerpts from a letter written by Wei Xinyi, vice governor of Anhui Province and addressed to the Anhui Provincial People's Government. The letter concisely described how the party and government leadership has exercised unified control on the work of family planning after practicing the system of responsibility for agricultural production. It also put forward several suggestions on further improving this work for the reference of various localities.

During the last 10 days of May, I went to Dingyuan County, Anhui Province, to attend a meeting on the work of family planning for Suxian Prefecture. After hearing reports from several counties, particularly Dingyuan County, I had the impression that the situation turned out to be better than expected and that everything was going well. Despite a population upswing this year, the original plan of keeping the natural population growth rate below 1 percent can still materialize provided several more serious efforts are made. A summary of the report on the work is as follows:

I. Population Growth Can Be Controlled Provided Comprehensive Measures Are Carried Out With Perseverance

During the first quarter of this year, there were some 8,500 births in Suxian Prefecture at a birth rate of 0.256 percent. The birth rate in Dingyuan County was 0.181 percent. In the whole prefecture, the number of births was 1,938 less than that of the same period last year. There were several reasons for this decrease: First, a firm foundation laid last year; second, continued efforts this year; and third, the practical measures adopted. After the efforts of last year and the first 4 months of this year, some 64,000 women in Dingyuan County, or 83.5 percent of all women of child-bearing age, were either sterilized or given contraceptives. The rate of single births was raised to above 50 percent, and the number of artificial abortions was reduced. This shows that as long as we keep up our efforts, population growth can be brought under control.

II. Dingyuan County Adopted New Measures for Family Planning After Practicing Responsibility System

The first year of family planning in Dingyuan County has been a success and its experiences were of a general nature. The methods used were: encouragement of all party members to "attend to two different types of production at the same time"; ideological education on the need to be concerned with livelihood and propaganda work against the preference of male to female children; reward for having one child and penalty for excessive births as a matter of policy to win people's confidence; use of contraceptives to be supplemented by artificial abortion and sterilization; a strict demand on the quality of birth-control surgery to guard against untoward incidents; and so forth. All these methods were successfully carried out in Dingyuan County. What was even more admirable was that after setting up the system of responsibility for production, the leadership of the county adopted the following new measures:

First, family planning and production tasks were combined to be included in the responsibility system. Various tasks of production, selling agricultural sideline products to the state, and collection of loans were stipulated in contracts in which, the number of workpoints for each task assigned to cadres of communes, production brigades and production teams, the reward for above-quota points and the penalty for failure to fulfill the quota were all specified. Family planning obligations was also included in the contract. If the birth rate was above 0.1 percent, 10 percent of the total workpoints would be deducted; on the contrary, if it was below 0.1 percent, 10 percent would be added to the total points. The people said: "Family planning is the decisive factor."

Secondly, since the establishment of the system of responsibility for production, the methods of implementing policies have also changed. Workpoints have been replaced by cash as a reward and penalty, and the health-care subsidies are no longer appropriated out of the public welfare fund. Instead, they are paid by the production brigade according to an overall arrangement.

Thirdly, there was a unified control by the leadership at each level. Cadres were required to set good personal examples, while rewards and punishments had to be fair and just. The system of "four responsibilities, four leading roles and four priority arrangements" was widely practiced in Dingyuan County. This system means "responsibility for oneself, responsibility for one's children, responsibility for one's relatives and friends, and responsibility for the fulfillment of duty; leading role in propaganda, leading role in work, leading role in receiving [sterilization] surgery, and leading role in [family planning] registration; and priority of party over league, priority of cadres over masses, priority of oneself over others, and priority of relatives over neighbors [all in promoting family planning]." In fact, family planning in the county was under the unified control of the county party committee and the county government, but, the chairman of the county federation of women and the female cadres of the production brigades also assisted in ideological and organizational work. They received remunerations for their work and the amount of remunerations varied according to the number of participants in the family planning program. There were rewards and punishments as well as clearly defined duties. A deputy secretary of the county CYL committee did not participate in the program and was, as a result, relieved of her duty.

Fourthly, strong support was given to the commune and production brigade, or team cadres in giving reward or meting out punishment according to established rules. In carrying out family planning, the cadres had "five fears": fear of untoward incidents, fear of law violations, fear of committing the mistake of commandism, fear of letters [of complaint] from the people, and fear of offending others. The key to encouraging cadres in their work was propaganda and education, including a clear explanation that rewarding and punishing people according to established rules could not be charged as commandism. The people also said: "Vigorous policies are not to be feared as long as they are fair. If the cadres will take the lead, we will certainly willingly follow."

In my opinion, the above four measures should be recommended to the communes and production brigades and teams where every family is charged with a responsibility.

III. Several Recommendations

(1) By now, the majority of cadres have realized the importance and urgency of family planning, and the broad masses no longer entertain the idea of having a third child. In Suxian Prefecture, the rate of excessive child-bearing dropped a little in the 1st quarter this year, but still remained as high as 47 percent. Among them, 30 percent gave birth to a 2d child (33 percent in Dingyuan County). This was a problem as well as a key issue. Therefore, we have to resort to three methods: first, the cadres, party and league members should take the lead; second, publicity and education should be promoted; and third, the policy of reward and punishment should be enforced. Most important of all, the leadership must be resolute in encouraging every couple to have only one child, and make every effort to reduce the rate of excessive births. To do a meticulous job in ideological and educational work, we must therefore be very careful in solving the problem of, and making rational arrangements for some commune members (including party and league members and cadres) who want to have a second child because of real difficulties, provided their requests are in line with policies.

(2) The use of contraceptives should be encouraged, because this is a good method to avoid child-bearing.

(3) The statistics of family planning are now based on the natural growth rate of population as the criterion; this is not a scientific one. According to this way of calculation, a high death rate would be misconstrued as a success in family planning. Therefore, the use of the natural population growth rate cannot be practical and should be replaced by the birth rate and one-birth rate as a yardstick for the work of family planning in each locality.

Commentator on 'Open Letter'

Beijing GUANGMING RIBAO in Chinese 24 Sep 81 p 1

[Commentator's article: "Further Improve the Work of Family Planning"]

[Text] Exactly 1 year has passed since the publication of CCP Central Committee's "Open Letter to All CCP and CYL Members Concerning the Control of Our Population Growth." During this year, the broad masses of CCP and CYL members, and particularly the cadres at various levels, warmly responded to the call and took the lead in having only one child. By now, more than 10 million couples throughout the country have obtained the one-child certificates.

Remarkable progress was made in various aspects of the work last year. This year, the State Council established the State Family Planning Commission to provide more active leadership to the work of family planning. This work has since been included in the agendas of important meetings of party and government leading organs at various levels, and active elements among the cadres have been selected to take charge of the work. Acting in accordance with the spirit of the "Open Letter," these cadres have carried out a great deal of ideological and organizational work in promoting family planning, while the technical personnel of the medical, public health, female and child protection departments energetically served the masses by providing technical guidance and producing high-quality contraceptives in the forms of pills or devices, according to the policy of "prevention first." More and more people, including party and league members, have decided to have only one child. The work of family planning is now taking on a new outlook; the situation is very good.

Practicing family planning in an effort to keep our population below 1.2 billion by the turn of the century is a strategic decision by the party Central Committee. This decision is based on our present population, the trend of its development and other realities in our country and is therefore consistent with the conditions of our country. We have a huge population, little farmland, a young age composition, and a backward economy and culture. The standard of living for the people is low, and the average amount of natural resources possessed by each individual is small. An excessive growth of population will bring more problems in food, clothing, housing, transportation, education, public health and employment, and it will be difficult for the state to overcome poverty and backwardness within a brief period. The "Open Letter" explicitly pointed out: The advocation that each couple should have but one child is an important measure with a bearing on the speed and outcome of our modernization and the health and happiness of our future generations. It is consistent with the long-range as well as immediate interests of all people. We can never take the work of family planning lightly, but must carefully attend to it as a matter of great importance. We must take positive and systematic action to lower the growth rate of our population.

There are now two difficulties in the way of our population control. First, our population base is large. The national population has already approached 1 billion, and, according to the age composition, 65 percent of the total population are below 30 years of age. Hereafter, more than 20 million people will get married and beget children each year. If we do not strongly insist that each couple should have but one child and, instead, allow the population to grow unchecked, it will greatly add to the problems of the four modernizations and make the task of improving people's livelihood difficult. Therefore, the urgent task now is to practice family planning and to lower the birth rate with great efforts.

Secondly, the work of family planning is by no means easy. Among a section of the population, such old feudal ideas and erroneous concepts as "the greatest filial impiety is the failure to have a male offspring," and "a son is better than a daughter" are still very much alive. In some families, particularly the families in rural areas, there are also certain real difficulties. However, inspired by the "Open Letter," the family planning workers are prepared to defy all difficulties. Their spirit is indeed admirable.

At present, a lot of work needs to be done before each couple can have but one child. This work should not be taken lightly. However, work in the countryside is even more arduous. Since the adoption of the system of linking output with remunerations in the countryside, the work of family planning has entered a new phase and faced new problems. The majority of provincial, prefectural, county and commune party committees have strengthened party leadership in facing the new situation and new problems and adopted such new measures as "attending to two types of production at the same time," whereby the agricultural production is closely coordinated with population control. Instead of letting the work of family planning drift along, many areas have achieved new success and gained new experiences with increased production and lowered birth rate as the gratifying result.

To control the growth of population effectively, continued efforts should be made to translate the spirit of the "Open Letter" into action, and to encourage every couple to have but one child. Therefore, publicity and education should be energetically carried out so that the whole party and people of the whole country will be more ideologically united. We must teach the people to bear in mind the overall situation and to subordinate individual and family interests to the overall national interest, and to practice family planning willingly. The policy of "attending to two types of production at the same time" for material production and human reproduction should be upheld. Regardless of the different forms it may take, the system of responsibility for production should be accompanied by a suitable system of responsibility for family planning as well. Comprehensive measures of birth control should be carried out with the use of contraceptives as the principal means.

The control of population growth is a strategic issue involving the overall situation. Party committees and governments at all levels should treat it as an important task requiring the personal attendance of the principal leading comrades, while other leading comrades should also help keep up this task with perseverance. As long as the party committees at various levels take this work seriously and there is no relaxation of efforts on the part of all concerned, we believe it will be possible for us to attain the goal of keeping our population below 1.2 billion at the turn of the century.

TAN QILONG PRAISES PRIZE-WINNING LITERATURE, ART

Taiyuan SHANXI RIBAO in Chinese 25 Aug 81 p 4

[Article: "Literature and Art Should Uphold the "FOUR PRAISES" and Criticize Erroneous Ideas and Works"]

[Text] At a meeting just concluded in Sichuan, held to award prizes for fine literary and art works, Tan Qilong, first secretary of the Sichuan Provincial Party Committee, spoke on the question of literary and art criticism and the question of criticism and self-criticism.

He said: "Literary and art workers should sing warm praised of the party, of socialism, of the people's army, and of the people. This is demanded by the people."

Speaking of the catastrophic flood that hit Sichuan recently, he pointed out: "Hit by such an extraoridnarily serious natural disaster, people in the old society would inevitably have suffered disasters, with homes broken up, some [persons] gone away, and some dead. But today, thanks to the party leadership, to the socialist system, and to the people's army, the army and people throughout the province are united as one, fighting shoulder to shoulder. After the disaster, the public is reassured, the basic living essentials are ensure, and a moving scene--the restoration of production and the rebuilding of homes--is seen everywhere. What should we sing praises of, if not the party, the socialist system, and the people's army?"

He said: "Since the "gang of four" was smashed, literary and art creations have flourished and many good works have appeared, thanks to the implementation of the policy of letting a hundred flowers bloom and a hundred schools of thought contend. "But a very small number of people are disseminating incorrect ideas, writing bad works, and even negating the party leadership and the socialist road. Criticism and self-criticism must be launched against incorrect ideas and works, before there can be assurance that literature and art will develop in the direction of serving the people and socialism. Criticism should be aimed at helping those criticized, based on a desire for unity and on facts, and conducted by placing the facts on the table and reasoning things out. There are a few people who regard criticism as the use of the big stick. Such a view is contrary to the party's tradition of criticism and self-criticism."

Choosing fine literary and art works through public appraisal began in Sichuan Province in October of last year. The party committees in literary and art circles took these activities as an important task in strengthening party leadership over literature and art. The provincial and prefectural writers associations set up appraisal and selection committees and adopted the method of combining leaders with the masses. From nearly 9,000 works recommended, 1,101 fine works were chosen, including works reflecting the fight waged by the army and people in Sichuan to combat the recent catastropic flood. These fine literary and art works uphold the political orientation and the four basic principles, successfully mold many moving artistic images, and vividly portray the practice of struggle to bring order out of chaos and to construct the four modernizations.

WRITERS CONTINUE TO VISIT RURAL AREAS FOR INSPIRATION

Enthusiastic Response

Shanghai WEN HUI BAO in Chinese 8 Sep 81 p 1

[Article: "Going Down to the Grass Roots To Seek Creative Sources"]

[Text] New and veteran writers from the capital and various localities are enthusiastically going to the grassroots. Some of them have created a great number of works that are being well received by readers.

The well-known writer Ding Ling [0002 3781] has recently returned from her visit to the great northern wilderness. The 77-year-old writer revisited the base where previously she had been in the thick of life for more than 20 years. She was given a welcome there.

Liu Shaotang [0491 4801 2768] and Hao Ran [3185 3544] have kept in close touch with the countryside. On the question of going down to the grassroots, Liu Shaotang said: "I am in favor of deepening the well. Upon conclusion of the present study program, I will proceed to the countryside and live there." In the last 2 years Liu Shaotang has written some 30 long, medium-length, and short novels which have direct connections with the life he tested in the countryside for more than 20 years. He said: "There are so many characters in my head. I know each of the 100 families in our Rulin village. If I want to, I can write a novel for each family. However, as the countryside is developing and new things are growing, there are some aspects with which I am not so familiar. For example, I am not familiar with the commune enterprises. From now on I will familiarize myself with new things and reflect the newly emerging industries and the people of the new generation. The veteran writer Guan Hua [4619 2901], who had lived in the countryside for a long time, went to Fengrun County, Baoding, and Shijiazhuang in Hobei Province last year and this in order to test life there. He grasped some important points of the production responsibility system. He wrote the novels "They Are Afraid of Water" and "Chuang Tai." The veteran writer Lei Jia [7191 0502] returned to the countryside in northern Shaanxi in the latter part of July of this year. He reviewed the history of the 1930's and met "second hometown" people dear to him. He exerted himself to do creative writing and published many works. Duanmu Hongliang [4551 2606 5584 5328] and Xiao Jun [5135 6511] went to the south and the northeast to collect materials.

Qian Xiaohui [6929 1420 1920] kept in touch with the "2-7 Locomotive and Railroad Car Plant" all the time.

As proposed and organized by the Chinese Writers Association and its Beijing branch, Shu Qun [5289 5208], Li You [3810 3945], Gu Ligao [0657 0500 7559], and Gao Xiangzhen [2640 0686 4176] will visit the Lankao area [Henan]. Jin Jin [0093 6602], Deng Youmei [6772 0645 2734], Ding Ning [0002 1380], and Ge Cuilin [5514 5050 3829] will visit Shandong. Writers from Beijing and those of the Beijing branch of the Chinese Writers Association will be in the countryside for half a month and, at their discretion, may stay there a little longer for the purpose of doing creative writing.

More than 50 writers from Wuhan have visited Gezhou dam and inspected the gigantic water-retention project. Some writers from Tianjin went to Yunnan and Guangxi and visited model heroes who had distinguished themselves in the counterattack for self-defense against Vietnam. They wrote a number of reportage items. A number of writers have built their life base in the grassroots. For instance, Hobei writer Li Mantian [2621 3341 1131] is now concurrently deputy secretary of the Zhengding County Party Committee. Liaoning writer Shao Hua [7300 5478] is concurrently deputy secretary of the party committee for the Northeast Oil Pipeline Administration; over the past 7 years he published long novels such as "Canghai Hengliu." Jilin writer Ding Rentang [0002 0088 1016] is concurrently deputy magistrate of Daan County; over the past 4 years he has written one long novel and is now writing another. Some sparetime writers such as Ho Shiguang [0149 0013 0342] and Ye Xin [0673 6580] of Guizhou are living among the masses and carrying on their creative writing.

Military unit writers Xu Huaizhong [1776 2037 0022] and Lu Zhuguo [7120 2691 0948] will live with company units for 7 or 8 months a year. On the basis of going into the thick of life, playwrights of Wuhan, Nanjing, and Guangzhou have created "Spring of the Company Unit," "Going to the North," and "Ideal Is Wonderful."

Reports at Writer's Symposium

Beijing GUANGMING RIBAO in Chinese 30 Sep 81 p 1

[Article: "More Writers and Artists Urged To Go Down to the Countryside"]

[Text] The Secretariat of the Chinese Writers Association held a symposium this afternoon, to which some writers who have returned from their visits to the countryside were invited to speak about what they have gathered and learned.

Not long ago, the Chinese Writers Association organized some of the writers to visit Lankao County in Henan and Heze Prefecture in Shandong. These writers have now returned from their short visits. At the symposium they talked about the profound changes taking place in the countryside. They personally appreciated the correctness of the line and policies laid down at the Third Plenum. They appealed to more writers, artists, and critics to go down to the broad countryside to understand the new situation and the new changes in the countryside, and to reflect on the new life there.

Literary and art critic Mao Xing [3029 2502] said: "While they are in the cities, people worry about this and that. When they visit the countryside to have a look, they are suddently enlightened. The production responsibility system in its various forms that has been put into practice since the Third Plenum has brought on rapid changes in Lankao County. In the past, Lankao was known as a poverty-stricken county, with strong winds and sand and saline-alkali soil. Many people did not have enough grain to eat and had to go begging in other localities. Now there are basically no beggars. The granaries are full of grain, and new houses have been built. For all the tortuous paths traversed, the peasant masses have firm confidence in the party leadership and the socialist road." Before he went down to the countryside, literary editor Zhong Yibing [6988 5669 0365] had heard discussions about the rural situation and had confused ideas in his mind. During his recent visit to the countryside, he saw with his own eyes the new changes taking place in the countryside and came to realize that the Third Plenum was indeed a turning point for our country, and particularly for the countryside. He said that a doggerel handed down in Laokao County speaks a lot. In the past, "dried potato chips were the main food and the chicken's rear end the bank." Now, "Steamed bread takes the place of sweet potatoes, and bachelors are married." Juvenile literature writer Jin Jin [0093 6602], who returned from Heze, said: "In the past, Heze was an area which depended on grain (resold by the state) for food, upon relief for money, and upon loans for production. Things are different now. The peasants' income has increased and their life improved everywhere, and there have appeared a number of "10,000-digit families"--that is, families with an annual harvest of 10,000 jin of grain and an income of 10,000 yuan. The system of production responsibility has roused the peasants' enthusiasm. In the past, they could only say, 'When the large river has water, the small rivers are full.' They dared not say, 'When small rivers have water, the large river is full.' Actually, without small rivers full of water, how can the large river be full?" Literary critic Miao Junjie [4924 0193 2638] deeply felt that the countryside is undergoing profound changes and that there is a pressing need for writers, artists, and critics to go into the thick of life in the countryside. "All those writers and artists who have the necessary requirements must go down to the countryside to realize the changes taking place there. Juvenile literature writer Ge Cuilin [5514 5050 3829] said: "While in the countryside this time, I was inspired with enthusiasm. The materials collected are concrete and vivid, making me realize deeply that the Third Plenum's line is correct and is producing far-reaching effects. Every peasant family has bank deposits and surplus grain. All people--men and women, old and young--are happy. Our literary and art work is not compatible with the excellent situation in the countryside. We should redouble our efforts to reflect the new life of the countryside. Cong Cong [5115 5115], the creative children's songwriter, had a question in mind when he went down to the countryside: "Is the production responsibility system a socialist system? Will there be a new polarization?" He told the symposium: "The facts I discovered in the countryside answer my question." He expressed the hope that promising writers and artists will spend some time going down to the countryside to understand the countryside and to reflect on more of the new changes taking place there. Veteran poet Han Yiping [7281 0310 5493], who is of worker origin, perceived in the countryside that the line of the Third Plenum of the 11th Party Central Committee has not only enabled peasants to begin to become well-to-do but also improved the relations between the party and masses and between the cadres and masses. Novelist Liu Poyong [0491 3134 3144] visited the countryside, and during his visit there he took particular note of the peasants' clothing, food, shelter, and transportation. He said that from his observations he had gained a deep understanding of the excellent situation prevailing in the countryside.

Writers spoke enthusiastically at the symposium, and many of them still had a lot to say. They earnestly hoped that the Chinese Writers Association will organize writers and artists through diverse means to go down to the countryside to breathe fresh air.

Feng Mu [7458 3668], vice chairman of the Chinese Writers Association and standing secretary of its Secretariat, concluded the symposium by saying: "Turning toward the direction of life, of the people, and of the countryside and maintaining close ties with the peasant masses are glorious traditions of China's revolutionary writers. We must restore and carry on this glorious tradition. The Chinese Writers Association will create conditions and adopt diverse methods for organizing writers, artists, and critics to go into the thick of life in the countryside and promote creative writing with the countryside as the subject matter.
